Wages *Will Go Up* and Prices *Come Down* Says Henry Ford

An interview by William S. Dutton

301463

HENRY FORD, at sixty-five years of age, considers himself just at the beginning of his life's real work. At present he is engaged in the biggest and hardest job that he has yet undertaken. On ahead he sees vastly bigger and vastly harder work still to be done. He intends to do what he can of it.

Ford told me:

"Up to the age of forty, a man is in training—every man is. He is assembling the tools with which to work. When the tools are at hand, they can be put to their real uses. Should he quit then, he would quit a failure. Should he sell out and retire, he would be the sorriest failure of all.

"You say I am already successful. I am not, except as an assembler of tools. The failure is that man who, with his tools at hand, locks them away and stops work. Money is but a tool. As soon as it becomes other than a tool in use it is a menace. Nonproductive private fortunes—well, there isn't any such thing any more. Once they cease to produce, they disappear. They scatter to find hands that can put them to use."

He continued:

"You give a boy a kite, and expect him to fly it. You put a pick and shovel into his hands when he becomes a man, and expect him to dig a ditch. Later, you give him a steam shovel and expect him to help dig a subway. When he has gained wisdom and experience, you give him men, money, and a hundred steam shovels, and expect him to build a subway system. You expect his accomplishments to measure up to the size of his tools.

"This business is a tool. If it is the largest tool of its kind, it should do the greatest work. With every added man and machine and factory, its responsibility

Digitized by Google

is increased. Today, because we are a bigger business than ever before, we are charged with doing a greater work than we've ever done before. You remember the parable in the Gospel of the servant who was given a talent and buried it; he was judged unfaithful, and the talent was taken from him. That parable points to a fundamental law which is as sound today as it was nineteen hundred years ago. We are going to live up to that law."

THAT was Ford's answer to the question, "Why doesn't Ford quit?"—at an age when countless men do quit.

It is one of the questions most commonly asked about Ford. The newspapers style him the "world's richest man." Business men marvel at his "profits," while bankers gasp at the size of his cash balances. The professional charity workers wonder "why he doesn't give away some of his money;" and they ask, "What is he going to do with all of it?"

Ford does not consider that he has built a fortune. He refuses, in spite of public insistence, even to regard himself as a rich man. The simple fact is he doesn't think in terms of money any more than he thinks in terms of coal. His coal pile and his money pile are in the same category: they are the raw materials of industry. To use his own term, with help he has built a "machine." This machine, even like the automobiles and tractors and by-products which it produces, has been the outgrowth of lengthy experiment, and labor, and testing. Today, after twenty-five years, it is not perfect by any means; but, what is more important, it is sound in principle; and it works! The fact that many thousands of men are required to operate it, and tens of millions of dollars to feed it and keep it running, does not change its basic character in the least.

It is a gigantic machine—a machine designed to convert, to manufacture, to assemble, to produce.

"To produce what?" I asked.

"*Anything!*" replied Ford.

"By the same process under which we are producing motor-cars and tractors," he explained, "we are converting ore into steel, sand into glass, hemp into burlap, cloth into artificial leather, waste paper and rags into binder board, slag into cement, and coal into coke, fertilizer, gas, and horsepower. The process has almost universal application in industry, from buttons to locomotives. The scope of the principle is unlimited."

WIDE WORLD PHOTOS

He added that one of the most important things that the Ford industrial machine was designed to produce is jobs—better jobs, more jobs at higher wages and shorter hours.

"There are a number of things we have learned in the building of this machine," said Mr. Ford. "One is that what we look upon today as high wages may be low wages ten years hence. Nobody knows how high men's wages eventually will go; and, likewise, nobody knows just how cheaply goods eventually will be produced. It may be possible to double wages and to halve costs, or to quadruple wages and to quarter costs—we don't know. All that we know certainly is that costs are no nearer the bottom than wages are to the top; and we know that the two movements, the one of wages upward and the other of costs downward, will do more toward abolishing poverty than all of the professional charity agencies combined.

"We have found, also, that prosperity is not the product of charity but of industry, not of receiving but of producing. Money, as such, has little to do with prosperity,

(At top of page) Henry Ford playing truant from business, near the Wayside Inn, South Sudbury, Mass., a famous historical building which he recently bought and restored as it was in Revolutionary days. (Left) A recent picture of Mr. Ford and his son Edsel

Digitized by Google Original from UNIVERSITY OF IOWA

"Is it efficient," asks Henry Ford, "for business to pay high land prices and high taxes in congested cities, where its workers must pay exorbitant rents?"

"By moving fifty miles into the country, business could get low land prices, lower taxes and lower rents—and far better living conditions for its people"

because in itself it does not produce. Divide the business capital of the country equally among the people, and we would be not one penny richer than we are. On the contrary, shortly we would be in distress.

"Money represents an earned right to participate in the general production; but if everyone partook and no one produced, what good would money be? We make a fundamental mistake in confusing wealth with money. You can use real wealth: you cannot *use* money: you can only accept it in exchange of uses. That is, real wealth gives value to money; money gives no value to wealth. But let every man in the land produce one useful thing, or reclaim one idle acre more, and wealth increases—real, usable wealth.

"INDUSTRY—that is, efficient industry—is the sole key to prosperity. Therefore it is the most effective means to do away with poverty. It strikes at the cause of poverty. Already, through efficient industrial operation, we have attained a level of material life unparalleled in the world's history. But we have only begun to practice efficiency: the methods we have put into use scarcely scratch the surface; our economies have been molehills compared to which those of tomorrow will be mountains!

"There was a time, not long ago, when engineers pronounced our Highland Park plant one of the most efficient in the world: it was the main unit in our production of Model T Ford cars. But the main unit in our production of the new Model A cars is the River Rouge plant. Highland Park has become obsolete; its efficiency is of the past. That shows how fast we are moving.

"This is just one instance having to do with one factory; but it is true of whole branches of our industrial system. We talk of the efficiency of our railroads, but is it efficiency to grow steers in Texas, haul them as live stock to Chicago, and then haul them as beef back to Texas? Is a factory in New England efficient which must send all the way to Pennsylvania to get water power, when water power at its door is running away? In agriculture, is it efficient for some millions of men to work for five months and do little work for seven months? Is it efficient for business to pay high land prices and high taxes in congested cities where its workers must pay exorbitant rents, when, by moving fifty miles into the country it could get low land prices, lower taxes and lower rents—and far better living conditions for its people?

"Instead of boasting of the degree of efficiency we have attained, we should be appalled by the prodigious amount of waste and inefficiency yet to be eliminated. The building of this machine, this business, has opened our eyes to that waste. We used to pride ourselves on utilizing waste; now we simply eliminate it—there is no waste to utilize. The same principles that enter into the making of an efficient factory should enter into the making of an efficient nation. The shops of this country should be its laboratories, for they are proving on a laboratory scale what can be applied and accomplished on a national scale.

"Finally, we have learned that 'best' is but a relative term. The 'best' of today is simply an improvement on what preceded it yesterday. Tomorrow we marvel at our shortsightedness of today, and establish a new standard entirely—a new 'best' process, a new 'best' price, a new 'best' wage, and, in the case of individuals, a new 'best' measure of performance.

"We always see better today than we did yesterday, because we are one day richer in experience. One new discovery tomorrow may make all the accomplishment of our past look foolish and puny. That is why we don't consider very highly what we have done in the past, and why we think so confidently of the future. That is why I say we have only begun to work, and that this business is but a tool to work with."

OF SUCH is the real Ford machine. The Ford cars you see running over the roads no more represent his mechanical masterpiece than eggs do the hen. His masterpiece is not his car, but his factory. Like the true poultry fancier, whose chief interest is in the hen that produces the eggs, so Henry Ford's chief interest is in the great stationary (*Continued on page 111*)

Braddy and Jim-Jams and Click go in for antiques—the "antiquer" the better!

Late American Lowboy

By HOWARD BRUBAKER

WHEN Braddy was a baby, he was rocked in a paneled oak cradle which was dated about 1680. Later, he sat up for nourishment to the precious Heppelwhite, in a genuine comb-back Windsor high chair with legs like a straddlebug. His juvenile clothing was kept in that awfully good-looking carved chest-on-frame.

When he began to navigate under his own power, he tripped over a funny old hooked rug and bumped his darling head on the shapely legs of a unique butterfly table that had helped to start off the eighteenth century properly. Braddy got his first burned finger by touching the loveliest fireplace tongs in Pequot.

When he violated the laws of civilization, he was made to stand in the corner behind the perfectly gorgeous herringbone walnut highboy that had "come down from Mother's Grandmother Bradford." Instead of reflecting on his sins, he spent such penal terms wishing that he had been present when the highboy came down.

Once, when lying on the grass near the sun dial, he saw a curious cloud, and he thought for an exciting moment that Great-grandmother Bradford was sending down some more furniture from heaven to Pequot.

Such was the atmosphere and such the vocabulary in which Bradford Sillinger grew up—if forty-six inches can be called "up." At seven his yellow curly head came exactly to the top of that terribly effective whitewood secretary at which Mother wrote letters for him to mail.

He was about the only thing in the lovely old Colonial mansion which was not antique. He represented the merger of two noble houses, retaining—so his parents felt—the best features of both. Father called him "Brad," and Mother called him "Angel-heart," "Ducky," "Honeybunch," or "Mr. Yellowby." And sometimes, in moments of especial tenderness, she referred to him as her "late American lowboy."

By seven he had mastered life's great lesson: that only old things were beautiful, that modern stuff was atrocious. Bottles, china, and rusty old hardware might be junk to some boys, but to this antiquarian they were possible "bargains," "finds," and "pick-ups." He had learned to speak with reverence such holy names as Heppelwhite, Chippendale, and Sheraton, and to wrinkle his little fat nose in disgust at the mention of "Golden-oak."

The words apple, cherry, maple, and walnut, which to grosser natures meant eatables, set up in Braddy's mind a reaction of woods with mellow, velvety surfaces, pleasing to the fingers.

THIS passion for the past came to Braddy from constant association with his mother, Bettina Bradford Sillinger, who on this spring morning sat at the ancient secretary writing a note. Dad did not care so much about antiques as he did about stocks and bonds. Nicholas Sillinger was a gold-hunter and a seven-forty-niner.

Every week-day morning he took the train for the city at eleven minutes to eight, and he returned to Pequot when he had found enough money to keep things going. The job must have been pretty easy, because Braddy had heard Dad speak of it as "a dog's life," and everybody that had a dog knew how little a dog had to do.

For instance, Blimp, an Airedale puppy of tender months now romping with Braddy on the beautiful wide-board oak floor while Mother finished her letters. Blimp was a fat, troublesome, and delightful dog who also had a weakness for antiques. He was forever dragging things out of unlikely places for chewing purposes—tasteful old shoes, authentic pre-war bones, and terribly effective scrubbing brushes.

"If the lowboy and the lowdog would kindly make a little less hullabaloo this would be over quicker." Mother looked at

Digitized by Google

the antique Willard banjo clock and added, "My goodness!"

Presently the letters were finished, and Braddy had a nice walk with Blimp, and ten cents for private use. After his visit to the post office, he invested this personal dime in a bargain, or pick-up.

One James Jameson, vulgarly known as "Jim-Jams," got the dime, and Braddy got a charming old alarm clock which would never tick or be alarming again. Long before Braddy had reached home with this antique, the so-called Jim-Jams was at the Red Cross Drug Store, nose deep in soda.

"I stung Braddy Sillinger on an old busted clock I found behind Mrs. Tackley's cow shed," this confidence boy explained to the fountain operator. "Braddy is a nut about junk!"

What Mother said when shown the gem was, "Bless his darling heart!" Father, told at supper, said it was "heredity."

"He catches it from you, Bet. That disease doesn't run in my family."

"He's at the collecting age," said Mother. "Every child has to have that, like mumps."

"Some people never get over it."

"Ouch!" exclaimed Mother. "Well, I'd rather have him spend his money on antiques than on candy. Better for teeth and tummy."

DESPITE this tribute, Braddy realized that his pick-up was not old enough to be beautiful. He therefore decided to put it away to age in a secret place in the cellar. "It'll get more antiquer after while," he thought.

Father said something else, but Braddy didn't quite get the hang of it: "Let's lay off the antiques for a little while, Bet. Bonds are not doing so well."

Mother said, "All right, dear, I'll try to restrain my appetite. It's not early American furniture that bothers me just now, anyhow, but late American clothes. I'm practically all rags!"

Dad said that was a different matter. The conversation then got beyond Braddy's depth, and something was said about a hundred dollars as Mother's birthday present. Everything was quite happy and pleasant, and Braddy was permitted a small piece of pie.

The cellar of the Sillinger home contained a large iron pressure tank filled from the well by an electric pump. Behind this modern atrocity there was a considerable space, which made a splendid private apartment, because the entrance to it was too small for anybody who disliked crawling on hands and knees over a dusty floor.

Braddy had no such prejudice, and he often squeezed in there with Blimp, whose stature and tastes were also low. In this secluded spot, Braddy, the next morning, deposited his passé alarm clock, and began to look about for other antiques to keep it company. Part of a former phonograph record joined this collection, so did several bolts and nuts jarred from passing cars, a piece of electric light cable, a talcum box in pretty fair condition, and some charming medicine bottles.

Braddy was enjoying a week's holiday from education and he had lots of time to be an antiquarian. He used the outside cellar door when entering with treasures, and Mother did not know of the growing collection of Americana behind the tank. All she said was, as she was giving him his bedtime scrubbing:

"That's exactly the wrong shade of hair for a boy who crawls around under dirty things." She gave him what seemed an unnecessarily violent shampoo. "Why do you spend so much time in the cellar?"

"It's a secret," said Braddy. "I can't tell now."

Tilly's formula for a happy life was to take nourishment before and after meals, and she had been absorbing chocolate cake on the gate post when the slicker came along and disclosed his plans

Digitized by Google Original from UNIVERSITY OF IOWA

Conscious of her impending birthday, Mother was in a delicate position and did not press the inquiry. She bore with fortitude several days during which Angel-heart looked like the coal man's little boy.

"My husband grubs in Wall Street and my son grubs in the cellar," she said to Nicholas one night after removing anthracite from Braddy's ears. "That's the kind of life I lead!"

Nicholas chuckled.

"After all, we don't want him to be a sissy, do we?"

THE next morning he went into Braddy's room and gave him three dollars for Mother's birthday present. There were no strings upon this princely gift. Braddy was to buy whatever he thought would please Mother most. The Sillinger family were great believers in self-expression.

"Don't make up your mind too quickly. Take your time. A present for Mother must be pretty fine, you know."

"I'll buy careful and not waste my money," Braddy promised.

"Right-o. I'll leave it to your judgment."

"That's the most dollars I ever had to spend. Prob'ly I won't spend it all for just one thing."

Braddy's last word was a whispered confidence as Daddy was leaving for the train.

"I won't buy anything 'trocious or Mission or anything!"

This was so good that Nicholas Sillinger had to tell it to his fellow seven-forty-niners at the morning auction game.

"Following in Mother's footsteps," said Lon Jameson, father of the so-called Jim-Jams. Lon was no worshiper of the eighteenth century. He was a skeptic and an unbeliever in these matters, and forever poking fun at the Sillingers for their obsession.

"Brad will get his money's worth, all right," Nicholas boasted. "They don't put anything over on *that* boy."

That forenoon Bradley did some window shopping in the marts of trade, but he saw nothing that met his exacting tastes, and all he actually bought was three dollars' worth of nickels and dimes. This small change he rattled at Jim-Jams, and hinted that he might be in the market for genuine antiques after lunch.

When the midday meal was over Braddy said to Mother:

"Maybe I might take a little walk with Blimp. It's a pretty nice day." He looked innocently out the window, where the weather was kept.

"All right, Ducky." Mother pretended not to know what this was all about. "I'm going over to Milltown in the car on some errands, but I don't expect to be gone very long."

So Braddy took his three dollars and his love of the aged and the beautiful and went forth into the busy world. The news that Braddy Sillinger was in funds and on the loose had been pretty thoroughly spread by this time, and Pequoters less than four feet high were prepared to give him a hearty welcome.

The too-talkative Jim-Jams, against his own best interests, had advertised the matter. A shrewder financier would have isolated the antique fiend and cornered the market.

The whole party assisted physically or morally in delivering these goods to Braddy's back yard

As a matter of fact, it was Clinton Smedlay, known in the younger set as "Click," who was the first to lay hands upon the promising customer. Click was a tow-headed boy with a pretty taste in hardware, preferably greasy.

He was not an antique hound but a maker of do-funnies, thingamajigs, and contraptions. The Smedlay barn was rich in iron and tin, replete with straps, buckles, wire, spools, former sewing machines, dismembered express wagons, partial wheelbarrows and ex-baby-carriages.

This mechanical genius could take things discarded by society, and fashion cunning devices which almost worked. Click had all the qualifications of a future inventor—including

Digitized by Google Original from UNIVERSITY OF IOWA

301463

bitter, grinding poverty. He was now in desperate need of a quarter for certain bolts and screws, and the news about Braddy sounded like the hand of Providence.

Click therefore happened to be examining a loose picket on the Smedlay fence at the exact moment when the solvent junk-lover hove into sight.

"W'y, hello, Brad?" he called out. "How are you?"

"I'm very well." Braddy was several sizes smaller than Click, and getting any attention whatever from the older boy was a new experience in his life.

"How's Blimp?" The sociable one patted the lowdog.

"He's very well."

"Nice pup, I'll say. This here picket is a little loose. Le's us get a hammer and nail from the barn and fix 'er up. They're dangerous when they're loose."

"Why?" asked Braddy. Loose pickets were a new idea to him.

"They fall out. You might be walking along here at night and this here picket might fall out, and you'd trip over it and, bing! Down you'd go! Hundreds of people have been bad hurt by loose pickets falling out on sidewalks. Prob'ly thousands. You'd be lucky if you didn't break your arm or leg or something!"

Click put this matter in such a direct personal way that Braddy had to help avert this calamity. As they started back toward the barn he told Click that he couldn't stay long because he had to spend three dollars for old antiques.

Their going, however, was not unobserved. A pair of sharp and envious eyes diagonally across the street had taken in the shameless hold-up. They belonged to Jim-Jams, who had made other plans for the spendthrift's afternoon. He therefore crossed the street quickly and followed Click, Braddy, and Blimp down the alley.

Nor was *his* going unobserved. Jim-Jams had boasted and prognosticated to one Tilly Rickhill, a spherical, good-natured child, and a habitual eater. Tilly's formula for a happy life was to take nourishment before and after meals, and she had been absorbing chocolate cake on the gate post when the slicker came along and disclosed his plans.

"I don't think you ought to cheat a little boy like Braddy," she said. "I'm going to tell him!"

"What's the matter with you, Till? He's got a right to buy stuff with his own money if he wants to, ain't he? Don't be so dumb."

"I'm going to tell him. It's not right to pick on such a little small boy."

"All right, tell him—if you don't want any peanut brittle, or caramels, or gum-drops." Jim-Jams paused for breath. "Or hot dogs, or chewing gum, or—"

"Or lollypops, or éclairs, or milk chocolate." It was clear that Tilly relished this conversation. "Oranges, bananas, nuts, raisins, figs, dates," she murmured.

"Well, good-by. I'll see you later," said Jim-Jams. He hurried away, leaving Tilly Rickhill sitting on the gate post and feeding the inner girl. No specific promises had been exchanged; but it was understood that she had sold her silence for a mess of confectionery.

From her observation post she kept her eye on her investment, for it was her experience that boys could be trusted, if watched. When she saw Jim-Jams (*Continued on page 135*)

The terrors and the challenge of

"BLASTED EARTH *And* BLASTING SKY"

Hot countries lure me, but there have been times when I would have given a king's ransom for a cool breeze or a sip of water

Drawings by Stockton Mulford

By Eugene Wright

I HAVE a leaning toward hot countries. They lure me into strange adventures. Once I chipped rust on the deck of a steamer when my shipmates were dropping unconscious from the heat, and I walked the streets of Soerabaya when the equatorial sun hung over the city like a thundercloud, and there was not a white man to be seen. In Death Valley I tramped and perspired like a boiled turnip, when the thermometer registered one hundred and twenty-eight degrees, and even the rattlesnakes were under cover; and I have had my lips baked black and my eyesight blinded in the Persian deserts.

I like to feel the sun burning into my skin. I like to feel its oppressive, smothering heat crushing in upon me, for it is such moments that make me acutely aware of how precious life is.

The degrees and kinds of heat which a white man can stand are truly amazing. He will prospect for diamonds under a sun that sends the crocodile into the shade, and, provided he has water, he can endure a dry heat that kills his camel beneath him. He can be on his feet and marching under a sun that will strike a horse dead. Desert trails of the Southwest are strewn with the bones of animals that died as their masters went on, and the route from Jeddah to Mecca is one great boneyard for camels. In southern Persia I met a mail carrier walking across the arid plateaus with a water skin and food bags upon his back. Through my interpreter I learned that his donkey had died from the heat; but he had taken its load upon his own bare shoulders, and was walking the eighteen blistering miles to the next oasis. Somehow, a man's nervous energy seems to carry him on when the lesser animals drop.

No man, however, can endure extremely hot weather without losing something very vital to his nature. If you have seen any of the tea planters, prospectors, rubber planters, or men who have lived long under the burning sun, you know at once what they lack. Their faces are grave, and yellowed with the heat; their eyes have a washed-out look. They seem to have lost the fire and vigor of their Northern fellow men, and are mere husks of their former selves. And at any of the jumping-off places for the tropics—Port Said, Havana, Mexico City, Singapore—you can see the contrasts: young men fresh and eager from the North, bubbling with vitality and hungering for the tropic life they have heard so much about; and beside them the hard, washed-out faces of the "old-timers," men who pity the fate of the newcomers, and wish they had their chance again. They would never go down to that heat, never! Some day, I suppose I shall be like that.

If you have never experienced terrific heat and are of a skeptical frame of mind, you may doubt the truth of this article. You may say that it is impossible there should be such heat as I have encountered, and demand authorities and statistics to be convinced. But I have very few figures, for in some cases I have been where a thermometer is unknown and unnecessary, and at other times and other places it has been too hot to bother to turn the head and look at a thermometer.

On the other hand, if you have experienced the desperate sensation the extreme heat of the sun produces, you will need no figures, and will recognize that merciless sun which is a myth to most people and a nightmare to others.

I THINK the hottest five days I ever knew were spent on the Red Sea in June. I was on a merchant ship at the time, and we were sailing East from Port Said. On the Suez Canal it was not very bad, for we still had the winds from the Mediterranean to cool us off; but when we passed the lights of Suez and struck the Red Sea it was like sailing into the open door of a furnace.

I came off watch at the fo'castle head at four A. M., just as the glow of the sun was beginning to clear the horizon. At the time I was wearing only a singlet and a pair of dungarees, yet they were soaked with perspiration. I changed to another shirt and pants and turned in: My bunk was swung beneath the awning on the after-deck.

I could not have slept for more than three hours when I dreamed that I was being scorched by flames from which I could not escape. They burned my skin and seared my face, yet in the stupor of utter fatigue I slept on. The dream persisted: I became unbearably uncomfortable, and finally the reality of the heat and the mental exhaustion of trying to escape it awakened me. The awning was about three feet above my face, and the sun was up and beating down through it as if it were a pane of glass. Still drowsy with sleep, I tumbled down from my bunk and lay upon the deck near the taffrail. There, the heat was less intense.

Not long afterward, semiconsciously I became aware of a cool, sharp breeze upon my left arm. I thought a wind had sprung up, and was thankful. Then the breeze seemed to come in gasps, short and quick. I awakened to find that the breeze was merely the slow, regular exhalations of breath through my nostrils striking my arm.

Let me quote from my diary:

"MONDAY, JUNE 14th. I have not attempted to write during the past forty-eight hours. The heat has been too intense, and I believe if I had touched this notebook with my arm it would have turned into a soggy pulp. Even now I must write with two blotters under my (*Continued on page 78*)

JOHN J. BERNET, president of the Erie Railroad, right-hand man of the Van Sweringen brothers, is a downright, forthright railroader of the old school. He was a blacksmith before the ticking of a telegraph key lured him away from the forge and started him on one of the most picturesque of modern railroad careers. When the Van Sweringens—those silent financial geniuses of whom you hear so much but from whom you hear nothing—bought the "poor old Nickel Plate" they took Bernet from the New York Central and made him president of their road. He set the Nickel Plate up in great style, and now the Van Sweringens have handed him a bigger job—the presidency of the Erie. Bernet was born in Brandt, New York, sixty years ago. Who said *The Day of* Railroad Giants is Over?

By Sherman Gwinn

TWELVE years ago two young real-estate men of Cleveland bought a single-track run-down railroad five hundred and twenty-three miles long. They had a hard time to raise the initial payment on the purchase price. They knew nothing of railroading. The road they bought was regarded as one of the "joke" railroads of the country.

Twelve years ago this was, I said, and as time goes that is but a tick of the clock!

Today, these two Clevelanders own and control a network of railroads that aggregates more than nine thousand miles of track, more than one hundred and thirty-five thousand employees, and a billion and a half dollars in assets. Their personal fortune probably never has been estimated accurately, but runs into many million dollars, which gives an indication of how wisely they have built. These two —the brothers, O. P. and M. J. Van Sweringen—have become the most powerful and astonishing individual figures in the present day of American railroading!

And the question of how they did it has become one of the mysteries of the day. From where, in such magic fashion, did these two local real-estate dealers get their enormous resources and their uncanny knowledge of needs and methods in a field to which they came as utter novices?

It is granted that the answer to much of this mystery reposes in the genius, vision, and boldness of the Van Sweringen brothers alone, and they are silent; but the other day, in the unpretentious New York headquarters of the Erie Railroad, which they control, I found the answer to other parts of it. It is personified in a hard-boiled ex-blacksmith railroad executive named John J. Bernet.

When the Van Sweringens bought their first railroad, the Nickel Plate, from the New York Central, they wisely looked around for an experienced railroad man to run it. To the consternation and dismay of his friends, John J. Bernet took the job. At the time he was a vice president of the New York Central System and ahead, at no great distance, his friends saw the presidency awaiting him. To quit such prospects for the "poor old Nickel Plate" was like quitting an ocean liner for a tub.

"The old fool!" stormed Bernet's friends. "The young fools!" lamented the friends of the Van Sweringens. The elder of the brothers was only thirty-seven, and the other was thirty-five. They had paid $2,000,000 in cash for the Nickel Plate, and had obligated themselves to pay $650,000 a year for ten years. Only crazy men would think the road could earn that much. It had never paid a dividend on its common stock, pointed out the friends.

Built in the early '80s, largely for promotional purposes, the road had never even achieved the objectives stated in its corporate name—the New York, Chicago and St. Louis. It began at Chicago and ended at Buffalo, getting nowhere near St. Louis or New York. In its general territory, three greater lines paralleled it and divided the cream of the business. Even its sobriquet, "The Nickel Plate," had been given it as a joke, based on William Vanderbilt's rueful remark upon acquiring the road for the New York Central, that if the "thing had been nickel-plated" it couldn't have cost him more than it did.

But Bernet, with shrewd eyes, long had been studying the Nickel Plate. During the twenty-seven years that he had been rising from country blacksmith to telegraph operator, and to one of the biggest railroad jobs in the country, he had upset more than one railroad tradition. In the Nickel Plate he saw but the beginning, but the nucleus of what might be; and in the soft-spoken Van Sweringen brothers he glimpsed a daring that was an equal to his own. They, too, were tradition smashers.

"We don't know railroading," explained the Van Sweringens.

"Good!" said Bernet. "Neither do a lot of railroaders who think they do. The difference is that you admit it."

IT WAS characteristic of both the Van Sweringens and Bernet that nothing was said about salary. It was characteristic that no contract was written. And in four years' time Bernet had plated the Nickel Plate in gold!

In 1916, the road's operating revenue was $23,969 a mile; by 1920 Bernet had raised it to $44,867 a mile. When he took the road its average revenue trainload was 355 tons; in four years he had increased this to 771 tons. Its earnings per freight mile in 1915 were $1.82; in 1919 they were $6.32, and to go higher. And while traffic expenses were $1,075 per mile in 1915, they were down to $604 per mile in 1919; while gross income increased more than 100 per cent, a rise of only 25 per cent in operating expenses took care of the new business.

Simultaneously, Bernet rebuilt the road. He double-tracked much of it, bought new cars and locomotives, erected new stations and freight houses, and paid that $650,000 a year to the New York Central. Also, he paid dividends of 11 per cent on the common stock—and that stock which had been at $35 a share leaped far above $200 a share.

"To get Western business our tracks should penetrate the West," Bernet told the brothers, and his blunt forefinger traced over two lines on the railroad map: The first line, that of the Toledo, St. Louis and Western, linked the Nickel Plate with Toledo and St. Louis—it had just emerged from a receivership. The second, the Lake Erie and Western, ran from Sandusky, Ohio, to Peoria, Illinois, making junctions with both of the other lines. The Van Sweringens bought them, within three years of their purchase of the Nickel Plate! The three roads became one under Bernet management.

AND again the finger of the ex-blacksmith traced over a line on the map—a line that began at the Atlantic Coast in Virginia and cut westward through the rich Pocahontas coal fields to Chicago. This was the Chesapeake and Ohio Railroad, with 2,651 miles of track and paying four per cent dividends on its common stock, dividends that shortly were to be more than doubled.

"We need new industries along the Nickel Plate," said Bernet; "but they won't come in until we can supply them with steam coal. The C. and O. is a coal-hauling road and through the Hocking Valley, which it owns, we make junction with it at two places. It can send us its cars loaded with coal, and we can send them back to it loaded with merchandise."

The Van Sweringens bought the Chesapeake and Ohio.

Then followed in rapid order similar purchases, of the Père Marquette and of the Erie, two roads which totaled almost five thousand miles of track. No longer tyros but masters in railroading, the brothers now envisioned the formation of a fourth great Eastern railroad system that would rank with the Pennsylvania, the New York Central, and with the Baltimore and Ohio. Their dream had become one of empire, and this in a scant half-dozen years!

That dream of the Van Sweringens lacks only Federal consent to become a reality. They have the roads, able managements, and the money. Their properties yearly are paying them new fortunes in dividends. They are the largest individual owners of railroads in America. And their chief-of-staff, their probable choice to head the proposed system, is John J. Bernet. They make no secret of the fact that, in their opinion, Bernet is (*Continued on page 129*)

"Things don't matter so much—
but wanting them does, and working for them"

Swooping Hawk And Weeping Willow

By Nelia Gardner White

ILLUSTRATED BY VICTOR C. ANDERSON

HELGA LIND, mail carrier for the Sweden Hollow Route, drove into the rainy morning gladly. She liked rain. She liked snow too—beat of sun and whip of wind. There was something about rain, though, especially on a spring morning like this, that released some seed of joy in her, as it released the upward-reaching, winter-bound things of earth. The world was so quickened into tender greenness by it. And when the sun came out after a May rain, Helga hurt sometimes within, because it was so sweet and beautiful and there seemed to be so few to see the beauty.

When she came to the top of the little hill just out of Sweden Hollow the light rain broke into a rush of blue sky and sunlight, and she could see below on the slope the Puddles orchard. It was a run-down orchard; there was nothing about the Puddles place that was not run down. But the apple orchard was doing its best to cover that up. Helga had many bright moments stored up for remembering; but she crowded them back and let this one have a big place. So pink, so fresh and rain-washed—the fragrance came up to her on a little wind and she took down the front curtain to let it in.

As she drove past the orchard she saw the eldest Puddles girl standing in the wet grass beneath an apple tree, and she wondered a little. There was no mail for the Puddleses. There never was any. But sometimes Helga drew up and talked a moment to the children, and at Christmas she always managed a little remembrance for all ten of them.

She did not stop to-day. Some of the children were running, barefooted, in the muddy back yard, and she could hear a baby crying somewhere. The chickens went scurrying about across the littered front yard for after-shower worms. Helga looked away from the house. It was too ugly, too shiftless and unbeautiful, after the orchard. *"Lazy as Sam Puddles!"* the neighbors were wont to say.

But she did not get by, after all. "Miss Lind! Hoo—oo—*Miss Lind!*"

She stopped old Net and looked back. It was the eldest Puddles girl running down the hill from the orchard through the mud and the wet grass. There had been a kind of desperation in her voice. When she came, breathless, to the side of the buggy, Helga saw that there was desperation in her eyes also. It surprised her into a quick interest, for the shiftlessness of the Puddleses had always been measured by their placidity. And here was Joy Puddles, with eyes rebellious and bewildered and anxious.

"Hello, Joy."

"Oh, Miss Lind—I wonder if you'd tell Mr. Trent, down to the drug store, to fill out this prescription; and if he'd go in next door and get some safety pins and half a yard of flannel—for baby's bands, you know—and if you'll ask Lars Larsen to stop and get it on his way up to-night—"

"Why, Joy! *There isn't—!*"

Joy Puddles tossed back her dark head, with its careless, home-done shingle.

"Yes, there is; and Ma's awfully bad. And the baby's so little—it doesn't weigh five pounds, even. And the kids are all so noisy. Seemed as if I couldn't stand it—that's why I was up in the orchard just a minute. Doc Davy didn't get here till it was all over, and I got scared, all alone. Pa, he's no good to help. . . . Gee, Miss Lind, I hate babies!"

Helga felt a queer shock at the passion in Joy Puddles's voice. And she could think of nothing to say, because, she admitted to herself, why wouldn't Joy hate babies?

The girl turned away. "Well, I'll have to get back to Ma. I'll be awfully obliged to you for telling Mr. Trent."

HELGA went on, but the day's beauty was forgotten now. Which was why Helga Lind was loved all along R. F. D. No. 3. People were more important to her than days, and Joy Puddles had suddenly become, to her, not one of the ten—no, eleven now—Puddles young 'uns, but a person in herself, a person with longings and responsibilities and repressions.

Helga remembered her face, thin and too old for seventeen—but pretty in a stormy, dark way. And wasn't it like the Puddleses not to have flannel bands, or *safety pins*, on hand? Helga would have laughed at that had it not been for the remembrance of Joy, standing there in the wet orchard, running away, just for a minute, from the weight thrust upon her young shoulders.

Sairy Overhiser, a little crocheted shawl around her shoulders, came down to the road. "Well, what's the news to-day?" she called to Helga. Sairy did love gossip. But in a friendly, interested way, and Helga gave gossip as freely as she gave service of any kind.

"OLD Mr. Manning's had another stroke," she told Sairy; "and the Puddleses have another baby."

"No! You don't tell me!" Sairy healthily put aside old Mr. Manning's nearness to eternity for the life just beginning. "Land! That must make nine."

"Eleven," Helga said dryly.

"*'Leven!* Is that right? Well, I like big families—I always said that an only child didn't know what livin' was—but, I dunno. 'Leven's a good many, when there ain't more'n a livin' for two in that old Puddles place. What'd she name it?"

"I don't know; Joy didn't say."

"*'Leven!* Well, I got a little dress I was makin' for Cousin Joe's baby; I guess I'll take it down. Joe's wife has made dozens of everything, and she won't miss it."

Helga gave Sairy a quick smile. "That's nice of you," she said.

When she told the family that night, the Linds found it very funny. There were a good many of the Linds—but not eleven! They began to name the Puddleses: "Joy; Archibald; Marcella, the cross-eyed one; Philomena, the dirty one; Theodore, the foolish one. . . . Heavens, that was only five."

"Marj'ry Alicia—you didn't say her," put in Emil.

"And Junior."

"And Calvin Coolidge Puddles—that was last year's baby."

Before they had finished supper, Sairy Overhiser called up: "Say, Helga, what in time do you suppose they've named that new baby of Puddleses? *Gladiolus!*"

The Linds went into a gale of merriment.

But Helga was sober as she cleared the table: *"Gee, Miss Lind, I hate babies!"* Joy had said. And presently her brother Carl stood in the doorway.

"Those fool lazy Puddleses," he said. "It's a wonder they wouldn't give Joy a rest!"

Afterward, Helga remembered the passion of resentment and feeling in his voice, and wondered why she had not

"It's like that hawk up there," he said, with a kind of fierce soberness. "You just get to doing something you want to do, and something always seems to sort of swoop down on you and kill it"

known at that moment what it showed.

The next week, when Rush Sloan came for a visit to his little artist's cabin above the Linds' orchard, Helga told him of Joy.

He laughed at her, ever so little, and with tenderness, "Helga, don't dare tell me you've found somebody else to worry about. Worry about *me!*"

"Oh, *you*—you can take care of yourself; but Joy can't."

But she was glad he had come. Very glad.

WHEN Gladiolus was three weeks old, Joy brought her down to the mail box for Helga to see. "She's awfully little," Joy said. "But she's pretty, isn't she? Isn't her hair curly!"

Helga laughed. "I thought you hated babies," she said.

Joy's thin, vivid face became hard with its rebellion. "Well, I do," she said; and then she laughed, looking in direct contrition at Helga. "Only not *this* one."

After that, Helga loved Joy. She wanted to help her; but she could think of no way. You could not give the Puddleses charity. They were too proud for that, in spite of their shiftlessness. And what was there you could do? She talked to Carl about it.

"Don't know," he said, a little shortly. "She won't let you do anything—she's touchy."

But there was something. Helga found it out one late June day. As she crossed the little bridge down past the Puddleses she came upon Joy, on the bank of the creek beneath the big willows, and she was crying.

Helga put aside her government duties for duties more important, drew up by the roadside, and went down the bank to Joy. "What is it, Joy?" she demanded.

Joy sat up, looked resentfully up at Helga, so tall and fair and serenely beautiful, with her soft braids about her head, and her steady, understanding gray eyes.

"Nothing," she said sullenly.

Helga felt definitely repulsed, but she couldn't go. "Is the baby all right?"

"I guess so."

Helga flushed a little. She wasn't used to being pushed away, and it hurt her. But she refused to be pushed. She dropped down on the grass beside Joy. "Joy, what's the matter? Is the work so hard you can't stand it?"

Joy would not look at her; but some of the enmity went from her voice: "Oh, I don't know. It's just everything! The dirt . . . and the crying . . . and never getting done . . . and nobody happy! If only the kids would be happy, I wouldn't care how naughty they were. But they whine and tease—oh, I can't stand it! You get to thinking there isn't any use trying." Her voice was fierce, and not young enough. It made Helga want to cry.

"I know," Helga said gently.

"No, you don't! Nobody knows that hasn't lived it. You folks—there's a lot of you, but you all help, and you keep things up. But once you get behind, you never get caught up again. If only the kids would mind; but they go to Ma—she's easy—she always lets them have their own way. Oh, I get to feeling so blue, I want to die. I used to go off like this and kind of pull myself together, but now, even down here, I have awful thoughts.

"I looked at that willow tree that I've always loved so, and even that seemed like me—reaching out a million branches after things, and then just weeping; and me, I've wanted so many things too. I wanted a pretty yard once and I tried to get it; but it's no use, with chickens running loose and the children digging everywhere.

"And I wanted to get the house painted, and saved egg money and saved it—and there was another baby, and it took it all. And I wanted to go to high school; and I did go, in spite of everything; but I couldn't finish, not with Ma sick and all the work to be done nights. I wanted to be a teacher—*gee!* All the reaching, just like those willow branches—and now just a feeling like crying inside all the time. . . . Gee, Miss Lind, I wish I was dead!"

HELGA wanted to put out a hand to Joy's slender brown hand on the grass; but she had a feeling that Joy would fly, like a wild thing, if she touched her. She sought desperately for the right words to say.

"Listen, Joy! Why don't you finish up your high-school work at home? I've got all my books yet, and I'll bring them up, shall I? If you could get to be a teacher, why, it would help out more at home than any other way, wouldn't it?"

Joy stared at her. "I couldn't," she said at last. "There's no time to study, except late at night—I couldn't!"

"Yes, you could. I'll help you all I can. You could get a little time Sundays, couldn't you?"

In spite of herself, Joy's eyes grew hopeful. "Maybe. But, Miss Lind, I get so tired."

"I know. But it's always seemed to me, you don't mind the tiredness when you're working toward something special. It took me a long time to go through high school. I was nineteen. Everything went wrong on the farm those years. I'll bring up my books anyway, and Carl can keep you posted on things. I know you can do it."

Joy had scrambled to her feet, and stood with her back to the hundred-year-old willow. "Gee!" she said. "Gee—I guess I will try!"

When Helga had driven on a way, she looked back and saw Joy still standing there against the willow tree. She felt a hurt so deep that her eyes stung with tears. It was too cruel, to have life mean that to seventeen—a reaching and a weeping.

And yet, Helga sensed, it was better to

Digitized by Google Original from UNIVERSITY OF IOWA

think of life even that way, than never at all.

She hunted out her old schoolbooks the next morning. Carl came to her as she searched. "What you looking for?" he asked.

"Books, for Joy Puddles. Did you have my Cicero?"

"It's in my room. What does Joy want of it?"

"She's going to study—finish up her high-school work and get ready to teach."

Carl did not go on with his questions. He became very quiet, sitting there on the edge of Helga's bed, one knee pulled up into the circle of his arms. Carl was the moody Lind boy, and Helga was used to his sudden silences; but there seemed a more special quality to this silence. Helga reached for a chemistry book, forgetting Joy in concern over Carl. But Carl spoke presently.

"I'll walk up with you and take the books," he said suddenly.

So presently they started, their arms filled. But when they came to the top of the hill, Carl said, "Let's go up there under that chestnut tree for a while."

They did—stretched out on the thin green grass in the Sunday stillness. Carl, his dark eyes unhappy, leaned on an elbow. Helga knew he wanted something; but what was it? Why had mention of Joy stirred him so?

She said, abruptly, "I feel terribly sorry for Joy. Do you know what she said?" And she told him of Joy and the weeping willow tree.

"Well—*'tis* like that," he said, with a kind of fierce soberness. "It's like that hawk up there—you just get to doing something you want to do, and something always seems to sort of swoop down on you and kill it—or you—or something! How'll Joy Puddles ever get to be anybody? How'll I?"

HELGA turned her head and looked at him. He was staring straight up at the blue now. But there was something in his face, some feeling so intense, some groping so fierce, that Helga felt her throat throb with pity.

She looked away again as if she had had no right to see. "What is it, Carl? Your . . . drawing?"

He gave a fierce nod. "Here I am—past seventeen—and no more chance of getting ahead than Joy has of being a teacher!"

"Why, Carl!"

"Well, have I? After you've plowed all day or picked apples, you're too tired. And it's hard to sneak off and have folks laugh at you. There isn't any place, without the boys running in—and—and, Helga, I *can't* do it with 'em looking on!"

"No, of course not," Helga said quietly. "I—I didn't understand. I didn't know it meant quite so much to you."

"Seems as if I've got to draw! I suppose Joy feels like that about teaching. I get to feeling terrible inside, just hating everybody because I can't. But how're you going to get away? You can't study without money, 'n' you can't go off and leave your folks when they are counting on you."

Helga's throat throbbed harder. "No," she agreed simply. No more. They were still then. All the world seemed stilled. Helga's mind, though, was filled with a strange confusion. *Two* of them—Joy and Carl—reaching!

When Carl spoke again, his voice had pleading in it. "Do you think I'm a fool, Helga? Maybe I never could draw, maybe I just think I can because I want to so. Only—when I look down there and see the steeple coming up, so white, and all the trees so green after the rain, and the air so clear—" Sudden, hot, boy's tears came down across his face, and he put up his arm quickly across his eyes. "Gosh—I'm a fool!"

"No, you aren't! No, you aren't, Bud!"

"Well, what do you feel like that for, then, 'n' then never get a chance to do anything? What (*Continued on page 114*)

Helga sought desperately for the right words to say

My Fourth Of July *Wish*

By Edgar A. Guest

YOU probably never have had to write Fourth of July verse. I have! It has been my annual job for a long time. Several years ago, the Glorious Fourth being near at hand, I was sitting in my office, trying to think of something appropriate to write for the Detroit "Free Press."

It wasn't easy! I had been doing Fourth of July verses so long that I couldn't think of anything new to say. So my mind wandered to other matters.

The first thing I knew, I was thinking about my boy Buddy: wondering what kind of man he will grow up to be; trying to figure out just the kind of man I *want* him to be.

"If some good fairy should appear right now," I said to myself, "and promise you one wish about Bud, what would you ask for?"

At first I thought I'd ask that he should be honest. But then I hesitated. The meanest man I ever knew was absolutely honest! He paid his just debts to the penny.

But that man was bitter and hard and quarrelsome; mean with his neighbors and a penurious tyrant in his family. No! Honesty alone would not be enough.

Then I thought I'd ask for Bud to be brilliant. But I gave that up, because I've known of too many clever men who, nevertheless, landed in jail.

What I wanted was a blanket wish; one that would cover his career as a man, a neighbor, a friend, a stranger; one that would hold him safe, no matter where he went or with whom he was thrown.

Out of a clear sky, my wish came to me with lightning-like clearness. If I can have only one wish for my boy, I said to myself, it is this: That all his life he shall love his country.

The wish I made that day still stands. If my boy does his best as an American citizen, I shall have no fears for him.

Digitized by Google
Original from
UNIVERSITY OF IOWA

But I hope Bud won't make any mistake about the real meaning of the word "patriotism." It is something more than cheering the flag on the Fourth of July, or at other times when everybody else is doing it.

Mob patriotism is common enough; sometimes it is tawdry and undignified. It is easy to cheer for the flag when everybody else is doing it. It is fun to sing patriotic songs with the crowd. In moments of excitement and general enthusiasm, even traitors have been known to cheer.

What I want Bud to feel is that patriotism is a personal responsibility with *him!* Not a dozen times a year, but *all* the time. It is not an occasional enthusiasm for parades and declarations of war. It is something to influence his life every single day.

I want him to look upon his country as he looks upon his mother and me. We are not perfect. We have our faults. But he loves us for the good that is in us; and because we give him love, protection, and a home.

I want him to feel that way about his country. It is not perfect. But I want him to love all that is good and fine and wonderful in it. And I want him to be grateful and loyal to the land which gives him protection and a home.

I WANT him to appreciate all this, and to give his best in return. I don't want him to cheer the flag—and then go out and break the first law which interferes with his own notions.

I want him to respect other nations, just as I want him to respect the neighbors who live on our street. I don't want him to think that all the good is on his side of the fence.

I hope some day to send him to Europe, to learn. But I hope that when he gets there he will also teach. Not by boasting about his country! But by giving an example of a modest, tolerant, courteous American citizen; a walking advertisement of the best traits of a man and a gentleman.

I don't want him to go to Europe and be a ridiculous American, a pompous and boastful American, a drunken and riotous American. I want him to feel that, as the Flag represents him abroad, so he represents the Flag. And I want him to respect his country too much to disgrace her in the eyes of others.

I want him to remember the impression made by Colonel Charles Lindbergh. For the first time in history, that youngster flew from New York to Paris, carrying his country's flag with him. And though all Europe cheered him, statesmen showered him with praise, and kings and queens delighted to do him honor, the boy remained unspoiled. He was representing his country, and he knew it. He realized that his responsibility was a grave and beautiful thing. (*Continued on page 134*)

If You Ask Me:

There is a spark of the divine in every man

ALL great religions contain the doctrine that men are equal in the sight of God. They admit no ultimate distinctions among human beings. Every person is infinitely precious, because he has in him that mysterious power which philosophy calls life, and which religion knows as soul.

Modern science tends to replace this stimulating and challenging conception with the picture of human machines strutting mechanically across a little stage of space and time. It has become the mode (for there are fashions in physics too) to think of man in terms of his chemical components—which make him but a highly unstable compound of solids, liquids, and gases, operating solely on the principles that appear to hold in mechanics and chemistry. Thus, science tends to think of man as similar in all essentials to the engines that run our motor-cars, and the great presses that strive to satiate the metropolitan appetite for "news." Man has made so many and such marvelous machines that at last he has become enslaved to them in thought as well as in action, in philosophy as well as in life.

Scientists write of "the mechanistic interpretation of life," and saddened men, from La Mettrie to Clarence Darrow, announce to the world that they and their children are machines.

Perhaps they have been a little hasty, and have done injustice to their own natures and the nobility of their own lives. Even the blindest motion of the lowliest organism might have made them pause. The patient plant curling its roots around an obdurate obstacle, the little protozoön veering about to find some opening to the food it seeks, already smile in the face of the mechanist. The living cell is everywhere selecting, digesting, transforming, rebuilding, creating, reproducing. The severed structure is resolutely regrown; the gaping wound is bridged over and healed with vital power and unconscious skill. What principle of mechanics or physics can explain this self-directive purpose in the simplest life?

Or who shall interpret mechanically the growth of a child? Here at every moment is something new under the sun. Never have the atoms shaped themselves precisely so before. And now how they throb with a new vitality, and the eyes sparkle, and the face brightens with smiles, and the little fingers close hungrily upon this novel and delectable world. What magic alchemy is it that changes the lad into the mature and responsible man, and transforms the light-hearted girl into a mother self-forgotten in her child? So the radiant energy of life overrides, in reproduction, the black chasm of death, leaping from generation to generation, drinking at love's fountain of perpetual youth, and laughing at all mortality. How shall we capture that divine exuberance and imprison it in our impoverished formulæ?

We know, with a direct perception surer than any science, that we are not machines. There is more in genius than all the elements, and more in consciousness than an automaton's dream. We feel in ourselves a certain power of creation.

We perceive that we are not quite the victims of our environment; that there are times when the Living Will of the world, embodied in us transiently, strikes out upon the brute inertia of encompassing things, and remolds the earth a trifle nearer to the heart's desire.

It is that power which scientists forget when they judge themselves machines. They have seen life harassed and driven from a thousand sides; they do not see with what creative patience it rises from the germ to the genius, how it covers the earth with its conquests and its beauty, how it grows from brutality and greed to generosity and gentleness, how it flowers out into the sacrifices of motherhood and the forgiving wisdom of the sage. They lose the kernel of life in studying its changing shells and homes. It has slipped through their fingers as they have dissected corpses and pored over dead tissues on microscopic slides. But let them look again into their children's eyes, and they will know that man is greater than their philosophies, and harbors in him, even in his downfall and his desolation, some ennobling fragment of the Creative Power that fills every field with flowers, and every wood and stream with incalculable life.

Will Durant

"Carry Your

By Mildred

DRAWINGS BY R.

HALF a dozen trains had just pulled into the Grand Central Terminal in New York City.

Through the gates that lead from the tracks poured line after line of incoming passengers. Outside the ropes several hundred men, women, and children waited with varying degrees of impatience for friends or relatives to arrive. Hundreds of persons scurried here and there, buying tickets and magazines, or looking up schedules. Still other hundreds rushed to and from the streets, or up and down the stairs to the subway trains that rumble ceaselessly beneath the station.

Through this milling mass of humanity, a little old woman pushed her bewildered way. She was alone and she was frightened. All her life she had lived in a quiet little Vermont village whose entire population would have been swallowed up in this hurly-burly as completely as a handful of sand is swallowed up by the ocean.

Now and then the little old woman paused and peered up anxiously at the strange faces above her. It was plain that she was looking for somebody. Presently she caught sight of a colored man in uniform. She hurried up to him. "Do they call you a red cap?" she asked breathlessly.

"That's what they *calls* me, lady, and that's what I *is*," was the cheerful reply. "Can I help you, lady?"

The little traveler handed over her bag and umbrella and straightened her bonnet. There was a look of immense relief in her nearsighted eyes.

"My daughter is sick and couldn't come to meet me," she explained: "she said not to trust anybody but a red cap, and to watch out for pickpockets and such. I'm going to live with my daughter," she added, as she fumbled in her old-fashioned reticule for a bit of paper. "Here's her address."

The red cap copied the name and address in a small vest-pocket book, so that he could notify the daughter that her mother was on the way. Then he put his patron aboard the proper subway train in charge of a conductor who promised to see that she got off at the right station.

As the colored man turned to leave, the old lady thrust a roll of bills into his hand.

"You keep it till tomorrow," she whispered. "It's the money I got for my house. My son-in-law will stop by for it on his way home from work. I'm afraid of pickpockets."

A few minutes later, the red cap spent a nickel of his dime tip to telephone the daughter that her mother's three thousand dollars were safe in the keeping of the station master, from whom it could be obtained on demand.

I ASKED Chief Jim Williams, who for nearly a quarter of a century has been head of the red cap service at the Grand Central Terminal, if many people use station attendants as safety deposit vaults. His answer was in the negative; but for all the evidence to the contrary, any man on the staff could without serious risk be picked for such a responsibility. From the beginning, every attendant has it thoroughly drilled into him that his red

Bags, Sir?"

Harrington

M. BRINKERHOFF

cap is a badge of integrity. "And I'm proud to say," the chief told me, "that it is. During the twenty-odd years I have been on the job, I have never had to discharge a man for dishonesty. Just the same, where the human element is involved it is always well to take every precaution.

"Travelers ought never, under any circumstances, give their bags or parcels over to a station attendant without making a mental note of the number on his cap. It is put there for the protection of the public. If you have a porter's number and anything goes wrong, you have a way of checking up. Without it, you are helpless.

"MAYBE you will be surprised," Williams went on, "to hear that carrying hand bags is by no means the only job that a red cap is called on to do. The fact is, he must be ready to try his hand at almost anything.

"He must for instance be a regular walking information bureau. In dozens of important matters, he is the traveler's guide. He is asked anything, from 'Is my face clean?' to, 'What is the best hotel for a woman who is alone?' And if he can't answer offhand all the questions fired at him, he is pretty sure to know some official who can.

"Last-minute shopping is a common chore. A man who has been to the city on business dashes in to buy his ticket, and remembers that he has forgotten to buy a present for his wife. He sends a red cap out for a box of candy. Or maybe he wants a clean collar for himself.

"Not long ago, a man in the waiting-room called an attendant and said he wanted some live flies, and he wanted 'em quick. He said he would pay a nickel apiece for all he could get. At first, the boy was stumped. Then he thought of a certain basement restaurant not far away where he sometimes got a 'sinker' and a cup of coffee. It seems that this place is always well supplied with flies, summer or winter. The boy beat it around the corner, got permission from the proprietor, and went to work. Fifteen minutes later, he returned with a small bottle full of flies.

"Lordy, Cap'n," exclaimed the red cap, "what's in he'ah?"

"The purchaser seemed satisfied with the catch. At any rate, he didn't bother about checking up, but handed the boy a couple of silver dollars. He then proceeded to empty the bottle into a long pasteboard box with air holes punched in it. He explained that inside the box was a Gila monster, a sort of big lizard he had caught in Arizona, and made a pet of; flies were its favorite tidbit, and it got restless when it had to go too long without them.

"EVERY now and then, one of the boys is called on to help out a mother with several small children on her hands. Most of our attendants, especially the married ones, would just as soon carry babies as suit cases. But during the war we had a boy of eighteen or nineteen who always dodged acting as nursemaid, even for five minutes. You can imagine how wild he was one day when it looked as if he was going to be left with a six-months-old infant on his hands.

"This is the way it happened: He was standing near the gates when the Montreal Express pulled in. Right next to him was a very excited young lady with a baby in her arms. We afterward found that she had come to meet her husband, a Canadian officer who had lost a leg overseas and had just been let out of the hospital. The baby had been born after he got to France, and he had never seen it.

"Well, when the young lady saw her husband, who had gone away so strong and gay, coming through the gate hitching himself along on his crutches, she clean forgot everything else in the world. She pushed the baby into the arms of the nearest red cap, who happened to be the boy I was telling you about, and she just naturally flew to meet that thin, white-faced young man.

"For a long time, they just stood there holding on to each other, and looking as if they couldn't believe it wasn't all a dream. Then, laughing and crying at the same time, she took one of his crutches and made him put his arm over her shoulder. Walking like this, they started for the cab stand, followed by the porter who was carrying the young officer's bags. The red cap with the (*Continued on page 84*)

I couldn't escape the feeling that practically nobody was being made to realize the true meaning of the Fourth of July

"*I Just Love* Americans"

FANNIE KILBOURNE'S

latest story about the

Adventures of DOT AND WILL

EVERYBODY in Montrose appreciates Miss Prescott; but there's no denying that she makes life harder at times for pretty nearly every one of us.

If she isn't nagging the merchants to close up Saturday nights, or the Ladies' Aid Societies to do more for the new hospital, she's running the school board ragged. She's the only woman member; but she can dig up more trouble in a day than two men members can in a month.

Everybody thought when she adopted little Ben Brace that that would keep her busy and quiet—but, mercy, it has just seemed to give her added strength.

There's no doubt that a woman like that's fine for any town; but she certainly doesn't make it any more restful. One of Miss Prescott's favorite stunts is making people remember the meaning of things. She's always saying, "Now, with all the presents and parties of holiday time, we mustn't forget the meaning of Christmas." Or, "Of course it's very nice for you girls to have a pleasant time in your Charity Club, but you mustn't let the fun make you forget the meaning of charity." And so on.

We've remembered the meaning of everything, from state song-bird week to Valentine's Day. It's odd that not till this year did she take up the Fourth of July.

WE ALWAYS have a grand time on the Fourth of July. Of course there's the parade in the morning, and a lot of our husbands march in it. Then there are the lodges and the fire department and the societies and both of the bands. But the parade starts assembling at nine and is all over by noon. Then comes the real fun.

For I can't even count back how many years, we've always had a Fourth of July picnic out at Smiley's Grove. It started, I guess, ten or fifteen years ago with just six or eight families. But what with people bringing along friends, and marriages, and new in-laws, and new children, it's grown and grown till it must be a quarter of the town, now, that goes.

The picnic is always just the same. The bunch from Verblen is always there when we get there—the grove being nearer Verblen—and every year they pretend they've eaten their part of the lunch already. Mrs. Long always brings some of her famous home-baked beans and brown bread. Some old lady always looks at our young married crowd and says to some other old lady:

Digitized by Google
Original from
UNIVERSITY OF IOWA

"My, doesn't it make you feel old to look at these children all grown up!"

We pay the Smileys ten dollars for the use of their grove, and they let us go in the farmhouse kitchen and make coffee, and move their little old organ out under the trees to sing by. We always start with the popular songs, but usually wind up with the old-timers; "S'wanee River" and "The Banks of the Wabash" and "Clementine."

Usually, someone strikes up "Marching Through Georgia;" but long before we get to "So we sang the chorus from Atlanta to the Sea," the Marks and the Van Cleves, who come from Down South, pull whoever's playing off the stool, and this starts a riot. Then we all sing "Dixie," and the fun goes on. We all chip in for fireworks in the evening and stay till the last rocket's been set off.

Of course there are always little things that are different each year, like the time Roger, who was setting off the fireworks, absent-mindedly stuck a piece of punk in his pocket, and went around smoking for the longest time before anyone noticed that he was on fire. And the year that Frankie Kirsted, who is a perfect little pest, threw the youngest Merton baby in the creek, to see if she'd float.

But, in the main, the picnic is usually about the same. The children all get cross and tired before it's over, and go dead asleep in the cars on the way home, and we girls usually say that it's more bother than it's worth. But we know that it isn't. Not one of us would miss it for anything.

IF ANYONE had asked me if we'd ever consider making it any different I'd have said emphatically that nobody would. But I would have been reckoning without Miss Prescott. When she gets an idea in her head, it's as good as carried out already. I never did see anything like the way she can make people do what she wants them to. And this Fourth, if she didn't get the idea that we ought to have something patriotic at the picnic!

She spoke about it first to Rosemary and Dulcie and Mrs. Frank Kirsted and me. Said that it was always the married girls who were the most enterprising and that, as we were the leaders, if we were enthusiastic, the rest would follow suit. It is queer, how stimulating it is to realize that you are a leader. You're so anxious to prove it that you'll lead almost anything!

Miss Prescott said she was afraid that, in the fun of the picnic, we were forgetting the real meaning of Fourth of July.

"You mean the Declaration of Independence?" asked Dulcie dubiously.

"That," Miss Prescott agreed, "and everything that America has made out of her independence—liberty, and courage, and coöperation, a welcome to the alien—everything that is free and brave and helpful and fine. The thing that wells up inside you and makes you thankful that you're an American!"

We girls looked at each other uneasily. I don't know of anything that makes me more uncomfortable and embarrassed than to have people talk about feelings welling up in me. It's something that practically never happens, and when it does it's very private, and not about large and solemn things like patriotism. It was as though Miss Prescott had read my mind.

"We all take our blessings too much for granted. Do you ever, once, during the Fourth of July, stop for a moment and say to yourself: 'I am grateful for having been born an American.'"

"Well, you see," said Rosemary apologetically, "we're always so busy all day, the Fourth. In the morning I have the lunch to put up and get Howard off to march in the parade. And then at the picnic, there are the children to keep an eye on, and then we usually pitch horseshoes with the boys or have three-legged races, or something like that—"

"Exactly," said Miss Prescott triumphantly. "We're all too busy celebrating the Fourth of July to spare one single minute for remembering what it really means."

"I'm sure we've all put ourselves out to be nice to Fritz Schaufmeister," said Mrs. Frank Kirsted.

For a minute, I couldn't think why she should be talking about Corinne's sister's husband at this particular time. But shortly I figured it out. Mrs. Frank Kirsted has the slowest mind I've ever seen in a peppy girl. She always works out ideas in their proper order, and she's always a mile behind the rest of us. She had just got now to what Miss Prescott had said about welcoming the alien.

Corinne's elder sister met Fritz Schaufmeister when she was visiting in New York, and married him, and they live here, now that he has gone into business with her father. Fritz really seems to be awfully nice, in spite of speaking with an accent, and though I never expected to have anything to do with anybody who had actually fought in the Kaiser's army, we've all tried to be as nice and polite to Fritz as though he really belonged in Montrose.

Corinne told us, though, that her sister said that Fritz often felt very lonely and alien here, in spite of our politeness. Of course it was both Elizabeth's and Miss Prescott's using the same word "alien" that had set Mrs. Kirsted off on Fritz Schaufmeister.

WELL, what it came down to was that Miss Prescott thought we should have an Independence Day pageant. Not a big affair, of course, like the one the school children in Verblen have every spring. Just, as she said, an intimate pageant.

She said the grove made a perfect natural amphitheatre, and she knew of a lovely little pageant that wouldn't be hard to get up, and that wouldn't take more than an hour. It wouldn't interfere with the picnic at all. We could have it late in the afternoon, instead of the sports, after the lunch was all over and before it was dark enough for the fireworks.

"I'm sure nobody will mind giving up an hour of sports for a beautiful ceremony to remind us all that, after all, the Fourth of July is something more than just a picnic day."

We all agreed, of course. Nobody could be so crude as to say that you would rather have a potato race than a pageant. Even if you suspected that you would.

And the first thing we knew, we had not only agreed to have a pageant but were already at work getting it up. That's the way Miss Prescott does things. She is certainly a wonder—you don't know where you're going till you're on your way. They tell of old Mr. Porteous going to call on her to protest against her new More-Playgrounds Committee, and coming out sort of dazed and having promised to act as chairman.

As for the idea of a little pageant not being any work to get up—well, mention that to anyone who has ever helped get one up, and see what you hear! And it all fell on us girls, just as I knew it would. As far as I have been able to observe human nature, I have noticed that men, as a class, don't put their hearts into pageants.

BUT Miss Prescott said that it was perfectly amazing to her the way we married girls could twist our husbands around our little fingers—and that, as you might say, put us on our mettle. Even the most strong-minded man does have *some* little joint in his armor, and usually his wife knows just where it is!

Rosie, for instance, knows that Howard thinks he has a fine, rolling voice, and he secretly loves to read out loud, so we got him to read the lines for the pageant.

Roger Lane is rather small and has ears that stick out in a way that—till we got to know how nice he is—used to make us wonder how Dulcie ever came to marry him. We've discovered that he will take part in anything if he just thinks he's taking the most important part, so, though it didn't seem quite fair to Washington, we let Roger be the Father of his Country.

It wasn't so terribly hard to get the boys to agree to be something like George Washington or Daniel Boone or Davy Crocket; but when we got into the spirit of this and that we struck our troubles. Will's susceptible point is that you can get him to do almost anything by putting it on the Boost Montrose basis. Working from that angle, I got him to agree to be the Spirit of Our Mighty Rivers.

The pageant directions said that was an adult male part; but when Will found that the costume was pale blue mosquito netting he was fit to be tied. He seemed to resent my even having suggested the part to him. In fact, before we got through, all the adult male spirit parts had to be taken by the little girls in Miss Prescott's Sunday-school class. They were the only ones who would wear the costumes.

Take it altogether, that pageant took just about all our spare time for three weeks before the Fourth. And they were three of the hottest weeks I can ever remember in June. I was either up in somebody's attic—that must have been a hundred and fifty—rooting around for costumes, or sitting at the machine stitching up bunting, or helping rehearse the spirits.

But it is just as they say it is about bringing up children—the mother gets to love best the one that she has to take the most trouble over. When I started I was practically indifferent to that pageant, but by noon of the Fourth of July I had gone to so much trouble for it that what little there was left of me that hadn't melted away was crazy about it, and very anxious for it to be a success.

Of course, I don't suppose I should say that it wasn't a success. It's very hard to be sure about pageants. People are

Digitized by Google Original from UNIVERSITY OF IOWA

always so polite about them, and then, when you have several children in them, the parents, at least, will always pay good attention.

Little Polly Burbank, for instance, had about the smallest part in the whole pageant—she was, in fact, just one of the grains of corn at the Colonists' first Thanksgiving—but I happened to hear somebody say something afterward to Mrs. Burbank about, "Wasn't the pageant nice?" And Mrs. Burbank said, "Why, yes, I thought she did very well, considering her age."

OF COURSE, nobody is ever mean enough to tell the mother of a grain of corn that her child's part is one of the lesser features of the entertainment.

That was, as a matter of fact, the great trouble with the entire pageant. Everything about it was so terribly polite. Everybody who wasn't in it sat around on army blankets on the grass or, if they were elderly, on folding chairs, and watched politely. They clapped at the right time and everything like that, but there was a sort of limpness about the whole thing. Everybody had eaten too much lunch, of course, as you always do at picnics, and it was frightfully hot. So many people fanning themselves with palm-leaf fans made a sort of sleepy rustle in the audience.

Some little boys did snicker when Howard Merton read sonorously:

"And who, of all the forces that are growing in our nation
Is this one, mysterious, potent, infant still, but growing
Wiser, growing stronger, growing greater—"

Because, in spite of his bunting costume, they could recognize the youngest Witherspoon child, who isn't any too bright and has certainly got a long way to grow if he ever gets wise and strong and great.

And they laughed out loud when Billy Purser's dog kept following Billy around through his part, and finally got between the feet of the Spirit of Our Mighty Huntsmen and tipped her over. But the older people all said "sh-hh," and there was no harm done.

Still, as the pageant drew near the end, I began to feel that it had hardly been worth all the work we'd put on it. My part was over. Mother was minding the twins for me, so I had nothing to do but watch the audience—and I couldn't escape the feeling that practically nobody was being made to realize the true meaning of the Fourth of July.

I saw Scott look at his watch. Old Mr.

UNIVERSITY OF IOWA

Porteous had dozed off in a precarious position in his camp chair, and the people who were sitting near him were so absorbed in waiting hopefully to see if the chair was going to tip over that the real climax of the pageant couldn't compete for a minute.

Except for the people who had children in it, and who were each watching their own, I couldn't see, in fact, that anybody was responding to the pageant at all. It certainly didn't make me humbly glad I was an American. In fact, I was kind of irritated at my countrymen. It seemed to me that, after all the work we'd put on the pageant, the least they could do would be to feel patriotic about it.

The last part of the pageant was the "Welcoming the Alien to Our Friendly Shores," and during this part the Howland boys—concealed behind bushes—played a medley of "Airs of Other Lands" on their mandolins. They had "The Wearing of the Green," but I couldn't see that the O'Sheas or the Callahans, who, of course, were all born in this country, even noticed it. And when they were playing "The Watch on the Rhine," which Miss Prescott had insisted on including, saying we must be magnanimous and gracious, I happened to glance at Fritz Schaufmeister. He and Elizabeth were holding hands, but he was looking off into the distance as though he were bored.

At first, this made me kind of mad—when you've gone to the trouble of being gracious and magnanimous you like to have it noticed—but then suddenly, I felt sorry for Fritz instead. There was something about that far-away look that was kind of pathetic.

I suddenly thought of myself having to go and live all the rest of my life in Germany or some other country. I knew I'd feel just the way Fritz looked. His look wasn't bored, it was lonesome, right in a crowd. And I knew how he felt. It would take a lot more than just three mandolins playing the "Star-Spangled Banner" to make me feel at home.

TOWARD the end of the pageant everybody seemed to brighten up a little. This may have been because a heavenly brisk breeze suddenly sprang up, which relieved everybody's feelings and stopped the sleepy rustle of the palm-leaf fans. But I've a strong suspicion that the real cause of the brightening was that everybody sensed that the pageant was nearing its end.

For a finale, everybody in the pageant drew out squares or stars of red or white or blue and held them in such a way that they formed a flag. The pageant directions said that at this point the audience would rise to its feet and cheer. Of course the audience hadn't read the directions, and it took them some little time to get the idea of what they were supposed to do.

They all did get up at last, but I must admit they didn't do it in any way to make a dramatic climax. The fat ones who'd been sitting on the ground had to be pulled to their feet, and even those who had been sitting in camp chairs were so busy groaning and grunting and stretching that the cheers were half-hearted.

The mandolins struck up the national anthem, and Miss Prescott signaled to the audience to all join in. But it was, as usual, pitched too high and nobody seemed to know the words after the "Oh, say, can you see?" In spite of Miss Prescott's encouraging looks and energetic beating of time, all we got from the audience was a few people singing tum-te-tum-tum-tum-tum, and some faint humming and whistling. (*Continued on page 92*)

My arms were aching till they were ready to fall off; but if you slowed down a second they yelled at you from the ladder

"Women Haven't Enough To Do!"

Says

Mrs. Henrietta W. Calvin, director of home economics for the public schools of Philadelphia

By

Graham Pierce

PHOTOGRAPH BY BACHRACH

Mrs. Henrietta W. Calvin

THERE are too many wives who haven't enough to do. They have too much leisure, and not enough work. Modern household appliances have taken them out of the kitchen and given them time which they don't know how to occupy profitably. We are becoming a nation of bored women, and bored women don't make good wives."

I am quoting Mrs. Henrietta W. Calvin, of Philadelphia, to whom I had gone with the question, "What is the matter with our modern homes?"

Our divorce courts are dangerously busy. Too many of our homes are childless and mere "stopping places" where we eat and sleep. What is the trouble? What is the remedy?

Mrs. Calvin is a woman eminently qualified to discuss this question and to suggest remedies. She is a nationally known home economist and teacher; also she is a mother, and a most unusual one. She herself has done a glorious work as a home-builder against terrific odds.

Left a widow at the age of thirty-six, with a few hundred dollars and five children to raise, Henrietta Calvin secured the post of librarian of the Kansas State Agricultural College, where she had been a student. Two years later she became a professor of domestic science. Up and up she went in her profession. For seven years as specialist in home economics she traveled all over the Union for the Bureau of Education of the United States Department of Agriculture. Then Philadelphia appointed her to the directorship of home economics for all its public schools, the position which Mrs. Calvin holds to-day.

During all these years, as long as she had children to put in it, Mrs. Calvin kept a home intact. She nursed her children when they were ill; she cooked for them, sewed for them, educated them, and earned for them. To-day all of her boys are doing splendidly in business and professional pursuits. The daughter, in Indiana, is most happily married.

Her husband, had he lived, could have done no more for his family.

Therefore it was to no theorist that I took the question thousands of us have been asking, "What is the matter with our homes?" It was to a wife who had known want and need; to a mother who had seen the shadows, as well as the lights of parenthood; to a widow who had felt the pangs of "work as usual" while, blocks away, a child of hers lay unconscious with pneumonia, alone because stark necessity bade it should be thus.

And Mrs. Calvin did not theorize nor quibble in her answer.

"There isn't so much the matter with our homes," Mrs. Calvin told me, "as there is with us. The home has gone ahead and we haven't caught up with it. When I say, for example, that the average housewife needs more *work*, I don't mean that she needs more *housework*. The freedom she now enjoys from the kitchen, due largely to the modern labor-saving devices, is a good thing: But too often, instead of profiting by this spare time, she fritters it away on nonsense. She becomes bored—and boredom makes a mountain of trouble in any home.

"Where do we find the highest rate of divorce? In the ranks of the leisured and moneyed. The fewest divorces are found in the farming class, where the housewife invariably has plenty of work to do. It is a paradox that the less a husband requires his wife to do the more he is in danger of losing her.

"We used to train our daughters to be housekeepers. Nowadays we send them to business school and, if we can afford it, to college. We are turning out nurses, stenographers, teachers, and manicurists, and expect them upon marriage to settle down as their grandmothers did, with some knitting for diversion when the work is done. We forget that our modernly reared young women are not knitters and sitters. They are goers, alive to life and wise in the ways of the world.

"'They need children,' you say. 'Children will keep them busy, and also keep them home.'

"ENOUGH children will, but we are not having that many any more. Two or three children, especially after they are of school age, won't in themselves keep the up-to-date wife busy at home. Besides, children often signify that the home can afford a maid or a nurse—otherwise there would be no children there.

"No, children as mere producers of household work don't furnish the remedy. Drudgery can bore, as well as pleasure. We will accomplish no lasting good by insisting that the modern wife give up the movies, and darn socks and wash diapers. These utilitarian jobs must be done, but what is big, and important, and thrilling about them?

"It's the whole job of motherhood that must be made thrilling. Mothers must learn that, instead of merely doing a good job, they must do a superlative job—turn motherhood into a profession.

Sunshine for Saturday, *Please!*

As told by PATRICK CONNOR, *veteran forecaster of the United States Weather Bureau, to* COURTNEY RYLEY COOPER

I NEVER tell exactly how long I have been in the business of providing weather; if I did, people might get the impression that I am a doddering old man. I suppose, however, from a point of service, that I am one of the real veterans, owing to the fact that I entered government employ when barely past the knickerbocker stage—and liked the uncertain task of trying to read the minds of the elements sufficiently to give the rest of my life to it.

It is far from a dull job. I've played my part in weddings, funerals, and christenings; in business, in public health; there are great buildings that I can look upon and, in a sense, call mine; to a degree, I command the throngs which flock to the big stores on sales days or to places of celebration; my fingers are literally in every pie; I've even withstood the temptations of money aimed to lead me from the straight and narrow path as defined by my meteorological instruments, and I've experienced the threat of death, all in a day's work.

Many people take the weather as a personal affair, and hold the forecaster as in some way responsible. Perhaps this is more pronounced in my case than in others: it happens that for more than thirty-five years I have dispensed weather in the same locality, that of Kansas City, Missouri. During all these years, it has been the practice of the newspapers in this particular region to personalize my bureau; from childhood up, its inhabitants have read the prediction of tomorrow's rain or sunshine, not as a statement from an agency of the United States Department of Agriculture, but as a personal prognostication for which I must be held definitely responsible. The result is that the telephone rings often when the forecast goes awry. Frequently it carries a woman's voice:

"And if it is anything to you, Mr. Connor, I want you to know that I think you are perfectly horrible! You predicted sunshine for today, and look at it! Look at it—raining pitchforks and me with fifty people invited to my party!"

To which I answer pleasantly—and mean it:

"Well, the next time you're thinking of giving a party, call me up beforehand and I'll see if I can't arrange a better day for you."

Silly, to make such promises? Not at all; in fact, the business of providing the kind of weather which people want is a big part of a forecaster's job these days. Not only is it possible, but plausible; and hardly a day goes by in my office that this matter of "weather to order" does not enter into my work.

Strangely enough, it is sometimes easier in my particular district to make a long forecast than a short one. Kansas City, Missouri, is situated practically in the heart of the United States, midway between the northern and southern storm paths, which, if they run true to form, are comparatively easy to diagnose. However, if a heavy atmospheric disturbance is sweeping across the country, gathering fury as it comes, an offshoot may upset temporary forecasts.

On the other hand, since these storms move from the west to the east, if the Far West is clear the indications are that fair weather will prevail for several days, hence the ability to predict a settled period in advance. Also, if a storm center is developing, it is likewise possible to figure fairly closely when bad weather will strike. Hence the dependency upon what might be called unofficial forecasts, and the myriad ways in which they take their place in human life.

TIME was when the work of the Weather Bureau was little more than giving cut-and-dried information, and justifying its existence by the gathering of statistics on precipitation, wind velocity, and temperature, without much attention being paid it other than by captains of vessels on the Great Lakes and our seacoasts, farmers, and those who desired to satisfy their curiosity as to what the atmospheric conditions might be on the morrow. But today's complexities of life and their interdependencies have changed all that.

There is a merchant in Oklahoma, for instance, to whom I send a telegram each week at his expense, giving my opinion of what the weather will be in his city on Saturday. This telegram governs his advertising; if clear weather is on the way, he spends more money than usual; if a storm is brewing, he retrenches. The same is true on a closer basis with merchants in my own city; there are at least a half-dozen, who, before they decide upon a special-sale day, particularly when great crowds are necessary to offset unusual advertising expenditures, bring their plans to the Weather Bureau for consultation as to the possibilities of sunshine. Recently a merchant called at my office, announcing:

"Connor, I'm going to spend ten thousand dollars on advertising a special sale. Is Saturday going to be clear?"

"You're putting too much responsibility on me," I answered. "I won't say."

"Then change the wording: Suppose you were spending ten thousand dollars. Would you be willing to risk that money on next Saturday?"

"I would," I answered. "There will be rain in the meantime, but Saturday will be fair and pleasant"—which proved to be so, and the merchant did a record-breaking business.

This sort of thing illustrates what I mean by unofficial forecasts, and the work of a weather man goes even farther than that. Sometimes he must be a cheerleader for a community as well.

THE psychological effect of sunshine or of rain is tremendous. When days are fair, my telephone, always a barometer of public feeling, carries nothing but pleasantries. But when the rain comes! Then all is different, especially if the wet spell be a protracted one. Often it is the merchant who is calling, begging for fair weather as earnestly, as though, by manipulating a lever, I could shut off the downpour. All I can do, of course, is to give my opinion regarding the future: a bright sign of clearing in the places whence the storm has come, winds which may bring fairer skies, an indication here and there of coming change, and I have often been able to tide merchants and others over periods of utmost despondency, holding them down on their expenditures and ventures on which they might lose money, until such time as I can see clear weather in the offing. In one or two instances I recall, it has meant the difference between a going business and failure.

But business is only one angle of the weather man's life, just as the perfunctory duties, like the notification of florists at the approach of a cold wave or hint of hail, the warnings to shippers that they may prepare for frigidity in transportation, have become another part of a day's work. Beyond this, there is what one might call the angle of "personal service," which is as variegated as the human race. One naturally wouldn't expect a weather man to act as a mentor of wardrobes—but I've done it, times without number.

"I'm going to Colorado for my vacation," comes the voice over the telephone. "Are the nights really cold there? And what clothes should I take for the daytime?"

I've packed trunks for various parts of the United States until I can recite the necessary wardrobes by heart. I've told people when to wear rubbers and when to leave them at (*Continued on page 102*)

Grab It!

By Earl Chapin May

FOR nearly two hours the circus performers had competed with trained tigers, lions, elephants, and horses for applause, and the rapidly-moving program neared its close. The clowns did their last grotesque "walk-around," while perspiring property men in drab uniforms hastily stretched a long rope net above the center ring. The tireless circus band burst into a march. Eight athletes in silver spangles and white silk tights strode, single file, into the tent. A sturdy man with heavy shoulders set the pace. Five trim-built girls followed him. Two youths, square-shouldered but thin of limb, brought up the rear. Eddie Ward's Flyers, exponents of "the fling-return," were about to "stop the show" and thrill the multitude.

As the circus flyers climbed on rope ladders to various perches and trapeze bars suspended from steel rigging near the big-top peaks, the band began a lilting waltz. Thereafter, for twelve minutes, the towners got their thrill as the aërialists flew from bar to bar or, turning somersaults in the air, were caught by companions hanging upside down on swinging trapeze bars, and were, by these companions, returned through the air to other swinging trapeze bars which in their turn carried the flyers to safety on a lofty perch.

After the various pupils of Eddie Ward finished their part of the performance by dropping gracefully into the long rope net, diving daringly into it, or still more daringly leaping into space and turning over and over like balls, which "straightened out" in time to avoid breaking well-muscled necks, all eight lined up and "took their bow" in front of the reserved seats. Then I followed Eddie Ward into his canvas dressing-room.

"YOU have some nervy flyers working for you this season," I said to the veteran.

Eddie smiled in the wisdom of his forty years. "It takes more than nerve to make a circus flyer," he answered as he rested on a flat-topped wardrobe trunk. "I've been training boys and girls for the flying-return for over twenty years. I've put a hundred of them in the business in my time. Too much nerve is a dangerous thing. What keeps me and my pupils in the circus business is strict attention to discipline.

COURTESY PARAMOUNT PICTURES

"I don't mean the discipline of regular hours, plain food, and all of that. Anybody can understand why dissipation doesn't go with circusing. The discipline I'm referring to is the discipline of taking orders from the boss. The boss is the chief catcher of the flying-return act. In this case, I happen to be the boss, for I employ the people who fly and catch with me.

"Although all of us are known as flyers, technically, the flyers are those who do the spectacular work. They fly from the trapeze bar to the catcher's hands, and are returned by the catcher to the trapeze bar which carries them back to the flyers' perch. So the flyers are the folks who get the applause. The catchers, hanging by their knees or hocks get little credit from the towners on the circus seats. But if the chief catcher did not know how to *time* each trick in the routine of our act, most of my flyers would end their days in hospitals. That's why flyers must have nerve; but what they need most is discipline.

"Aërialists, as the word suggests, must do their work up in the air. A mistake is followed by a fall. With aërialists trained to do the flying-return the fall is usually softened by the net, although such a fall can and does sometimes end fatally. But in straight trapeze work, which I began when I was ten, a fall is finished on the ground, and it isn't just a fall from a horse or a fellow performer's shoulders but a fall of from ten to forty feet.

"MY SISTER Jennie and I did a trapeze act for twelve years before either of us had a nasty fall. Our star trick was a drop she did from a trapeze above me to a foot-to-foot catch; that is, she would drop head downward, and her feet would catch in mine as I sat, with legs extended, on a lower trapeze bar. It took close timing to do that act.

"We had been doing it for nearly three years, when, one day, in hurrying through our routine before the equestrian director's whistle blew to announce that all acts working in that program number were through—and they must all be through at the same minute—Jennie slipped from her trapeze bar. I let go one hand and reached for her. But she fell too fast for me, and her body landed across the wooden ring curb.

"The impossible happened in that fall. Her neck broke a two-by-four in that ring curb, but the ring curb didn't break her neck. Why? Partly because luck was with her at the time, but principally because her well-developed neck and shoulder muscles protected her. Most of the physical development gained by aërialists is in the shoulders, chest, and arms. Youth and perfect condition helped Jennie live through that forty-foot fall. She was only twenty at the time.

"After five weeks in the hospital, she rejoined the show. For three more weeks she couldn't work. Her back was bent into a half circle, but she straightened it. Every day she'd take hold of a side rope leading from a tent stake to a side pole of the tent, and gradually, day by day, pull herself erect. It was punishment of the toughest kind. But she worked with me eight more years, until she was killed in the circus train wreck at Gary, in 1918—killed outright in the berth next to mine after we had worked together more than twenty years.

"But Jennie's fall while doing the foot-to-foot catch that no other double trapeze performers could ever do was caused by

UNIVERSITY OF IOWA

forgetting discipline. She didn't time her movements accurately.

"That's why, since I've been specializing in the flying-return, I make all my pupils listen to me. Each flyer leaves the perch when I tell him or her to grasp the trapeze bar and 'go.' Each flyer leaves the swinging trapeze bar when I say, 'Leave it.' Each flyer reaches for the catcher's hands when I say, 'Grab it.' Each catcher—sometimes there are three of us catching all at once, or nearly so—returns the flyer to the swinging bar when I command it.

"It's timing that counts in the flying-return. And the head catcher does the timing for all the tricks in our routine. This timing is pretty difficult, because some one of the three or four flyers should be flying all the time. And if the whole act is not done gracefully and with apparent ease, the act would lose its strongest pull.

"When a new pupil reaches my training barn, on my farm near Bloomington, I make sure he has plenty of nerve by sending him up to the flyer's perch, thirty feet above the ground, then telling him to jump, back-downward, into the net. I am careful to explain just why he must land on back or shoulders. If he lands face forward, he may break his neck; if he lands on his feet he may break a leg. I'm not trying to scare newcomers needlessly. I'm just stating facts and starting them off right.

"You might think that the circus flying business is filled with accidents. But bad falls are rare.

"'If you do exactly what I tell you and *when* I tell you, nothing serious can happen to you,' is what I keep hammering into my pupils, from the time they begin on ground work and Roman rings.

UNDERWOOD & UNDERWOOD, N. Y.

"SUCCESSFUL aërialists must, like all performers, begin on the ground. They must be strong and quick and supple. That combination can be secured only by many days and weeks of back-bends, hand-springs, flipflaps, round-offs, and somersaults on the ground. This preliminary course must be completed by long hours of exercise on Roman rings, to give them arm and shoulder development. These tests of their ability to respond to discipline come long before I let them try to fly from bar to catcher in the air. If they can't stand the monotony of this gymnasium practice, or if they balk or weaken on this work they're out, as far as I'm concerned. But it would surprise you to see the number of boys and girls who will go through this tedious practice just to be tested in the flyer's rig.

"This rig consists of a pair of jumpers, for each girl, regular gymnasium clothes for the boys, plus a mechanic. A mechanic is a safety belt around the pupil's waist, which belt is swiveled to a half-inch safety rope running over a pulley in the roof of the barn.

In the old days, when I was broken into the flying game, the pupil, or 'punk,' to use a professional term, did his first net falling and flying without any kind of safety appliance. His boss gave him plenty of good advice; but after that the pupil took his chances with the veterans. He got his first lesson in ground work by turning a back somersault with the upturned teeth of a garden rake just back of where he was supposed to land. He had to alight on the spot he left. Consequently, he turned his somersaults pretty close. When he began to fly he was just as careful not to make mistakes. We are easier with our 'punks' now.

"Every flyer in my company learned his complete routine, including the double aërial somersault, with a safety belt around his waist. I held the other end of the safety rope, if I wasn't catching him. If I was catching, one of my heavier assistants held the rope. If the flyer missed a trick, the safety rope saved him from a fall. That sort of training gives the beginners confidence. The only trouble is that it gives them too much confidence.

"You take healthy boys and girls of seventeen and make them believe they cannot fall, then take them into a big top jammed with towners, the circus band playing like all get out, and the towners applauding every trick, and first-season flyers may lose their heads. They are likely to have their minds on hurrying back to the perch so they can take their bows, whereas the important thing with all of us is to climb into the rigging, go through with the act and forget there is such a thing as an audience. The time for a flyer to think of the audience is when the act is over and he is on the ground. That's true of almost any line of work.

"Sometimes it is hard to teach my flyers this. 'You're from twenty to forty feet in the air,' I keep warning them. 'You keep your mind on your work and on me. The safety net is your only life insurance, and that won't save you if you hit it wrong. The first time you may think of or see your audience is when the act is over.'

"I JOINED out a girl from Peoria in 1922. She was young and slender and strong enough, and she went through the preliminary work so well that I put her into the regular act in 1924. That was pretty short training for a flying act. It takes about four years to make a professional flyer out of anyone. But she was naturally a graceful girl and unusually quick, mentally and physically. Flying and somersaulting seemed to come natural to her. Moreover, she had plenty of nerve.

"But she couldn't get her mind off her audience. She had good looks and knew how to sell herself, so she was always in a hurry to get back to her perch and take her bow. Finally, she got to looking sidewise at her audience as she swung toward me on her bar. That made a great impression on the audience, but it didn't make a hit with me.

"'You'll get hurt if you don't keep your mind on your business,' I warned her after we had been performing under the canvas a week or so. 'It's me and not the audience that's catching you.'

"But she wouldn't take my warning seriously. One day at Binghamton, New York, she was trying to do a double cutaway. That's a trick that needs concentration. But she was thinking of her audience. She didn't come within a yard of me. Luckily, she struck on her shoulders in the net, (*Continued on page 158*)

Babe Ruth listens in with nature's own receiving set while Graham McNamee broadcasts a baseball game. Contrast McNamee's favored position with his place in the old picture on the opposite page

My Adventures In BROAD-

By Graham

WE WILL now take you back to the studio."

How many times you hear that over your radio as the announcer brings a program to a close. Well, the time has come when I can say:

"We will now take you back to the grand-stand or, perhaps, to the bleachers."

For the good old outdoor sports season is here. The ball teams are at it again, and have been for a month. We are moving along toward another big outdoor heavy-weight championship fight. Half the country is already out on the tennis courts, the golf links, and the sand lots. All of which means that sports are the order of the day, over the air, as well as upon the earth.

I was going into a baseball park once with a very serious business man who was also a great baseball fan. As we passed into the main entrance, he said:

"Here is the point at which I always check my brains."

Maybe it will be good to remember that in connection with some of the things I want to tell you about this month. When I asked my companion what he meant, he laughingly replied:

"Oh, when I go to a baseball game, I always take my brains off the job, and do my thinking with my heart."

And that about expresses it. At our baseball games, and our prize fights, and our football matches, we look and listen and think with our hearts. Naturally, this makes us a little unreasonable at times. Once at a prize fight, when Tommy Gibbons fought Billy Miske, Gibbons was making Miske look quite foolish. He hit Miske at will. Finally, Gibbons had poor Billy so weak and groggy that he could hardly stand up. Suddenly, a young chap beside me yelled out:

"'Go ahead, Billy, finish him up!'"

NOW I'm an ardent sports fan myself, and, like all the other fans, I love to think with my heart when I'm witnessing a big game or fight. But an announcer can't do this. He has to take into the microphone whatever little supply of brains he has. He can't give free rein to his feelings. He must try to see correctly, and then report accurately what he sees. Like the newspaper men, he must also try to report impartially. But the crowd at the game, and the million who tune in on the "mike" are seeing and listening with their hearts. This makes it a bit hard on the announcer at times, for, naturally, the two points of view don't always tally. Let me give you a case in point:

After the World Series games between Washington and the New York Giants, the National Broadcasting Company got the following letter from a Washington rooter:

GENTLEMEN: The City of Washington and the entire country must feel grateful to Station WEAF for furnishing play by play description of the recent World Series baseball games.

There was only one phase of the broadcasting that was not pleasing to Washingtonians, and I do not feel it can be passed over without comment. I have reference to the partiality of the announcer, Graham McNamee, toward the New York Giants. This partiality was marked to such an extreme degree that it has caused most unfavorable comment from all sections of the city. It was even so pronounced as to warrant the press of Washington to comment on it in headlines.

A man acting as a radio announcer should be impartial to both sides when reporting a sporting event.

Almost the same day, the following letter was received about the same series from a New York fan:

GENTLEMEN: In the recent broadcasting of the World Series games by your man, McNamee, the last of which I have just finished listening to, here is one person that wants to make a tremendous kick at the unfairness of this man. I never supposed there was a human being, and I suppose he is a New Yorker at that, that could show such partiality to two baseball teams playing a series of such importance as the one just played. Why, the Washington players couldn't even brush the dust off their pants nor pull down their caps, without it being

CASTING SPORTING EVENTS

McNamee

"a beautiful play." Everything they did was "a beautiful play," but not once did he give praise to a Giant player except in a disappointed and grudging voice.

When Nehf struck out his idol Goslin on three straight pitches, not one word of praise for the pitcher, but a world of disappointment for the poor Goslin. Again, today, when Barnes struck out Goslin, not one word of praise for Barnes, who must have pitched a wonderful game. No; I mean "a beautiful game." And to show how far he went with Kelly at bat, this was the remark, the unfair remark, your broadcaster made: "I hope he doesn't put one over the center of the plate, for that is what Kelly likes."

If that wasn't rank pulling for Washington and by a New Yorker at that, I don't know what was. Don't think that I wanted to see him pull for New York either, but I did want to see a man in his position play fair with both teams. I must say right here if this is the kind of man you have to broadcast your sports, then the good Lord help the opposing side. I am off WEAF for some time to come for having a man like this on their staff.

I trust you will pass this letter on to McNamee, so that he will know at least how one fair fan thinks of him.

It is interesting to note here that I have never received a complaint or a criticism from a ball player, or a fighter, or a football player, or coach, about the treatment of their performances over the air. I have received a number of very interesting and highly prized letters from old umpires speaking in very kindly terms of my accounts of games. Perhaps these old veterans, who have known the ordeal of being compelled to see with the eye, while the crowd around was watching with their hearts, have felt some sympathy for the announcer.

Occasionally, I have heard from some player's wife who resented my account of the game *her* ball player was in. But, Lord bless their hearts, who wants a ball-player's wife to look at a game with anything else than her heart!

As a boy, I played on my high-school team, and later I put in three years on third base as a semi-pro ball player. This experience has stood me in good stead before the mike. I learned the rules of the game then, and, of course, I have studied them faithfully since. But that doesn't save me from criticism at the hands of the experts who sit in the bleachers. After every World's Series game, I get scores of letters "putting me wise" to some rules of which I seemed to be ignorant. I also get all kinds of instructions about everything, from the way to use my voice and pronounce my words to the fine points of inside diamond strategy.

The letters from the newly-made fans are interesting. Every baseball enthusiast knows, of course, about the spit-ball. This pitch is accomplished by spitting on the ball a moment before it is delivered. The small particles of extraneous matter cause the ball to deflect in a peculiar manner in its flight. And because this effect is achieved by putting something on the ball which is foreign to it, the pitch has been barred by the rules. Only those pitchers who were using it prior to a date fixed in the rules are permitted to continue its use, and they must be registered as spit-ball pitchers. There are but three men in the major leagues now allowed to use it. Now, in the game I was broadcasting, whenever a spit-ball was pitched, I announced it. The following week, a letter came from a gentleman in Pittsburgh—a very kindly and appreciative letter indeed. But it included the following paragraph:

> You ask for friendly criticism. All right—here goes. In describing the Washington pitcher's delivery, unfortunately you used again and again that vulgar word "spit." This was offensive to my wife and, frankly speaking, to me. Your story would have been detailed enough had you omitted the word entirely. It is a filthy pitch that cannot be outlawed too soon.

This was not the only reference to that subject. Another letter from the junior master of a high school in Massachusetts, said: "Wouldn't it be well for you to say 'expectoration ball' next time."

Incidentally, (*Continued on page 139*)

ZANE GREY'S strange and thrilling drama of frontier days

SUNSET PASS

IT WAS six years since Trueman Rock had killed a man and ridden away from Wagontongue, a fugitive from justice. In those years the truth had come out, the rascality of the man he shot had been discovered, and Rock's name had been cleared. All this he learned only when he came boldly back to Wagontongue, to greet old friends and pass on again. He had prospered greatly in a cattle deal in Texas; he had ten thousand dollars in his pocket, a gorgeous Mexican riding outfit—and he was the same handsome, reckless, irresistible True Rock who had been the most famous cowpuncher and heart-breaker on all the range around Wagontongue.

But on that very first day, in Sol Winter's store, he met Thiry Preston—and Rock the philanderer was lost forever in Rock the lover. The Prestons were newcomers—the "thirteen Prestons of Sunset Pass" they were called—and Rock had heard nothing but ill of Ash, the eldest brother, and of the men of the family, since he alighted from the train that morning. No definite accusations were made, but there were ugly rumors everywhere. And when Ash, in a drunken rage, ordered Trueman to leave his sister Thiry alone, True knocked him down, and went back to Winter's store to announce his plan of getting a job on the Preston ranch. Winter warned and pleaded, but True paid no heed. He had resolved, come what might, to solve the mystery of the whispers about the Prestons, and to banish the tragic look from Thiry Preston's lovely eyes.

He gave his money into Winter's keeping, bought a magnificent white horse, Egypt, and rode the sixty miles to Sunset Pass. Ash ordered him from the place, but Gage Preston, the father, interfered, and gave him the job of bossing the younger boys in an outfit separate from himself and Ash and the three older brothers. True found himself liking all of the family except Ash, especially Mrs. Preston and Alice; and he fell more deeply in love than ever with Thiry.

But every day on the prosperous ranch confirmed his suspicion that something was very wrong; and he determined to set it right if he lost his life in the process. Gage Preston had run out Slagle, a neighboring rancher, and was using his buildings for slaughtering cattle, which he shipped away as beef, while the hides were taken separately to town and sold. Rock was sure that the clue to the mystery was here.

The morning of True's first day on the range, Ash calmly rode off for a long absence with his outfit—on Egypt! And then Thiry, with tears in her eyes, implored True not to stay on at Sunset Pass. But nothing could shake him. And soon the opportunity he wanted came. They were all going to a Fourth of July ball in Wagontongue given by Amy Dabb, an old sweetheart of True's, and he got permission to ride in a day ahead of the family. He stopped at Slagle's ranch—and found just what he had feared: There were hides with the Preston brand about, and concealed in a thicket True watched a group of horsemen, led by a rider with a red scarf, inspect these and ride away. But there were also traces of quicklime, and—carefully hidden under a big culvert—True found sacks filled with fresh hides and quicklime. The hides were marked with a Half Moon brand that Rock had never seen. There were footprints in the culvert, and these he measured carefully. Then he rode on with a heavy heart toward Wagontongue.

EGYPT, left to choose his gait, had started off on his fast trot. He had many gaits, but this was his favorite and it covered distance rapidly. He held to it steadily, except on the hills, when he slowed to a walk.

Rock scarcely saw the beautiful range land. He rode past Pringle's place before noon, scarcely aware of it. He was in no mood for friends. But in due time his emotion spent itself upon the resolve to save Thiry, if he had to die to do it.

After that he gradually rounded to a coherent, if not a logically connected sequence of thoughts. When cattle disappeared off the range, any range, in more than a negligible number, it always led, sooner or later, to speculation and private suspicion by every outfit, and usually investigation, also private, by the outfit that had suffered most. Rock recalled cases where quite extensive rustling had never been cleared up. Ranchers worked slowly in this regard. They might step on someone's toes. Generally, when the perpetrators of crooked work were unearthed, it was accomplished by the cowboys rather than the ranchers.

Rock had no idea how far this extraor-

In this instalment True Rock faces a crisis in his love

Illustrated by

W. H. D. KOERNER

The man was a tall rider. He wore a red scarf, and his face was almost as red. "See heah, sweetheart, you cain't come thet with me," he drawled, blocking her way

dinary dealing of the Prestons had gone. It would take considerable time to find that out, if it were possible at all. But it had proceeded far enough to be extremely hazardous for them, and, in fact, for any riders connected with them. The situation would certainly become a delicate one for Rock, unless he betrayed Preston at once. This was unthinkable. Rock knew his own reputation had always been above reproach, as far as honesty was concerned. It would still hold good with the old cattlemen who knew him. But that could scarcely apply to the new ranchers, new outfits, who had come into the Wagontongue range of late years.

Rock believed that, before another year was out, if the Prestons kept up this amazing and foolhardy stealing, they would be found out. Why could not Preston see this? He certainly did not lack intelligence. One remark he had made to Thiry had been thought-provoking. It might well be true that Ash Preston, having led or forced his father into criminal practice, dominated him wholly. Ash Preston struck Rock as a man without fear or conscience, and even without a heart, except where Thiry was concerned.

As the hours passed, Rock reviewed the whole knotty question again, without further enlightenment. He strove to bring reason and intelligence to bear, instead of a mounting antipathy for Ash Preston.

It was long past dark when Rock arrived at Wagontongue. Upon inquiring of a Mexican, he found a stable where Egypt would be well looked after. Next, he hunted up a restaurant to appease his own hunger, and then he went to the hotel and to bed. The long ride and the long hours of emotional and mental conflict had exhausted him. Not for years had he been so sunk in gloom. The urge to drink came upon him, and he laughed it away. He had need of stimulant, yes; but not that false kind. It was well that he fell asleep at once.

THE sawmill whistle disrupted his deep slumber at six o'clock, but he enjoyed the luxury of the soft bed and linen sheets a while before rising. Rested and fresh again, and with the bright gold of sunrise shining in his window, Rock felt far removed from the brooding, fagged rider of the night before. He would find a way. He dared to pit himself against Ash Preston in anything.

After breakfast, he went around to see Sol Winter. And meanwhile he had subdued himself to some semblance of his old order of cool insouciance, which state really had been natural before the fair face of Thiry Preston had disturbed his equilibrium forever.

Winter was sweeping out the store, his back to the door, and he did not see or hear Rock.

"Hands up!" said Rock, in harsh disguised voice, as he gave Winter a hard dig in the back with his forefinger, to imitate the prod of a gun.

"Oh, lord!" ejaculated Winter, swiftly dropping the broom and elevating his hands high. He had once been held up by a robber.

"Turn 'round," ordered Rock.

Stiff as a poker, the storekeeper obeyed, white and tight of face.

Then, "Rock! . . . You—dod—blasted—son of a sea cook!" he gasped out.

Digitized by Google
Original from UNIVERSITY OF IOWA

"Scared me—'most to death! Same old cowboy! My, you look good. All browned-up. Dog-gone, I'm glad to see you."

"Same here, old-timer," replied Rock, heartily. "Reckon you look a little brighter, Sol."

"I've less worry, son, an' at my age worry tells. Fact is, I'm doin' fine again. Since payin' my debts, I've laid in more stock, an' advertised it. We're goin' to make money, pardner."

"Fine. I'm sure tickled. Reckon I'll need a pile one of these days. . . . Any news, Sol?"

"Not much. Everybody comin' in for the Fourth. Amy Dabb's givin' the biggest dance ever held in these parts. How're things out Sunset Pass way?"

"Pretty bad, Sol. But there's too much of it to tell now."

"Bet you had a run-in with Ash."

"Nope. Outside of stealin' my horse, Ash acted tolerable nice, for *him*."

"Stole your horse! . . . An' he's alive yet?" ejaculated Winter, his shrewd old eyes warm upon Rock.

"Sol, I took it as if I was complimented. Honest. I'm tellin' you truth. Now what do you say?"

"Wal, all I can say is love works wonders."

"Does it? All right, old-timer. Let's hope it lasts. . . . But, to leave off and talk serious, Sol. I want to find out somethin'."

"What?" asked Winter, as Rock led him back into the store.

She greeted him shyly, with absence of that inhibited expression which marked her meetings with him at Sunset Pass

"PRESTON drove in here a couple of days ago," went on Rock, lowering his voice. "In the outfit were three wagons I know of. One was full of hides, which I helped pack. The other two were loaded with meat. Beeves! Now, I want to find out how many beeves there were and where they went. But I don't want this information unless we can get it absolutely without 'rousin' the slightest curiosity or question. Savvy, old pardner?"

"Wal, I'll be darned if that ain't funny! I shore can tell you right now what you're so keen about knowin'."

"Good lord!" exclaimed Rock, with a quick breath, and he sat down heavily upon the counter. He had actually to nerve himself for the disclosure.

"Heard it quite by accident," went on Winter. "Jackson, who runs Dabb's butcher shop, once worked for me. An' if I do say it myself, he liked workin' for me better than for Dabb. Wal, I went in last night to buy some beefsteak to take home. An' I seen a lot of fresh meat hangin' up. Shore, I always was curious, but I never let on I was. All I said was, 'See you're stocked up plenty an' fresh. How're you ever goin' to sell all that meat before it spoils?'"

"'It won't last over the Fourth,' he said. 'Long as I got plenty an' can sell cheap to the Mexicans an' lumbermen, it shore goes fast. Wagontongue will soon stand another butcher shop, Sol; an' any time you want to talk business with me I'm ready.'

"'I'll think it over, Jackson,' I said. 'But where'll we get the meat? Reckon we couldn't cut in on Dabb's supply?'

"'No, we can't,' he told me; "'but Preston is killin' now altogether instead of sellin' any more on the hoof. He's gettin' thirty dollars more by killin', on each head of stock. He'll sell to anybody. To-day he shipped thirty-six beeves. Driscoll told me. Shipped them to Marigold.'"

Winter paused to see what effect this news might have upon Rock.

"Thirty-six!" muttered Rock, with unreadable face and voice.

"Yep. An' I counted ten beeves hangin' up on Jackson's hooks. All fresh. So that makes forty-six. What you want to know all this for?"

"Gee, Sol, you're a gabby old lady," returned Rock. "I was just askin', because you and I might go into the meat business. . . . And, say, who runs the Half Moon brand?"

"New cattleman named Hesbitt," replied Winter. "He's been on the range over two years. I've seen him but don't know him. They say he hails from Wyomin', has got lots of money, an' runs a hard outfit. Clink Peoples is foreman. You ought to know him, Rock."

"Clink Peoples. By gum, that sounds familiar. I've heard his name, anyway. What does he look like, Sol?"

"Onusual tall puncher. Sandy-complected. Eyes sharp like a hawk's, but tawny. Light tawny. Somethin' of a dandy, leastways in town. Always wears a red scarf. An' he's one of the gun-packin' fraternity. Clink will be in town shore over the Fourth."

"Red scarf? Ahum," said Rock. "Well, Sol, I'll run along, and drop in again."

REACHING Dabb's new store, Rock went in and hunted up the suit department. It chanced that there was in stock a black broadcloth suit, with frock coat, which might have been made for him, so well did it fit. Rock purchased it and an embroidered vest of fancy design, a white shirt with ruffles on the bosom, a wide white collar, and a black flowing bow tie to go with it. Lastly, he bought shining leather shoes, rather light and soft, which augured well for dancing. Not forgetting a mask, he asked for a plain black one. None of any kind was available. All false faces, and masks of humorous design had been sold.

Rock carried his possessions back to the hotel, certain that some of his youthful cowboy sensations were not wholly dead. While in his room, he cut a pattern of a mask out of paper, and taking this back to the store he bought a piece of black

cloth and fashioned it after the paper pattern he had cut.

After supper the hotel man, Clark, got hold of him and, in a genial way whose intent was obvious to Rock, tried to pump him about the Prestons. Rock had met that same attitude before during the day, and without apparent evasion he did not commit himself. Then who but Jem Slagle stamped into the hotel lobby, in his rough range garb.

Slagle had been trifling with the bottle, but he was not by any means drunk. He was, however, under the influence of rum, and his happened to be a disposition adversely affected by it.

"Howdy thar, Sunset Pass puncher," he said, loud and leering.

"Hello, Jem. How are you? I called on you on the way in."

"Left home yesterday. Stayin' till after the fireworks. Are you goin' back to Preston?"

"Why, certainly. Like my new job fine," responded Rock. "I'm sort of a foreman over the younger Prestons."

"Rock, it was a thunderin' good bet that Gage Preston would never put *you* to butcherin'. Want a drink with me?"

"No, thanks; I've sworn off," replied Rock shortly, and he went out to walk in the darkness. Slagle's remarks did not set lightly upon Rock. They were trenchant with meaning. Slagle, of course, hated Preston, and naturally would be prone to cast slurs. But would he make two-sided remarks like that, just out of rancor? It would go severely with him if one of them ever came to Preston's ears. And rattlesnake Ash Preston would strike at less than that.

ROCK strolled to and fro between the hotel lights and those on the corner. As he came once into the yellow flare of light, a hand, small, eager, and strong, seized his arm, and a feminine voice he knew rang under his ear.

"True Rock, I've been on your trail all afternoon!"

Rock stared down into the piquant flushed face of his old sweetheart, Amy Wund.

"Now I've got you, and I'm going to hang on to you," she said, with a roguishness that did not altogether conceal a firm determination.

"Why . . . how-do . . . Mrs. Dabb, you sure—"

"'Oh, Mrs. Dabb!'" she interrupted, flashing dark passionate eyes up at him. "Call me Amy, can't you? What's the sense of being so formal? You used to call me 'darling Amy'."

There was no gainsaying that. "Well, good evenin', Amy," he drawled. "I've forgotten what I used to call you. Reckon it's not just good taste for you to remind me."

"Perhaps not, True. But you make me furious. Let's get out of the light. I've got to talk to you."

And pressing his arm tight she hurried him down the dark street.

"Amy, listen to sense. Oughtn't you be home?" asked Rock, gravely.

"Sense, from True Rock? Ye gods! When I was sixteen you *made* me meet you out, at night, because my father wouldn't let you come to our house," she retorted.

"That's so, Amy. I guess I was no good. But I've learned a little in all these years—at least enough to consider a woman's name."

"Thank you. I believe you have. And it's not true you were no good. . . . Now, about my being at home. I suppose I ought to be there, since I took the responsibility of it. But it's an empty home, Trueman. I am alone most of the time. John has men come there to drink and play cards and talk business. He objects to my friends. He is jealous of everyone. Just a selfish, rich old man!"

"Aw, too bad, Amy," replied Rock, deeply touched. "You never should have married Dabb."

"Father was in debt to John. . . . And I had to foot that bill, True," she returned, bitterly. "But I didn't waylay you to talk about myself. Did you get the invitation to my dance?"

"I did. Many thanks, Amy. It was good of you. I rather expected to be left out."

"Are you coming, True?"

"Well, now, that's a horse of another color," he said. "I'd sure like to. I might drop in for a little—to look on."

"True Rock! You look on at a dance! Why, cowboy, are you growing old?"

"No, Amy, I feel far from being old. But there are reasons. You should know one of them, anyhow."

"You mean my husband?"

"Sure do. He never had any use for me, after I quit him."

"ALL the same, Trueman, I'd like you to come—for several reasons."

"All right, fire away," he said lightly.

"First for old time's sake. Then because certain of my friends say you won't come. Next because—well, True, I've been a darned fool. I've gone—a—a little too far with a certain cowboy. And I'm afraid of him. He's coming to my dance. And I thought—if you were there—I'd not be afraid, anyhow."

"Who is he, Amy?"

"I don't know his real first name. His last is Peoples. Clink, they call him."

"Clink Peoples. I've sure heard of him. Rides for this new rancher, Hesbitt."

"Yes. And Hesbitt—"

"One thing at a time, Amy. Is this the last reason you have for wanting me at that dance?"

"No, Trueman, there's another. A woman's reason, and therefore the most important."

"What is it?"

"I won't tell you."

"Very well, I reckon your third reason is enough to fetch me. I'll come."

"Oh, thank you, Trueman," she replied, in delight, squeezing his hand. "You always were the dearest, kindest fellow, when anyone was in trouble. . . . Trueman, you could steady me. Heaven knows I need it."

"Amy, I don't exactly trust you," said Rock, dubiously. "I never did. But that

(*Cont'd on page 74*)

Rock heard Winter, but only vaguely, for he was rushing out to the door, where through the window he had espied Thiry Preston

I Like To Take A Bath
But I'm Not An Old Soak

By H. I. Phillips

IN THIS country, bathing, like college football, is suffering from over-emphasis.

The bathtub is occupying a place of exaggerated importance in life.

Cleanliness should perhaps be next to godliness, but there are disturbing indications that it is away ahead of it in modern civilization. There are lots of people who would show no resentment if accused of not saying their prayers more than once a week, but who would snap your head off if you expressed the slightest skepticism about their leaping gleefully into a hot tub twice a day.

There are times when it would seem that America's chief diversion is the working up of a lather.

Life, to hear some folks talk, is just one tub after another.

It is a matter of faucets, water temperatures, plugs, soaps, Turkish towels, bath mats and refrains from "Pagliacci," "La Bohême," and a Liszt "Rhapsodie Hongroise," whistled, gurgled, and inhaled. Indeed, you would gather the idea that Americans are happy only when floundering around a bathtub in pursuit of a cake of playfully elusive soap.

The bathtub influence is reflected everywhere. On the billboards, in the newspapers, buses, surface cars, and subway trains, the advertisements emphasize the importance of keeping awash. Most modern novels devote a chapter or two to the bathroom. There is at least one bathroom skit in most every musical show, and a famous Broadway producer is but recently out of the hoosegow as a result of over-emphasis of the bathtub motif at an informal back-stage party.

WHEN you go apartment hunting, the landlord's consuming pride is in his bathroom. He will point to the tiled floors, mosaic wallwork, streamline tub and built-in fixtures.

The up-to-date apartment house may have a cramped living-room, a dining-room the size of a telephone booth, and a decidedly demi-tasse boudoir, but you can bet the works that it has a bathroom by Caracalla, out of Diocletian.

Recently, in a house-hunting tour, I complained to the agent who conducted me about that the floors of the apartment were terrible, that most of the doors were out of plumb, and that the walls were beginning to crack wide open. He took all these criticisms calmly. But when I suggested that the bathroom color scheme was not so good, I wounded him so deeply that he bled from the nose and ears.

It is difficult to convince the modern renting agent that a tenant doesn't move from one place to another merely to get a change of swimming atmosphere, or to float in hot and cold water under a new landlord.

He seems to have a notion that a house-hunter is changing his residence so he can reach in a different direction or to a new level for his built-in soap-dish.

You find the same general situation in choosing a private home for rent or purchase. The builder may skimp on the heating plant, shirk on the foundations, play short in the design and construction of the rooms in which the tenant will live, but his bathrooms will be the kind you would not hesitate to show to a Roman emperor. The plural is used advisedly. There is no such thing as "a bathroom" in the up-to-date home. "The bathrooms," if you know your stuff. Even a five-room bungalow has at least two spacious bathrooms these days, and it is no novelty to see an advertisement reading like this:

OPPORTUNITY of a lifetime: charming little suburban home; just the thing for small family; 9 rooms and 6 baths; room for wing with two more baths if desired. If you are looking for a small well-planned home this is it.

A FEW years ago, I bought a house in the suburbs. Mrs. Phillips had pronounced it ideal for alterations. She has an alteration complex. After we had altered it and lived in it about a month, I began to notice that she was not altogether happy in it. I found out later that the bathroom was to blame. She had been reading the bathroom advertisements and studying the pictures. She really didn't want the house; all she wanted was a chance to tear out a couple of old-fashioned bathrooms and put in some up-to-date ones. They set me back so much hard-earned cash that I figured every bath I took cost me about fifteen dollars. And during our occupancy of that house, I took three baths a day, as a matter of getting my money's worth. I reached what was my bathing peak at that time.

After giving up that rural home, we returned to the apartment-house life, where tenants are not allowed to change the general contour or equipment of a bathroom. However, I have just been persuaded to buy another little place in the country. I did so with the understanding that the house was satisfactory to Mrs. Phillips, and that no remodeling would be expected. She has just finished

Digitized by Google
Original from UNIVERSITY OF IOWA

a post-purchase inspection and decided that to give it the right touch she will have to rip out the baths now there and put in some modern ones.

It serves me right!

WE ARE now occupying "a five-room apartment" in the city. It has three rooms and two baths. This, it seems to me, is carrying the bathroom motif to extremes. Last year, we had an apartment of similar size, in which the bathrooms were almost as large as the living-room. They had been the builder's joy and pride. They had more attachments than a concert organ in a modern movie cathedral. I never did master all the handles and knobs, and during two years' occupancy of the apartment I was never able to get water at the right temperature.

One of the bathrooms had an enormous shower of most bewildering ramifications. It always looked to me like a combination chicken rotisserie, automatic sprinkling device, rain-making machine, bear trap, and electric chair. I was always afraid of the darned contrivance. It had exactly nine faucets on it. There were two thermometers attached to the mizzenmast, and on the aftdeck was a huge handle of the type used to throw switches. Although I always pointed to it with that same satisfaction a man feels when showing off

a foreign car, a Stradivarius violin, or an electric refrigerator, I never got up enough courage to get into it and challenge it to a finish fight. Two or three times I stepped inside and experimented cautiously with some of the handles; but it gave me more scares than my first ride at the wheel of an automobile.

I still think that a complete understanding of its intricacies would have enabled me to bathe, bake a cake, get WEAF, have my teeth X-rayed, and make a telephone connection with London. On the other hand, it may have been nothing more than the model for a concrete mixer.

The day I moved out, I sounded the janitor on the matter and asked him why he didn't furnish a set of directions with the shower. He said that would ruin everything. "Listen," he told me. "That shower always rents this apartment. Some of the other apartments are hard to lease, but this one always goes quick, and I think it's the shower that turns the trick. People look at it, and look at it, and look at it. No matter how many times they go through the apartment they always turn to the shower. It gets them somehow, and I can see 'em ache to operate it."

"I'll make a confession," I said. "In all the time I lived here I never got the blamed thing to work."

"I don't think it ever worked," said the janitor, who could be frank with departing tenants. "Anyhow, I never had a complaint about it. But it's an impressive thing to have around the house, and people certainly fall for it."

The fuss made over a bath on a steamship cruise is just about the limit. No member of a ship's personnel is so zealous about his work, so heavily impressed with his obligations and responsibilities, as the bath steward. On the transatlantic liners a passenger has to take a bath, no matter whether he wants it or not.

You are hardly aboard the ship before the bathroom steward knocks, and demands to know what time you would like your bath mornings. There is no evading the question.

He will either bulldoze you into setting the hour, or, if he is of an emotional nature, he breaks down and cries until you are all broken up yourself, and say, "I had no idea you would take it like that, old man. Now brace up and dry those tears . . . I'll agree to take my bath at eight-ten sharp every morning. I'm not really a bad fellow, Steward. I'll bathe any time to please a friend."

You may have a notion that when he knocks on the door the next morning and cries "Bath, sir!" you will pull the blankets over your eyes and play dead. Don't be silly! It can't be done. The steward will pound with his fists. Then he will try to kick the door open. Ultimately, he will break it down with a fire ax and drag you to your bath by the ears.

Now, I think bathing is a good thing. I regard it as important. Far be it from me to padlock a single bathroom, or to knock a solitary "hot" knob off a tub. I am moderately fond of bathtubbing, but I am not an old soak. I think a bath is just a bath, and am never carried away by the notion it is a sacred ceremony, an Oriental rite, a carnival, a great sport, or a picnic. Frankly, there are a lot of things I'd rather do than bathe.

AS a matter of fact, bathing is no credit to anybody any more. It is made too easy. There are so many bathtubs in this country that it is harder for a man not to bathe than for him to frolic about in the suds three times a day.

Whereas a few years ago hotels were erected with only a small percentage of the rooms "with bath," the ultra-modern hotel today has a bath with every room. There were always two hotel rates, one with and one without.

When a client asked for a room, the hotel clerk inquired with a cold and supercilious look, "With a bath, sir?" And, while the applicant might lack the nerve to say "without," thus conveying the impression that he could get along overnight in such deprivation, it was certainly within his power to make a choice. I have all my life cherished a burning hatred for hotel clerks as a class, and I think it all comes from their habit of going out of their way to bark "With bath, sir?" whenever I sought a $2.50 room. Of course I always let them (*Continued on page 154*)

The Story
101

The daring Miller broth-
000 acres, its Wild West
amazing features, will
once, and if it doesn't work

By CHARLES

Joe Miller, one of the famous Miller brothers who built up the vast 101 Ranch in Oklahoma. The "101 Ranch Wild West Show" is a side line of these remarkable farmers

WHAT old-time Western cowmen will describe to you as the "greatest single movement of cattle in forty years," and as one of the greatest in the history of the country, took place during the spring months of 1927, out of Florida.

That spring, Florida put into effect new and drastic regulations to govern and clean up its previously unregulated cattle industry. Vast expanses of land in the state, unfenced and used for years as open ranges for grazing cattle, were to be fenced, under the new law. The thousands of half-wild cattle of these ranges were to be subjected to the treatment known as "dipping." Other regulations were imposed, striking panic into the ranks of the state's big cattle raisers, who faced the necessity of expending tens of thousands of dollars. Cattle became a drug on the Florida market, as one big landowner after another quit the business and offered his herds for sale.

At the height of this crisis, two men arrived in Florida. One was big-shouldered, browned, and bluff in his manner and speech, and he wore the broad-brimmed felt hat of the Western cowman.

The other—tall, slender, courteous, businesslike—might have been a banker or a corporation president. Yet the two introduced themselves as brothers, Zack and George Miller.

"We're just a couple of Oklahoma farmers here to see if we can't pick up a few head of cattle," Zack Miller explained. "We heard that you're selling cheap."

The Florida landowners looked bored. They had trouble enough on their hands without being pestered by a pair of farmers who probably would consider a dozen heifers a big purchase. Florida, that spring, had herds to sell: not cows by the dozen but cows by the thousand.

Still, a buyer was a buyer. The Miller brothers were shown over the range. They saw young steers which, if fattened and properly marketed, would bring double and treble the price asked. They saw calves and heifers which needed only age to give them value. And they saw these in far-flung herds that numbered tens of thousands! Whole droves were as wild as buffaloes, untouched as yet by rope or hand of man. Everywhere cattle were for sale in this state known to the world mainly in the terms of its pleasure resorts.

THEN these Oklahoma farmers began to buy. One pasturage contained a thousand cattle; they bought the thousand intact. Another herd was estimated at thrice that number. "Sold," nodded Zack Miller, as if a calf were on the block. George Miller, the businesslike one of the brothers, handled the financial details, while the big-shouldered Zack picked the cattle. They bought ranges full of cattle, by the hundreds and by the thousands. In one bold stroke they purchased a single herd that

of the Great Ranch

ers, who operate its 110,- Show, and its many other try anything within reason that time they'll try it again!

LANE CALLEN

PHOTOGRAPHS COURTESY MISS MARGARET TIERNEY AND MR. CORB SARCHET

numbered nine thousand head, at which even sensation-weary Florida opened its eyes.

"What are you going to do with all these cattle and, now that you've bought them, how are you going to 'round 'em up?" asked the amazed landowners.

Zack Miller's reply was action, a telegram dispatched to Marland, Oklahoma: "Send me a bunch of cowboys."

A few days later a company of lean, brown-faced men and small tough ponies of the Oklahoma plains unloaded in Florida. The men were spurred and booted, lariats hung from their saddle horns, and sleeping blankets were strapped to their cantles. It was a hard-riding company; and the round-up began.

AT Old Town, at Clara, at Cross City, Hines, and Pineland the cattle were assembled. It was like the mobilization of an army, an event unparalleled since the great cattle drives of the Chisolm Trail back in the '70's. For, when those cattle were counted, it was found that the Millers had purchased thirty-six thousand head!

"Where will they put them?" gasped spectators.

In the old days of the West such herds were moved overland, feeding off the country as they went. These thirty-six thousand head had to be moved by railroad. Pastures had to be leased for them in which they could fatten, and pastures of such size were not to be had offhand.

Zack Miller (above), one of the owners and managers of the famous farm. (Right) George, another of the Miller boys who helped to create a farm that is known around the world. (Below) Watering horses in Salt Fork River, which flows through the Miller lands

The herd included two thousand cows with spring calves, requiring special handling and pasturage.

An army, indeed; but the Millers, it proved, were capable generals. In the middle of April, as if the whole movement had been carefully rehearsed for months, the cattle horde began to move westward out of Florida. In Alabama, near Montgomery, seven hundred acres of pasture had been leased for the cows (*Continued on page 147*)

UNCLE EPHRAIM

By Don Marquis

DRAWINGS BY NORMAN PRICE

UNCLE EPHRAIM was a man who enjoyed a vast reputation for wisdom in our town. At a nod of his head, men bought and sold, married or refrained from matrimony, plowed and planted, reaped and sowed, engaged in speculation, stayed safe at home, or went upon journeys.

He must have looked wise and experienced and solemnly judicial, even in his early youth. Indeed, I know that he had a reticent, considering air even in the cradle. I have seen a picture of him in an old family album, actually sitting in that cradle holding a rattle in his hands; and he is looking at the rattle with a deep, thoughtful concern, as if he were a young Plato or an early Einstein determining just what the rattle's significance might be in relation to the core of the cosmos.

I knew him for many, many years, and I am certain that he was more communicative to me than to most other persons; but even I never heard him utter more than fifty consecutive words, and then only at most infrequent intervals. A hundred words from Uncle Ephraim would have been equal to a wild and whirling outburst of fevered eloquence from anyone else.

It was his reticence, his air of judicious and calm consideration, his slow and pondering manner, that gained him his reputation as the local Solomon.

Uncle Ephraim was a shoemaker and fairly prosperous, as prosperity went in small American towns a generation ago. He really *made* shoes, as well as sold them. He had learned his trade of cobbler as a very young man, and he stuck to his last; he loved good, sound, honest work. He loved to turn it out, to look at it and to handle it, to feel its neat perfection, and to realize that he was the author of it, the artist who had created this minor masterpiece.

He might have retired from his cobbler's bench many years before his death, if money had been his sole consideration; but his heart was there amongst the rolls of goodly leather and the sleek knives and the pungent wax. His place of business was divided into two departments: the Store in front and the Shop in the rear.

In the store, there were always a couple of spick-and-span young clerks to wait on the trade, and as fine and complete a line of up-to-date footwear as any small city could boast. In the shop was Uncle Ephraim, who employed these well-dressed salesmen, in his workman's leather apron, with his rolled-up sleeves and his waxy hands. Merely *selling* shoes and boots, although it was from selling that he gained most of his prosperity in later years, could never be as interesting to Uncle Ephraim as *making* them. To the end of his days he had half a dozen old customers who scorned to wear anything but his worthy handiwork, although most of the jobs on which he expended his artistic inspiration were, of course, repairing jobs.

It was to the shop that people came who wanted advice, guidance in affairs material or moral. He would sit working steadily and saying nothing while they talked, apparent wisdom crowning his high bald forehead, and with a most prodigious chew of tobacco in his cheek; for he was a constant and devoted chewer of tobacco.

I remember being in there one day when Mal Graham, who ran a flour mill, came in to consult him. I was a lad in my teens, and was busily engaged in sewing a cover upon a homemade baseball; and I suppose, on account of my youth and my obvious intentness on the job, Mal spoke before me without hesitation. The conversation, if it can be called a conversation, went something like this:

"Uncle Eph," said Mal, "I'm kind o' worried about that boy Henry of mine, and I thought I'd drop in and talk things over with you."

UNCLE EPHRAIM took from the leather pocket on the front of his apron a most amazing quantity of fine-cut tobacco, combed out of it three or four wooden shoe-pegs with his awl, and crammed it into his cheek. He looked solemnly at Mal while he did this, and then sighed and soberly returned to his wax ends and his work. Mal took the sigh, evidently, for an invitation to proceed.

"I sent Hen to college," said Mal, "on the idea he was going to study for a preacher; but now he's got all footballed up, and the last time I saw him he was wearin' a pair of these yellow toothpick shoes."

"Humph!" grunted Uncle Ephraim, but went on working.

"HIS ma wanted he should be a preacher, and so did his granddad, and I ain't anyways averse to it; and his granddad put up most of the college money. But now he writes me he's entirely off the idea of bein' a preacher. He wants to keep on at college; but he says he's going to make a newspaper journalist out of himself; says he's got doubts about whether he believes the Old Testament or not. His granddad's sore, and wrote him if he wanted to be a printer, why didn't he start here at home, without a college education, and says he won't get another cent from him without he sticks to bein' a preacher; and if he hears any more nonsense about him not knowing what his Bible beliefs are, he'll larrup him good when he comes home and teach him what to believe in.

"And I'm in doubts about it myself. If I put up all the money to carry Hen through college myself, it'll cramp and cripple me—you know, payments on the house and everything. It's my notion I ought to tell the boy to work his own way through college, and then be what he wants to. But I don't like to go against his ma and his granddad, neither. What you think I ought to do, Eph?"

Uncle Ephraim looked up from his work; his eyes wandered past Mal's intent face to a spot on the wall above and behind Mal, and he said:

"Humph!"

It certainly wasn't an unfriendly grunt, but to my juvenile mind it conveyed very little in the way of guidance. But Mal Graham was evidently impressed and satisfied; he apparently felt that he had received his answer. Perhaps he construed it as affirming his own inner convictions; and the result was that Mal's boy did work his way through college, because he was forced to, and turned into a very capable newspaper man.

Nods. Grunts. Movements of the luxuriant eyebrows. Ambiguous pursings of the lips. Motions of the stained and waxy fingers when he scratched his ears or rubbed his benign bald head. Occasional slight frowns. Infrequent chucklings. Wrinklings of the enormous forehead. Deep sighs. These were all I ever saw or heard anyone get out of Uncle Ephraim in the way of comment. But they seemed to be enough. And year by year his repute for wisdom grew and spread.

He could have been a member of (*Continued on page 144*)

Don Marquis

DONALD ROBERT PERRY MARQUIS, otherwise and universally known as Don Marquis, is one of the most versatile and distinguished of American newspaper men. He is author of "The Old Soak," "The Dark Hours," "Noah an' Jonah an' Cap'n John Smith," and many other books, poems, and plays. While a New York newspaper columnist he created several famous characters, among them Archie, the cockroach; Mehitable, the high-toned cat, and Captain Fitzurse. Mr. Marquis is best known as a humorist, but his genius is not limited to fun-making; it includes among other facets, philosophy, and poetry. He was born in Walnut, Bureau County (that's right!) Illinois, in 1878, and resides in New York City.

A Love Story by MARGARET CULKIN BANNING

Accepted *Without* Pleasure

Illustrated by
JOSEPH SIMONT

"OF COURSE we will go," said Mrs. Linden.

She used a certain manner which she kept on hand to quell incipient attacks of temperament. But June only drew the tangerine coolie coat still more unbecomingly about her, and sat huddled in apathy on the edge of her chaise longue.

"Can't you tell them I'm sick or dead or something?" she suggested. "They won't care. It isn't as if it were a man dropping out."

Her mother, already very splendid in silver velvet which made her white hair only an adornment, showed no sympathy with that plan and certainly no hint of coöperation.

"Don't be absurd, June. I wish you wouldn't act like this. You accepted the invitation, didn't you?"

"I did," said June. "They've got it on me in writing all right. I accepted with pleasure. But my pen slipped. I meant without pleasure!"

"It isn't much wonder that you don't enjoy yourself when you go to a party in such a mood. Come! Please get your dress on, June. There isn't any too much time."

June could read her mother's face, without looking at it. The full measure of Mrs. Linden's frustration was always in it at times like this. It might be thinly washed over by restraint and a determination not to say die, but there it was just the same.

There was the irritation caused by years of forbearing with a daughter who had failed utterly to wear with any grace the social mantle which she had inherited; the impatience with these strung-out years of trying to get June settled, before it would be possible for her mother to arrange her own life as she wished.

Mrs. Linden made no secret of what that arrangement would be. She wanted to give up this big, expensive house which she had kept so long against the possibility of marrying June from it. The hallways almost demanded a wedding. June was her mother's only child, and of course must therefore be her inevitable companion. But sometimes, now that June was twenty-nine and growing steadily more ineffective in the part she should play, Mrs. Linden felt that it was going to be impossible to drag this girl—who was no longer a child but a reluctant and uncongenial woman—about with her forever.

It was so absurd to have named such a girl June, who could never carry off the mood of the month or rise to its possibilities as a wedding time. The very way June could ruin the way clothes ought to look was getting on her mother's nerves.

Those things she thought but did not say. She had taken several classes in psychology, and never allowed despondency or what she called "the negative thought" to master her. Instead, she repeated, "Come, dear;" and June, with a whimsical, compassionate little grimace, got up from the chaise longue.

"All right. I'll be ready in ten minutes," she promised.

"Don't hurry too much. You must look your best. Do you want any help?"

"No, thanks."

"Call Elsa if you do. I'll be down-stairs." Mrs. Linden paused, obviously wishing she could inject some of her own deliberate brightness into June. "I'm sure you're going to have a good time to-night, dear. The Dovers do things so beautifully."

"Dinners look alike to me," said June, brushing her hair as if she had a grudge against it, and eying herself inimically in the glass.

"But that's just how you mustn't feel. Mrs. Dover often has new people. She may have a very interesting young man picked out for you to-night."

"Not for me. I'll draw either a wind-blown, sun-dried, heart-embalmed old one, or some young bird with pimples that none of the younger girls would stand for and Mr. Dover insisted on asking," prophesied June. "However, I don't care, Mother. It's nothing to me. Pimply or doddering, I'll take him on for a meal."

"You ought to care," said Mrs. Linden, her heart sinking at the probable truth of the prophecy, "and if you did, everything would be different."

June had refused to join any classes in either psychology or poise. Her mother felt that was why she got like this—blankly dejected or hard and cynical. Either way she sent men scattering away from her into other bridal arms.

"It's no good, Mother. I know the way you feel. But parties that set *you* up simply let me down. I'm sorry to be the ball and chain; but you just forget about me and give old Sam Stoddard the time of his life. Let him give you an oration about how much prettier you are than any of the younger crowd."

Mrs. Linden couldn't help smiling faintly. She belonged to a generation which was instinctively coquettish under flattery from any source.

"It's just being nice to him that makes him like me, June. You might remember that."

"I don't feel nice," said June, and drew on several layers of chiffon. "I feel mean and ugly!"

"Just remember that a man likes a nice, cheerful girl."

"I've been cheerful," answered June, with accent on the past, "and I've been gay. But after twelve years of it your smiles get chapped from exposure."

Mrs. Linden, feeling the imminent recurrence of the mood of depression, only lifted her head as the poise teacher had taught her, tossed a fragment of negative thought away, and went down-stairs. June did not look in the mirror again. There wasn't much need of it, anyway. She felt reasonably familiar with what the glass had to show and you couldn't blame results on it. Men didn't turn away in pain from the sight of her. It wasn't that.

Perhaps, June felt sometimes, if she hadn't had that sense of her mother expecting her to be popular, waiting for her to be married, she might have made a better job of it. It was like living under a spotlight that made her self-conscious, stiff, and edgy. And as man after man passed her by, the spotlight grew brighter, and began to bring out defects and failures.

The only answer to that was not to take the whole marriage business seriously, but to burlesque it more or less. Of course one couldn't get a husband that way, but June did not want a husband. Except for her mother's sake. She couldn't help feeling that her mother had been given a rather raw deal on the whole. Other women of her age were comfortable grandmothers or distinguished mothers-in-law, but Mrs. Linden had to keep on pretending that her daughter was a débutante, just toppling over the edge of marriage.

June went over to her desk and looked at the letter she had just finished reading when her mother came in. It was, as usual, an answer to a request for a job, and it stated that, since she had no training, it was impossible to consider her application. She couldn't get a job without some training, and she couldn't get training because she had no money, except what her mother gave her.

"It's time to go, June dear. Cochran has brought the electric around."

June pulled an evening coat off a hanger and went down-stairs.

SHE had a certain Sibylline gift. As she had foretold to her mother, her partners at dinner were the elderly but still sportive Cal Wetherell, and a pimply young man. No; on looking at

Digitized by Google

UNIVERSITY OF IOWA

him the second time he wasn't pimply exactly, but he looked as if he might have been. His hands were big and freckly, and uncertain when he had to serve himself from the silver platters leveled at his elbow.

June, who had paid no attention to him through the first two courses but had been listening indifferently to the cackles of Wetherell, found herself amused at the struggle on her left. The young man was very red by the time he had landed his food on his plate. He had done it rather badly, taken too much asparagus and only a sliver of meat, but he was obviously very much relieved to have it over.

Did they bring this in from the garden or the garage, wondered June, a little hot at having such a person placed beside her

"Did you get enough to eat?" she asked.

He looked at her sheepishly. Obviously, he was a very inferior young man. His clothes were unadjusted, his collar too high and his tie too large.

"Yes, ma'am," he said.

Did they bring this in from the garden or the garage, wondered June, a little hot at having such a person placed beside her. "Ma'am!" She was accustomed to take the social leavings more or less, but there was an outside limit! His card read "Mr. Delancey;" and that meant nothing at all to June. Nor did she want it to mean anything at any future time.

AT THAT point he spilled Hollandaise sauce, and tried to wipe it off the cloth with his napkin.

"Let it go," advised June, leaning on her elbow and watching him as if he were in a cage, "they wash every week, I think."

"I'm awfully clumsy," he said. "You see, I'm hardly used to dinners like this."

"Aren't you?" she asked coldly, pushing away his attempt at confidence.

"No, ma'am. I live rather plain as a general thing."

She looked at him with those satirical, unhappy eyes which had kept so many men at a distance.

"Do you like it better plain or fancy?" she inquired.

He knew then that there was humor in the offing, and grinned.

"I don't really know, myself," he admitted. "I suppose, if I had done the easiest thing to-night I'd have stayed home and put my feet up and read the paper."

"Then why on earth didn't you do what you wanted to?"

"Well," he said, "I suppose you might say it's a matter of self-improvement. A man likes to get on in the world. Meet nice people, you know. Now, just sitting next to a beautiful young lady like you is an experience for a fellow like me."

It was a long time since June had been called a young lady. She had thought both phrase and idea obsolete. It was also novel to have social climbing so freely acknowledged.

"And you can't help but feel," said Mr. Delancey, pursuing his reasons further, "that if anybody's kind enough to ask you to dinner, you ought to go."

June wanted to say that the Dovers always had a reason for asking everyone, and that it rarely had anything to do with conferring enjoyment on their guests. But she checked herself, thinking that the young man might possibly be one of their relatives. It was pretty thick to plant him beside her, anyway.

She made a couple of rather devastating and subtle remarks, but the young man did not seem to get their meaning. She could see that he was admiring her by this time, and that he was fascinated by her white shoulders and her dress. Probably it's the first time he ever had dinner with anyone who wore anything more radical than elbow sleeves, she thought.

"DO you live here?" she asked, to check that annoying admiration he was bestowing too freely.

"Yes, ma'am. For the present, that is. I've got a little job up here in the copper country that will keep me busy for a couple of years. A mining engineer hardly knows where he'll land next. For about three years I was in Rhodesia."

She wasn't entirely sure where Rhodesia was, so she let that pass. But Delancey went on talking, now in unregulated bursts of confidence, now with apology and self-depreciation. The ice was broken, and floating about on the sea of his relief at being able to talk to someone. He was awkward and absurd, and when at the end of dinner he took it upon himself to thank her for her company she felt only humiliated.

They were silent driving home, Mrs. Linden and her daughter. Mrs. Linden had heard that Mrs. Tom West and Mary Jameson were going abroad on one of those foot-loose trips which elderly ladies of means can take with such unchaperoned delight. It made her envious, chafing at her own restraints, and irritated at the very sight of June sitting there silently wrapped in her evening coat and her own brooding thoughts.

"Sue West and Mary Jameson are going to Europe," said Mrs. Linden, driving the high-stomached electric at a careful fifteen miles an hour. "They're going to have a wonderful time. They asked me to go with them."

"Why don't you?"

"My dear June, how can I? With this house and all the other things. They can. I can't afford it."

June knew. Her mother meant that the other ladies lived in apartment hotels, that they had no unmarried daughters.

"I'll get a job pretty soon," she said, "and be off your hands. Look here, Mother, let me go off and try it. Just give me enough money to land me in New York, and I'll take care of myself."

"I don't know what you'd do."

"I could sell clothes. I'd find something."

"Perfectly ridiculous!" exclaimed Mrs. Linden.

"Well, then let me start a shop of my own here. It wouldn't take so much. And I'm sure I could make a go of it."

"I've no money for silly ventures," said her mother.

June knew. She understood the fine points of her mother's economy. There had always been money enough for hand-embroidered dresses, for nurses, for expensive schools—but once, when she had wanted a book so terribly that the very thought of being denied it still hurt, her mother had refused. The book had cost five dollars; had been out of the question. And June had no money of her own, and never would have until her mother died or she could earn some or marry some. She could have a wardrobe, a home, but no money.

"Who was the man next to you at dinner?" asked Mrs. Linden.

"Some bum Mrs. Dover wished on me."

"What was his name?"

"Delancey."

"I never heard of him," said Mrs. Linden.

"You probably never will, Mother. His shadow just passed across the sun."

"He seemed very attentive. Is he unmarried?"

"I don't know. I think so, unless he has a wife tucked away in Rhodesia. He was all worked up at being in high society, and grateful and everything."

"You shouldn't talk like that, June. Perhaps he does want to raise himself. That's to his credit. You ought to be more open-minded. And, after all—"

"Spinsters shouldn't be choosers," finished June. "Would you like me to marry young red-neck, Mother? I might be able to put it over, barring wives in Rhodesia."

"You mean—"

"I MEAN he doesn't know anything about women. He's been off the map. He says, 'ma'am.'"

"Did you like him?"

"No," said June, "not in the least. But I don't see that that matters. He wants to improve himself. He's hot-foot after culture and bigger and better table manners. And we need a husband for me. We might make a very good deal with him."

"That's no way to talk, June. I only want you to be happy."

"I know, Mother," said June, with a kind of penitence at having rubbed the truth in too bitterly. "But if I had it my own way—"

Mrs. Linden's face hardened. She didn't want a daughter running a tea-shop or teaching or working in a department store. She wanted a married daughter. And she was not yet prepared to give up. Again (*Continued on page 124*)

She grew prettier during those weeks almost in spite of herself under that constant, unremitting devotion which Delancey gave her

How Many Of *Do You*

By FREDERICK

The names of the thirteen men and women whose pictures appear here will be found at the end of the article on page 72

WHO was Guy Empey? What happened to Harry Hawker?

On which side did Admiral Kolchak fight?

Who were Alcock and Brown?

What did Ole Hansen do?

What office did Adolphe Max hold?

These are not catch questions. They haven't been dug out of any "Ask Me Another" book. They are the everyday front-page stuff of newspaper commerce. At least, they were, within the experience, and presumably within the memory, of most of the readers of this page.

The answers should be easy.

But are they?

Guy Empey wrote "Over the Top."

Harry Hawker was the Australian aviator who in an attempt to fly the Atlantic was for a long time lost at sea.

Admiral Kolchak was the white hope of the darkest days of red Russia.

Captain John Alcock and Lieutenant Arthur W. Brown made the first transatlantic airplane flight.

Ole Hansen was the mayor of Seattle who broke the sympathetic strike and helped to stamp out Bolshevism in the Northwest.

Adolphe Max was burgomaster of Brussels.

And you had forgotten most of them!

Discouraging, isn't it? One is inclined almost to agree with Marcus Aurelius that "all is ephemeral—fame and the famous as well."

Suppose we had before us a list of erstwhile front-page names—not all of them of heroic stature but all of them newspaper luminaries of very considerable wattage—could we pick the good from the bad, the consequent from the inconsequent? For instance:

Sir William Osler
Francis Edward Clark
Bruce Ismay
E. Coué
Steve Brodie
"Chief" Myers
Cleofonte Campanini
Frances Heenan
Franz von Ritelen
Cecil Arthur Spring-Rice

Jeannette Rankin
Annie Oakley
Bela Kun

Perhaps it isn't necessary to identify all these ladies and gentlemen of the public prints; but for the benefit of those who, like myself, may have forgotten one or two, here goes:

Sir William Osler was the Canadian physician with revolutionary ideas about old age.

Francis Edward Clark founded the United States Society of Christian Endeavor.

Bruce Ismay was saved from the "Titanic."

E. Coue was the French chemist who said:

Every day in every way,
I am getting better and better.

Steve Brodie was the celebrity who jumped off Brooklyn Bridge.

"Chief" Myers was the Indian catcher of the New York Giants.

Cleofonte Campanini was general director of the Chicago Opera Association.

Frances Heenan was "Peaches" Browning's maiden name.

Franz von Ritelen was said to be the head of a German spy plot in this country.

Cecil Arthur Spring-Rice was British Ambassador to the United States during the war.

Jeannette Rankin was the first woman member of the House of Representatives.

Annie Oakley was the champion "shot" who starred in Buffalo Bill's Wild West Show.

Bela Kun was Soviet dictator of Hungary.

Let's put it another way:

Who took the

Digitized by Google

These Celebrities *Recall?*

L. COLLINS

"Oregon" from the Pacific to the Atlantic during the Spanish War?

Who was Flo Ziegfeld's first wife?

Who was "The Grandmother of the Russian Revolution"?

Who was head of the French High Commission to the United States?

Who was the woman who was United States Senator for a day?

Who was the orchestra leader who played in Carnegie Hall under guard?

Who was the fourth member of "The Big Four"?

Who married Prince Christopher of Greece?

What recent governor of Texas gave Gifford Pinchot a black hat?

Who was General Pershing's chauffeur?

Who was the commander of "The Battalion of Death"?

Who fined the Standard Oil Company $29,000,000?

Who was the bearded fanatic who terrorized Czarist Russia?

Who was the man picked by General Pershing as the ideal soldier of the World War?

Who was the man to whom Marshal Foch said: "What you did was the greatest thing accomplished by any soldier of any of the armies of Europe."

Whose army marched on Washington during the gay nineties?

Was Dorothy Arnold ever found?

Who was Uncle Joe?

Who was the manager of the Cincinnati baseball team that resigned to enter the army in the World War?

Credits for photographs will be found at end of article

Who was the commander of the NC-4?

Who was in charge of our Red Cross work in France?

Who was "The Millionaire Kid"?

Who was head of the German Peace Commission at the Paris conference?

Who was the girl in the bathtub?

Who was Ponzi?

The last one is too easy. So I'll begin at the beginning. Captain C. E. Clark was the skipper of the "Oregon." Anna Held was the first Mrs. Ziegfeld. Catherine Breshkovskaya was the Russian lady. André Tardieu was the French Commissioner. Mrs. W. H. Felton, of Cartersville, Georgia, was senator for a day. Karl Muck was the orchestra leader. Orlando, with Wilson, Lloyd George, and Clemenceau, made up the "Big Four." Mrs. W. B. Leeds was the Grecian princess. Pat Neff was the governor. Eddie Rickenbacker chauffed for General Pershing. Maria Botchkarova commanded "The Battalion of Death." Kenesaw Mountain Landis was the judge. Rasputin was the man behind the Czar.

Samuel F. Woodfill was the ideal soldier. Sergeant Alvin C. York received—and deserved—Marshal Foch's praise. Coxey's Army marched on Washington. Dorothy Arnold is still missing. Uncle Joe Cannon was speaker of the House of Representatives. Christopher Matthewson was the baseball manager.

Lt. Colonel Albert C. Read was hailed as "The Columbus of the Air." Major Grayson M. P. Murphy was head of the Red Cross work in France. Byron D. Candler was "The Millionaire Kid." Count von Brockdorff-Rantzau represented the Germans at the peace table. Joyce Hawley was in the bathtub. And Ponzi is the "financial wizard" who caught hundreds of investors in his fake scheme.

I am covering a good deal of ground and skipping fast. If anyone thinks I am choosing unfairly, let him pick the people in whom he is (*Continued on page 69*)

INTERESTING PEOPLE

This Boy is Off to a Famous Start!

AT THE age of fourteen, Deric Nusbaum is a veteran archæologist. As Deric himself would tell you, that means finding out about folks who lived thousands of years ago by the things they left behind them. From his first-hand adventures among the Indian ruins in the Southwest he has acquired a lot of fascinating information, and he has a whale of a good time.

Deric's father is head of Mesa Verde Park, in Colorado. His mother is the author of several books. Deric himself has written two books about his experiences in exploring Indian ruins and in tramping about Mesa Verde. From the sales of his books, he has already realized enough money to see him through college when he is ready to go. He is *big* enough to go now, for he is a blue-eyed, ruddy-cheeked young giant who comes within an inch of his father's six feet one of height.

"Deric was born in Paris in 1913," Mr. Nusbaum told me. "His mother saw to it that he spoke both German and French before he spoke any English. We figured this would help him with his languages later on.

"He returned to America with us before America got into the war. Since then he has spent most of his life right out here in the West. He alternates between our ranch outside of Santa Fé and our headquarters down here in the Park.

"Deric knows his homeland of the Southwest fairly well," Mr. Nusbaum went on. "His mother and I believe that every boy and girl should know a whole lot about one locality: the kinds of birds, and trees, and flowers that live there; something about the local geological system; something about the written history of the neighborhood; and, if possible, something about the history that is unwritten."

Later, Deric told me about some of his experiences in reconstructing history from the relics that he finds.

"I had a wonderful time when first visiting ever made to Frijoles Canyon," he said. "That is where one of the best cliff-dweller ruins lies. I was only about six years old at the time. But I remember standing by the little stream that runs along the floor of the canyon and looking up at the cliffs on both sides of me.

"Two summers later we went to Hawikah, an old ruined village of the prehistoric Indians. There Dad and Mr. F. W. Dodge set about excavating the whole place. For the first time, I saw a city of ancient America grow out of a pile of rubbish.

"After a while, I began to meet some of the Zuñi Indians, who descended from the original people. At first, I was scared of them. They were so silent and wild-looking in their dress of skins and their long black hair.

"But after while I met an old man who could speak a little English he had learned at the mission house. He began to teach me some of his own language. Then I could play with the Indian boys, and know what they were talking about.

I have since learned that these people have their history and traditions, just as we have. They have their ideas of religion, which they follow just as honestly as we do ours. They love their children, take pride in their work, and gossip about each other the same way white people do."

"We make it a point to encourage other boys and girls to come and visit us," Deric's mother told me. "Both Mr. Nusbaum and I believe that all the brains and teachings in the world can't take the place of a certain amount of the right sort of contacts between young people.

"As a result, despite the great deal of time Deric spends reading at home and prowling around the country, he

makes friends easily, and keeps them."

The old adage says "the proof of the pudding is in the eating." In the case of Deric, his practical test came last summer when he left his accustomed environment and went to sea with the Putnam Baffin Land Expedition.

In a dozen different ways, he faced an entirely new set of circumstances. He had to associate with a rough crowd of sailormen on one hand, and with a mixed party of college men and erudite scientists on the other. He had to endure the hardships of cold and heavy weather. He had to take his turn at pump and windlass, halliard and winch.

Let the vessel's master, Captain Bob Bartlett of North Polar fame, tell how the young archæologist got his sea legs.

"I took two looks at the lad when first I set eye on him," said the captain. "He was fine upstanding timber in the way he was built. But I've seen them look shipshape before—on the beach, that is; and turn sour as a fisherman's forehold soon as they got out on blue water.

"Well, this lad Deric somehow eased along quietly the first week or so after we left New York. 'Twas a case of quartering wind and easy sea up the coast.

"Then out of the northwest she came on to blow. Right in the midwatch it hit us too.

"We weren't carrying much of a crew: five men and a cook to handle a two-masted schooner is plenty. But in the darkness and with pretty nearly full canvas on her that is a small company.

"I figured we'd better use some of the scientists we had aboard to help us slack sail. So I let go a yell down aft where the intellectual fellows slept. And what do you think I raised first try? An archæologist! Fourteen years old, too! Can you tie that? The lad was like two men when it came to laying hands on the right line, and grabbing reef points out of the dark. And once when Tom Gushue, my mate, got a lantern for a look at the hatch combings I saw young Deric was laughing! 'There,' said I to myself, 'is the making of a sailorman!'"

So it went through the whole summer. The ship was nearly lost by ice; her propeller was smashed; fog and gale vied to coax her tender keel across uncharted shoals. But through it all our archæological bookworm won and held the affection of his shipmates. Best of all, when things were at their worst, he *laughed.* That in itself seems to me a pretty fair test of the sort of stuff the boy is made of.

FITZHUGH GREEN

Maud Howell, School Ma'am, is Now a Stage Manager

IT WAS the morning before the night on which George Arliss's new play was to open in Philadelphia. The final rehearsal was due to start at any moment. The entire cast, nervous and excited, were assembled in the theatre. They were waiting for the stage manager to arrive. Without him, they were helpless, for, as everybody knows, the carpenters, the electricians, and the property man all work under the direction of the stage manager; and the actors must be familiar with the sets, the lighting, and the "props" before they can go on in a performance in a strange theatre.

Finally, just as somebody was about to telephone the stage manager's hotel, a messenger dashed in with the information that the young man had suddenly been taken ill with acute appendicitis. He was already on his way to a hospital.

At this piece of news, the eyes of the entire company, including those of the stage hands and the producer, Winthrop Ames, turned to a slim, brown-eyed girl who stood quietly in the wings.

"All right, young woman," Ames said; "that means that you're *it!*"

Quite unflurried, the brown-eyed girl stepped into the middle of a very difficult situation, and began to make things happen. It was instantly apparent that she had already figured out just where each "prop" was to go; that she had thought out her lighting scheme in detail; that she had in mind a definite chore for each stage hand.

Surely and steadily order emerged from chaos. The stage ceased to be a cross between a lumberyard and a furniture warehouse. In an incredibly short time, it had flowered into an enchanting setting for the play.

And that is the way that Maud Howell, young school ma'am from California, became stage manager for Winthrop Ames's productions starring George Arliss.

She had come down to Philadelphia as assistant stage manager, with the distinct understanding that she would probably return to New York jobless. For even so short as eight years ago, stage managing was looked upon as one of those things that just aren't done by women. Today you could count on the fingers of one hand all the women who have tackled the job and who have made a go of it. And of these few Miss Howell is the only one who has become stage manager for a star of anything like the magnitude of George Arliss.

PHOTOGRAPH BY FLORENCE VANDAMM, N. Y.

Maud Howell, stage manager for the Winthrop Ames Productions starring George Arliss, has always been interested in the theatre. She was born in California, and acted in plays at Stanford University when a student there. Later she became dramatic director in a Los Angeles high school

"I've always been interested in the stage," Miss Howell confided to me the other morning as we talked together in her office in a New York theatre. "When I was a student at Stanford University—I was born and grew up in California, you know—I was forever working my head off to get into the plays put on by the various college organizations. And, like every other girl who has thrilled to the applause of her friends, I dreamed of being a great actress and of taking New York by storm.

"Fortunately, I had gumption enough to know that even if an inexperienced actress is lucky enough to find an engagement, she won't have much of an income. It was absolutely necessary for me to earn a living wage from the start, so I looked around and landed a job as dramatic director in a Los Angeles high school.

"There is a pretty widely circulated idea that teaching is a very drab, thankless sort of task. Nothing could be further from my experience. Why, you can discover more fascinating and thrilling things in a roomful of youngsters in a single day than Robinson Crusoe ever found

Digitized by Google Original from UNIVERSITY OF IOWA

during his whole stay on his famous island!"

Miss Howell taught in Los Angeles until America entered the World War. Then she went to Washington to do her bit in the service of the Government. As soon as the Armistice was signed, she set out for New York to look for work that might lead to the stage. The best that she could get was a job putting on plays for working-girls' clubs. A year of this, and she got a chance to go to Detroit to play small parts in Jessie Bonstelle's stock company. She also acted as Miss Bonstelle's stage manager.

It was her ability as a stage manager that attracted the attention of Guthrie McClintic, who was then playing leads in the Bonstelle company.

Mr. McClintic recommended Miss Howell so warmly to his friend Winthrop Ames that the latter was persuaded to give the young woman a try-out as assistant stage manager in the new Arliss production.

When the triumphant Mr. McClintic asked Miss Howell how she would like this job, she promptly replied, "I'd like being his stage manager much better!"

"I admire your spirit, Maud," said Mr. McClintic; "but some things are impossible."

"Nothing's impossible," she retorted.

And, as we have already seen, Miss Howell was right! FRANCIS PETERS

William Creamer Has Sold Dry Goods to the Wives of Many Presidents

FOR sixty-six years, William Creamer, dean of New York floor-managers, has been an employee of Arnold, Constable and Company, one of the oldest and largest department stores in New York. Mr. Creamer, who is just turning the corner into his seventy-seventh year, started working for his present employers when he was ten years old. His salary was a dollar a week—in gold.

"I got most of my schooling right here in the store," he told me, with a lift of pride in his voice. "And although I can't write a degree after my name, I believe I've had a pretty liberal education.

"I've never traveled much. Didn't have to. Sooner or later, the whole world comes to a big department store—in packing cases: Perfumes from France, silks and pottery from China, fine glass from Venice and Bohemia, tooled leather from Spain and Morocco, prayer rugs from Persia—you can look at 'em, and handle 'em, and smell 'em, and dream about 'em to your heart's content without so much as the price of a ticket to Jersey City in your pocket!

"In the old days," Mr. Creamer went on, "when big families were the fashion, ladies used to fetch their children along when they came a-shopping. I've seen them come in with three, four, or even five little ones, often in charge of a nurse. They just sat and behaved themselves while their mothers fingered silks and tested linens by wetting a spot with a dampened finger tip.

"One chubby little lad who used to come often with his mother to my counter when I was in the silk department grew up to be President of the United States. His mother addressed him as 'Theodore,' but later the whole world called him 'Teddy.' For all his energy, he was a patient little lad. He always sat very quietly while his mother examined the goods at my counter. People were a never-ending source of interest to him. I can see him now, with his round eyes following the motions of the shoppers.

"I have waited on many famous persons in my day. I was a junior salesman when I sold silks to Mrs. Abraham Lincoln. Her enemies and some of the newspapers used to say that she was wickedly extravagant. I recall distinctly that she was always rather plainly dressed than otherwise. She was 'choosy' and somewhat hard to please. I considered her anything but extravagant. In fact, I always thought that she was inclined to drive a good bargain.

"Mrs. Ulysses Grant was one of my customers for eighteen years. She was a woman with a kindly face and kindly manners.

Mrs. Grover Cleveland was another White House lady it was my honor to serve.

PHOTOGRAPH BY D. JAY CULVER

William Creamer, seventy-six-year-old floor-manager of Arnold, Constable and Company, got his first job there at the age of ten. He has served many famous people

"Mark Twain was one of our regular customers up to the time of his death. As a rule, he was quite solemn-looking, not to say glum in appearance. I waited on him hundreds of times, and I never in my life heard him make a joke, or a facetious remark.

"Miss Lillian Russell, a well-known stage beauty of a generation ago, used to cause quite a sensation when she came into the store. I shall never forget the day that a nervous young clerk ran his shears quite through a handsome piece of brocade when the actress paused at his counter to ask for a sample.

"Fashions in shopping have changed a great deal in the last fifty years," said Mr. Creamer. "Thirty years ago, when a woman went shopping for the makings of an afternoon gown, she carried in her bag a list of minimum requirements which read something like this:

15 yards of wide silk
5 yards of skirt lining
3 yards of horsehair cloth to stiffen the skirt
4 yards of silk for a dust ruffle
5 yards of velveteen skirt binding
24 inches of skirt belting
24 inches of waist belting
1½ yards of sleeve lining
1 yard of crinoline to stiffen the skirt
12 inches of buckram for the collar
4 dozen fancy buttons
1 card of large hooks and eyes
2 cards of medium hooks and eyes
1 card of invisible hooks and eyes for the skirt placket
5 spools of silk thread
3 spools of cotton for basting
4 spools of buttonhole twist
2½ yards of featherbone for waist
1 yard of small boning for the collar
1 bolt of seam binding.

"Today she simply buys four yards of silk and a spool of thread!

"What could better tell the story of woman's emancipation!

"There wasn't a woman clerk in any fashionable shop when I started my career at Arnold's," Mr. Creamer went on to say. "Indeed, we have had women clerks in New York for only a little more than fifty years. I want to say that I'm all for the modern woman. I've watched her grow from the sweet, old-fashioned girl, whose boast was that she wore a number two boot and didn't know how to boil water, to her present competent status, when she makes a man hump himself to keep up with her.

MILDRED HARRINGTON

More popular than ever in summer!

SOUP

as the one-hot-dish of summer meals

DELICIOUS, invigorating soup! In the midst of all the cold meats, salads, iced desserts and beverages of the summer dining-table, good hot soup is a welcome contrast. It appeals to the appetite now with even greater charm. It has a bracing, tonic effect in the cold meal, which makes soup especially beneficial and healthful in the summertime. The hot, wholesome liquid food sets the digestive juices flowing more freely and in this way gives a renewed activity to a digestion steadily confronted with the task of assimilating so many cold foods.

NATURALLY enough at this season, every woman seeks to spread before her family all the cooling, refreshing foods which are so inviting. She also knows the little secret of the one-hot-dish in meals of this kind—how healthful it is, how necessary to make all the other dishes taste their very best.

ADDING an equal quantity of water, bringing to a boil and simmering a few minutes. That is all the famous Campbell's Soups require before serving on the table! And they are of such delicious quality that the proudest housewife is glad to serve them.

Read the full list of twenty-one Campbell's Soups printed on every label. Make your selections and order from your grocer. He has, or will get for you, any of the Campbell's Soups you select. 12 cents a can.

15 vegetables
Beef broth
Cereals
Fresh herbs
Seasoning

. . . 32 different ingredients
12 cents a can

My how Campbell's makes us grow!
Everybody tells us so.
We just beam with health and pride
With our Campbell's Soup inside!

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

5 years old - - - and 52 teeth

By the time that youngster playing so happily at your feet reaches the age of five he will have more teeth to care for than at any other time in his life! For underneath his twenty temporary teeth, the thirty-two permanent ones are being formed. As these grow, the roots of the baby teeth are gradually absorbed, leaving the crowns free to drop out.

It is easy to see that under these circumstances decayed temporary teeth can seriously affect those which will replace them. As a result they can also influence the actual growth and shape of a child's jaws and even his physical health and development.

Acid-decay, the destroyer of permanent teeth, is no less an enemy of these first fledgling molars and incisors. Particles of food lodge in the pits on the grinding surfaces of the teeth and in the tiny V-shaped crevices at The Danger Line—where teeth and gums meet. They ferment. Acids form which attack the teeth and irritate the delicate gum tissues.

A tooth-brush cannot possibly reach into all these crevices. So it is necessary to use a dentifrice that will both cleanse the teeth and neutralize these dangerous acids.

Squibb's Dental Cream is made with 50% of Squibb's Milk of Magnesia, more than enough to neutralize the acids in these pits and at The Danger Line and to give needed protection. Moreover, Squibb's Dental Cream contains no grit, no astringents, nothing that can injure the sensitive mouth of a child. It helps to keep the mouth in a healthy condition. It is pleasant to the taste and harmless if swallowed.

It is essential to have your dentist inspect your child's teeth regularly. By exercising this precaution, and by having your child form the habit of using Squibb's Dental Cream at least twice a day, you will help him secure a sound, permanent set of teeth which should serve him through life. At your druggist's, 40c a large tube.

E. R. Squibb & Sons, New York. *Manufacturing Chemists to the Medical Profession since 1858.*

Squibb's Milk of Magnesia promotes proper alimentation by virtue of its twofold action. Its antacid quality helps counteract improper digestion. And its mild laxative action helps to relieve the system from fermenting foods. At druggists, 25c and 50c a bottle. The Standard of Quality.

How Many of These Celebrities Do You Recall?

(*Continued from page 63*)

especially interested. Let him see if he knows:

Six members of Roosevelt's Cabinet.
Of Taft's.
Of Wilson's.
Of Coolidge's.
Six men who went down with the "Lusitania."
With the "Titanic."
The wireless operator of either ship.
Any six vice presidents.
Any six murderers.

Murder "heroes" are seldom heroic, I know. But they are often excellent examples of public forgetfulness applied to individuals who have held for a time the top of the page and the spot of the light.

Some people say that if we gave less thought to criminals, we might give longer life to "regular" heroes who don't get into jail. I wonder. We do forget the people who have done the really worthwhile things. But do we do any better for our murderers and our scandal-makers?

A FEW months ago, I picked up my paper and found that Lizzie Borden was dead. I didn't know that she was alive. If anyone had asked me, right-off-the-bat, I should have said she had been murdered in Fall River about the time I was learning to skate! Yet Lizzie, in her day, was the center of an extraordinary murder mystery—one that is still unsolved.

Last winter a play was produced in New York based on a famous novel, which was in turn based on the famous Gillette case. The average playgoer saw it only as the story of a boy who pushed a girl into a lake.

Who was "Pink Toes"?
Who murdered Avis Linnell?
Who was accused of the murder of J. L. Hamon?
What was the name of the San Francisco girl who killed her mother because she wouldn't let her go on parties?
Whom did Charles J. Guiteau kill?
Who was Belle Elmore?
Was Powers accused of killing Goebel or Goebel of killing Powers?
In what murder trial did Jack Rose figure?
How about Ruth Cruger?
And who were:

David E. Herold	Edward Spangler
Lewis Payne	Samuel A. Mudd
George A. Atzerodt	Samuel Arnold

and Michael O'Loughlin?

I'll admit that my average on this examination paper—without the aid of newspaper files in various parts of the country—would be about the same percentage as Volstead's legalized beer. But I won't ask others to confess their powers of forgetfulness. I'll give the answers right away, just as if I had known them all along:

"Pink Toes" was Dorothy King, the show girl whose death shook New York theatrical and Philadelphia social circles to their respective foundations. The Reverend Clarence Virgil Thompson Richeson was convicted of the murder of Avis Linnell in a sensational trial which focused the country's eyes on peaceful Cape Cod. Clara Phillips was the "heroine" of the famous Oklahoma Hamon case.

The San Francisco girl who objected to her mother's supervision of her pleasures was Dorothy Ellingson. Charles J. Guiteau killed President Garfield. Belle Elmore was Dr. Hawley Harvey Crippen's murdered wife, a murder which shook London and reverberated for months over here.

Caleb Powers was convicted of the murder of William Goebel in the most memorable trial Kentucky ever knew. Jack Rose and his bald head illumined the mysterious case in which Police Lieutenant Charles Becker figured as a convicted murderer, and gambler Herman Rosenthal figured as the corpse.

Ruth Cruger was the high-school girl who was last seen entering the bicycle repair shop of Alfred Cocchi. And the gentlemen with the unfamiliar names were accused of conspiring with John Wilkes Booth to kill Abraham Lincoln.

But we don't have to bear down hard on crime to prove the shortness of our front-page memories. Many a man whose virtue is wholly impeccable, or, at worst, only slightly pecked, has had reason to sigh with the poet:

> What is the end of fame? 'Tis but to fill
> A certain portion of uncertain paper.

For instance, Richmond P. Hobson. Of course, we *do* remember Hobson—and we certainly should, for he was a real hero and a gallant gentleman; but,

What really do we know about him?
Was he in the army or the navy?
Was he a congressman or a senator?
Was he a Republican or a Democrat?
Was he a Prohibitionist or an anti?
Was he a Northerner or a Southerner?
In which war did he fight?

And Carrie Nation? What did she do? What did she carry in her hand? What, if anything, did she have in common with Mrs. Pankhurst? With Doctor Parkhurst? With Wayne B. Wheeler? With George Washington?

Ruth Law. There's a name for you! When Miss Law first astonished the world with her flying stunts, crowds followed her about the streets just as they did Dr. Mary Walker in her frock coat and high hat. To-day, we have women aviators essaying the Atlantic—and Miss Law's feats are forgotten.

The truth about this hero business seems to be that the modern world is crowded—even the clouds and the waters are crowded! —with heroes who successively claim the front-row place. And each new splendor makes us forget the one before.

Nowhere is this more true than on the stage. Al Jolson we know; and Ed Wynn, and Walter Hampden, and John Barrymore; but—

Who played Josh Whitcomb in "The Old Homestead?"
Who was the playwright-star of "Shore Acres"?
In whose stock company did Ada Rehan play?
Who was Frankie Bailey?
Who was the Salvation Army lassie in "The Belle of New York"?
Who was Bert Williams?

Or, to turn for a moment to an allied art, who was:

Arthur Johnson?	Maurice Costello?
Mary Fuller?	Max Linder?
John Bunny?	Ruth Roland?

Here are the answers to the six questions about the stage: Denman Thompson; James A. Herne; Augustin Daly's Stock Company; the Weber and Fields girl with the perfect legs; Edna May; and the greatest negro actor who ever lived.

And here are the answers to the six questions about the movies; the first leading man to get his name in print; the heroine of the first movie serial, "What Happened to Mary?"; the Charlie Chaplin of his day; Valentino's Irish predecessor in the early films; the French comic who committed suicide; and the star of a hundred thrillers, who is now said to be the richest woman in Hollywood.

And sport? That's where the heroes pass with the count of ten:

Who knocked out whom with a solar-plexus blow?
Who was Hans Wagner?
Who was Bernie Wefers?
Who was Jim Thorpe?
Who was Mike Kelly?
Who was Malcolm D. Whitman?
With what college team did Red Grange play?
What did Hank Gowdy do?

Of course, to sport's followers, the answers are easy; but some of us may have forgotten that Bob Fitzsimmons knocked out Jim Corbett at Carson City with a solar plexus blow; that Hans Wagner was the greatest short-stop Pittsburgh—or any other city—ever saw; that Bernie Wefers was the first sprinter to do the hundred yards in less than ten flat; that Jim Thorpe, the Carlisle Indian, was the greatest all-'round athlete of all time; that "Slide-Kelly-Slide" Kelly was the Babe Ruth of his day; that Malcolm D. Whitman was the undefeated tennis champion of the United States; that Red Grange played with the University of Illinois; and that Hank Gowdy was the first professional ball player to "join up" for the World War.

I COULD go on asking and answering questions indefinitely. But perhaps the most convincing way to demonstrate the brevity of hero-memory is to let *you* answer a few. I have chosen a list of names, most of which will be at least vaguely familiar to every newspaper reader. They aren't all heroes; but they have all, generally speaking, been "front-page stuff" in your time and mine. Moreover, so as to show absolutely good faith, *I haven't put anybody in this list that I have not seen with my own eyes:*

1 Thomas B. Reed	6 Lord Louis Mountbatten
2 Lyman Abbott	7 Madame Montessori
3 Frederick Remington	8 Jesse Livermore
4 Sam Hill	9 Percy Haughton
5 Simon Flexner

(The answers will be found at the end of the article.)

I DON'T know how you came out on that one. But if you didn't do a great deal better than several high-brow friends of mine, on whom I tried it, it is pretty good evidence:

That there is something wrong with this newspaper hero business.

That it isn't organized right.

That sales, once sold, don't stay sold.

That the goods don't stick.

Some of these newspaper heroes weren't nearly so heroic as we thought they were at the time. Many of them are well forgot.

It is possible that Lindy, the unforgettable, will sometime take his place among the heroes we've forgot?

Perhaps. But I don't think so. His first achievement, great beyond the dreams of great men, might not save him. It is historic. It is epic. But, like many historic and epic deeds, it might be forgotten, *if it weren't for two things*:

One of them is Lindy's own personality.

Two heroic figures emerged from the chaos of the Spanish War: Dewey and Roosevelt. Of the two, Dewey had every advantage of rank, prestige, and actual achievement; moreover, he enjoyed for a brief period an unprecedented popular acclaim. But he had no personality. Roosevelt—well, we all know what Roosevelt had.

The other reason why Lindbergh may *never* die is his glorious youth.

Most of the men who have kept a continuing hold on the public imagination have begun early and stayed late.

Again the inevitable comparison: Theodore Roosevelt entered the hero business at an early age. Month by month, he built up the structure of his popularity just as he would have done if he had been manufacturing silk stockings or selling automobile bearings. He made himself the best advertised article the world has ever seen. And what is the result? One of the questions invariably put to a candidate for American citizenship is: "Who is the President of the United States?" And it is no unusual thing, even to-day, for the applicant to answer, "Teddy Roosevelt."

Here, it seems to me, is the secret of heroic success.

Look at Henry Ford.

He has done much the same thing that Roosevelt did. Not so consciously, perhaps. But far more obviously. Ford has ridden into the public imagination, year after year, mile after mile, gallon after gallon, under power of his own creation.

Edison stands in the public mind far above any other inventor of his day, not alone because of the merit of his inventions but because his face and signature have spread his name and supported his fame throughout the electric-lighted world.

PROMINENCE is like prosperity: hard to win, harder to keep. And sudden prominence is like sudden prosperity: the first to go. Quick publicity doesn't stick to people any more than quick money does. But both publicity and money can be accumulated line by line and penny by penny against the rainy day of other people's neglect.

Henry Cabot Lodge may not have been a hero—a lot of people thought he was just the opposite—but no one in our fathers' generation or ours is likely to forget him. Robert M. LaFollette was a hero to some and a red flag to others. Half the people of the United States didn't know how to spell his name, and less than half know how to pronounce it; but every American of voting age had heard of him, and a good many out Wisconsin way thought he was next to God. Elihu Root never flashed across the front pages of the country's press as the doer of startling deeds, but every intelligent American thinks of him as a symbol of intellectual strength.

I'll put it another way. No one who lived in John L. Sullivan's time is likely to forget him. Or J. P. Morgan. Or Rockefeller. Or Queen Victoria. Or Hetty Green. And the reason is that all of these people had one thing in common: a long and—in one way or another—continuously interesting career."

Most of the men and women who suddenly achieve heroic front-page type are just that. Murderers arrive on the pull of the trigger and depart with the turning-on of the current. Military heroes rise at reveille and retire at taps. Even aviators must find new worlds to conquer. If they don't, they too are flashes in the public pan.

One-time men are often good men. They sell themselves to their public honestly and soundly. But they don't follow up their sales. And most of the profit, as every business man knows, is in the "repeats!"

"Who's Who"

1. THOMAS B. REED
Congressman from Maine, Speaker of the House, orator and wit.
2. LYMAN ABBOTT
Editor of "The Outlook," distinguished divine.
3. FREDERICK REMINGTON
American artist, famous for his picturization of the Great West.
4. SAM HILL
Northwestern railroad man, world traveler, friend of Marie of Rumania.
5. SIMON FLEXNER
Director of the laboratories for medical research of the Rockefeller Institute in New York.
6. LORD LOUIS MOUNTBATTEN
Cousin of the Prince of Wales.
7. MADAME MONTESSORI
Italian educationalist, inventor of the Montessori System.
8. JESSE LIVERMORE
Wall Street operator, famous for his sensational manipulation of the market.
9. PERCY HAUGHTON
Football coach at Harvard—and later at Columbia, creator of the Haughton System.
10. HENRY WHITE
American diplomat, member of the American Commission to Negotiate Peace.
11. HUGO MUNSTERBERG
Professor of Psychology at Harvard—credited with pro-German war views.
12. FELIX ADLER
Founder of the Society for Ethical Culture, writer, lecturer.
13. J. J. JUSSERAND
French Ambassador at Washington, for years the dean of the Diplomatic Corps.
14. ARTHUR RUBINSTEIN
Pianist and bon viveur, famous for his brilliant technique.
15. JOHN M. PARKER
Bull Moose candidate for Vice President in 1916 and ex-governor of Louisiana.
16. INEZ MILHOLLAND
Youthful American suffragette influential in securing "votes for women."
17. PEGGY MARSH
American chorus girl, involved in litigation with the estate of Marshall Field.
18. TOD SLOAN
Famous American jockey and sports figure.
19. YVETTE GUILBERT
Distinguished French lyric artist, a frequent and much-loved visitor to our stage.
20. EVELYN NESBIT
Former wife of Harry Thaw, who murdered the famous architect, Stanford White.
21. JULIA ARTHUR
Distinguished American actress famous in Shakesperean rôles.
22. ROSE PASTOR STOKES
East Side working girl who married the "millionaire socialist."
23. JACOB RIIS
Writer and sociologist, biographer of Roosevelt.
24. R. F. DOHERTY
British tennis player who, with his brother, ruled the tennis world.
25. FANNIE WARD
Perpetual American soubrette.
26. H. P. DAVISON
Financier and patriot, partner of J. P. Morgan, war-time head of the Red Cross.
27. JOAN SAWYER
Popular American dancer, one of the first to specialize in restaurant dancing.
28. TOM LAWSON
Financier and propagandist, author of

Take 10 *Shaves*—FREE

Accept a generous test sample of this amazing shaving cream to prove that the remarkable claims we make for it are true

GENTLEMEN:

Advertising claims may sound much alike. And meritorious products that suit one may fail to please another. Hence we feel, in common fairness, that the way to introduce our new shaving cream is by offering a free test at our risk.

Thus, if it suits you—as it does the majority of those who try it—you will then buy it. Whereas, should it not, you will be out nothing.

If this reasoning appeals to you, detach the coupon now. Send it before you forget. We promise 10 delightful shaves which we believe will win *you*—as it has thousands—to this new delight.

1000 men helped us

Palmolive Shaving Cream has five unique features—things 1000 men told us they had sought. With their wishes to guide us, we set out to reach a new goal in shaving comfort.

Our laboratories spent years in experimental work. In all 129 formulas were discarded before we succeeded.

That creamy lather which multiplies 250 times to soften the stiffest beard—that unguent-like blandness from the palm and olive oil content—they are no accident. They follow naturally as a result of our 65 years of successful soapmaking.

These 5 exclusive features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now make the trial, please

No doubt your present shaving preparation suits you, yet there may be a better way. We've tried to find one for you, and will thank you to give it a test. Just send the coupon now, before you forget.

PALMOLIVE RADIO HOUR—Broadcast every Friday night—from 10 to 11 p. m., eastern time; 9 to 10 p. m., central time — over station WEAF and 31 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Please let us prove them to you. Just mail the coupon.

35c

3964A

10 SHAVES FREE

and a can of Palmolive After Shaving Talc

Simply insert your name and address and mail to Dept. B-1499, Palmolive, 3702 Iron St., Chicago, Ill.

Residents of Wisconsin should address Palmolive, Milwaukee, Wis.

muck-raking sensation "Frenzied Finance."

29. MR. "A."
Indian potentate involved in unsavory litigation in British courts.

30. SAMUEL LAMBERT
Distinguished American physician.

31. GEORGE W. PERKINS
Financier and insurance magnate, member of the firm of J. P. Morgan & Co.

32. STUART BLACKTON
Pioneer motion picture man prominent in the affairs of the old Vitagraph Company.

33. MRS. TINGLEY
Religious writer and lecturer, leader of a Theosophist colony near San Diego.

34. GERALD DU MAURIER
British actor-manager, knighted for services to the stage, son of the author of "Trilby."

35. W. F. CODY
Buffalo Bill, plainsman and showman, who toured the world with his "Wild West Show."

36. BONAR LAW
Prime Minister of Great Britain, prominent member of the war-time Coalition Cabinet.

37. MRS. WHITNEY WARREN
Wife of the famous New York architect, well-known society woman.

38. LORD READING
Lord Chief Justice of England, Viceroy of India, war-time High Commissioner to the United States.

39. EDWARD M. HOUSE
Friend and adviser of Woodrow Wilson, who made him our unofficial Ambassador-at-Large.

40. JOSEPH CAILLAUX
French statesman, former Premier and Minister of Finance.

41. A. MITCHELL PALMER
Democratic politician, Attorney General in the Cabinet of President Wilson.

42. MRS. NORMAN DE R. WHITEHOUSE
Suffrage leader, active in the European propaganda work of the Committee on Public Information.

43. ROSIKA SCHWIMMER
Pacifist leader credited with persuading Henry Ford to charter the famous Peace Ship.

44. BRUCE BAIRNSFATHER
British artist who won fame by his "Old Bill" sketches in the trenches on the Western front.

45. T. P. O'CONNOR
The famous "Tay Pay," editor, writer, movie censor, and parliamentary whip.

46. SIR HORACE PLUNKETT
Irish patriot chosen by all parties to preside over the first Irish Parliament.

47. MAURICE ROSTAND
Poet and son of a poet, prominent and picturesque figure in Parisian life.

48. RAQUEL MELLER
Popular Spanish singer.

49. BIG BILL EDWARDS
All-America football celebrity, held several offices under New York municipal government.

50. FATHER DUFFY
Beloved chaplain of the New York 69th, who saw the fun and fighting of the World War.

51. GEORGE RANDOLPH CHESTER
American humorist, novelist, short-story writer, author of "Get-Rich-Quick Wallingford."

52. PACKY MACFARLAND
American pugilist who retired—just before prohibition came in—to go into the brewery business.

53. BRECKENRIDGE LONG
Democratic politician, Assistant Secretary of State in the Wilson Administration.

54. EDWARD EVERETT HALE
Distinguished American preacher and essayist, author of "The Man Without a Country."

55. ANDRÉ CITROEN
Manufacturer of low-priced French cars, known as the Ford of France.

56. RENÉ FONCK
French ace, who has recently made attempts to fly the Atlantic.

57. SAM LOYD
Puzzle king, the Houdini of the conundrum world.

58. SAMUEL GOMPERS
President of the American Federation of Labor, widely honored for patriotic war-time services.

59. Charles Rann Kennedy
Playwright and actor, husband of Edith Wynne Matthison, and author of "The Servant in the House."

60. DIAMOND JIM BRADY
Salesman, gourmet, man-about-town, who never missed a new dish or a new play.

61. WORTHINGTON WHITEHOUSE
New York society man, leader of cotillions, successor to Ward McAllister.

62. CLAUDE GRAHAME-WHITE
British aviator and war figure, husband of the American actress, Ethel Levey.

63. NIJINSKI
Dancer, for many years the chief figure in the famous Russian Ballet.

64. FOXHALL KEENE
American sportsman, international polo player.

65. LOUIS SHERRY
New York restaurateur, proprietor of the well-known restaurant which bears his name.

66. HIRAM MAXIM
American mathematician and inventor, who created the famous Maxim silencer.

67. HOWARD CARTER
Discoverer of King Tut's tomb.

68. CLARA MORRIS
Beloved American actress, whose "lost" sister was recently discovered.

69. ELEANORA HUGHES
Dancing partner of the famous Maurice.

70. BRONCHO BILLY ANDERSON
The first internationally known movie hero, the Tom Mix of his day.

71. BARRETT WENDELL
Professor of English at Harvard University, scholar, essayist, and wit.

72. CHICK HARLEY
Football hero of Ohio State University, considered by many the greatest player of all time.

73. NORMAN ANGELL
British writer, lecturer, sociologist, purveyor of polite socialism to American women's clubs.

74. JOHN CLARKSON
Pitching member of the famous battery of Clarkson and Kelly—"Slide-Kelly-Slide."

75. W. T. JEROME
District Attorney of New York County, foe of corruption, prosecutor of Harry Thaw.

76. MAGGIE CLINE
Singer of Irish songs, a figure long popular on the American stage.

77. ALTON B. PARKER
Chief Justice of the Supreme Court of the State of New York, Democratic candidate for President.

78. CHARLEY BRICKLEY
Famous football captain and dropkicker recently involved in stock brokerage difficulties.

79. FRANZ LEHAR
Viennese composer, author of "The Merry Widow Waltz."

80. JEREMIAH SMITH
The Boston attorney who refused $100,000 for reconstructing Hungary.

81. VESTA VICTORIA
The English Nora Bayes, a music hall singer.

82. "HONEY" FITZGERALD
Mayor of Boston, chronic baseball fan, editor, orator, and politician.

83. GEORGE B. MCCLELLAN
Mayor of New York, professor at Princeton, son of the Civil War general.

84. PRINCESS YOLANDA
Eldest daughter of the Italian king, who married an Italian nobleman.

85. GEORGE W. GOETHALS
The man who finished the Panama Canal, first governor of the Canal Zone.

86. LEWIS J. SELZNICK
Russian immigrant who had spectacular career in moving pictures and other enterprises.

87. ALANSON B. HOUGHTON
First post-war Ambassador to Germany, now Ambassador at the Court of St. James.

88. THE AGA KHAN
Indian prince, owner of famous race horses and famous jewels, a prodigious gambler.

89. HARRY A. GARFIELD
President of Williams College, fuel czar during the war.

90. JACOB H. SCHIFF
Financier and philanthropist, head of the firm of Kuhn, Loeb and Co.

91. ELEUTHERIOS VENIZELOS
Greek statesman, premier, peace delegate, ancient adversary of King Constantine.

92. JOHN PURROY MITCHEL
Reform mayor of New York, who lost his life while training for aviation work in France.

93. TASKER H. BLISS
General of the American Army, American representative on the Supreme War Council in France.

94. TRUMAN H. NEWBERRY
Secretary of the Navy in Roosevelt's Cabinet, who spent considerable money to beat Henry Ford.

95. WALKER D. HINES
Railway lawyer, head of the Atchison lines, Director General of Railways succeeding William G. McAdoo.

96. MARY ANTIN
Writer and lecturer on Russia, author of "The Promised Land

(*Continued from page 51*)

doesn't mean I haven't faith in you at all. Could I help you—as a friend or brother? Be honest, Amy; I'd despise you if you lied."

"Yes, you could; and I'll be grateful for that—if I can't have more," she rejoined, won to sincerity by his force.

"All right. Shake hands on it," he said.

"But, True, I won't promise not to try to—to make you be more."

"Don't talk nonsense," he returned sharply. "Amy, will you consent to my callin' on your husband?"

"You want to see John?" she queried, astounded, her eyes opening wide. "What on earth for? All right, go ahead. You have my consent. Tell him anything you want, except that I was once in love with you—and that it's not utterly impossible for me to be so foolish again."

"I'll take good care you don't do that," he laughed.

"Trueman, I have something more to say," she said hesitatingly, lacking her former confidence and spirit: "I think you'd better quit riding for the Prestons."

"Why?" he inquired, freezing a little.

"I'm afraid I can't explain what may be only my intuition. But I give you my word of honor, Trueman, that it's not because I—I might be jealous of Thiry Preston."

"No. What is it then?"

"I believe the Prestons are going to get more than the ill will of the range."

"That's a strong statement, Amy. On what do you base it?"

"TRUE, I can't trace it down. But it must come from many little bits of gossip I've heard. Some of it, by the way, from Peoples. Everyone knows, of course, that you took the job to be near Thiry Preston. It's a joke already. That's your side of it. Trueman, you have a reputation. Oh, I don't mean as a gun-slinger. That's old. Nor do I mean as a great rider, roper, and all such cowboy qualities. It's that you're true-blue, honest, a man of your word. I could tell you a lot of things, if I could remember. One is—Clink Peoples said he reckoned Gage Preston would profit by your honest name. Isn't that a queer remark, Trueman?"

"It is—a little," Rock admitted.

"And here's another, more of a stumper," went on Amy. "Last night John had some men out to the house, as usual. They talked and smoked. When I heard your name I listened. Someone, I think it was Mr. Hesbitt, answered whoever had used your name first. 'I don't know this great cowboy, Rock,' he said. 'But if he stays on ridin' for Preston, I'll not share the opinion you men gave of him.' Trueman, there's something wrong about this Preston outfit. There's an undercurrent of feeling here and there against them. It'll spread, if there's any reason for it. And then you'd be dragged in. True, will you leave Preston? Please! You can get three times the money."

"No. I'll stick, Amy. I should think you'd know that. If there's anythin' in these hints I reckon the Prestons need me all the more."

"I always loved you for that very trait," she said, with passion. "But I wish here you didn't have it. . . . Oh, Trueman, I tell you I dread this job of yours. That wild, beautiful Sunset Pass! That lovely, strange, Thiry Preston! She'll fall in love with you. How could she help it?

"And you'll be dragged in with them. You'll have to kill this Ash Preston. Oh, he's a snake! He insulted me vilely, right on the street. There's not room enough on this range for you and him. You'll fight. I feel it, Trueman. A woman knows . . . Don't hush me. I *will* tell you. . . . Trueman, I *don't want* you to kill another man!"

She wiped her eyes. "Forgive me," she said, more composed. "I didn't mean to speak out like that. I know how you hate it. . . . Let us walk back now. You can drop me at my corner."

She did not speak again for several blocks. She held his arm closely. Rock did not have anything to say. The interview had surprised, annoyed, frightened, and softened him.

"True, I like you better than I used to," she said softly, releasing his arm and stopping. "What will you wear at my masquerade?"

"Look here, little lady, that's not fair. I won't tell you."

"You must. I'll never be able to recognize you. I remember how clever you used to be. . . . The unmasking will not take place until dinner. That'll be late, Trueman. And I'll want to know you, so in case I need you— You may have to throw Clink Peoples out."

"So the honor of protectin' you falls to me," laughed Rock. "I've half a mind you're lyin'. But I'll stifle my suspicions. . . . Amy, I've bought a dandy broadcloth frock suit, black. Also, a fancy vest, shirt with ruffles, flowin' black tie, and black mask. I'll come as a flash gambler."

"You'll look grand. Bet you make more than *one* heart ache," she returned, with glance of mischief and regret. Then she extended her hand: "Good night, Trueman."

"Good night."

NEXT morning about eleven o'clock, Rock strolled out of the hotel on his way to see John Dabb. He was shown into that individual's private office, and walked into a richly furnished room where two men sat smoking. One was John Dabb, not a great deal changed from the Westerner Rock had worked for.

"Howdy, Mr. Dabb," said Rock easily. "Reckon you know me."

"Trueman Rock!" exclaimed Dabb, in great surprise. Embarrassment succeeded his astonishment, which was perhaps what caused him to extend his hand.

"Hesbitt, this is True Rock, one of the real riders we used to have," went on Dabb, recovering to introduce his comrade, who had also arisen. "Rock, shake hands with Hesbitt, one of our new ranchers."

Hesbitt bowed stiffly and spoke, without offering his hand. Rock looked sharply at him.

"Glad to meet you, Mr. Hesbitt."

His keen faculties, on edge now, gauged this man unfavorably. Hesbitt was younger than Dabb, probably a man who had never been a cowboy, for he did not show the physical characteristics of the range. He was lean, sallow, hard, with sharp eyes close together and deep under bushy eyebrows.

"Well, Rock, to what am I indebted for this call?" queried Dabb.

"Remains to be seen whether you'll be indebted to me or not. Reckon that's up to you," replied Rock. And then he took a slow step nearer to Dabb's companion. "Mr. Hesbitt, I heard this mornin' that your foreman, Peoples, was in town, wantin' to see me."

"Yes, he got in early, and I believe does want to look you up."

"Reckon he can't be particular eager," drawled Rock. "I've been up and down street, and in and out of the hotel all mornin' lookin' for Mr. Peoples."

"Ah! I see . . . I dare say he's very busy buyin' supplies," replied Hesbitt nervously. "May I inquire—er—what you want of my foreman?"

"Nothin' so important; that is, to *me*," said Rock, with emphasis on the pronoun. "I just wanted to give Peoples an opportunity to meet me. And to tell him somethin'."

"What?" asked Hesbitt, whose sallow face slightly paled.

"RECKON I'd sure like you to know as well. I just want to give you a hunch. Not till two days ago did I ever hear of the Half Moon brand. And not till yesterday did I learn what outfit run it."

Manifestly, Rock's cold, biting speech impressed Hesbitt, but scarcely to the acceptance of its content. He knocked the ashes off his cigar and picked up his hat from the desk, without deigning another glance at Rock.

"Dabb, your former cowboy's talk is queer, if true," he said curtly. "I'll leave you to renew old acquaintance. Good day."

"Hesbitt, you're new to this range," rejoined Dabb, a little caustic. "I've told you before. And your Wyoming cowboy foreman needs to be told—or he'll get into trouble. This is not Wyoming. . . . I'm bound to tell you that Rock's talk is not queer. I'll gamble it's true. I never knew him to lie. And no old rider or cattle man on this range would *say* it, even if he thought it."

Hesbitt bowed and went out, jarring the door. Dabb bit viciously at his cigar.

"Some of these new cowmen make me sick. . . . Rock, help yourself to a smoke and sit down."

"Dabb, I sure appreciate what you said to him about me," replied Rock, losing his coolness. "Fact is, I'm surprised too. I'd been told you had no use for me."

"Rock, that's not the point," returned Dabb quickly. "When I knew you were honest, I was bound to say so. Your connection with Preston has started rumors. Hesbitt has been losing more

"Chrysler can't do it"

IF THE WORLD excels in any one thing today, it is in the almost miraculous achievements of the mechanical or physical sciences.

It is not altogether safe to say of anything mechanical, in such a creative age as this, "It can't be done"—but it will continue to be said till the end of time.

People who have been doing things in a certain set way for a great many years do not like to be jolted out of that one set way; therefore, they always say, as they have said of Chrysler thousands of times in the past three years, "It can't be done."

Chrysler has fired the imagination of the public and rushed up to its present eminence in the industry precisely because people believe that Chrysler represents exactly the opposite spirit in engineering—which is the spirit of it-*can*-be-done.

This spirit of youth, and quickness, and daring in the Chrysler organization crystallizes and is given concrete expression in the appearance and the performance of every car which that organization designs and engineers and builds.

Doubtless you will hear the old petulant, pessimistic cry, "It can't be done"—every time progressive newness issues from Chrysler laboratories and plants—almost every time, indeed, that a Chrysler announcement appears.

But here is Chrysler, firmly lodged in the front rank of fine cars—here is Chrysler, backed by the most enthusiastic public a car has ever known—here is Chrysler, forming the style trend and the engineering trend for the whole blessed industry, from cars of lowest price to highest—and that would seem to be that!

stock than any of us. His outfit is a hard-nut bunch from Wyoming. They think you're—well, I don't want to repeat gossip. There's too much of it. . . . But whether or not I have any use for you, I'd sure need to see proof of your dishonesty."

"That's straight talk. I like it, and thank you. It makes what I wanted to say easier. Dabb, did I ever do you any dirt?"

"You quit me, left me in the lurch," replied Dabb testily. "I never overlook that in a foreman."

"But be fair, at least," responded Rock earnestly. "I had to leave quick—or kill another man, and one very generally liked here, Cass Seward."

"You may have thought so. Cass was a friend of mine. He told me once you didn't need to run off. He could have fixed it up. Arrested you—and let you off. It was an even break, you know. What was that fellow's name? Anyway, I know everybody was glad you bumped him off."

"Ahuh! I'm sorry I didn't know that," said Rock, broodingly. Then he shook off dark thoughts. "Dabb, did you have anythin' else against me?"

The rancher thrummed on his desk and puffed on his cigar, while revolving this query.

"LOOK me straight in the eye," went on Rock. "Man to man, Dabb. If you have cards on me, lay them down. I'm comin' clean honest. . . . And a lot might depend on you doin' the same."

"All right, Rock, I'll meet you," replied Dabb, flushing darkly, evidently stirred. "Straight out then, I've sort of held against you—that old affair of yours and Amy's."

"Good!" exclaimed Rock, cracking a fist in his palm. "That's just what I wanted you to admit. The old women gossips here gave Amy the worst of that affair. She was pretty and vain—and had a way with the boys. But she was good, and if they ever said otherwise they lied. I was in love with Amy, perhaps a little more so than I was with two other girls. But what I want to make clear to you, Dabb, is that Amy was never serious with me. I mean never in love as it was in her to be. And I'm satisfied that she never has been yet. Even with you—her husband! You'll excuse me, Dabb, but this is blunt, straight talk."

"It is, by heaven!" Dabb said strainedly. "And to what end, Rock?"

"Amy's happiness," flashed Rock. "I met Amy the day I arrived in Wagon-tongue and again yesterday. Dabb, she'd scalp me alive if she ever found out I told you this. . . . She's lonesome and unhappy. I don't believe Amy ever would have married you if she hadn't cared somethin' for you. But you've failed to win the best in her. Dabb, I don't suppose anyone ever dared to hit you this way. I don't give a darn how angry you get, if I can only make you see."

"You're making me see red, cowboy," replied Dabb hoarsely. "But go ahead. I've not the nerve to pull a gun on you."

"Dabb, I always had a hunch you weren't a bad fellow, under your skin. The range claimed you drove hard bargains, and the boys didn't exactly like you. Maybe that was justified. All the same, as ranchers go, you sure were white. . . . You're rich now. You don't have to eat, sleep, drink, whistle, and smoke business. Pay some attention to your young and pretty wife! Like you did before you married her! Sol Winter told me you were as gay as any young buckaroo in town. Well, back-trail yourself. Take the girl away occasionally, to Kansas City or Denver. California in winter. . . . And before long, old-timer, you'll be glad. If you don't do this, sure as I'm sittin' here, Amy is goin' to the bad. . . . That's what I came to say, and that's all."

ROCK ended abruptly, forced by the older man's torture. Dabb writhed in his chair. Fury and shame contested with the sense of fairness that seemed dragged out of his depths.

"You are a—queer one—Rock," he stammered. "You've hit me where I live. And it hurts like sixty. . . . But you talk like a man. And I'm not yet so set in my mind that I can't learn from any man. I'm not convinced, but I'm some staggered. If the truth turns out as straight as you talk—well, young man, you're on parole till I find out. . . . Now, since you've presumed to advise me on a delicate matter, I'll retaliate: Quit Preston!"

"Why?" snapped Rock.

"You know the range, Rock. Some things just can't be said."

"Because they can't be proved?"

"Exactly."

"Well, I'll stick to Preston until these underhand rumors are proved—or until somebody suffers for startin' them."

"That may work out too late for you. I think I ought to tell you I've broken business relations with Preston."

"When?"

"Last Friday, when Preston was here."

"May I ask what were the business relations?"

"Preston had the small end of a cattle deal with me. I bought him out. And then I canceled all beef orders."

"How did Preston take that?"

"Kicked about the cattle deal. But I took it he was relieved to get out of selling me more beef."

"Relieved— What you mean?"

"He just struck me that way. Didn't ask me why. I was glad. My reason was good, but I could scarcely divulge it to him."

"Mind tellin' me?"

"Yes, I'd mind. It would necessitate violating someone's confidence. You'll have to find out for yourself, Rock."

"Reckon so. Well, I'm such a dumb hombre it may take me long. . . . By the way, Dabb, are you still head of the Territory Cattle Association?"

"No; I resigned. Hesbitt was recently elected."

"Gee! Sorry to hear it."

"Why so? Hesbitt is said to be a better executive than I was."

"He never was a cowboy," returned Rock, significantly. "Good day, Dabb. Reckon I'll meet you at the rodeo and the dance."

"Likely. I'll drop in on Amy's party for a couple of dances if I break a leg."

In the afternoon, rather late, Rock walked round to see Winter. He was received almost with open arms.

"Hey, you been drinkin'?" expostulated Rock, holding his friend at arm's length.

"Nope. That is, not red liquor. But I shore been drinkin' in Thiry's sweet smiles an' words."

"Dog-gone! . . . I didn't expect her till to-morrow."

"True, she has been in half a dozen times," went on Winter. "Asked for you *every* time!"

"Sol, you lyin' old geezer! My heart might stand her askin' once. But six times! . . . I ought to choke you."

"Son, mebbe it's not all gospel truth. When she first run in she was her old nice, sweet, cool self. Kissed me. Said she an' Alice were all fixed up nice out at my house. She asked if I'd seen you. An' I told her I hadn't yet to-day, but that you'd be in. An hour later she came in again, somehow different. She bought buntin'. She was helpin' Amy Dabb decorate the dance hall. Asked had I seen you yet, an' I said no. She went out an' pretty soon came back, a little more different. She had a red spot in each cheek. An' so she came an' went, till the last time, a little while ago, when she was with Amy. Then you bet she didn't ask about you. True, shore as you're born, Amy has been fillin' poor Thiry full of guff about how wild you was over her, an' mebbe was yet."

Rock heard Winter, but only vaguely, for he was rushing out to the door, where through the window he had espied Thiry Preston.

"Why, hello," he said, forcing a pleasant surprise to hide his rapture, as he doffed his sombrero. "Heard you were here. Really didn't expect you till to-morrow."

She greeted him shyly, with absence of that inhibited expression which marked her meetings with him at Sunset Pass. She wore a light blue dress and a new hat, the rather wide brim of which shaded her face somewhat. Still, he saw that her cheeks were not pale and her eyes not tranquil.

"WE STARTED at daybreak yesterday morning," she was saying. "The boys were no good at all, and the youngsters simply mad to come; so Dad sent us off a day ahead. Ash stayed home."

"That so?" replied Rock, with constraint, though he tingled. "Well. It's too bad, if you're disappointed."

"I'm so greatly relieved I—I don't know myself," she replied, with unexpected candor. "I don't remember a Fourth that Ash hasn't spoiled by getting drunk."

"May I walk with you a step?" asked Rock, changing the subject.

"You may. I'm on my last errand," she replied, and waved a gay hand at Winter.

Rock fell in with her short quick steps, and made careful remarks about the weather and the town being full of people, until they reached the baker's, where she said she was to order things for Mrs. Winter.

"I'll wait for you," said Rock.

"Are you afraid to walk into a bake-shop with a girl?" she asked, and the wide hat brim tilted just far enough and long enough for him to catch a flash of gray eyes. "From what I've heard—recently—you could march into a lion's den, for a—for certain people!"

"Ahuh, reckon I could—for—for a

For today's hard driving conditions you need the engineering margin of safety provided by Mobiloil

Quality

You may never motor across the Sahara Desert. But your engine will run better in hot weather if you use the same oil as that which protected the Citröen cars which were the first to cross that torrid waste of sand. Their oil was Gargoyle Mobiloil.

You may never race at 50 miles an hour through city streets. But there is added security in knowing that your Mobiloil is used in nearly all of the demonstration work done by the leading builders of fire fighting equipment.

You may never operate your car under heavy load conditions where every moment counts and every drop of oil must pay its way. But your engine will run better with Mobiloil—the oil used in the motor trucks owned by 28 out of the 30 contractors who are building New York's new $95,000,000 subway.

You may never fly from New York to Paris nor from San Francisco to the Hawaiian Islands. But you are sure of superior engine protection when you use the same oil which lubricated the first engines which made these daring flights. That oil was Mobiloil.

Today's high speed, high heat engines and today's faster driving and congested traffic put a new load on your lubrication. You are always sure with

certain *person*," replied Rock, beginning lamely and ending valiantly. That brought the blue hat brim down to hide most of her face. Rock, however, thought he caught a glimpse of a coloring cheek. He escorted her into the store, stood beside her while she gave her orders, and accompanied her out.

"I'm to wait here for Allie. She won't be long," said Thiry, stopping outside.

"Hope she'll be late," returned Rock, trying vainly to find himself.

PRESENTLY she lifted her head and Rock devoured her lovely face before he realized it had never worn such an expression for him: doubt, disdain, petulance!

"You're going to the dance," she said. It was not a question.

"Reckon I'll drop in for a peep."

"Would you tell me what you'll wear?" she asked sweetly—too sweetly not to be dangerous.

"Thiry, that'd spoil the fun. I sure want to fool you," he protested.

"Have you not already fooled me?"

"I have not!" he shot at her, swift to speak his sudden passion. It startled her.

"Trueman Rock, you have a great deal to disprove, and more to prove," she said, wide, strange eyes on his. "You would not tell *me* what you were going to wear—so I'd recognize you first."

"Of course I'll tell you!" he burst out.

"I don't care to know now. . . . You would not see *me*, anyhow."

He could only stare mutely.

"Mr. Rock," she went on, without the scorn, "I had better explain my rather bold words. This dance was to be the first gay, happy time for me since I grew up. Dad somehow prevented Ash from coming to town. He filled me with—with beliefs about how *you* would make it wonderful for me. I have no one but my brothers, and they all have their girls. I—I dreamed myself into—no matter what. . . . Then I come to town, to have my ears filled to burning—all day long. The dance was to be given for you! You wouldn't even dance with any other woman but *her!* You were an old lover, renewing his vows! You—"

"Thiry, hush!" interposed Trueman, in rage, despair, and exaltation, all bewilderingly mingled. "I told you I didn't care what anyone said to you about my old affairs. But if *you* care, then I hate the very thought of them."

"Trueman, I don't know how much, or why, or if, I care. But I trusted you, and that woman has killed it."

"Oh, no, Thiry, don't say that," he implored.

"But there's a secret understanding between you and her—for this dance."

"Yes; there is. But it's sure not sentiment on my part," he replied humbly. "Thiry, if you don't trust me, I shall have to give her away. And I never did that to a girl in my life."

"How could I trust a man who would betray any woman—much less her?"

"You couldn't. And I deserve that rebuke. But, Thiry, I'm dumfounded. Dear child, be reasonable. Why, I was going to get *my* happy time just spying upon you from some corner. I never dared hope to get to dance with you. Good heavens!"

"Trueman, I meant to dance only with my brothers, and perhaps one or two of the boys I know—and all the rest with you."

"Thiry Preston, you tell me this—this—" he cried, and failed to find adequate conclusion.

"Yes, I tell you," she retorted. "I couldn't do it at home, because I didn't know. But that's no difference."

"Of course it isn't. I should have made some wild dream come true. But, Thiry, it's not too late."

"Oh, it is," she said disconsolately, yet she seemed to hunger to be persuaded. "She has spoiled—"

"Listen," he broke in. "I mean to befriend Amy Dabb. She needs it, heaven knows. But if you let her jealous tongue spoil *anythin'* for you, I'm through."

"Trueman, I could forgive a great deal, I think, but no bold lie," she murmured.

"I would not lie to you—to save my life," he returned, in weary, cold finality.

"I apologize. It is I who am a little suspicious," she returned softly. "Trueman, I make this excuse: I'm not used to intrigue, to deceit. . . . Oh, yes, I'm a woman and I haven't told you my real feelings. And I cannot. But I could never cope with Mrs. Dabb. She read my soul and tortured it. She thought I might . . . like you, and meant to destroy."

"Thiry, did she destroy what little there might have been?"

She averted her face. "I don't know. I'm all excited. When I get home I'll be appalled. But oh, I—I want to have this dance. You'll understand me, Trueman, won't you? That's one thing I do trust."

"I'll do my best. But you are strange. Sure there never was a girl like you."

"In what way?" she asked, giving him again the gray, sweet wonder of her eyes.

"Thiry, I could not find words here," he replied, striving for calm. Indeed where or when could he ever do justice to her strangeness, her inconsistency, her innocence and simplicity? "Perhaps at the dance—"

"Perhaps at the dance—then—if you disprove much and prove more, I will—"

THE arrival of Alice Preston, breathless and pink and merry, checked Rock's impassioned reply, that otherwise he could not have resisted, even if Thiry had never completed her thought-compelling sentence. The girls, laughing and talking, started for home, and Rock accompanied them toward the corner.

Just before they arrived there, a man and a woman hove in sight. Evidently she was trying to hurry away from him.

"I tell you no—no!" she cried, in a rage. Then Rock recognized the voice and the blazing black eyes. Amy Dabb! The man was a tall rider. He wore a red scarf, and his face was almost as red.

"See heah, sweetheart, you cain't come thet with me," he drawled, blocking her way.

"Shut up, you crazy fool! Someone might hear you," she cried.

Rock with a stride and a leap was upon them.

"Somebody did hear you, Amy. Rustle now, with the girls," said Rock sharply, as he gave the rider a hard thrust backward, and then confronted him.

"Howdy, Mister Red Scarf!"

(*To be continued*)

"Blasted Earth and Blasting Sky"

(*Continued from page 22*)

arm, and continually blot my hand and fingers.

"About five-thirty this afternoon I went down into the engine-room to get a hack saw to cut a coconut, and the iron railings were so hot that they blistered my hands. I was fairly dry when I started down; but by the time I reached the bottom I was running perspiration into my shoes.

"TUESDAY, JUNE 15th: I was surprised when the bo'sun had the watch and day men work to-day. We are in no condition to work, and there might be an accident. I painted the strongbacks over the No. 3 hatch, and the water fell from my chin and toes in a steady stream into the hold below. There was an awning stretched above me, yet my flow of perspiration was so free that when paint splashed on my arms it flowed off over the skin. Two men went into the forepeak to get more red lead, and did not return. I went up to hurry them along, and found Olesen unconscious, and Jimmy talking foolishly and stumbling around over the gear. The air was as thick as putty and poisonous with the fumes of red lead.

"WEDNESDAY, JUNE 16th: Another incredibly hot day. The thermometer registered 155 degrees in the engine-room and 120 in the wheelhouse. I am wearing a huge pair of heavy shoes insulated inside with about fifteen thicknesses of newspaper, yet I cannot stand in one spot very long without great discomfort. The decks are fearfully hot, and the heat waves rise from them in a haze.

"Freddie was a bit insane from the heat yesterday, and to-day he is unconscious from a heat stroke. Sweeney and Jap suffered strokes also, and are laid up, covered with blankets and shivering. The other men are haggard and vacant-eyed, and can scarcely drag themselves for'ard and aft.

"Last night in the wheelhouse, the perspiration ran off me like rain down the side of a house, yet the thermometer showed only ninety-four degrees. The captain, unable to sleep, sat in a deck chair clad in a pair of shorts, with two electric fans playing upon him. Now and then I stepped from the wheel to catch some of their breeze. The supercargo lay sleeping in a lifeboat full of water, his head resting on a seat.

"THURSDAY, JUNE 17th: I can hold out as long as anyone, yet how I wish for the Indian Ocean! One day of this heat is enough for any mortal man to bear, and we have had five. As far as the eye can

Sun-scorch— *how to cool it*

NO one minds acquiring that healthy outdoor look—but nobody wants a fiery sun-scorch. That's painful—looks anything but alluring. To cool sun-scorch—smooth in Hinds Honey & Almond Cream. It will ease and relieve it—instantly. Make the skin feel soft and fresh again. Try it and see.

But do you know that Hinds Cream also *prevents* sun-scorch? Just pat it on, and powder, *before* going out into the sun. And your skin will be safe from violent sunburn. Because Hinds Cream, with powder over it, will protect the skin from the burning rays—prevent it from getting red and blistered—keep it lovely.

Would you like to try Hinds Cream in these two ways—to relieve sunburn and to prevent it? Then send for the sample bottle. The coupon below will bring it to you. Fill it in and mail today, while you think of it.

reach, the sea is motionless, expressionless of anything except intense heat. We are like a great beetle, cutting our way through a solid substance, leaving a refuse of foam in our wake. The atmosphere is abnormally clear, and the heat waves magnify a simple coral reef to the size of an island.

"All day long the sun beats down, as if to see just how much we can stand. He seems to be plaguing us, tormenting us. One looks at the glassy sea, and wonders if he is actually seeing a liquid. It is hard to believe that the smooth surface is wet and cool, that real water can actually exist under such heat. If it is water, it cannot be cold; it must be hot and tasteless, like the stuff in our tanks. It is almost midnight now, yet I write with three blotters under my hand."

Leaving the Red Sea was as definite as entering it. I was at the wheel that night when the light flashed at Aden, and soon afterward a warm breeze, but a breeze nevertheless, began to surge into the wheelhouse, and the ship began to pitch. The heat spell was over; we were in the Indian Ocean.

Unfortunately, human beings are not made of mercury, and are prostrated by certain kinds of heat that the thermometer scoffs at. In Death Valley men can be on their feet when the thermometer registers 125 or even 130 degrees; but in India or Java a temperature of 102 is enough to keep a white man quiet for the day. And in New York, Galveston, and Chicago, a temperature of 95 or 100 degrees kills off or prostrates many people. It is the humidity, of course, that makes the difference.

IN CALCUTTA during the latter part of July, 1926, and up until the middle of August, I survived a spell of moist heat such as I hope never to experience again. Calcutta is on the vast, swampy plain of the Ganges delta, and always has a damp climate; but what made it particularly bad was that the monsoon was late, and the atmosphere was full of moisture that could not precipitate itself in rain. Fever and disease spread with a pestilential fury, and in Calcutta alone there were upward of four hundred natives dying each week while it lasted.

One early dawn, when the city was just beginning to cool off from the heat of the previous day, I walked through the native districts. The air was passive with lifeless heat, and except for the occasional cry of a sleeping child all was silent. Thousands upon thousands of people slept in the streets. They lay in the open squares, across the main thoroughfares, in the park on Chowringee, and in the bazar lanes along the water front. Now and then a form would raise an arm or leg in a ghastly manner, moan softly, and be silent. A naked little child, emaciated by rickets, lay in a pool of odorous mud. Along the Hooghly the funeral pyres sent up tongues of flame, and through the entrances of the walled burning ghats I could see in silhouette men carrying logs before other fires that were consuming the dead of the previous day.

The sun was over the house tops at six A. M., and the heat fell like a pestilence upon the city. In the dark bazar lanes, filled with silks and brasses and the odors of sweetmeats, the sun's rays darted like shafts of quicksilver. Merchants squatted in the recesses of their stores, breathing quietly beneath the regular swishing of the overhead punka, and groups of women and children hurried to do their buying before the intense heat of midday arrived.

Toward noon, the city became a great simmering stew of humanity, a seething panorama of glistening bodies. Men walked a few hundred feet under their burdens of jute, to drop panting in the shade of a wall. *Gari-walas* lay on their backs beneath the shade of their carriages, and the buffalo carts creaked and groaned in clouds of pungent dust as heavy whips lashed the animals' hides and the drivers cursed them for their weariness. The city panted and struggled for existence.

I CAME back to my little hotel, bathed for the third time that morning, and sat beneath the overhead fan. A mosquito dropped on my arm like a bit of dust, but I had not the heart to kill it. Calcutta mosquitoes are so small and unsophisticated; one can pinch them or caress them and they will not take wing. I finally pushed it off. Several crows which found the sun's rays too strong perched in my window casement and sat with drooping wings. It was too hot to read or even to think. I stretched my legs out over the long arms of the chaise longue, composed myself, and sat staring at the crows.

In the tropics one learns to sit out the hours very gracefully. I lounged around for three hours, and then decided to go down to the bazar. As I started out the door, an old Scotchman whom I knew asked if I had on a felt spine protector. When I replied that I hadn't, he warned me that it would be very dangerous to attempt to walk in the "poisonous Indian sun" without one. At the very least, he said, I should be wearing light woolen underwear and a light coat, and have a damp sponge in the crown of my helmet. But I had none of these things, and, besides, I had already been in Calcutta for a month without them. So he closed his eyes and settled back into slumber, clasping a prayer book over his stomach.

I went into the street, blinked hard, and started toward the Kidderpore bazar. I noticed that the streets were singularly deserted, but thought the natives were at prayer, or perhaps a festival. After I had proceeded a hundred yards or so, I began to feel faint. The back of my neck ached and my head throbbed sickeningly. Then my eyesight began to fail. Squint as I did, I could see only faintly. It was then that I began to realize how terrifically hot it was; and a few moments later things went black, and I collapsed.

A native lifted me to my feet, and helped me to a coffee-house. After resting, I started back to my room, walking like a drunken man. Sweat stood out on my forehead; I felt cold and chilled, and was so weak that I could hardly mount the stairs. I did not burn with the heat as I had in the Red Sea, for I had merely walked under the sun for a few moments. A doctor told me later that I was fortunate in not having been killed outright. Thereafter, I respected the Indian sun.

The baffling heat of India is always puzzling to newcomers. It is hard for them to understand how, on a cloudy day, when the sun is not visible, one can come down with a sunstroke. Directly before a rain, when the sky was gray, I have known sailors to go swaggering ashore wearing their customary caps, and land in the hospital with a sunstroke from which they would never fully recover.

I doubt if the sun is much hotter in India than it is on the deserts, but on the deserts the heat is drier. If one has a shade of some sort, he can be reasonably secure against sunstroke, for the heat is in the direct rays of the sun, not in the atmosphere.

I was first initiated into this extreme dry heat of the deserts in Death Valley. This valley is a deep depression—most of it below sea level, in one spot almost three hundred feet below—in the most desolate region of southern California. It is cut off entirely from the Pacific winds by the Paramint Range, which rises in Telescope Peak to an altitude of about eleven thousand feet, and by the Sierra Nevada Range. To the east and south for hundreds of miles are the deserts of Nevada, Arizona, and Mexico. No dew falls, and often there is no appreciable rain for two or three years at a time; in some spots it *never* rains.

With my father and another man I went in a prairie schooner through the part where it never rains. The air was as dry as pepper, and where there was no sand the yellow earth was covered with glistening alkali and little flakes of gypsum, that reflected the sunlight like broken glass.

The sun comes up early on the desert, and by six o'clock it is burning hot. Toward eight o'clock there is not a living thing to be seen; not a jackrabbit, not a buzzard; even the rattlesnakes are under shelter. The sun struck my boots as we were driving, and made them like firebricks. It drew all the oil out of them, and they began to crack. By eleven o'clock it must have been 120 degrees. I had a handkerchief tied up about my eyes, yet the light was so dazzling that I could not open them without pain; and although the sun had not touched my hands the flesh was crimson with the reflected heat.

MIRAGES came and went continuously. Directly ahead of us was a beautiful lake with tall cottonwoods around it, and low brush near the shores. It twinkled and sparkled in the sunlight, and I could almost smell the freshness of it. In a half-hour's drive toward it the lake faded away, and another one came into view farther on. The heat waves arose in billows; we could see them rising from the sand like steam, gathering together and rushing toward us.

There was not the slightest breath of air; no movement, no sound, unless it was the pounding of my temples and the throbbing of my head. In this strange silence, and in this unbelievable heat, little spirals of sand rose up ahead, waving up into the sky like ribbons, caused by sudden vacuums in the cool air high above the earth. Sometimes these little sand whirls swooped down upon us as if to take our hats off and run away; often they were large enough to carry up a wagon and horse.

This Death Valley heat became so fierce toward early afternoon that I was

Another Headache

"CLANG! Clang! Clang!" rang the bell in the old town-hall and at once the whole countryside was alert. The bell meant danger — usually FIRE!

"Bang! Bang! Bang!" goes the pain in your head—and it, also, is a warning of danger, perhaps grave danger, somewhere in your body.

Can you imagine any villager being stupid enough to cut the bell-rope because the clanging of the bell annoyed him — thus silencing the alarm while the fire raged? When you take a pill, or powder, or wafer to stop a headache, you may deaden the nerves which are carrying an important message of danger to your brain—but the "fire" goes on.

Headaches are usually symptoms of unhealthy conditions, perhaps in some totally unsuspected part of the body. There is almost no physical ailment which does not at some stage manifest itself in headache. That pain, if heeded in time, may be counted a blessing.

Fortunately the causes of the vast majority of headaches—indigestion, eye-strain, sinus and teeth infections and wrong posture—can be located promptly. But some of the obscure causes of headache can be found only by patient, skilful search. The trouble may come from a cause so remote from the head as a bone out of place in the foot or a toxic condition from a diseased gall-bladder.

"The humblest and least distinguished of all the organs of the body can order the lordly head to ache for it, and the head has no alternative but to obey."

It is risky to attempt to diagnose your own headache. You may guess wrong and waste precious time prescribing for an imagined ailment while the real trouble grows steadily worse. To still the voice of pain without finding its source is like cutting the bell-rope and ignoring the fire.

Beware of headache remedies composed of habit-forming drugs which may injure the digestion, destroy red corpuscles of the blood, undermine the nervous system, depress or over-excite the heart action, and at best may give only temporary relief.

Give your doctor a chance to find the cause. While he is searching for the cause let him prescribe something to relieve the pain, if you must have relief.

When another headache comes, take warning!

A booklet giving helpful information about headache may be obtained free on request to Booklet Department, Metropolitan Life Insurance Company, 1 Madison Avenue, New York City. Ask for Booklet No. 78-A.

Haley Fiske, *President.*

What Causes Headache?

WHEN your head pounds with pain your first thought should be, "What causes it?" not "What shall I take to relieve the pain?" That headache may come from any one of many causes. Among them are:

- **Indigestion**
- **Fatigue**
- **Impure air**
- **Eye-strain**
- **Nose or sinus trouble**
- **Infected teeth**
- **Incorrect posture**
- **Infectious and contagious diseases**
- **Nervous disorders**
- **Emotional strain**
- **Disordered kidneys, liver, gall-bladder**
- **Intestinal difficulties**
- **Foot trouble**
- **And many other abnormal conditions**

obliged to tie a second silk handkerchief over my face to keep it from being scorched.

It was almost fatal to let the sun strike the back of one's neck. In a few moments the head began to grow dizzy and whirl. The neck throbbed, and in ten minutes, if one remained in the sun that long, he approached a state of unconsciousness. I stretched my hand out into the sun from under the wagon cover, and it was burned red to the wrist.

MIRAGES always come with intense heat, and the hotter it is the more convincing is the mirage. In the Persian Gulf I have seen one beautiful island after another floating in the sky above the horizon; and in the Caribbean, near Lower Matacombe Key, my father saw a whole train of cars puffing its way across the sky. There were no tracks, but he could see every detail of the illusion perfectly, even to the windows in the cars.

When I was crossing Mesopotamia by motor-car, a run of seven hundred miles, the driver suddenly pointed off to the left and put on speed. I looked, and saw what was apparently a band of Arabs riding down upon us. Bandits had recently been holding up convoys and cutting throats along that route, so we prepared to run it out or take the consequences, being unarmed. About ten minutes later, as we were beginning to come abreast of them, the Arabs were transformed into a group of tiny bushes, rooted to the ground.

In the deserts of Southern Persia I have often seen beautiful lakes fringed with trees disappear as I came up to them. At the time it was impossible for me to convince myself that it was only a mirage. I could distinctly see boats upon the far shore, and men moving toward them. I could actually *smell* the water. Imagine the terrible disappointment, upon traveling five miles or so out of one's route, to see the lake disappear utterly!

It is not only the tenderfeet who are deceived by these mirages. The oldest of the old-timers, and the Arabs and Persians who have traveled the deserts all their lives, are constantly deceived. Worn out with travel and suffering from lack of water, they drag themselves to the enchanting lake only to find baked clay and sharp rocks.

Water makes heat bearable, and no one can ever appreciate water until his life has depended upon it. I once knew an old sea captain who sailed the South Pacific in the days when the chief engineer stood over the water tap with a shotgun, and each man got one bucket a day, no more. This captain never could bear to see water wasted. When he was at home he always turned off dripping water taps, and each night he went around once more and closed the taps tight.

When I was traveling the old caravan route from Birkeh to Lar in Persia, my simple-minded servant emptied the water skin because it was too heavy for him to carry with comfort; and we had eighteen miles to go until we could expect a water hole. That meant a walk of over four hours in the terrific desert heat without water.

Four hours without water would not alarm the average metropolitan, but when the sun is draining moisture out of one's body by the quart it must somehow be replaced. We sucked pebbles for moisture after the first hour, but they soon exhausted the saliva. Then our lips began to swell and crack. Our tongues swelled gradually until they filled our mouths like a ball of hot spines. My head felt as if it had been kicked by a horse and stung by hornets—but still we went on.

Those four hours were like eternity. A dozen times, in desperation, we followed dry watercourses and gullies, running and scrambling over the rocks as if our salvation lay in haste. We sighted the domes of ruined caravanserais, and went far out of our way, to find only black, cracked mud at the bottoms of their wells: Once we did find water, an amazingly deep and crystal well, so clear and fresh-looking that I thought I was dreaming. I wondered why it was not slimy and green, like the other wells from which we usually drank, and why there were no dead birds and rats floating in it. It was, in reality, too good to be true. I dropped in a stone, and the splash of water sizzled like an effervescent. It was alkaloid water.

It was just sundown when my servant, far ahead, raised his hand and gave a shrill cry. "Water!" It was in a large depression in the center of a rocky ravine, and a flock of goats was wading in it. It was thick, green stuff, with a sickening odor, but it was nectar to me. For a long time afterward I treasured water like my life, and even to this day I remember that experience whenever I see a glass of water unemptied on a table.

I BELIEVE that equatorial heat is the hardest for any man to bear. Near the equator the sun is on the march fourteen hours a day three hundred and sixty-five days the year. And, to make matters worse, an inch or so of steady rain will fall in a great hurry. Then the sun burns down again, and in fifteen minutes the earth is dry and the atmosphere is torpid with steam.

I was in Soerabaya, Java, when it was so hot that not even the little horses would remain in the sun. The asphalt on the streets became like paint, and ran off into the gutters wherever there was an incline. It was almost impossible for a man, white or brown, to go out in the sun. I tried it once; it was like walking through a hot fog. My eyes could see only smoky whiteness and blurred houses and trees. I felt giddy, almost as if I could fly. It was a kind of heat drunkenness. The sun did not just burn into me; it seemed to constrict, to press downward and all about me like a straitjacket. All the shops were closed, and I could not find a taxicab anywhere. The heat had positively buried the city for the day.

The most sickening kind of heat, however, is that which one finds in a choppy sea, or over a long ocean swell. There, the sun flashes from the waves like the facets of a diamond, and if one is in the least inclined toward seasickness, he is in for a ghastly sensation.

I went through such an orgy on the Persian Gulf, said by many mariners to be hotter even than the Red Sea. I was in a little gasolene launch with a crowd of Persians and Arabs, and we were starting out from the coast to meet a steamer. It makes me seasick to think of it. A nasty, choppy sea was running in toward the coast, and the sun was beating down with terrific force.

The gasolene fumes from the engine, the nauseous body smells of the natives, and the odors of greasy food tied up in bundles filled the launch and hovered about it like gas. The heat made it worse; my eyes watered, my head throbbed, and my stomach turned over and over in vain. A thermometer in the cabin showed one hundred and four degrees, but the hot winds mingled with gasolene fumes and other odors raised it fifty degrees in my estimation. For three hours we tossed in that choppy sea until the steamer hove in sight. It was a sorry-looking crowd that climbed aboard her.

BUT there is no weather hotter in my experience than that which is mingled with the cold. It is curious to feel heat and cold at the same time; bitter cold that numbs the limbs, coupled with a sun that makes one uncomfortably hot.

It is not necessary to go to Persia or to the mountains of Africa to find this mixture. I found it on the tops of the snow-covered Rockies in Wyoming, in the middle of August. I was riding south from Jackson's Hole and met a ranger. He spoke of the Seven Lakes District, which lay in the very tops of the Rockies, and mentioned that there was excellent fishing there. I started up.

It was in the middle of August, yet at twelve thousand feet I ran into a blizzard. Then I came to that enormous glacier that lies at the top of the Wind River Range. In a mad moment I decided to explore it. I was born and raised in a warm climate, and am naturally very susceptible to the cold. That glacier radiated cold like a shark's eye. It numbed my fingers, and the rain and sleet and snow of the blizzard made my cheeks stiff, and my ears like porcelain. My nose burned with the cold, and I had to rub it vigorously to keep it from freezing. How I wished for hot weather! Death Valley would be Paradise to this, I thought. And then the sun came out!

Its first effect was practically to blind me. The reflection from the glacier was inconceivably brilliant, and it not only pained my eyes but actually began to thaw out my face. The numbness began to disappear from my hands, and soon I began to perspire. The sun roasted my back, yet I dared not remove my heavy shirt, because of the cold—the whole front of my body, which was turned from the sun, was still very cold. I sweated copiously, only to be severely chilled the moment I turned around to warm my face. That was heat with a vengeance.

You who live in a temperate zone can never know what real heat is. When it gets up to ninety, and your stiff collar wilts, you want cold weather. And then, when it gets cold, you want warm weather. In Arabia they praise Allah if they can cross the desert and come out alive. In Malaysia they sit in the sun and blink, and are thankful that there is a sun to burn their skins and let them know they are alive; and on the banks of the Nile the fellahins still sing hymns to the sun, the Life-Giver, the Creator.

DID ANN LITTLE CHOOSE WISELY?

Like thousands of others she can smile *her answer*

Ever since this picture was taken, Miss Little has depended on Colgate's to keep her teeth sparkling clean.

Long ago she learned that people watch for the quick flash of gleaming teeth

RADIANTLY beautiful . . . with a charming personality. That is the way you'd describe Miss Ann Little.

Her close friends agree that much of Miss Little's beauty is due to her remarkable teeth . . . teeth that fairly glisten when she smiles.

Her own explanation is extremely simple you'll agree.

"Twelve years ago," she says, "I started using Colgate's Ribbon Dental Cream. And all these years I've depended on this one dentifrice to keep my teeth sparkling clean and healthy."

In this country, and in foreign countries the world over, you will find thousands and thousands of men and women like Miss Little who because they began using Colgate's ten, fifteen, even twenty years ago, have teeth exceptionally sound and beautiful today.

There is nothing mysterious about these enviable results. The men and women fortunate enough to secure them did nothing that you cannot easily do yourself.

They visited their dentist for periodic inspections. And they used Colgate's.

In such a vital matter as the care of the teeth, could there be any safer guide than the actual experiences of thousands of people like yourself?

Also, wouldn't it be an immense satisfaction to know that the dentifrice you were using was the one which dentists recommend most frequently?

Just ask your druggist for Colgate's . . or let us send you a tube to try.

. . . CLEAN . . .

Years ago we set out to make the best dentifrice possible. We interviewed leading dental authorities. They told us that the one thing a dentifrice should do is to clean teeth. We then produced Ribbon Dental Cream—designing it to do that one thing superlatively well. It is not medicated, because all experiments in the meantime have sustained the original principle that cleansing is the only thing a dentifrice can do.

Colgate & Co., Dept. 201-G, 595 Fifth Avenue, New York.

"Carry Your Bags, Sir?"

(*Continued from page 33*)

baby brought up the tail of the procession.

"The young lady wouldn't let anybody help her get her husband into the cab. The luggage was stowed up in front with the cabby. The young lady gave the address and somebody slammed the door of the taxi. They were about to drive off when the young officer caught sight of the red cap with the baby. The boy was holding the child with both arms, so that he did not have a hand free to wave, but he was making awful faces and splitting his throat trying to make himself heard above the noises of the station. The young soldier laughed and said something to his wife, who almost jumped through the glass half of the cab door.

"'Why, that's *our* baby!' she cried, as much surprised as if the infant had got out of its crib at home and walked down to the station.

"'Well, if you're *sure* it belongs to us,' said the young man, 'let's take it along.'

"But let me tell you, for all his careless way of speaking about it, he was crazy about that little piece of humanity. He had given the boy who carried his grips a quarter, but he gave the red cap who carried the baby a five-dollar bill! That colored boy almost knocked off work for the day. But he told me he sure earned that money, for he nearly died of heart failure when that cab door closed and he was left holding the baby.

"I SAID a while ago that carrying luggage is not the red cap's only job, but it's the way he earns the bulk of his living.

"The average tip for taking a passenger's hand baggage from a taxicab and onto the train is twenty-five cents. Of course if the red cap performs some extra service, like waiting in line to buy tickets, the remuneration is usually more.

"But while the usual tip is a quarter, the dime is not uncommon, and the boys tell me that they still get an occasional lone buffalo nickel. There are a few folks who don't tip at all. In justice to them, though, I must add that they are mostly untraveled people who make the mistake of thinking that the station attendants are paid by the railroad for looking after passengers.

"I remember one instance of this kind," chuckled Chief Williams, "that was mighty funny to everybody but the red cap concerned. His patron was a prosperous-looking, beaming old gentleman from somewhere 'up-state' who was on his way to visit his only son. It was the old gentleman's first trip to New York in twenty-five or thirty years. He seemed much relieved when a red cap took him in charge on the station platform and brought him safely through the gates to the big concourse. And, believe me, he certainly clung to that colored boy until his train went out two hours later.

"First, there was the old gentleman's ticket to buy and his trunk to check. Then he wanted the boy to take him to a bootblack stand, and from there to the station café, where he insisted that the red cap stand outside the door with his old-fashioned telescope valise while he ate lunch. When he finished eating, he made the boy sit down by him 'to keep him company' until his train left. And all the time, he kept telling the colored boy that he would 'make it all right.' The red cap expected a dollar, at the very least, for his time. He could probably have earned twice that much on the floor.

"Finally, when the old gentleman was safe in his seat on the train, he thanked the boy heartily for his help and courtesy and asked for his name, which he carefully wrote down on the back of an envelope.

"Then it came out—what he meant when he said that he would make it all right with the boy. He explained that he was going to write the president of the railroad a letter and tell him what a fine lad this employee was. I am convinced that the old gentleman actually thought he was going to get the boy's pay raised. And, in a manner of speaking, maybe he did. A month or so later word came down the line that there was a fine Pullman berth open, and this boy got the chance at it. He's making good, too.

"MOST people think of the quarter they hand a red cap as a 'tip.' It isn't, though we call it that. It is simply pay for services rendered, the person who pays being his own judge of how much the service is worth to him.

"The man who takes the same train, say the Twentieth Century Limited, at fairly regular intervals often has his favorite red cap, who is ready with his favorite paper or magazine, and sometimes with his favorite cigars! This man is likely to slip his pet red cap a 'five-spot' at Christmas, and think nothing of it.

"For that matter, the whole world loosens up around Christmas time. The boys usually average between four and five dollars a day, but between the twentieth and the twenty-fifth of December their daily earnings run up to seven and even eight and nine dollars. The pickings get mighty slim between Christmas Day and January 1st. I suppose folks start in early to practice their New Year's resolutions to 'save more this year.'

"The strangest tip I ever saw given was a live turkey. The man who owned the turkey tried in vain to get it checked, and when he failed he gave it to the attendant who was carrying his suit case. As it was the week before Thanksgiving, there was no kick from the red cap. He wasn't married and had no family, so he auctioned off the turkey in my office. If I remember correctly, he got six dollars for it, which was a pretty hefty tip.

"Women used to tip more sparingly than men. This is no longer true. If anything, they average a little higher than men. I think this is because there are so many business and professional women nowadays who are accustomed to pay well for service. Day coaches are just about as profitable as Pullman and parlor cars.

"The biggest tip I ever heard of a red cap getting was a hundred-dollar bill, which I myself received. The gentleman who handed it to me was an old friend—I had been looking out for him fifteen years or more. He was about to be married, and decided at the last moment that he wanted a private car for his honeymoon. He telephoned me and I hustled around and made the arrangements for him."

Chief Williams says that the out-and-out deadbeat is rare, but that he does exist. He usually waits until his train is about ready to pull out before he boards it. Then, when he is safely settled in his seat, with his belongings about him, he discovers that he has no change. He always makes the gesture of taking down the red cap's number, meanwhile promising volubly to mail back the tip. Of course not every individual who at the last minute finds himself with nothing less than a ten-dollar bill in his pocket is a deadbeat. But the chief claims that the boys can tell by the look in a man's eye whether or not they will ever hear from him.

"It's funny," chuckled Jim, "but a red cap of any experience can nearly always size up folks, anyway. Nine times out of ten, he can tell beforehand whether his tip will be a dime or a quarte.. It isn't the way that people dress or the kind of luggage they carry that gives them away. It's just something about the folks themselves.

"There's one thing a red cap can count on: If a person has traveled a lot, he is not likely to give big tips, but he is almost certain to come up to the standard. Probably the most generous tippers in the world are rich Cubans and South Americans. They never give less than fifty cents and a dollar is more common. Europeans in general are pretty close tippers.

"YOU would be surprised," Jim went on, "at the number of people who try to borrow from me or from the boys. As a rule, we make it plain that there's nothing doing, but occasionally we allow circumstances to alter cases.

"Just the other day, an elegantly dressed woman with a fur piece about her shoulders that probably cost a thousand dollars borrowed two dollars from a red cap to pay her taxi fare up-town. The boy hasn't seen or heard from her since, although she promised to mail him a check that night.

"I don't think this woman meant to be dishonest. Two dollars was such a trifle to her that it slipped right out of her mind. She did not realize that the sum represented a half-day's earnings to the red cap.

"Here is the other side of the picture: I once lent seven dollars to a Swedish woman from Minnesota who had come East with her three children to be near her family in Philadelphia. Her husband had died, and she and the children were going to work in a factory. When they got to New York, the woman found that she had less than a dollar left, and she had to feed her youngsters and get them over to Philadelphia. I figured that she needed seven dollars. She sent the money back to me out of her first week's wages."

The DeLuxe Sedan

A flashing flexible beauty – and the fastest car in its class

Everyone concedes to the Victory Six a vivid and refreshing personality quite its own . . . . A captivating rakishness that is partially an effect of line and apparel : . . . partially a matter of spirit and superb speed . . . . you sense it as the Victory flashes by and you sense it at the wheel . . . . Perhaps, in the last analysis, it gets down to the fact that no car in the Victory price class is so fast, so flexible, so quick to get underway, and so instantly obedient to the brakes . . . . in a word, so brilliantly responsive to every whim of the driver . . . . Spacious, too, with side-sway impressively absent, thanks to a new and exclusive development in better bodycraft . . . . A car that we invite you most cordially, and without obligation, to *drive*.

Seven wonderful shaves just like the one described below are yours for the asking now. Read this advertisement, then tell us where to send your seven-day tube.

Mail Coupon Men...

Postman will bring you quick new way to shave

A LITTLE package. The postman will hand it to you. And inside you'll find a scientific answer to the age-old problem of beard-softening.

Just squeeze a little on your brush. Whip it on your face and lather up. Your stubborn beard becomes limp and lifeless ... soft and pliable ... ready for the razor.

You feel no razor-pull, drag or scrape.

Your face is fresher ... cleaner ... smoother than it's ever been before.

Every year this very simple test has shown thousands of men the way to a faster, smoother shave.

So please read this advertisement thoroughly. Then mail coupon. It's a step you'll never regret, we're sure.

Read this, men . . . you'll see the difference

Small bubbles . . . that's the secret

No other shaving cream is like Colgate's. No other can offer you such unique results. It is, we believe, the ultimate attainment in the science of beard-softening. A shaving cream based on the now proven principle that water, not soap, is the real beard-softener.

Colgate lather is designed to absorb more water . . . scientifically drench your beard with moisture right at the base, where the razor work is done. It's a "small-bubble" lather. For small bubbles hold more water. They carry it closer to your beard. A glance at the photomicrographs below proves this better than words. Note the startling difference in bubble size between Colgate's and ordinary lather.

That's the principle, men. Now here's what it does for you:

1. The soap in the lather breaks up the oil film that covers each hair ... floats it quickly away.

2. Then millions of tiny moisture-laden bubbles seep down through your beard . . . crowd around each whisker ... soak it soft with water.

Thus your whiskers come off clean and smooth. No razor-pull. No stinging and smarting.

Ordinary Lather

Photomicrograph of ordinary lather surrounding single hair. Note how the large bubbles hold air instead of water against the beard.

Colgate Lather

Under identical conditions note the closely knit texture of Colgate lather. The small bubbles hold water instead of air against your beard.

Colgate & Co., Dept. 501-G, 595 Fifth Ave., New York

FREE OFFER, MEN!

Please send me FREE sample of Colgate's Rapid-Shave Cream. Also sample of Colgate's "After Shave."

game at New Haven passes that Jim doesn't receive a ticket from some boy, usually one whose father knew Jim. And if it is at all possible Jim takes in the games. And more than one Yale student, finding himself "broke" after a big party in New York, has borrowed his fare back to the campus from Jim.

"And they always send it back to me too," Jim declared.

As chief of the red caps, it is a part of Jim's job to meet all private cars. When a visiting celebrity is arriving in New York, or leaving the city by way of the Grand Central, Jim is always in personal attendance. In the course of twenty-five years' service in this capacity, he has attended many famous people, a large number of whom have honored him with their friendship.

Jim's friendship with the late President Roosevelt covered many years. To-day, no subordinate is allowed to touch the bags of any member of the Roosevelt family if Jim knows anything about it. He is very proud of the fact that when the widow of the late Colonel travels, there is always a telephone call from Oyster Bay requesting that Jim personally look after her comfort at the Terminal.

In Jim's office in the Terminal there is a framed and autographed picture of the Colonel. This photograph was given to Jim by Mr. Roosevelt himself during his famous Bull Moose campaign for the Presidency. Getting off his private car in the Terminal one day, the Colonel called to Jim, who was picking up his luggage.

"Here, Jim!" he cried; "come over here."

Jim obeyed, and found Mr. Roosevelt fumbling with the strap of his brief case. In another moment, he pulled out a large photograph, which he autographed against a convenient pillar while half a dozen important politicians waited to gain his attention. He handed the picture to Jim.

"New ones," he explained. "I wanted you to have one."

Jim prizes this picture above all his earthly possessions.

THERE is only one other happening connected with his work in the Terminal that means as much to Jim Williams as does that mute evidence of Colonel Roosevelt's confidence and esteem. This was an incident that occurred shortly after the death of the late Henry Reinhardt, well-known connoisseur of art and founder of the Reinhardt Galleries.

"Mr. Reinhardt and I were good friends for years," Jim said. "I don't think he made a trip out of the Grand Central during the last twenty years of his life that I wasn't on hand to look after him. He always paid me generously, but that wasn't all of it. He showed in a hundred little actions that to him I was another human being, not just a useful pair of hands. He often stopped to tell me a little story that pleased him, or to ask about my children.

"When Mr. Reinhardt died, I was hurt all through—the way you are hurt when someone very close and dear to you passes on. I didn't want to seem presumptuous, but I wanted to do something to show the family how I felt. I went over to Thorley's, the big Fifth Avenue florist shop where I worked for seven years before I became a red cap. Mr. Thorley himself helped me pick out some flowers. I wanted

I'll make a prediction

FROM the first pipe-load, you'll be boosting P. A. like a small boy bragging about his dad. That's my prediction. I started smoking and talking P. A. about the time pet dogs were being named for Admiral Peary. Good old Prince Albert and I have been pulling in double harness ever since.

I like to turn back the lid on a tidy red tin and whet my smoke-appetite with that P. A. aroma. Gently I pack a load into my pipe. Then a match sets that P. A. flavor to work. Cool as a wind-blown derby rolling down the street. Sweet as retrieving it without a dent.

A pipe and P. A. keep the smile-works running like a clock. And I have mine going from early a. m. till the end of the day.

Mellow, mild, long-burning tobacco with a rich, tasty body that never wears off on the edge. That's what you want in a pipe. That's what you *get* with Prince Albert. Try it!

Here you are, Men, TWO full ounces of top-notch pipe-joy.

PRINCE ALBERT

—the national joy smoke!

He could be so good-looking—*but ..he has that half-clean look*

WHAT a disappointment! When she saw him across the ballroom floor he looked so attractive. But "close-up"? . . .

Sometimes you *do* have to look closely to see pore-dirt. But there's pore-dirt in *every* face. Even after you wash and shave, pore-dirt lurks in your skin . . . sallow . . . gray.

The air you live in all day long, says the U. S. Weather Bureau, swims with millions of tiny specks of sooty gray. Even indoors you can see them in any shaft of sunlight. These tiny specks float onto your face . . . get into the very pores of your skin—wedged *under* the surface!

Once under the skin, no surface washing can ever budge pore-dirt. It's there "for keeps" . . . unless you massage it away with Pompeian Massage Cream.

Watch this pink cream roll pore-dirt free!

When you rub Pompeian Massage Cream into your skin, notice the clean, pink color. But after only a two-minute massage the same cream rolls out—actually gray with pore-dirt!

That's what this greatly enlarged photograph shows. See those dark marks? They are dried pellets of cream—loaded with pore-dirt that just a few minutes' massage rolled free!

Try it yourself tonight. Make sure that when she sees your face "close-up" it will have that fresh, ruddy glow that Pompeian Massage Cream gives. A clean, confident look that will make her say, "My, but you're looking well tonight!"

This FREE test convinces thousands every day!

Pompeian is 60 cents at every toilet goods counter. You're welcome to test it free. Simply fill in coupon and drop it in the mail. Do it now!

After a few minutes' Pompeian massage. Photo taken under lens of microscope showing dried pellets of cream laden with dirt that clogged pores.

POMPEIAN MASSAGE CREAM

The Pompeian Company, Dept. 900-G
595 Fifth Avenue, New York.
In Canada: 72 St. Ambroise St., Montreal.
Gentlemen: Please send me a free trial tube of Pompeian Massage Cream . . . enough for two cleansing, invigorating facial massages.

to be sure that what I sent would be all right. I wasn't sure about putting in my card, but Mr. Thorley said I ought to. I'm mighty glad that he made me do it."

Jim's voice choked a little as he went on:

"You will never guess what the family did. Out of all the hundreds of handsome and costly designs sent, Mrs. Reinhardt and her daughters chose to include *my* simple offering among those that were given the place of honor on the casket. Later, I heard what Mrs. Reinhardt said, and I shall always treasure her words:

"'Jim has started Father off on many a long and trying trip,' she told her friends. 'And somehow I think it would please Father to know that Jim is with him in spirit on this last journey of all!'"

The late President Wilson always had a smile and a pleasant word for Jim. On one occasion, when Jim had been able to perform some special service for him, Mr. Wilson shook hands with the colored man in saying good-by. Jim recalls that, when Mr. Taft was President, he refused as a matter of principle to wait until the platform was cleared before leaving his train.

"Mr. Taft went into office on the Republican ticket," said Jim, "but he is one of the most democratic of big Americans. He never wants any fuss and feathers about anything."

THE man who carries your grips or golf bags in the Grand Central Terminal may be a vaudeville actor, a preacher, a professional boxer, or a doctor or lawyer in the making. According to Chief Williams, many young colored men who are struggling to establish themselves in business, or in one of the professions, work at portering in off hours. Besides the vocations mentioned above, the present personnel includes a shoemaker, a carpenter, several dentists, and a watchmaker.

A quarter of a century ago, when Williams got his job as a Grand Central red cap, there were twenty-five white attendants and only two colored men. Now all the red caps at both the Grand Central and the Pennsylvania terminals are negroes. Colored men seem by temperament better fitted to the work. It took Jim Williams just two years to climb from his place as a "rookie" red cap on the night shift to the commanding position in the service.

"Grand Central men were the first station attendants in the world to wear red caps," said Jim proudly. "I am told that the idea has spread practically all over the earth. People tell me that there are red caps in Switzerland, Italy, and even in China.

"I never knew a colored man to get rich toting grips," he continued; "but, just the same, portering is a mighty popular job. There is always a long waiting list of men who want to get into the service. Right now, I have on duty about four hundred boys. The number varies with the season of the year. Summer is the busiest time. It is the vacation, convention, and excursion season.

"Thousands of folks who stay in the city all winter take frequent week-end trips during the summer. We have between six and eight hundred trains arriving and departing daily, depending on the seasons and other travel factors. On

ATWATER KENT RADIO

The common sense of buying radio—

most radio enjoyment for your dollar

A radio receiver is an instrument which gives you your choice of all the broadcasting programs within range.

When your radio receiver makes this selection quickly, brings in music and speech clearly, gives you no trouble at all—you have the best radio.

A. Atwater Kent

THE Atwater Kent A. C. set is that kind of receiver.

The *price* of the best set should be whatever you have to pay for a good-looking instrument that will give you perfect reception consistently. When such a set happens to be low-priced, you are the gainer. The Atwater Kent A. C. set does give you everything you ask of radio—and is not expensive.

To make such a set, at such a price, requires more than good intentions. It requires a complete modern laboratory to originate new ideas and new ways to try them out, and to hold fast to that which is good. We have that laboratory.

It requires experience—and we have twenty-six years of it. It requires facilities—and we have a 15½-acre factory, built, every inch of it, solely for radio. It requires equipment—and we have equipped that factory with machinery designed to make quality radio very rapidly.

It requires extreme care, and we assure such care with 222 tests or inspections of every set before it is shipped.

And—it requires a huge public demand to create such radio on a scale which alone makes a low price possible. More than 200,000 Atwater Kent A. C. sets sold since January 1st. 1,400,000 battery sets before that. There's the demand. And every one of these 1,600,000 owners knows that he has in his pocket a good many dollars which he might have spent without getting an additional cent's worth of enjoyment.

Try it in your own home—*then you'll know*

You have heard of the simple, sturdy and beautiful Atwater Kent A. C. set and the new conception of radio. You have seen it, of course, in stores and in the homes of friends. Naturally, you have wondered how it would look and act in your own home. Why not try it there?

Tell the nearest Atwater Kent dealer you want a free home demonstration. Fix with him the day and hour, and have your family share the fun. Snap the switch yourself and watch the friendly glow of the A. C. tubes as power that *can't* "run down" pours through them from a lamp socket. Try the new A. C. Atwater Kent in *your* home. It invites you to put it to any test.

ATWATER KENT MANUFACTURING CO. *A. Atwater Kent, President* 4702 Wissahickon Ave., Philadelphia, Pa.

On the Air—every Sunday night—Atwater Kent Hour—listen in!

The lather's the thing

IT TAKES more than water to soften whiskers. Whiskers are too tough, too horny to be softened by water alone. It's the ingredients in the lather made active by the water.

That's why Mennen-lathered is smooth-shaved. For in the dense, creamy Mennen lather only, do you enjoy that exclusive beard-softening process, *dermutation.* While it is completely softening the thousands of horny little hair shafts, dermutation levels and smooths the tiny mounds at the base of each hair, so that the razor slides through clean and square right at the skin surface, without nicking, scraping or abrading the skin. Your beard fairly rolls off before your razor. No rubbing necessary. None of that raw, burning after-shave effect, either. There's no caustic in Mennen to irritate or smart. And Mennen works equally well in all waters, hard or soft, hot or cold. Five agreeable emollients in Mennen lather tone and cleanse the face, leaving it fresh, soft, smooth and cool, fit for the longest day. 50c per tube. The Mennen Company, Newark, N. J., and Toronto, Ontario.

Now also made with Menthol

Some like the brisk, tingling coolness of a dash of menthol in their lather. For them we have good news. They can now enjoy this pleasant feature in the shaving cream that softens their beards by the dermutation process and therefore gives them the world's finest shave. Mennen is now made both ways—plain and mentholized. To get the mentholized, ask for the Mennen tube with the red ball. Your dealer has it, or can get it for you. 50c—same as plain.

Mennen Talcum for Men, Too!

Tone down that schoolboy face shine with a light sprinkle of Mennen Talcum for Men. Neutral tinted, doesn't show. Rounds out the perfect shave. 25c per tin. Also made in stick form—50¢.

Saturdays and Sundays during hot weather, it's not unusual for a quarter of a million people to board or leave terminal trains every twenty-four hours. The boys meet the trains according to a rotating schedule, so that all may have a fair chance.

"WE PICK our boys mighty carefully. Character is the first consideration. A young fellow who wants to wear one of our red caps must furnish satisfactory references covering in detail the five years preceding his application. He must be able to speak and write the English language. He must be at least five feet eight inches tall, so that he can be readily spotted in a crowd. He must be neat, alert, and intelligent. No matter how other folks act, *he* has to be polite. But above all things, he must be trustworthy.

"A few of my men have been with me more than twenty years. The majority have seen five years' service. A man hardly ever gives up his berth with us unless he sees bigger pay and opportunity ahead. A good many of our boys graduate into the Pullman service. It is a fact that many of the negro lawyers and doctors of to-day got their start as red caps or Pullman porters.

"Most folks seem surprised when I tell them that about one out of five of my men is studying something or other. A year or so ago, I counted up and found that we were employing one hundred and one college men, twenty-five of them graduates.

"Several red caps have worked up profitable side lines in connection with their work here in the Terminal. One middle-aged attendant repairs suit cases. He sews up rips in the leather, patches worn spots, and puts on new handles almost while you wait. Another boy has a small tailor shop near by where he presses and mends clothes for patrons. He has developed quite a tidy little business.

"We are proud of the fact that the red caps of the Grand Central Terminal gave New York City its first colored policeman. One of the first Americans killed in the World War was Thomas J. Bullock, a second lieutenant in a colored regiment, who carried grips on my staff for years."

AT TIMES Albert Payson Terhune has led a pretty rough-and-tumble life. He was a champion amateur boxer, and a metropolitan newspaper reporter for over twenty years. He's a roughneck. He says so himself—and he is proud of it. Next month, in a powerful article, entitled "A Roughneck's Religion," he sets up a virile picture of Jesus, which has for a background Mr. Terhune's visit to the Holy Land, in which he followed the long pilgrimages that Jesus made. He analyzes the sturdy physical qualities which endeared the Son of Man to the common people. "Roughneck" qualities, Terhune calls them; but he does so with a reverence and admiration that can offend no one. You are shown Jesus, the well-muscled carpenter, the fighter, the champion of the oppressed; Jesus, the tireless, capable of performing physical feats that would tax the strength of many an athlete of the present day.

(LEFT)
New York City

"You would think that athletes would keep in perfect health without any trouble. But as every man who has trained for an athletic team knows, that is by no means always true. In spite of training table food, a fellow often gets irregular in his elimination. Another big trouble is boils.

"I found that eating Fleischmann's Yeast kept me in perfect condition to stroke the Columbia crew. Every member of the 1926 crew, which I captained, ate Yeast regularly."

ERIC C. LAMBART

(RIGHT)
Salt Lake City, Utah

"I am thirteen years old. I had stomach trouble, and when we sat down to meals Mother nearly always warned me not to eat this or that or I would have indigestion.

"Mother had taken Fleischmann's Yeast to make her skin clear. After she had used it for some time the doctor and her friends spoke of how lovely her complexion looked. Her wonderful results with Yeast made her buy it for all the rest of us.

"Since eating it regularly I have never been troubled with indigestion. I am grateful that I know about Fleischmann's Yeast."

MARCELLA ANDERSON

"... so 'logy' I could hardly keep awake"

Cincinnati, Ohio

"Long hours of concentration on an engineering job often means irregular meals, lack of exercise—and consequent digestive trouble.

"After twenty-five years of this kind of work I got so bad I saw I would have to do something about my health. I was nervous and overweight. After a meal I would feel so drowsy I could hardly keep awake—just 'logy,' I guess, from auto-intoxication.

"Last February I decided to try Fleischmann's Yeast. My doctor encouraged me. In two months my weight was back to normal, my nerves were steadier, I was more alert and vigorous than I've been in years!" OLIVER H. SCHLEMMER

MR. OLIVER H. SCHLEMMER (above, at left)

WHEN you are "logy," run down, your whole body is being flooded with poisons from stagnating food wastes.

Fleischmann's Yeast rouses the sluggish intestines, keeps them clean without exhausting you as cathartics do. That is because yeast is a food—as fresh as new spinach or any garden vegetable. When normal elimination is restored, your appetite picks up. Digestion improves. Your skin becomes healthy, fresh-looking.

Buy 2 or 3 days' supply of Fleischmann's Yeast at a time from your grocer and keep in any cool, dry place. Write for booklet on Yeast in the diet—free. Health Research Dept. J-54, The Fleischmann Co., 701 Washington St., New York.

***Easy, natural*—this new way to health:**

Eat three cakes of Fleischmann's Yeast every day, one before each meal or between meals: plain, or in water or any other way you like. For stubborn constipation drink one cake in a glass of hot water—not scalding—before each meal and before going to bed. And train yourself to form a regular daily habit.

"I Just Love Americans"

(*Continued from page 37*)

I just looked around at them in disgust, thinking of all the work we'd put on that pageant. They were one swell bunch of patriots! Instead of showing that their feelings were welling up in them, and making them humbly grateful that they were Americans, the only ones who didn't just look relieved kept glancing over their shoulders and sniffing absent-mindedly, as though they thought they smelled smoke. It was disgusting!

We were in the second verse when I noticed that more and more of them were sniffing, and looking over their shoulders. It was conspicuous because, during the entire pageant, it was absolutely the first sign of life they'd shown. Without even waiting for the end of the song, Mr Smiley, who, with his whole family, had come down to the pageant, got up and started over the hill back toward the farmhouse.

Suddenly, at the top of the hill, he threw up his arms, and yelled at the top of his voice.

"Hey!" he shouted, "my barn's on fire!"

I HAVE never seen such a dramatic change in my life. It was as though his shout had touched an electric switch that set off the audience. The sleepy listlessness vanished as though by magic. Fans were dropped, camp chairs kicked over. With one wild-Indian yell, everybody started up that hill toward the Smiley barn.

Honestly, I never knew our young men could run like that. Howard Merton and Fritz Schaufmeister were in the lead, and their heads were down for speed. They fairly charged over the top of that hill. Before we'd got untangled from the bunting, they'd disappeared over the brow and were already yelling back directions:

"Bring all the pails you can find! Got any fire extinguishers in your cars? Get flat boards!"

Will and Roger and half a dozen others turned back, and in about ten seconds they'd smashed up two picnic tables and were on the dead run again, carrying the planks.

I had been in the back of the amphitheatre, and by the time I got to the top of the hill where I could see, there were great flames shooting up into the air. It wasn't the new barn yet; it had started in the corncrib, and the old barn had caught and was all in flames.

The heavenly brisk breeze of the grove was a brisk young wind here, and anything but heavenly. With every gust it blew the flames toward the huge new barn, and great showers of sparks would shake down on its dry shingle roof. And beyond the barn, right in line with the wind, was the farmhouse.

"They'll never save a stick of it," old Mrs. Porteous gasped behind me.

"Not with this wind blowing," said somebody else. "There, look at that!" The other side of the shed flamed up.

I saw that Mother had the twins all

Laid up in the Hospital he sold $200,000 worth of Silk

An Advertisement for Bell Long Distance Telephone Service

A NEW YORK raw silk salesman had to go to the hospital for 10 days. His illness was minor, but the loss of time was serious. He secured a room with a telephone. Throughout his convalescence, he kept informed of the course of the market. Sent and received his cables by telephone. Kept in constant touch with office and customers. Sold more than $200,000 worth of silk.

A Milwaukee dry goods salesman was forced to cancel his regular trip because of a broken leg. From his sick-room, he covered in 5 days by telephone the same territory that took 5 to 6 weeks of traveling. And he gathered in 90% of his usual business.

Held up by road conditions, a tire salesman had to abandon a certain trip in southern Nebraska. He went to the telephone office and covered his territory by Long Distance. Sold, $1280 worth of tires; charges, $6.20.

In emergencies and in the regular day's work, hundreds of concerns are using Long Distance to get things done and to increase profits.

You will be surprised how little the calls now cost. New station to station day rates are: Los Angeles to New York, $8.75. Dallas to Chicago, $3.25. Baltimore to Philadelphia, 70c. . . . Calling by number takes less time. . . . . *Number, please?*

AMERICAN TELEPHONE & TELEGRAPH CO. AND ASSOCIATED COMPANIES BELL SYSTEM

New, *illuminated* Red Ball Models, with special car nameplate on dial.
Model "CL", dash type: $8.00
Model "CS" or "FS", steering col. mtg. $8.50

right, and ran on down toward the fire.

A half-dozen men were playing fire extinguishers on one side of the old barn, but while they checked the flame there it was spreading twice as fast on the other side. As every new man or boy dashed up, he grabbed a flat board and started beating out wherever he could. The girls and women were gathering around the edges, each one keeping her own babies and children back out of the danger. It was one wild, mad, shouting pandemonium.

And, every instant, the fire was gaining ground. In the brief minutes that I was running down the hill, a change came. Suddenly, before my amazed eyes, that thing became organized: Fritz and Howard, having got there first, seemed to be taking charge.

"Here, you girls," Howard yelled, "get busy. Let the grandmothers watch the kids. Fall in line down to the brook!"

Fritz, a half-dozen pails over his arm, was already at the brook getting the bucket line started, getting the Dower boys and the Perkins to dipping up the water. Milk pails, buckets, the lemonade pails we'd brought—everything that would hold water started hand to hand down the line.

A half-dozen older women, who hadn't done anything but gasp and say we'd never save a stick, found themselves pushed over to one side with the twenty children to watch. Somebody grabbed my arm roughly and pushed me into line just in time to pass a pail of water on to Peter Vane, who pushed in right ahead of me.

"Hey, boys, whoever of you can run the fastest, keep the empty pails going back to the brook."

Fritz, half way up a ladder, passed the full pails on up to Will, who was on the edge of the roof, emptying them over the fire as fast as they came up, throwing them back down to some high-school boys, who ran back with them as though they were in a hundred-yard dash.

There was no telephone at the Smileys'.

"Jimmy, Pat, Roscoe—all you fellows that've got motor-cycles, one of you beat it to the Piersons' and telephone the alarm in to Dawson. And the others scatter, in case Piersons' is locked up—get the nearest telephone—call both Dawson and Verblen for their chemical engines!"

Pat Callahan was off first, with a great chugging and back-firing, streaking it down the road. It was like Sheridan's ride, only faster and noisier.

IT WAS the young men who were running things, Will and Scott and Howard and Fritz Schaufmeister and the rest. And what got me was the way every human being did exactly what he was told. There was no back-talk, no grouching.

The captain of the high-school football team stood meekly, just steadying the ladder for Fritz and handing up the pails as they came. Mr. Cranston, who is vice president of the bank, and very important, went into the hay mow obediently, with nothing to do but to watch and see if any sparks came through the roof, and call out the alarm if any did.

Wells Prentice, who is the lady-killer of the town and quite fancies himself, didn't just like being put in the bucket line, and started to make some sort of protest, but he didn't get far with it.

26 MILLION DUNLOPS

"WHAT OF IT?... What does that mean to my car?"

Simply this: The 26 million Dunlops now running are your guarantee that Dunlops will pay you on your car.

With 45,000 craftsmen.... 40 years' experience.... $195,000,000 resources...vast rubber plantations ... and great spinning mills, Dunlop *should* make the world's best tires.

The longer Dunlops have run, the more popular they have become. In Australia, 75% of all tires are Dunlops.. In Japan, 65%.. In England, 70%.

The ninth and greatest of all Dunlop plants was built at Buffalo, U.S.A. five years ago. Since then, Dunlop has climbed from 89th place to an undisputed position among America's leading tire-manufacturers. In 1927, American dealers sold 41% more Dunlop tires than in 1926.

Yes, the 26 million Dunlops now in service are your guarantee that Dunlops will pay you on your car.

DUNLOP TIRE & RUBBER CO., BUFFALO, N.Y.

"DUNLOP CITY"

Throughout the world, the productive Dunlop Properties cover so vast an area that—if combined into one place—they would form a "Dunlop City" of over 100,000 acres.

Different—
in recipe, in mulling, in delightful flavor

Wine of tomatoes gorgeously spiced!

CATSUP has been good before. But never *quite* so good as Snider's, many folks tell us.

The reason? Taste, taste, more taste!

There's the magic of Snider's own time-honored recipe. There's that wonder-working Snider method, called "mulling," which adds sparkle and tone to the natural rich flavor of the tomato.

The next time your marketing list calls for catsup, say Snider's—for a condiment blended to the queen's taste!

P. S. Also the king's.

Naturally they prefer Snider's

The *mulled* catsup

CHILI SAUCE ~ ~ ~ COCKTAIL SAUCE

FRESH-KEPT VEGETABLES & FRUITS IN GLASS & TIN

"Shut your yap and keep those pails moving," came curtly from the other end of the line.

And though he looked pained at anybody being so crude, he did it.

We didn't seem to have a real chance though, in spite of everybody's best. All the water we could get just steamed and sizzled and wasn't really holding back the blaze. Some sparks fell into a pile of shingles against the barn on the other side, and of course they caught like kindling. There wasn't anyone to be spared to go around there; but, just as it seemed hopeless, we had unexpected reinforcements.

A crowd of berry pickers who—being foreign and not celebrating the Fourth—had been working a mile away, had got the news from one of the motor-cycle boys, and they came tearing up to help. Only one of them could speak English, but they told him about the shingles, and in half a second he had his gang over on the other side of the barn.

The sparks were falling faster now on the barn roof, and they had to thin out the bucket line and get more men up there with boards to beat them out. That meant we had to pass the buckets farther to each other, and, believe me, passing full pails of water as fast as they come is no easy job. My arms were aching till they were ready to fall off, but if you slowed down a second they yelled at you from the ladder:

"Hey, there, keep 'em coming! What do you think this is—a pink tea?"

THEY began to be pretty sure we weren't going to save the barn, and Fritz, who can drive any engine made, had to leave the ladder and go to the new barn and drive out the new tractor. He came out saying smoke was in there and the horses were scared to death.

Little Jimmy Perkins, who hadn't been thought important enough for anything but to pass buckets, went in there and blindfolded those horses and led all three out, kicking and bucking and squealing. His mother was scared to death for fear he'd be hurt, and started to wring her hands; but as they'd pressed her into the bucket line when they'd had to take all the men out, she had to stop that pretty quick and keep passing, in answer to that everlasting, "Hey, there, keep 'em coming!"

I was glad I had to keep passing. If I'd had an instant to spare I'd have been scared to death for Will. He and half a dozen others had climbed way up on the new barn roof, where the sparks were falling now like rain, beating with flat boards. That roof sloped at an angle that may be all right in geometry but isn't so good to keep your balance on. Those who didn't have rubber soles had taken off their shoes to get a better grip with their feet.

Fritz was back on the ladder again now, throwing water, and one of the boards hit him and made his nose bleed. It looked terrible, his face all blood, but nobody stopped to be polite, even if he was an alien. The fellow who hit him was already off after other sparks, and just yelled back that old war song,

"Keep your head *down*, Fritzie-boy!"

And then, suddenly, we knew we

Thorough chilling adds new flavor to foods – and drinks

JUST an ordinary grapefruit after a brief stay in a General Electric Refrigerator becomes a rare treat. Just a simple salad acquires a best-hotel air when it is chilled to the proper point of crispness. Drinks, too, are more refreshing when they are really cold. Keep a supply in the refrigerator. Or, for last-minute serving, use your always-ready ice cubes.

The modern housekeeper has also found to her surprise that with a General Electric Refrigerator, it's just as easy to make a luscious mousse as it used to be to make an uninteresting rice pudding. She finds that an aspic is a welcome hot-weather change from soup.

The General Electric Refrigerator is different from all others—in construction, in operation, in *results*. It is absolutely simple and unusually quiet. None of its machinery is exposed .... it is all safely stowed away in one hermetically sealed steel casing. It hasn't a belt, fan or drain pipe—never needs oiling.

As to its cleanliness, Miss Alice Bradley, principal of Miss Farmer's School of Cookery in Boston, has written .... "I can truthfully say that in my experience I have never come across a refrigerator which is as sanitary as the General Electric .... There is no oil anywhere to catch dust, no crevices where it can linger, no fan to suck it into the mechanism. The current of warm air which rises from the top unit is powerful enough to keep a small pin wheel revolving and, like the heat from a radiator, it drives the dust away from the unit and prevents it from settling."

Write us for a descriptive booklet A-7.

A DOCTRINE IN WHICH SOME NOTABLE ADVERTISERS HAVE DISCOVERED PROFIT POSSIBILITIES

There's a portrait of the family in Mother's shopping list

THE WANTS, the hopes, the desires of the family are pictured in Mother's shopping list. And that list is more than a prosaic catalog of products. It is a composite portrait of the family.

You can read there of Dad's fondness for ox-tail soup. A bottle of liniment (large size) can only mean that Son is trying for the ball team. While the gossamer-thin silk stockings for Daughter tell of a coming dance. Real things for real people. For a family is neither a "buying unit," nor a digit in a circulation statement. A family is *people*. And it has as many likes, dislikes and opinions as it has members.

That is why the products which are known and trusted by *every* member of the family appear first and oftenest on Mother's shopping list. The *more* members of a family that are sold, the quicker a family buys.

It is that doctrine which recently has led the most successful advertisers to consider not only the circulation figures of a given publication but the number of people in each family who read the publication.

To establish those facts many investigations have been made by advertisers and independent organizations. In every case, of which we know, The American Magazine led every other publication in all-family appeal.

As a woman's magazine alone, it usually ranks second or third. As a man's magazine, first or second. But in its combined reading by fathers, mothers and young people it is overwhelmingly first.

• • •

THE importance of the all-family appeal of The American Magazine is evidenced by the fact that such notable advertisers as Colgate, Heinz, Royal Baking Powder, Johns-Manville, National Piano Manufacturers Association, Cream of Wheat, and Dunlop Tires are either using The American for the first time in 1928 or have greatly increased their American Magazine advertising.

May we present to you the facts that convinced those advertisers that The American Magazine, at one advertising cost reaches not only Mother but her group of consumers?

• • •

How to reach the "*Two or More*"

From the most unusual marketing investigation ever undertaken, we learned the significant fact that *two or more* members of the average family dictate the selection of most of the merchandise the family buys.

For example, in 73% of the 952 families questioned, two or more members influenced the purchase of a piano. In 59% of the families, *two or more* members influenced the choice of ham and bacon. In 67% of the families *two or more* members influenced the selection of hosiery.

Obviously, then, most advertisers should use those publications which reach "two or more members" of the family. By every test, the magazine that does that most effectively is The American Magazine. Investigations, including those conducted recently by five leading universities, prove The American Magazine overwhelming *first in its combined reading by all the family.*

THE CROWELL PUBLISHING COMPANY ~ NEW YORK, N. Y.

couldn't make it. Mr. Cranston shouted out from inside the barn that holes were coming through the roof, and that he wasn't going to be able to keep the sparks from falling into the hay. The berry pickers were rushed in there with more boards, but we knew they could never hold out long.

The men on the roof were working like flying flails. Somebody else got a crack and a bloody face—it seemed as though everything was blood. Somebody slipped, and was barely pulled back from sliding right off into that flaming pit below.

And I couldn't even look to be sure that Will was all right. If one of the bucket line so much as turned a head the everlasting shout came:

"Speed 'em up, there; keep 'em coming!"

Somebody in the line, closer to the fire, suddenly keeled over—the heat, I suppose. Two of the older women got her away, throwing water on her, but the rest of us just stretched out a little farther apart. It brought me right up close to the fire, and the heat was terrible. I began to get dizzy, too. And still those heavy buckets—

"It's no use," I heard one of the men say, and his voice sounded queer and a million miles away; "the corner of the new barn's caught."

The ground under me seemed to tip up, I shut my eyes for a second. Even with my eyes shut all I could see was blood and flame, and those flailing figures up in the sparks. I tried to take a bucket and my arm gave way—everything went queer and red and black and reeling. And I seemed to hear a terrible screeching.

At first, I thought I was just hearing things. But it kept getting louder and louder, and suddenly, from the roof, from the inside of the barn, from everywhere, came a great shout of joy. The screech I heard was real—sirens from two ways at once.

Shrieking down the road, one from each way, came the chemical engines from Dawson and Verblen.

That fire, that had seemed such a terrific conflagration while we were fighting it by hand, was just nothing for those two engines. Inside of fifteen minutes the last spark was out. The old barn and corncrib, of course, were smoking, smoldering ashes; but the new barn and the house were safe.

The older people, who hadn't done anything but watch the children, were all in and eager to start home.

"But we haven't had the fireworks yet," we all protested.

They stared at us as though they thought we must have had a blow on the head in childhood.

"Fireworks!" they said. "For heaven's sake, haven't we had *fireworks* enough for one day!"

THAT is the trouble with older people. They seem to have a good sense right up to a certain point, and then unexpectedly they disappoint you. There we had forty dollars' worth of rockets and red light and Roman candles and pinwheels and flowerpots!

We compromised by most of the older people going home, taking the littlest of the children with them, and the rest of us starting back to the grove. We had a whispered discussion first, and decided

ALL THAT IS BEAUTIFUL SHALL ABIDE FOREVER

Modern Memorials in Marble
A series illustrating and identifying basic types and modern design in family memorials.

ROYAL SIMPLICITY . . .
. . . *the* SCREEN

THIS regal type of family memorial takes its origin and name from the choir, chancel or sanctuary screen of church architecture.

Distinguished by its width, the modern screen memorial offers great opportunity for variety in design. It may be wall-like or made with a colonnade or balustrade, with a higher central canopy, pillar or tablet (as illustrated). Such memorials are usually placed at the rear of large, level plots. They merit the matchless permanence and beauty of Vermont Marble.

Vermont Marble, the nation's noblest Memory Stone. For tested permanence, beauty, sculptural quality, it was chosen for the Unknown Soldier's Tomb and Arlington Memorial. Our designers serve your local memorial dealer. Ask him for sketches and estimates.

FREE BOOKLET
It illustrates and explains the basic memorial types . . . greatly simplifies the problem of selection. For yourself . . . for a friend, *write for it.*

Lasting Cleanliness

with this paint enamel

Ordinary Flat Finish White Paint

Barreled Sunlight Gloss Finish

The microscope shows the difference

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keep clean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

WHEN the painter had made his last stroke, behold the beauty of clean white walls and woodwork. But for *how long?*

If it's ordinary paint, it soon becomes hopelessly dirty. But if it's Barreled Sunlight, occasional washing will keep it *spotless for years.* For this satin smooth paint enamel can't hold dirt embedded.

Has a rich depth of finish peculiar to itself—flows freely without leaving brush marks—possesses remarkable opacity or "hiding power"—and is *guaranteed to remain white longest.*

Easy to tint. Dealers carry handy tubes of Barreled Sunlight Tinting Colors.

Gloss, Semi-Gloss and Flat finishes. Cans and drums. Where more than one coat is required, apply Barreled Sunlight Undercoat first.

Also ask your dealer about the new product, Outside Barreled Sunlight.

U. S. Gutta Percha Paint Co., 33-D Dudley Street, Providence, R. I. Branches: New York—Chicago—San Francisco. Distributors in all principal cities. More than 7000 retail dealers.

that, with the older people gone, there was ice cream enough to go around, so we invited the berry pickers and the boys in the two fire departments to come too.

The department boys couldn't stay—they had to get back in case there should be other calls, the Fourth usually being their busiest day. But they did stop long enough to have a big dish of ice cream apiece. And though it was a little too light, we set off a few rockets while they were eating. Then somebody struck up a song for the two fire chiefs, the song we always sing for all the high-school football players:

They say Christy Borglunson ain't got no style—
Got style all the while—style all the while.
They say Christy Borglunson ain't got no style—
Got style all the while—all the while.

Of course we sang for Mike Sheenan, the chief of the Dawson company too.

Then, after they had left, and it was late enough to go on with the fireworks, we all sat around in the dark and watched them, and sang to everybody who had done anything toward putting out the fire. It took forever, and I suppose a real musical critic might have thought the tune got kind of monotonous, but it didn't to us. Because, while the tune and the words were the same each time, each time the name was different. And it's queer what a difference that makes.

Somebody found out the name of the boss of the berry pickers, and though the rest of them couldn't understand a word of English, you could tell from their flashing, white-toothed smiles that they understood the spirit of the song when we sang, "They say Tony De Silva he ain't got no style— Got style all the while—"

We sang for Mr. Cranston and Howard Merton and Fritz Schaufmeister and the Bucket Line and everybody else, till we were fairly hoarse. A red light was burning bright while they were singing for Fritz, and I happened to catch a glimpse of his face. He may have looked bored when they played the "Watch on the Rhine" in the pageant—especially for him—but, believe me, he didn't look bored now. Just kind of shamefaced and happy.

And when we were singing for the others, I'd hear his deep, rich voice booming out, strong and enthusiastic, nothing of the stranger-in-a-strange-land sound to it, just one more young man, perfectly at home, singing with his friends.

AND I couldn't help feeling what a grand country it was to be at home in. Any time I ever want a thrill I'll be able to get it by just shutting my eyes and seeing it like moving pictures all over again—our young men tearing down the hill at the first call of danger: the way they ran, heads down, strong and fast. Anyone in trouble could be pretty thankful to see that crowd charging down to the rescue.

There was something queer and almost mysterious about it, the way they seemed our own boys, and yet something a little more. There seemed to be something that was almost a spirit about it, made up of all of them, fighting and working together, some spirit that ran faster than any one of them, that was stronger and braver than all of them together. It was very queer.

The way everybody had forgotten all

15,034 "Squares" of General Electric Company roofs are - - - - - Johns-Manville Built-Up Asbestos

The General Electric Company is one of the world's greatest engineering organizations. This corporation buys equipment and materials after analysis and test. Precise standards and rigid specifications must be met. Nor does the exacting scrutiny end with purchase. Performance is studied with equal care.

The 15,034 squares (1,503,400 square feet) of Johns-Manville Built-up Asbestos Roofs on the General Electric Company's works at Erie, Pennsylvania, seem to us a stronger endorsement, a better proof of the worth of our roofs than anything which we might say. Chosen after cold consideration of various roofings, Johns-Manville Built-up Asbestos Roofs have met the test of severe use. They have been specified for building after building as the works have grown.

The result of 50 years experience

The reason that our Built-up Roofs have met the tests of General Electric and many other engineers, is that we, ourselves, are engineers. Pioneer developers of ASBESTOS, we have exhaustively studied, tested and worked with this remarkable mineral for 50 years.

Johns-Manville Built-up Asbestos Roofs are the result of experience in the manufacture of roofing felts, in the application of built-up roofs, and an observation of their performance extending over nearly half a century. It is because of this very long experience that the Johns-Manville organization is able to offer the very utmost in a built-up roof that is smooth, fireproof, of long life, economical, a roof that will not give trouble at any point, a roof that you can apply and forget.

Johns-Manville fireproof Asbestos Shingles are used on the roofs of more than 200 houses in Lawrence Park, a residential development for General Electric employees at Erie, Pa. These shingles provide a good looking, everlasting roof, ideal for any home.

If you have any connection with the building or maintenance of any factory, warehouse, office building, hotel, theatre, athletic field—in short, any structure of large roof area, we suggest that you write to us about the roofing. You incur no obligation. We think we may be helpful.

Johns-Manville Authorized Roofers

Johns-Manville Authorized Roofers are trained in the proper application of our Built-up Asbestos Roofs. You can rely on our Authorized Roofers to do their work well, to charge fair prices, and to render businesslike and satisfactory service.

MASTER *of* ASBESTOS

Two outstanding CAMERAS by ANSCO

NO CAMERA ever achieved widespread popularity so quickly as the new Ansco Memo. It takes 50 pictures on one 50-cent film, gives you prints for about one cent each—and all the thrills and satisfaction of projecting your own pictures on your own screen, at insignificant cost.

Positives for projection from your Memo negatives cost about 2¢ each—which for the first time puts this excellent entertainment in the inexpensive class. With a Memo, you can have pictures of everything worth photographing. The camera fits in your pocket or handbag—and the 50-picture film costs but 50 cents a roll.

YEAR after year the reliable Ansco Readyset holds its place as the simplest and surest of folding cameras—a favorite because it eliminates nearly every element of uncertainty in taking a snapshot.

Readysets are permanently set at the shutter adjustment best suited for snapshotting; there is no focusing or adjusting to do, therefore no chance to miscue.

All you need do is open, aim—shoot. Priced attractively at $7.50 for the Vest-Pocket (picture size 1⅝ x 2½); $10.50 for No. 1 (2¼ x 3¼); and $13.50 for No. 1A (2½ x 4¼). Ask your dealer to show you.

AGFA ANSCO CORPORATION, BINGHAMTON, N. Y.

The projector is the new Ansco Memoscope; price, $19.50 including case. Write for booklet.

Your own pictures on your own screen at trifling cost with the ANSCO Memo CAMERA

about himself or herself, and was willing to do whatever was needed. Fritz and Howard, side by side, sweaty and bloody, fighting together to put out a fire and save a home for a farmer that neither of them knew. That terrible leaping blaze, an enemy that was older even than war. The grim, set-toothed pluck that kept everybody too busy to be afraid. Even the bucket brigade—the curt commands, "Speed 'em up there—keep 'em coming!"

And then when it was all over, ice cream and skyrockets and laughing and joking and singing. Someone accused Fritz of getting rattled, and trying to blindfold the tractor before he led it out. The good-natured kidding back and forth. . . .

Oh, I just *love* Americans!

I was glad it was dark, because suddenly I felt tears trickling down beside my nose. I don't know why on earth I should have been crying. I never felt more solemnly happy in my life. It was almost awesome. They were singing for Will then, "They say old Bill Horton, he ain't got no style— Got style all the while—all the wh-i-ile."

The warm dark and the friendly voices. And every now and then a rocket zinging up into the sky and, as it broke, in the sudden light, the black trees and the old familiar hills—the grandest people and the dearest land in the world!

Oh, I shall always remember that Fourth of July. In spite of the pageant having been practically a failure. That was very disappointing, after all the work we'd put on it. And yet, someway, I couldn't hold it against other people for not having their patriotic feelings well up. I must admit that my own didn't. I really felt a little guilty about it. I suppose the trouble is, though it seems awful to say it, that I'm not what you could really call patriotic.

Sunshine for Saturday, Please!

(*Continued from page 43*)

home. In the summer, the 'phone often carries such questions as:

"Do you think I can serve tea on the lawn? Or will it rain during the afternoon? Or do you believe that this heat will continue so that it would be cooler in the house with the fans going than out under the trees?"

I answer them, to the best of my ability—it's all a part of the job of being a weather man. I have telephoned prospective brides that the sun will shine on their wedding day and that they won't need a canopy to protect arriving guests. And I've made just as many rush calls to inform a disappointed bride that a sudden storm is developing, and to put in a hurry order with the awning company.

It is endless, this affair of rush information. Theatres must know, so that their heat may be regulated and the house made comfortable for the audience. Big picnics are on my trail from the time the date is set until the last minute possible for postponement in case of inclement weather. And the first of the week finds either fishermen or hunters, as the season may be, asking anxiously for

Debutantes of modern business

MISS *Dorothy Holland*

—a representative modern business girl employed by the Intertype Corporation, manufacturer of typesetting machines, 1440 Broadway, New York City

Accomplished and valuable they take their places . . .

Yet to them, business is but a passing career. Sooner or later they will leave the office for new interests in homes of their own.

Meanwhile the *Easy-Writing* Royal Typewriter helps to conserve the energy of these fine girls. Royal recognized this responsibility and made typing easier. Business acknowledges it . . . and realizes that health and fresh vitality are also the essentials to better work and greater output.

So today the *Easy-Writing* Royal Typewriter has become an indicator of progressive thought. Its operation is easier for the girl . . . and from this greater ease comes an entirely new and higher standard of typing. The girl at the keyboard will confirm it. Her work will prove it. A Royal typed letter is as distinctive as the durability and easy action of the machine itself.

HE WALKED WITH KINGS

He could not know, standing there in his bare feet and his rough clothes, that kings would do him honor when he died, and that all men who read would mourn a friend. He could not dream that one day his work would stand in Chinese, in Russian, in many languages he could not read—and from humble doorstep to proudest throne, all would be gladdened at his coming. He could not know that through it all he would remain as simple, as democratic, as he was that day as a boy on the Mississippi.

From Albert Bigelow Paine's "Boys' Life of Mark Twain."

He Is American

He made us laugh so that we had no time to see that his style was sublime, that he was almost Biblical in simplicity, that he was to America another Lincoln in spirit.

He personifies the idealism of America—the humor, the kindliness, the reaching toward finer things, the simplicity. In his work we find all things, from the whimsical in "Huckleberry Finn" to the sublime in "Joan of Arc." There is nobody like Mark Twain any more—no humorist who can walk with kings as he did, and change in a moment from side-splitting humor to glorious inspiration. Fascinating plots, real people, real situations, make his stories forever true.

He will be loved and read when many literary idols of the moment have been forgotten. He will arouse sympathy and laughter and tears when the flare of mere cleverness has faded into oblivion.

MARK TWAIN

Author's National Edition

The Author's National Edition is the only *uniform edition* of Mark Twain's writings—including the great novels, the brilliant fighting essays, the humorous ones, the historical ones!

Mark Twain wanted everyone in America to own a set of his books. So one of the last things he asked was: "Don't make expensive editions. Make good books, books good to look at and easy to read, and make their price low."

Among the multitude of shoddily bound and carelessly edited sets of catch-penny books now flooding the market, this edition of Mark Twain stands out in bold relief. Yet it is not expensive as books go.

The Author's National Edition was edited exactly as he wished his works left to the world. And when finished he placed upon it the invaluable seal of his approval. "This," he said, "is the authorized Uniform Edition of my books."

Know more about this wonderful opportunity. Let us send you, free, a copy of an interesting little book, "Your Friend Mark Twain." It describes Mark Twain's matchless writings, and contains a little collection of his inimitable humor. It contains full information on how you can own Mark Twain, beautifully printed and bound, at a price so low and on terms so easy that you can have these wonderful books in your library at once. There is no obligation. Just tear off the coupon and mail it today.

opinions about what the week-end will bring.

Perhaps the only person more appealing than a hunter or a fisherman is the housewife, telephoning in the autumn to know how long I think she can delay putting in the coal, or in the spring to ask if I believe that one ton more should last her until warm weather sets in—and will there be any more cold spells? That last question, I should say, is the epitome of faith, unless it be an instance which happened a year or so ago:

IT WAS in the dead of winter—and that part of winter which is most capricious—that he came into my office.

"I'm from Lexington, Missouri," he said, "and I represent the celebration committee there. You know we've been building a new bridge across the Missouri River. It's about completed now, and when it's done we want to have a big jamboree, biggest thing that's been held in that section of the state for years. So," he concluded confidently, "I just came up to ask you to name a day for it—one when we can sure count on sunshine."

"How far off is the completion of the bridge?" I asked.

"Oh, about six weeks."

"And you want me to name a date six weeks in advance on which the sun will shine and be otherwise pleasant? That's a bit of a job."

"Yes, I know it is," he said. "But we figured that you could do it. We're all counting on you," he added, beaming, as if that would help.

"Better put it off until spring."

"Can't be done. Got to have that celebration when the bridge is opened. We can't keep it closed until spring. And we must have nice weather. Don't you really think," he added innocently, "that you could cook us up a nice day to have that celebration on?"

"All I can give you is an opinion," I answered, and it seemed that would suffice.

So I went to my records and searched them for thirty-eight years, tabulating the days about that time of year which were fairest. Out of those thirty-eight years, I found one day which had been a regular little blue-ribbon winner for fair weather: only a few times in nearly half a century had it offended in the matter of inclemency. "There's your date," I said.

He made a notation of it, and departed; while I, pinning my faith to the past performances of one day out of an entire winter, waited rather anxiously for the outcome. One comes to have a personal interest in such things, a feeling of responsibility for his predictions, pride in success and gloom for failure. At last the day came, without even a cloud; the record of thirty-eight years held good and the celebration was a success. Those incidents are good to think about when one has predicted fair weather, and a sudden change in atmospheric conditions brings about a day that only a duck could love.

The weather and human nature are tied so closely together that it is difficult to pry them apart. The calls, for instance, on a cold afternoon to ask the weather man's advice as to whether the water pipes should be wrapped that night to prevent freezing, the interminable advice in the autumn months as to whether

A specimen of Stenotypy. Plain alphabet type. Easier to learn. Easier to write. Easier to read.

STENOTYPE

The Machine Way in Shorthand

In business, as in every other field, the machine replaces the hand way. Because it is faster, more accurate—far more efficient.

ALONG with the typewriter, the calculating machine and the bookkeeping machine has come the Stenotype, the machine way in shorthand.

And like all other machine ways, the Stenotype came to eliminate waste and inefficiency—in short, to do for shorthand what the typewriter did for longhand.

The Stenotype is a handsome little machine—absolutely quiet—so light that it may be carried in one hand, easily.

Words—Phrases—at a Stroke

It does not write the kind of shorthand you write with a pencil. It is not a system of straight lines, curves, hooks, loops, circles.

Instead, it writes Stenotypy—a system of plain English spelling with the silent letters dropped. The Stenotype writes words—often whole phrases—at a single stroke. In plain type.

The sentence illustrated above—"She wor a red hat" written on 10,000 Stenotypes, by 10,000 different Stenotypists, would give you 10,000 identical notes, perfectly legible now or ten years hence, to ANY Stenotypist.

For You, Mr. Business Man

The Stenotype means:

1. Letters that say what YOU said.
2. Today's mail out TODAY.
3. Everybody producing all the time. ANY Stenotypist can transcribe notes taken by any other Stenotypist.
4. Lower correspondence costs.

In its infancy, the Stenotype proved the supremacy of machine speed, machine accuracy and machine legibility in an official national contest. It was the best news business had heard in fifty years. Soon the silent little marvel found its way into hundreds of business offices—then into thousands.

Banks, trust companies, insurance offices, railroads, manufacturers all welcome the machine way in shorthand.

Where Stenotypy is Taught

Stenotypy is taught in 200 leading business schools carefully selected for their ideals, standards and community standing. Any of them will be glad to demonstrate the Stenotype to you—give you a trial lesson free. Learn how easy it is to write Stenotypy—how easy it is to read. Learn how the Stenotype has helped thousands of young people into the high places of business—how it can help *you*. Be sure to go to an *authorized Stenotype school*. In no other way can you get authentic, unbiased information. Ask us for a list of authorized schools in your vicinity.

BETTER POSITIONS FOR YOUNG PEOPLE

BUSINESS is your richest field of opportunity. And salaries and promotion depend on efficiency.

The Stenotype makes you faster, more accurate, more efficient.

It makes your work stand out. And YOU get the credit in prestige and income.

It is easier to learn—to write—to read. Less nerve strain. Less eye strain.

It opens up better positions.

Send this coupon *today*.

to cover the flower beds against frost, and the long-distance queries about the possible severity of the winter, thus settling the problem of how heavily to bed down the rose bushes! Likewise, the letters from farmers, desiring to know how much feed the weather man thinks they should lay by for the frigid months.

These and a thousand other queries are part of his life; but of them all there is one standing demand which seems to come from everyone. That is the desire for sunshine.

The auctioneers ask for it as they go into the country to sell off the stocks of vacating farmers; sunshine means more people and better sales; the real-estate men beg for a day when I think the sun may beam, especially if they have big deals to put over. One doesn't visualize a home and happiness nearly so well on a murky, disagreeable day as on a sunny one. Outdoor celebrations, shows, and athletic events hover about, waiting for last-minute information that will bring them either money, or cause them to hurry for rain insurance.

Out of all the world, it seems, only two bodies of people want rain: the farmers, and they only at certain seasons, and the makers of overshoes, umbrellas, and mackintoshes. In my district at least, the weather man is a sort of adviser-in-chief to this latter branch of business. Salesmen often call to learn what nearby districts are being favored most from dripping skies; one can't sell galoshes and raincoats in a district where the dust is an inch thick.

But the rest, give them sunshine; nobody perhaps notices the depressing effect of clouds and rain more than the weather man. Wind may cause nervousness, too much sun may bring heat prostration, snow bring suffering in the poorer districts, but continued rain is the worst of all. Unconsciously, the weather man notices that there is less business, less moving about, more quarreling in families, more suicides, more murders in a time of steady downpour than in others.

SPEAKING purely from a layman's standpoint, there is a distinct effect upon human nature during times of sudden change in atmospheric pressure. I have answered many an early morning call from certain widely known surgeons of this district, and upon my answer to their inquiries depended whether or not they would that morning go into the operating-room, especially if the case were a serious one. If I reported that the barometer was rising, they would proceed. But if the barometer were low and falling, all thoughts of operation for that day were instantly dismissed. They contended that in a serious case the patient had far less chance to survive the shock in a time of low and diminishing atmospheric pressure, and they refused to place the sufferer under that handicap.

There are at present two hospitals which telephone daily for barometric readings for use in the study of metabolism, which has to do with nutrition and the chemical changes of human tissues, that statistics may be gained regarding the effects of the weather upon the patients under scrutiny. The same is true of the study of rheumatism; for that matter, the weather bureau plays its part in public health in a far greater manner than one would imagine.

DON'T FOOL YOURSELF

Better to be safe than sorry when halitosis is involved.

Halitosis may get *you discharged*

Employers prefer fastidious people . . . halitoxics not wanted.

MORE and more, employers insist on having about them people who are fastidious. Sooner or later, those with halitosis are "let out."

The true reason for discharge, however is usually hidden under such phrases as "Inefficient," "You can do better elsewhere," "We need a more experienced person," etc.

Realize these facts about halitosis. That, due to modern habits, it is much more prevalent than is suspected. That it is a definite liability in friendships, affections and business. That you can have it and not know it.

A pleasant means of being sure that you are free from it is to rinse the mouth systematically with Listerine. Every morning. Every night. And between times when necessary, especially before meeting others. Keep a bottle handy in home and office for this purpose.

Listerine ends halitosis instantly. Being antiseptic, it strikes at its commonest cause—fermentation in the oral cavity. Then, being a powerful deodorant, it destroys the odors themselves.

If you have any doubt of Listerine's powerful deodorant properties, make this test: Rub a slice of onion on your hand. Then apply Listerine clear. Immediately, every trace of onion odor is gone.

With these facts before you, make up your mind to keep yourself on the safe, polite and popular side by using Listerine. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

READ THE FACTS
1/3 had halitosis

68 hairdressers state that about every third woman, many of them from the wealthy classes, is halitoxic. Who should know better than they?

Have you tried the new Listerine Shaving Cream?

Cools your skin while you shave and keeps it cool afterward. An outstanding shaving cream in every respect.

LISTERINE

The safe antiseptic

Original from UNIVERSITY OF IOWA

Some years ago, I was called into consultation by a physician who was debating just where to send a patient who needed a change of climate. For some strange reason or other, certain people "wear out" a climate. Some change occurs in their physical make-up, with the result that the place in which they have lived and been happy for years no longer fills their needs. The doctor can do only one thing—order a change of abode; and such was the need of the case into which I was called. It was the beginning of many such consultations, with the result that scattered throughout the United States are hundreds of persons who have been sent to these specific spots on the advice of the weather man.

I should say that not fewer than fifty persons consult me annually on the matter of a change of climate, and through long experience with physicians in such cases, the matter of diagnosis has become almost a matter of second nature. However, because one needs a place of drier air it does not follow that he can be sent indiscriminately to a mountainous climate. There may be a weak heart to consider, or extreme nervousness; the resistance to heat and cold has also to be considered. But the task has become comparatively easy. It should; I've had occasion to investigate the health qualifications of nearly every district that exists.

PERHAPS it is because I literally live weather that I am prejudiced regarding its importance, but I truly believe that it enters into human calculations more than anything else in the world, save money and food. The three are in a measure interdependent, and if one doubts the interest that is taken by the human race in the state of the elements, one has only to visit a weather office on the morning after an extreme heat wave or cold snap. The telephones ring incessantly; every inquiry couched in practically the same terms:

"How hot did it get yesterday?" Or: "Did the thermometer go below zero last night? . . . How far?"

The answer often brings forth a disappointed grunt, or a joyful exclamation of:

"Hot dog! I win!"

Of course we can take no official notice of that, since a governmental employee is not interested in gambling. The fact remains, however, that month in and month out, there is almost as much betting done on the weather as on all other ordinary forms of wagering combined. The widespread activity of this was brought forcibly home to me one day when a man, who for some time had been cultivating my acquaintance, came at last to the point.

"Look here, Connor," he asked. "How much salary do you get at the Weather Bureau?"

"Seeing that's my own business," I replied, "I don't usually make a practice of telling."

"Is it enough?" he asked.

"Do I have a pinched and starved look?" I asked.

"No, of course not. But—but—" then he swerved to his proposition: "Look here, how'd you like to make twenty dollars extra a day, and nobody be the wiser? You could use it; anybody could use twenty dollars a day. I might as well tell you the truth: I run a pool on the weather; you know—everybody puts in so much money and guesses what the temperature is going to be at various hours tomorrow. Now, you wouldn't have to do a single thing that is crooked. You wouldn't have to touch your government reports. All you'd have to do would be to make a little mistake on one hour of the day that you report to the newspapers, and let me know what that mistake is going to be beforehand. Then I could cover that special temperature through a dummy, and be in on the pot every day. That's all it amounts to—and I'll give you twenty dollars a day for just that one little tip."

"I can give you a better tip than that," I said. "And I'll do it out of the kindness of my heart, because I think you don't know. Did you ever hear of the fact that it's a felony to bribe a government officer?"

So that was the end of that. But turning down bribes is more pleasant than being threatened with death.

There had been a protracted rainy spell at just the wrong time for the farmers. I noticed a strange tone to this man's voice and a crazed look in his eye as he came into the Weather Bureau office and inquired for me. There was actual threat as he approached, snarling, a fist upraised.

"You—" he exclaimed thickly—"you ruined my crop!"

"I?"

"Yes, with your rain, rain, always rain! And I'll get you for it! You won't ruin another crop for a poor farmer!"

There's Irish in my veins, and if ever an Irishman used the gift of blarney I used it that day. I talked fast and furiously to that man, for he was mad with the madness that sometimes brings murder, and I didn't care to star at a weather-man's funeral. I expressed my grief over the rain, I showed him the instruments which guided me; gradually I assuaged him. But as he left:

"All right," he said; "I'll let you go this time. But this rain had better stop."

And I suppose the fact that it did happen to stop in a day or so only increased his belief that I held a personal command over the elements.

However, most meetings with the outside world are more pleasant. The thrill, for instance, of helping to build great projects—such as when a railroad is planning a tremendous expansion program, and must know exactly the figures of precipitation and other facts which the Weather Bureau possesses, that it may make the necessary plans for storm sewers and drainage; when great irrigation companies plan the rehabilitation of a country, and come to the Bureau for important facts, or a river is harnessed by a tremendous dam, and the guidance of this office is needed for the knowledge of the precipitation and drainage that will keep the turbines going. And sometimes the connection becomes even closer. For instance:

AT THE close of the war, Kansas City decided to build one of the largest memorials in the country to its soldier dead. It was to tower above the Union Station with an immense groundwork and an equally immense cenotaph, most of the work being specified as poured cement.

My interest in the monument for quite some time was only that of an ordinary citizen; but soon after the excavations had been made the status changed. The weather was cold, with freezing nights, a bad time indeed for cement pouring, and in the midst of the cold spell the supervising engineer visited the bureau office.

"We've got to have your help," he said. "I have a job of pouring to do, and I must know when I can have weather without freezing."

"All right," I said. "I'll notify you whenever I think there'll be a freezeless night."

"One night won't do," he answered. "This job extends all the way across the base. It will require three days and nights of the hardest kind of work to pour it in that time, and the thing must be done in one solid piece without a single crack."

Three days and nights without freezing temperature in the winter happens only once in a while, and I said so. Still, the readings from other parts of the country indicated that such an event might soon be possible; weather was moderating greatly in contiguous regions and I told him so.

"How much time will you need to gather your forces?" I asked.

"Oh, a day will be sufficient."

"Then be in readiness for a call. I cannot promise, but there are indications that such a stretch of weather may happen."

THE engineer left, holding his entire force in readiness. A week passed, ten days, while I watched the approaching weather conditions with a feeling of real excitement. Thousands of dollars were about to be risked upon the predictions of one man, and those predictions based on the most capricious thing in the world—the weather. Two months passed; and with something of trepidation, I'll admit, I reached for the telephone. If I were wrong, the work of hundreds of men and the expenditure of thousands of tons of material would be for naught.

"Are you ready?" I asked.

"Ready!" answered the engineer.

"Then start to pour in the morning, and don't lose an instant. You're going to have just about three days and nights of good weather; but not much more. Do you think you can do it in that time?"

"We've got to!" came the answer.

With the arrival of morning, the men leaped to their task, literally racing in their fight against time. When night came, huge floodlights illumined the scene of action, the men standing out against the shadows like unearthly things as the concrete mixers whined and shrieked and clattered, and the steady bumping of wheelbarrows sounded ceaselessly. A day, and the weather remained clear. Two and it was still fair. Three—the job was done. And none too soon, for the cold weather was upon us again.

Thus was the cenotaph itself erected, "nursed along" by the bureau—a hurry message speeding forth to pour cement, until an equally rush message should halt the work. Bit by bit that memorial arose to the command of the Weather Bureau, workmen laboring or loafing as if on the touch of a button, until the whole vast task was done.

I never fail to get a thrill when I pass that monument. It was not necessary to repour a single foot of it. It's a great life, being "The Weather Man."

Wages Will Go Up and Prices Come Down, Says Henry Ford

(*Continued from page 17*)

machine which produces little mobile ones.

And his philosophy of ownership carries him a logical step further. He does not consider himself as more than a part owner of the machine.

He elaborated on this:

In private business, a charge is almost invariably made upon the product for money invested. This is an accepted, legitimate practice of all private business. It is considered as part of the "overhead." When a manufacturer invests a million dollars in machinery, the first item in reckoning the cost of production is interest upon that million dollars. In a word the sales price of the product must cover interest on the money invested in plant, in machinery, in experiment, in materials. This interest charge may be five, six, or even eight per cent annually. Until it is earned, there can be no profit. The interest is as much a fixed charge as labor, taxes, and insurance. It is the same as paying interest on a mortgage.

But no such charge is made by Ford. That is where the people who bought Ford products enter the picture. Money supplied by the buyers of cars and trucks and tractors made the Ford business possible. The money did not come from the banks, nor from Wall Street, nor from capitalists. It came from the people.

"Suppose you buy a Ford car," explained Mr. Ford. "Part of the money you pay the dealer goes to the dealer for his service. Part of it goes to pay the workmen who helped build the car Another part goes to pay for the material in the car, and there are incidentals to be paid, such as freight and taxes. These are all just charges. After they are paid, what is left of your money goes into the business. It is plowed back into the business.

"BUT this money which is left, and which goes into the company, is not a profit, for the reason that everyone concerned in the manufacture and delivery of the car to you has already taken a profit. The dealer has made his profit. The workmen, including myself and all of the other managers, have made their profit in wages and bonuses. The sellers of material have taken their profit, and also the railroads and the Government. You have paid in full for the car. What is left, therefore, constitutes a fund, a surplus, which the public has supplied us for expansion or experiment.

"This money may buy some bricks for a new building; it may build a new power unit; it may be spent in experimental work on a new model car. But it was supplied us by the public. Why, then, should we charge the public an interest rate on its own money? It has paid once, why should it be asked to pay again? When you buy your next car, why should you be taxed for the use of your own money that helped us to build it? On the contrary, we should endeavor to return this money to you *with* interest!

"And that is exactly what we endeavor to do. If possible, we want you to pay less for your next car than you did for this one. At the same time, we want your next car to be a better car than this one. We want the money you have invested with us to come back to you in a definite, tangible way. Furthermore, it should come back to you in a way not so tangible but just as definite, because you've done more than merely buy an automobile. You've helped give work to other men; perhaps you have helped to raise wages; perhaps you have shared in a new discovery in the laboratory. This is a stream of benefit that a man could not stop at his own door, even if he wanted to."

IN MAY of last year the Ford company had a cash balance in bank amounting to $350,000,000. In November, this balance had shrunk to $250,000,000. The difference of $100,000,000 represented only a part of the cost of discontinuing the old Model T car and of bringing out the new Model A car. During this period, the company did a business in parts amounting to $10,000,000 a month; it sold tractors and operated by-product factories, which also produced income. This income helped keep the bank balances up, so that the real cost of the new car was probably $150,000,000. Not one penny of it was reckoned in the cost of the new car, nor in its selling price.

As a matter of fact, the new Ford to-day is selling below actual production costs. At least it was at this writing. The sales price purposefully was made lower than the cost, as a fixed policy of Ford. His method is arbitrarily to lower the price and force his managerial organization to meet the cut by discovering better production methods.

There is always the proviso that better production methods never mean lower wages or harder working conditions, but decidedly the reverse. If it is possible, and he believes it will be, he intends to sell the new car eventually at a price lower than he ever before sold an automobile.

And in this intention Ford has tackled the toughest job of his life, with promise of no especial profit to himself. The new car is a far more costly car to manufacture than was the old one. Its materials are better and it costs more to put it together. Ford engineers estimate that this will be true even when the new model reaches a production total comparable to that of the old one. That means Ford must discover economies far beyond those of the past, even to equal the price of the old car—and he intends to go below it!

Additionally, the old car had little competition. The new car has a list of sturdy rivals. They are being produced along the same efficient lines in use in the Ford factories. In many instances, vital points in their manufacture are being supervised by former Ford executives who were carefully trained in Ford's own shops.

The day I was in Dearborn somebody remarked that four of Ford's good men had gone over to a rival factory within the three or four preceding weeks.

Ford's remark was, "They're good men. They should do well with that company.

"Why not?" he asked, when I expressed surprise. "The more efficient men there are scattered through the industry, the better will be the industry; and the automobile industry is big enough, and close enough to the public, to have a mighty effect on the efficiency of the country as a whole. An efficient country is a prosperous one. You can't grow wheat by keeping it in the bins; you've got to sow it over fertile soil, fling it to the winds.

"It is only right that men should progress and rise to better jobs, wherever they are," he continued. "For that matter, it is every man's duty to keep moving up as far and as fast as his ability and industry will carry him. He moves up, and leaves a place to be filled by the man behind him, and the man behind that man, and so on down to the bottom. When one man quits here we can promote a hundred men and give just one more man work who needs it. The men who jam the wheels are those who stand still, like stalled cars in traffic.

"There should be rivalry between men. There should be rivalry between businesses. The worst possible state of affairs is monopoly. There is too much work to be done, too many people with needs to be supplied, too many discoveries to be made, for any one man or any one concern, however big, to hope to occupy its field alone. Besides, there's no fun in a one-man race."

I WONDER how many of us, if we were in Henry Ford's shoes, would live as he does. He is up in the morning at five-thirty o'clock—sometimes as early as five o'clock—and rarely is he in bed later than six in the morning. Invariably he arrives at his shops before any of his men, though he has no fixed routine of work. He is just as likely to begin his day at River Rouge, as at Dearborn or Highland Park. He may start it on his farm. Nobody knows where he will encounter Ford during the day. He is here, there, all over. Seldom is he in his office.

He eats when he is hungry. He may sit down to lunch with a group of executives in the laboratory restaurant at Dearborn, where service and appointments are as simple as those of a country inn, or he may forget all about lunch. I was at lunch there when somebody gave me a vigorous slap on the back. It was Ford.

"I'm passing up lunch today," he explained. "Some youngsters and I are going in to Detroit to a circus, and if we don't start now we'll be late. See you later."

Earlier, I was in the office of one of his associates. We were speculating as to where Ford could be located, when the

Making the home beautiful

Inside and Out

Paint plays a bigger role today than ever before in history. Color has stepped to the fore, demanding its rightful place in beautifying our homes and possessions.

You, too, can have your share of color—with very little trouble and less expense. Take stock of your belongings. Wouldn't that table be more pleasing if it were painted; that chair; the desk over there?

Get these beautiful pictures in your mind's eye and go to the nearest Lucas Paint Dealer. You will be able to get for little expense enough good paint and sparkling color to give you a wealth of charm and beauty.

Lucas Paints have been used with confidence by master painters, as well as the public, since 1849—because they provide beauty that's more than skin deep—beauty that endures.

Only with good paints—Lucas Paints—can you get this ideal combination of durability and long-time protection plus beauty—and *save money*. In the beginning you pay a little more per gallon for Lucas Paints than for "cheap" paints. But that little buys 50% more coverage per gallon and more thorough coverage.

"Cheap" paints crack, chip, peel and fade in half the time paint ought to last. And, it costs more labor to apply than if you'd used long-lasting Lucas Paints.

Lucas Paints are a real investment. Insist on Lucas, and you'll save money.

Free—write for six handy booklets on "How to Paint".

Buying cheap paint to save money is like stopping the clock to save time!

door opened and there he was. He sat down, stretched out in the chair with his long legs crossed, and had there been a pot-bellied stove there the country-store atmosphere of our talk would have been complete. He was less formal than the janitor. And at the end of a half-hour he was up and off again, to keep an appointment. Ford goes to his visitors; they don't come to him.

He said once: "Oh, it would be easy to quit. I could take a few thousand dollars and live comfortably for the rest of my life, in fact live just as well as I live now."

His position imposes on him a certain list of expenses that most of us don't have, but at that Ford doesn't spend twenty-five thousand dollars a year on himself and family.

A Detroit storekeeper tells of Ford buying a silk hat. President Wilson had summoned him to some official function at Washington and ceremonial dress was necessary. Ford had never worn a silk hat in his life up to then. He took the first hat the merchant offered, tried it for size, paid for it, and started to leave the store.

"Don't you want to see how you look in it?" asked the merchant.

"What's the difference how I look in it?" said Ford. "I have got to wear the thing regardless of how I look."

But that is one of his ways. As a matter of fact, he does give attention to his appearance and dress. No man could look as well as he does without attention. He is immaculate. His shops are immaculate. When there is brass on a machine, it gleams. The locomotives on his railroad are like freshly polished shoes. He hates carelessness; he hates dirt.

IN SUMMARY, this "richest man in the world" is without ostentation. He lives on less, and with less display, than do numerous sales managers and other subordinate executives of large businesses. He takes a vacation or two a year that is of the simplest kind. Many a well-paid mechanic whose wife is a good manager sets as good a table—and sleeps later in the morning. Reduced to figures, if Ford had only one two-thousandths of a billion he would be able to live just as well as he does now, as far as his personal wants are concerned.

That is what I meant when I said that Ford, at sixty-five, is undertaking the hardest task of his life, without any promise of profit to himself. Should he double the Ford wealth, he would be no better off personally than he is now. He would have more buildings, more land, more power plants, more machinery, a greater machine; but it would be the *machine* which ate up the money, not Ford.

It is into the machine that the money now goes. It is for the protection of this vast machine that the cash balances of hundreds of millions are kept in bank. The Ford pay roll alone is a million dollars a day!

Why doesn't he quit?

There are two other reasons Ford gave for keeping on at sixty-five. The first is that he considers sixty-five a long way off from old age. Thomas Edison, his friend, is still hard at work at eighty-one. John Burroughs, his friend, worked until his death at eighty-four. Nobody called these men "old" at sixty-five, because they weren't.

Ford believes that most of us kill ourselves through improper eating and unwise living. He told me that he believes, in all earnestness, that improper food has done more to retard the progress of mankind than any other one agency.

However, Mr. Ford does not diet nor take "setting-up" exercises before open windows. He lives "normally." He eats what "agrees" with his system; what doesn't agree, he doesn't eat. He has determined to his own satisfaction what to eat, and what not to eat, by careful experiment on himself. Already, through experience, the race knows in a general way what is good for its stomach and what is bad for it.

Ford has taken this general list and worked it down to his individual requirements, very much as he tests fuels for motors in the laboratory. He doesn't think that other men should accept his list, but that each man should work out his own.

To-day, Ford is sound in wind and limb. He is lean and brown. His mind was never more active. He has the experience of sixty-five instead of forty, which was his age when he founded the Ford company. He has bigger and better tools in his hands than probably ever were given to any other private citizen. He sees his biggest work yet ahead—and another quarter of a century or longer, in which to do it. Quit at sixty-five? Why, he intends to be in harness at ninety!

THEN there is the final reason. I've already touched on it. Perhaps it is the most important of all. Ford refuses to regard himself as a success.

"The man who thinks he has done something, hasn't many more things to do," he says. "More men are failures on account of success than on account of failures. They beat their way over a dozen obstacles, overcome a host of difficulties, sacrifice, sweat and make the impossible the possible; then along comes a little success and it tumbles them from their perch. They let up, slip, and over they go. Who can count the number of men who have been halted and beaten by recognition and reward?"

He used this illustration: A man is elected to the Presidency, the nation's highest office. He has attained that peak only after a lifetime of effort. The bands play, the people cheer, the flatterers swarm around. Far below is the valley from which the man climbed. But, pointed out Ford, his work is all ahead. After all, he has only won a *chance!*

"Make your program so long and so hard that the people who praise you will always seem to you to be talking about something very trivial in comparison with what you are really trying to do," is a bit of Ford advice. "Better have a job too big for popular praise, so big that you can get a good start on it before the cheer-squad can get its first intelligent glimmerings of what you are trying to do. Then you will be free to work. And, being free to work, you will have achieved the truest success and satisfaction."

That's the only success Henry Ford concedes that he has won: he is independent; he has the tools; he is "free to work." To repeat his own words, he, too, has only won a chance!

✤ ✤ ✤ ✤ ✤

To wives and mothers

about husbands and children

Who will take care of this important matter if you don't? Husbands usually think about their hair only *after* it begins to thin, and children never.

Yet hair troubles are so much easier to prevent than to cure. And it is quite simple to *keep* the scalp healthy. Why not start the family (and yourself) on the way to healthy hair-habits now by providing, for regular use, one of these three Packer soaps: Packer's Tar Soap, or Packer's Tar Shampoo, or Packer's Olive Oil Shampoo.

Regular Packer shampoos are the safest, surest road we know to healthy hair—and we have been studying the care of the hair for 55 years. Into these soaps go ingredients especially selected for their benefits to the scalp—bland glycerine, stimulating pine tar, imported olive oil. Each ingredient is the finest and purest of its kind.

Outdoor health for a sleepy scalp

Men usually prefer the tar soap with its clean tang of pine woods. The generous snow-white lather encourages them to massage well into the scalp the outdoor health of pure pine tar which is so helpful in the treatment of dandruff. They like the waked-up feeling, the glow of health a Packer shampoo gives. And who wouldn't?

Quicker and easier

Let the children try one of the liquid shampoos. See how quickly they pile up billows of lather . . . that rinse away in a twinkling. Notice how soft and shining their hair becomes.

Even one shampoo with Packer's makes your hair more attractive. And regular Packer shampoos keep your hair healthy and bright and vital. Read the offer below and start your own and your family's hair off to healthier, better habits now.

Send for sample. Send 10c for sample of one of these three Packer Shampoos (specify which one) and our new 28-page book on hair health, the care of dry hair, oily hair, dandruff, etc. Address the Packer Mfg. Company, Inc., Dept. 6-G, P. O. Box 85, New York City.

Pipe Smoker Pines As He Awaits Loved One

Favorite tobacco comforts him as he bares his heart in verse

When a man gets to thinking of someone very dear to him—one who is far away—he often wants to be alone with his thoughts—and his pipe.

Recently, one such pipe smoker, as he sat puffing and dreaming dreams, opened his heart and penned the following verse:

Jamesburg, N. J.,
December 2, 1927.

Jest a-sittin', smokin' Edgeworth
An' a-thinkin', dear of you;
An' a candle's burnin' brightly,
An' it says your love is true.
For the days are long, of waitin',
An' the nights are longer still,
An' sometimes (Always smokin')
I pick up this old quill—
An' try to write some poetry
To tell you of my love.
As poetry it ain't much good,
But—holy days above—
It's jest the best I can, an' so
You'll find me, when I'm through.
Jest a-sittin', smokin' Edgeworth,
An' a-thinkin', dear, of you.

"J"

There's only one way to find out whether Edgeworth is *your* tobacco. That is—try it. Find out for yourself what makes smokers sit down and write its praises—men who have become friends of Edgeworth through its likable quality, and just can't help telling of the enjoyment it gives them.

So that you and Edgeworth may get acquainted, we make this offer:

If you have never lighted this tobacco in your favorite pipe, let us send you some free samples. Your name and address, sent to Larus & Brother Company, 3 S. 21st Street, Richmond, Va., will bring you samples of both Edgeworth Ready-Rubbed and Edgeworth Plug Slice.

Then, if Edgeworth suits your taste, you can be assured that it always will, because Edgeworth's quality never changes.

You can buy it everywhere—either Edgeworth Ready-Rubbed or Edgeworth Plug Slice, in small tins and various other sizes up to full pound humidors.

On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 254.1 meters. Frequency 1180 kilocycles

Swooping Hawk and Weeping Willow

(*Continued from page 29*)

chance has Joy got, with all those babies hanging onto her? What chance have I got? Seems as if I'd die not to draw; but I can't get away!"

Helga closed her eyes to the bright day. She seemed to see Rush Sloan's steadily demanding eyes. But she spoke quite easily. "You *can* get away, Carl. I'll help you."

"Helga!"

"I can manage it all right, I think. There's John; he's big enough to help lots, and with the money from the pines, they can get along."

"But you—you've got a life too."

That touched Helga to quick tears of gratitude for his understanding. "No special life, no life that'll be like yours, Carl. And I like the mail route, aside from the money it brings in. You'll be able to pay it back a thousand times over some day!"

Carl turned his face to the grass. It was a long time before he spoke. "We'd better get on with the books," was all he said then; but he took Helga's hand as he rose and held it hurtingly tight.

AT THE Puddleses, Joy was washing dishes. The children swarmed in the yard, all over the house. One baby crept on the bare floor. The newest one cried.

"Just a minute," Joy said. "I must fix the baby's bottle."

There was a roar from the back yard: "Joy! *Joy!* Marcella's up in my tree!"

"Just a minute," Joy said again.

"Joy!" that was Mrs. Puddles, whining from a bedroom somewhere.

"Yes, Ma! Just a second," Joy called from the back yard.

"Ma's been so miserable," Joy apologized, flushing. "Her back hurts her."

Carl looked out of the window; but Helga saw his dark eyes filled with a fierce pity.

It was Carl who spoke first to Joy. "Listen, Joy"—and Helga had a sudden sense of her own maturity—"you can't study here. Why don't you come down to the house nights after the children get to bed 'n' I'll study with you? I thought our house was noisy; but it's not as bad as this. I'll drive up and get you, shall I? I'm going to try and finish up in January; but it'll do me good to review some. What say?"

Joy was standing, sober and tired, in the middle of the kitchen floor. "I don't know," she hesitated. "Seems, to-day, as if it wouldn't be any use. But maybe that's just because I'm sleepy. The baby had the colic 'most all night."

"Well, let Marcella take care of her part of the time. I'll come up to-morrow night after you."

But on the way home Carl said, "She can't do it!"

"I think she will do it," Helga disagreed with him. She thought of Joy under the apple trees.

At home, Carl called Helga into his room, drew out a cheap drawing pad from under his mattress. "I copied these out of that book you gave me once," he said.

Helga turned the pages: Tall cathedral spires, river with a willow and a peasant in a rough road, the Angelus, a row of poplars against the sky.

"Do you think—?" Carl pleaded. "Do you think I'd be a fool to try, Helga?"

"I think you'd be a fool not to," Helga said, with quiet certainty.

She saw his fine hands, roughened already by farm labor, tremble on the book's edge.

"You aren't saying that just because—just because—"

"Because you're my brother and I love you? No, Carl."

No. Not that. She would not keep Rush Sloan waiting for a false dream. It would have to be something fine and great. . . .

"It doesn't seem fair somehow," Carl's voice was troubled under his exultation. "Here I'm getting my chance—but, Joy, she never will. There must be lots who never do!"

But Joy made a try for her chance. She came the next night, and the next. The third night Junior was sick and she couldn't leave him.

"You can have the kitchen," Helga said. "There's the big table there, and I'll try to keep folks out. Carl'll study with you, and you can call on me for anything I know."

The Linds got used to it—the slim, dark Joy and tall Carl bent over the books on the kitchen table. All but Helga. She never got quite used to it. Something seemed to catch at her heart every time she saw them there in the circle of lamplight—so young, and so earnest and so fine.

"They'll both get there," she thought often, fiercely. "In spite of babies and everything."

ONE night in hot August, Joy fell asleep above her trigonometry. Sound asleep, her pencil still held loosely in her tired fingers, her trigonometry book and papers beneath her weary head.

When it grew late, Helga was going to rouse her; but Carl said, in a fierce whisper, "Don't—don't you touch her!"

But Helga did not know, even then.

Another night Joy stopped in the middle of answering questions on an old American History Regents' paper, and said, "Oh, I'm sorry; but I can't think any more. I just can't think. I had to can peaches to-day—and Archie cut his arm—oh, I'm sorry!"

"Good heavens!" Helga said angrily. "Carl, get out the buggy and take Joy for a ride. It's too hot to study, anyway."

Then school opened, threshing was done, and apples were picked. And Joy was still studying with a persistence and an understanding that surprised even Helga.

And when Joy tried four Regents examinations in January, and passed them, Helga had a party, and the Lind house was filled with laughter and excitement and happiness. But, after that, it was time for Carl to go.

Helga had found it hard to tell Rush Sloan about Carl.

"Helga," he said, "you've held me off and held me off. And I love you. You

know I love you. You aren't being fair."

"But Carl's got to have his chance," she said.

"So have you and I."

But, later, she took Carl's drawings to him.

"Oh, I say!" he exclaimed, looking at them. "I didn't know—"

"You see!" Helga said simply.

"Yes, I see," he said. "But it needn't be for long, not for long, Helga. I'll find him a place to stay in the city near me, and I'll teach him everything I have. I'll do all I can—and then, Helga?"

Something unbearably sweet choked her answer and, after that, she gave yet more fiercely to Carl and Joy.

Helga thought that, perhaps, after Carl went Joy would not keep on studying. But she was mistaken. Joy came, as always. She was quieter, and looked a little lost without Carl's dark head bent above the books beside her. But she kept on studying, and many a night Helga, tired herself, wondered at her passion of persistence. Sundays, as spring came on, Helga and Joy would take as many of the little ones as they could to some hillside, and let them run wild while they talked of history and the books required in English. Sometimes they read.

Once Joy looked up from "Karl Heinrich" which she was translating then, and said, "I like this book terribly. I hated German so—and, all of a sudden, this story seemed beautiful, and it was easy to read it."

Helga smiled at her. Joy was different, she thought, a little sweeter and finer; some of her slangy vividness dimmed, but *finer*.

But, another day, she said, "I'll never get to Normal, Miss Lind. Looks as if we'd lose the farm—and Ma's so sick most of the time."

"Yes, you will," Helga said, almost sternly. "You've got to go!"

"I say that to myself; but—just the same—"

"Well, you'll make it, somehow," Helga insisted.

She talked to her father about it. "There's John Wainwright; he wants a tenant to help out," Emanuel Lind said. "Only, he would want a worker."

"Well, Sam Puddles is a worker when he has someone to tell him what to do," Helga said. "It would be the very thing. I'll go see John Wainwright myself."

But John Wainwright laughed. "Don't know as Sam'd be so bad," he said; "but I don't aim to have that lazy, whinin' woman and that dirty raft o' young 'uns in my tenant house."

There was not much Helga could say. But she could not let it rest there. Carl had his chance; she could not bear not to let Joy have hers.

IN JUNE, Joy said, "Well, I've passed my examinations. I've done it; but what of it? There isn't a chance in the world to go on. Even if I could, how could I leave Mother with all the children? They're getting better—honestly, Helga, they are getting better! As long as Mother lets me manage them—but when she begins to give in to them, it's terrible. Why, I even got them all to Sunday-school last Sunday, all clean, too."

"I know; they looked beautiful!" Helga exclaimed.

"Looks pretty bad. Is it passable?"

"You can make it if you take it easy—that is if you want to risk your tires."

"Oh, I'm not worrying about the tires—I've got Kelly-Springfields on all around."

Digitized by Google Original from UNIVERSITY OF IOWA

FOR longer mileage—to cut tire costs—test your tires once a week. We suggest Friday because most tires do their hardest work over the week end.

Keep them at the pressure recommended by the tire manufacturer. And be sure you use a Schrader Tire Gauge.

You can always depend on a Schrader Gauge. Built on the exclusive "direct action" principle, it is simple, sturdy and reliable. When you test your tires with a Schrader Gauge, you can be sure they are *right*.

Schrader products are sold by over 100,000 dealers throughout the world.

"But, if I go, they'll never be clean, all together, again."

Helga could not laugh. It was all so true. Poor Joy!

But she did not give up. She drove up one day to see Sam Puddles's sister Mary. She told her all about it. "If you could stand it, just for two school years," she said; "I know Joy would pay you back." She did not like Mary Puddles much; but anyhow, she was a worker.

"I'd want it down in black and white, what I was to get out of it," Mary Puddles said.

Joy cried when Helga told her. "Oh, I'll pay her back—anything!" she said. "Just so I can go. Oh, *I didn't know I wanted to go so!*"

Helga talked, too, to Sam Puddles; talked plainly. "You've got to let her go," she said, as if she had a right to say it. And Sam sold a cow to get Joy started. Once started, Joy could work her own way.

Joy slaved that summer. She sewed late at night. She canned and darned and washed and scrubbed in a passion of willingness. And Helga helped her in every way she knew.

But there came a day when she looked upon her hours of help, and regretted them. It was when she said, one day, to Joy, "Carl's getting ahead. . . . I'm so glad, Joy."

And Joy answered, "Yes, I always knew he would. Ever since he drew a picture of our house here. It was just like it—pigs and chickens and rotting wagons; it was so like it that it hurt me to crying." She looked off over the steaming tub to the scrubby Puddles fields. "That was when I first got to know Carl," she said in a quiet, remote voice.

IT CAME like that to Helga, a few quiet words that were like sharp sword thrusts. Somehow, in spite of everything, she had never thought of this—that Carl should like Joy. *One of the Puddleses!* Her mind repulsed the thought so angrily that she trembled. She wondered what she had been thinking of to let them be together night after night all those months of studying. Her Carl—so fine, so talented, so good to look upon—her Carl and *one of the shiftless Puddleses!*

"What was I thinking of? What *was* I thinking of?" she said, over and over to herself. And for three days she could not bring herself to see Joy or talk with her.

Then Joy ran out to show her a dress she had made. "Does it look homemade?" she demanded. There was a brightness, a shining of hope about her that touched Helga to quick responsiveness, in spite of her new antagonism. She remembered the cloth, a remnant that had been in Beamer's window at nineteen cents a yard.

"It's lovely!" she said sincerely. "And that's your own color, too. Joy, you *are* clever." But her heart said, "Only, not for Carl; oh, *not for my Carl!*"

Joy looked away, the creamy tan of the dress hanging, forgotten for the moment, over her arm. "Two more weeks," she said. "It can't be true, seems as if—*just two more weeks!*"

Helga was angry at herself for being moved. *One of the Puddleses!* Oh, she had done well, she had been brave—but *her Carl!*

It was Sairy, with her nose keened ever to the wind of gossip, who told Helga. She called her up on Saturday night. "Helga, you heard about Minnie Puddles?"

"No! What?"

"She was took sudden, this afternoon, and died at six o'clock! What on earth'll Sam Puddles do?"

Helga did not answer for a long moment. She could see Joy, standing there with the dress over her arm. "*Just two more weeks!*" she had said, with that proud shining about her.

Helga went up that night; but Mary Puddles was there with other neighbors, and Joy was busy getting the children off to bed. Queer, how feeding and sleeping went right on when someone died. She did not get much chance to say anything to Joy, and Joy seemed far away, numb and too still to approach. The house seemed still too, as if, with the passing of tired, confused Minnie Puddles, some order had been allowed to descend upon the old place.

ON HER way home, the thought came suddenly, unbidden: "Now she won't go to Normal—and Carl—and Carl!"

Then she flushed with shame because the thought had even had a beginning. Poor Joy!

On Wednesday night Joy came to her. "Are you too tired to walk?" she asked.

"No; I'd like to."

They went up the road through the September moonlight. The world seemed curiously light; the yellowing elms and poplars, the sharp edges of fences, all stood out clearly. Joy walked with a strangely free uprightness, and Helga had a feeling as of walking with a stranger. It was Joy who spoke first. She reached out a hand suddenly and slipped something into the pocket of Helga's dress.

"There's the twenty dollars you lent me. I won't need it now."

"Joy!"

"Oh, it's all right. I thought I couldn't bear it at first, not to go. But I can. It's all right."

"But can't you—some way? Can't your Aunt Mary . . . ?"

"No. I couldn't. Aunt Mary—oh, she'd keep things clean; but she's so hard. I couldn't stand it not to have them *loved* by somebody. I—I know my mother wasn't a very good housekeeper; but she did love us all. No; I couldn't leave them to Aunt Mary. But I don't mind. Really, I don't."

"But, Joy, when you're all ready! And have worked so hard!"

"That's it—that's why I don't mind. And I'm so thankful to you and Carl, for making me do it."

Helga felt a strange bewilderment.

"I felt so bitter at first. It seemed as if it would kill me to give it up; but last night I thought it out, and it was suddenly all right. I saw it wasn't whether I taught that mattered, but whether I wanted to, whether I got ready to. And it's all the same, really, isn't it? Getting ready for one thing gets you ready for anything, doesn't it? Oh, I sound mixed up; but it's clear to me.

"I don't believe education means so much, after all, does it, Miss Lind? But wanting it does—and working for it. And I can keep right on working for it. There's your mother; she never went to school much, did she? But you could be proud

Digitized by Google Original from UNIVERSITY OF IOWA

of her anywhere. I thought, at first, that Carl would get to be ashamed of me, not going on to school. But I see now he won't. He'd be ashamed of me if I didn't stay here."

Helga wanted to put out a hand to Joy's, but somehow, as on that day under the willows, she could not. The clear voice went on, as if Joy spoke without volition, letting the groping thoughts in her young mind come.

"We can have the Wainwright house—John Wainwright has promised me. It's little; but it's painted and fixed up, and there's a nice yard. And Dad will work for pay. I can make a little go a long way. Somehow—seems to me now that it's a bigger job than teaching—bringing them up right. It won't be long, only a few years."

Only a few years—that caught at Helga like a child's tears—*only a few years!* Shame seemed to sweep her in a tide. Not good enough for her Carl? Not good enough? For Joy was suddenly again a person, not one of the Puddleses, but a real person, with a greatness in her young heart that matched or even exceeded the striving in Carl's.

Helga put out the hand that had not dared before, found Joy's.

Late that night, Helga sat at the kitchen table by the light where Joy and Carl had used to study, and wrote to Carl.

". . . And here's the fare for you to come," she said. "I know it's a lot to spend, just for a day or two; but I want you to come, Carl. We'll make it up some other way. Joy needs you."

As she folded the letter she thought of that day on the creek bank, and smiled a little smile of sudden new wisdom. Life was not a weeping—*it was a song.*

Houdini and the Spirits

(*Continued from page 42*)

stands as a lecturer, at a lecturer's wage. Having won the position of prince of entertainers, some irresistible urge within him now made it impossible for him ever to be merely an entertainer again.

In his warfare against fraud Houdini ran across a young European who boasted of the possession of supernormal vision, or "X-ray eyes," which enabled him to see through metal. The man carried imposing credentials testifying to his powers, signed by noted European scientists, including one Nobel prize-winner.

The performer apparently could read the time of day through a hunting-case watch furnished by any spectator. He also gave demonstrations of reading handwriting through closed metal boxes. In the latter feat, he used either a silver box, or a steel box with sliding covers of various metals.

In observing this young man reading the time of day through a gold watch-cover, Houdini noticed that he moved the watch about for a period, resting it in the palm of his hand, ostensibly to focus his X-ray glance. Houdini, with a theory that the man slipped the watch open during this manipulation, tested him by producing a watch that could not be

Again in 1928—*Silvertowns are making records!*

GREAT motor car factories are using more Silvertowns than ever before.

Successful tire dealers—seeing the trend—are concentrating on Silvertowns.

Motorists by the millions are enjoying the new measure of mileage and economy they find in Silvertowns.

In Akron, in Canada, on the Pacific Coast, vast Goodrich factories are humming to meet the new demand.

All along the line—motor car experts and experienced motorists are turning to Silvertowns.

Here, they say, is a tire which we can depend upon—a tire which has proved, by years of fine service, that it is built for unusual performance.

When will you join this swing to Silvertowns? Goodrich dealers, more than forty thousand strong, are ready to serve you.

opened by the usual simple pressure on the stem. The X-ray eyes failed on that occasion. At a later demonstration, Houdini maneuvered to stand behind the performer while he was operating with another watch, and saw him open and close the timepiece so deftly that none of the other spectators suspected him.

Houdini then studied the boxes which yielded their enclosed messages to the X-ray eyes. In the case of neither, he discovered, was it necessary to have metal-piercing vision to read a card placed in the box. The silver casket had a trick fastening in the shape of a hasp and turnbuckle, which could be manipulated to afford a glimpse of the interior. For the other box, a flexible cover served the same purpose and even permitted the card to be slipped out. The young man manipulated the boxes so cleverly that the average spectator saw no opportunity for deception, and the performer's naïve and innocent manner promoted the hoax.

Houdini liked the young man personally. He admired his technique and his clever apparatus. He begged him to drop his supernormal claims and present his specialty as a trick. The performer, however, was apparently advised to defy the fraud-hunter. He agreed to a public test before Houdini, but when Houdini appeared with a metal box with the lid soldered and wired in place, he refused to operate. Houdini then published a full explanation of the man's tricks, with diagrams, and the X-ray eyes vanished from the happy realm of Big Time.

IN THE full heat of the crusading spirit Houdini carried his message to the Pacific Coast and back. But Crusader Houdini by no means impaired the powers of Houdini the showman. More and more the lecture merged into a fascinating performance, in which Houdini managed to give the spectators all the thrills involved in spooky manifestations at a highly developed séance, and at the same time revealed to them how the thing was done. Members of a committee from the audience, invited on the stage, would have their heads covered with black velvet hoods to simulate the darkness of the séance room. Hand in hand they would form the mystic semicircle, facing the audience, about a table, Houdini's neighbors on either side holding his hands and pressing their feet firmly upon his.

Presently, they would hear the "spirits" rapping sharply upon the table; that piece of furniture would buck and rear; about them would be heard the ringing of bells and the tinkling of tambourines, while various objects seemed to be floating in the air about their heads. Some of the committeemen even felt their chairs jerked off the floor and themselves levitated into the air in defiance of all laws of gravity.

One of them, unhooded for the moment, would write a question on a slate, tying it against another slate so that Houdini could not see what was written. When the slates were held under the table, by the writer and Houdini, the scratching of a spectral pencil was plainly heard, and when they were reopened, lo, the "spirits" had written a relevant reply.

To the hooded committeemen the phenomena were weirdly inexplicable. Those who sat on each side of Houdini were willing to swear that he could not move either hands or feet. The man who wrote on the slate was certain that it was never out of his control.

On the other hand, the audience, sitting in front, had a clear view of the processes of the bogus spirits at every turn. They saw Houdini slip his foot out of a trick shoe and sock, leaving the shoe still firmly held by his unsuspecting neighbor. They saw him ring the bell and shake the tambourine with his toes. They saw him, by a subterfuge, free his hand, and, with hand and foot make the table jump about, and saw him perform other spirit pranks. They saw how he simulated the scratching of the spirit pencil with his finger nail. They saw him shift the slates and finally substitute slates on which a hidden confederate had written an answer to the question submitted. They saw how, by the performer's subtle suggestion, plus some sleight of hand, the hooded sitters were made to believe that various objects were floating about their heads or that they themselves were being raised into the air. It was a great show, wholly novel, uproariously successful, and everywhere it served Houdini's purpose of striking a blow at fraud.

By the time Houdini returned to New York in December, he was ready to try out his novelty in the vaudeville houses. At the beginning of 1925, opening a two-weeks' engagement at the Hippodrome, he made his venture. To his usual spirit repertoire, he appended the impressive feats of the once famous Davenport Brothers, and a feature of detailing to the audience the principal news items they would find in their newspapers the next morning. A medium in Paris once won fame and fortune by anticipating the news in this fashion. His spirit-reporters were the wonder of a continent, though a private wire to the stage from a friendly newspaper office was his real secret. Houdini did the trick with the coöperation of the New York "World," and his audiences seemed none the less impressed because he revealed the trick.

The fortnight engagement at the Hippodrome was extended to six weeks. During the last two weeks Houdini doubled at an earlier show at the newly-opened Albee Theatre in Brooklyn, going through a full strenuous forty minutes at each place. Each night, in the interval between the two performances, a convoy of motor-cycle policemen escorted his car from the Albee to the Hippodrome, through the five or six miles of city streets, with traffic rules waived in his favor. "Sure an exciting week—plenty of work," reads the diary.

A TOUR of five months followed, with the crusader "packing them in" everywhere on the road. The old outdoor stunts, such as being flung into harbors nailed in a packing box or escaping from a strait-jacket while suspended above a crowded street, were now discarded in favor of a new spectacle, that of medium-baiting. Houdini would send advance agents to each city to pose as clients and learn the methods of some conspicuous medium.

Then, donning some disguise, and accompanied by a newspaper man, and a detective or the public prosecutor, he would attend a séance in person, and give the *coup de grace*.

Digitized by Google
Original from UNIVERSITY OF IOWA

In one city Houdini attended a séance at the home of a medium who drove a thriving trade in the spook business. At the medium's summons, apparently any ghost desired by a true believer would report present and deliver a message through one of the megaphones which the medium kept at hand for this purpose.

At the séance where Houdini and his confederates seated themselves among the regular customers, after a time megaphones seemed to float about the room, eventually drifting to the table in front of the medium. Houdini stole from the mystic circle and unostentatiously smeared the mouthpieces of the megaphones with lampblack.

When the spirits began delivering, a few minutes later, Houdini turned on his flashlight, revealing the medium with his hands, lips, and face looking as if he had tried rather crudely to make up for a black-face comedy.

The medium, perplexed and angered, shouted out:

"I have been a medium for forty years and I have never been exposed."

"Well," said Houdini, "you are now."

"Who are you?"

"My name is Houdini," said the magician.

The spirit-producer half rose in his chair, and slumped back into it, speechless. He was promptly arrested, and Houdini rushed to the theatre just in time to take his turn in the show.

IN NEW YORK, disguised with his whiskers and his hump, and accompanied by two detectives and a reporter, Houdini attended a session at a well-known medium center to get a message from a mythical dead son. The woman trumpet-medium apparently had no difficulty in summoning the aged customer's offspring from the shades for a fee. As Houdini professed a slight deafness, the apparition had to speak up. After the spirit had chatted a while through his megaphone Houdini suddenly turned a flashlight on the medium, revealing her with the megaphone held to her own lips. She was so amazed that she held the pose for several seconds. Then she fell to the floor, exclaiming that the light had killed her, while the true believers milled about Houdini crying, "You've killed our medie!" The medium, still protesting that she had been killed, was removed to the police station by the detectives.

These were typical episodes of the great crusade. They took much time and energy, and for the most part the regular sitters were ungrateful.

Some of the mediums made reprisals. At various times, their "spirits" discovered, and told the world, that Houdini was a drunkard, a drug addict, that he kept a secret harem, that he had sold his soul to the devil.

On every one of his programs Houdini printed a list of the rewards offered to any medium who could demonstrate psychic powers: $10,000 by Mr. J. F. Rinn, $5,000 by the "Scientific American," $10,000 by the "Journal of Abnormal and Social Psychology." To this he added his own offer of $10,000.

Houdini employed a dozen or more agents, who moved ahead of him and investigated the work of the mediums in the towns he was to visit. One of his

You can't say "*no*" to Nature and get away with it!

WHEN Nature equipped mankind with teeth, she designed those teeth for hard work—and plenty of it. And for hundreds of centuries, while primitive man was taking his food pretty much as he found it, nothing went wrong with Nature's plan. Teeth stayed by their owners—giving no trouble at all—until their owners finally had no further use for them.

How different today, when increasing civilization and luxury have led to the excessive use of over-milled, over-refined and over-cooked foods! Teeth have ceased to work. Man is consistently disobeying Nature's law—and he is paying a bitter penalty! You *can't* say "no" to Nature and get away with it.

We'll never get away with it!

Dentists—working desperately to overcome a nation's increasing dental ills with all the means that science has placed at their command—warn us that the penalty for lazy teeth must *always* be paid. They urge us to safeguard the health of our teeth—so important to the health of our whole body—by eating at every meal some food that requires thorough chewing.

Ask your own dentist about this. He will give you a list of the foods he considers most valuable for properly exercising teeth and gums. It is very probable that Grape-Nuts will have an important place on his list—for dentists all over the country recommend this delicious food as an aid to better teeth.

Grape-Nuts is made from wheat and malted barley. In form and flavor it is unique—small golden kernels, with an enticing nut-like taste and a characteristic, ever-so-tempting crispness that makes you *want* to chew. You will chew Grape-Nuts thoroughly and enjoy chewing it. That's the secret of its fame among dentists.

In addition to its value as a *crisp* food, Grape-Nuts helps to build sound teeth by contributing elements the body requires every day for proper nutrition. Phosphorus for teeth and bones. Iron for the blood. Proteins for muscle and body-building. Dextrins, maltose and other carbohydrates for heat and energy. And the essential vitamin-B, a builder of appetite . . . Eaten with milk or cream, Grape-Nuts is an admirably balanced ration. And it is made particularly easy to digest by the special baking process that prepares it for your table.

Give Grape-Nuts a place on your menus! Your grocer sells it, of course. Perhaps you would like to accept the following offer.

Free! Two servings of Grape-Nuts and an authoritative booklet—"Civilized Teeth and How to Prevent Them."

After the Game

Mighty refreshing with cracked ice, or ginger ale or sparkling water

COOL yourself off while you talk it over, with a glass of Welch's Grape Juice.

There's nothing more truly refreshing.

Because Welch's is the pure juice of fresh fruit it supplies energy value, fruit nourishment and mineral salts your body needs.

And the flavor is delightful, whether you drink Welch's straight, blended or diluted.

If you want a long cool drink mix Welch's with ginger ale or sparkling water, or make a pitcher of Welch Punch. Recipes are on every label.

At soda fountains ask for straight Welch's or a Welch-ade.

Free—How to make Fruit Drinks. Mail a postcard to The Welch Grape Juice Co., A-84, Westfield, N. Y. In Canada, St. Catharines, Ont.

WELCH'S

Once you've tasted Welch's no other grape juice will do

investigators went under the name of Frances Raud. Curiously enough, none of those claiming psychic powers ever attached any suspicious significance to the juxtaposition of the letters in the name Rev. F. Raud.

Mrs. Houdini also did much detective work among the mediums, though not as an advance agent. She went to hundreds of séances and obtained scores of messages from her dead children, who never existed, and from her mother, who was very much alive; but never did any of the spirit guides discover to their psychics the fact that the sitter was the wife of their arch-enemy. Not infrequently the mediums spoke of Houdini, usually in terms of objurgation.

WHEN a famous slate writer brought his spirits who answered sealed questions at Carnegie Hall, Houdini sat in a box with Dr. A. M. Wilson, editor of the "Sphinx," and Mrs. Houdini and other members of "the gang," as they called themselves, were scattered through the balcony.

After a time the performer on the stage announced that his spirit guide would answer a question put forth by Beatrice Rahner. "That's Bess. It's her maiden name," exclaimed Houdini excitedly to Doctor Wilson. Mrs. Houdini had written: "Will my trip be successful and does my sweetheart love me?" "Your trip will be successful and will be your first trip to California," said the medium. Mrs. Houdini had visited California a dozen times. He added: "My guide says that your sweetheart is not quite as much in love with you as you are with him." At this there were a series of giggles from the members of the Houdini "gang" in the gallery, and Doctor Wilson guffawed.

By the time Houdini on his tour arrived in any town, he was fully primed with information on the local spirit mart. The mediums, inspired by curiosity, would flock to his show, and Houdini's spotters would duly note the numbers of their seats. In the course of his exposure, Houdini would take up the local professors by name, telling of the bogus "messages" each had given to his agents.

Suddenly, across the darkened house, the beam of his flashlight would swing full in the face of one of the mediums present. "There is Mrs. Blank, who deals in bogus spirits at such an address," he would say. "Yesterday afternoon, for two dollars she gave my agent messages from the spirit of her deceased child and her deceased husband. My agent has never been married nor had a child." If the medium denied the accusation, Houdini turned a second flashlight on his agent.

If the medium was a hardy-minded person and still persisted in denying that she had ever entertained such a sitter, Houdini would point out that his agent had left a mark in indelible pencil on one or two places in the medium's sitting-room—on a panel beside the south window, and at the foot of the Rogers group—and he was willing to have a committee from the audience accompany the medium home to verify or disprove this. By the time Houdini got that far, the medium usually made a hurried exit. In the rare cases where the committee investigated, they always found the marks.

Each evening Houdini drew the attention of all mediums in his audience to his $10,000 challenge for a real spirit manifestation, pointing out that the money was on deposit at the box office. There were no acceptances. On some occasions he called for the readers of sealed messages, offering $1,000 for each correct answer to five questions he had written in sealed envelopes. Once a woman came forward, announcing herself as a medium, and said she would give the answers. The reply to the first question, she declared, was, "Is it possible?" The question proved to be, "What is the name of the man who taught me the East Indian needle trick?" Her second answer was "Yes." The question was, "Where did I meet the chief of police of Pittsburgh last summer?" After that the medium had enough.

In Buffalo a shrewd and attractive young woman-medium coolly invited Houdini into a partnership. If he would manage and authenticate her seership, she declared, they could easily clean up one hundred thousand dollars each annually.

Early in 1926 Houdini made a pilgrimage to Washington to enlist the aid of President Coolidge in his campaign "to abolish the criminal practices of spirit mediums and other charlatans who rob and cheat grief-stricken people with alleged messages from the dead." Houdini asserted that there were about two hundred mediums in Washington who operated without restraint, because the District of Columbia had no law, such as those of most other large cities, making it a crime to accept money for purveying synthetic messages from the shades.

As a result of Houdini's effort a joint resolution was introduced in Congress designed to curb the evil. Hearings were held by appropriate committees of both Senate and House, and the record of the latter was printed in a book of one hundred and seventy pages.

Assembled psychics protested severally the genuineness of their messages and manifestations. A number of respectable minions of the Civil Service testified that they derived much comfort from communing with the dead at the end of the daily seven-hour grind in Uncle Sam's Bureaus. The wife of a senator asserted that the élite of Washington spent happy hours in her salon "conversing with their invisible dear ones" via a trance medium; that the spirit of her father had assisted her in recovering a violin that had been lost for years, and that spirit guides could pick the winners at the races.

On the record Houdini seemed to have had the better of the argument, but the bill was never reported by the committee.

BACK in New York at the end of his strenuous season, Houdini was moved to undertake what was probably the most difficult physical feat of his career. He found the metropolis intrigued by the exploits of one Rahmen Bey, allegedly an Egyptian fakir, who professed to a supernormal power whereby he could suspend animation in his own body. At a local theatre, every day Rahmen Bey, in his self-imposed cataleptic trance, permitted himself to be shut in an air-tight coffin for ten minutes or more, whereafter he would emerge alive and bowing. The trances appeared to baffle explanation by

Digitized by Google
Original from UNIVERSITY OF IOWA

interested physicians and physiologists.

Houdini at once determined to spike the claim to supernatural powers. He immediately went into active practice in slow breathing and staying under water. After a few weeks he announced that he could keep alive in an air-tight coffin, by conserving oxygen, longer than the fakir could carry on in a trance with the aid of his djinns. In tests, Rahmen Bey's best trance in the coffin was clocked at nineteen minutes. Houdini predicted that he could do an hour. The fakir was in his twenties and Houdini at the blood-pressure age of fifty-two.

The trial was made before a committee of medical men in the swimming pool of the Hotel Shelton on August 5th. The magician was enclosed in a metal coffin in which the physicians estimated there was air space for forty-two normal breaths. They thought he might make that do for fifteen minutes at most.

The coffin was sealed and lowered into the pool, where relays of swimmers took turns in holding it under water. Not until an hour and thirty-one minutes had elapsed did Houdini signal to be released. He was in a state of great exhaustion, with blood pressure, respiration, and temperature all abnormal; but these symptoms passed in a short time. There had been no trickery about the test, and no possibility of trickery.

The vigor and sincerity with which Houdini conducted his crusade against fraudulent claims of supernatural power had won for him an unusually high measure of public esteem. Newspapers hailed him as one of the country's most valued citizens. He had come a long distance from the days of obscurity when Dime Museum Harry sat up nights inventing new tricks to eke out a bare existence. Yet, though his scope and purpose had expanded into larger horizons, he still burned the midnight oil over his work and his inventiveness and curiosity were unabated.

His program for 1927 embraced the presentation of a new feat, one that no conjurer had performed before. This was to have himself, on the stage, frozen into a block of ice, and to escape from this arctic restraint in full view of the audience. He had been working on this feature for five years. At last the problems of quick refrigeration and of insulation were moving toward solution, and he expected to introduce his novelty during 1927.

With his future activities safely planned, he began his routine of production in the fall of 1926. The session opened with high promise. As a conjurer and as a showman Houdini seemed to surpass himself. In the propagandist portion of his show, the manner in which he made his moral crusade serve as an absorbing entertainment was an example of rare art.

A SERIES of mishaps soon began: First, toward the close of their engagement in Providence, Rhode Island, early in October, Mrs. Houdini was ill for several days with ptomaine poisoning. Next, during an evening performance in Albany, while his assistants were clamping him down in the stocklike cover of the Chinese Water Torture Cell, Houdini felt one of his ankles snap and a sharp pain shot up his foreleg. He signaled to be

Careful boy! — It's spread thick — that Heinz Peanut Butter. Moist and creamy. And what a flavor. All those little Spanish peanuts — all those big Virginia nuts — that's what gives it that wonderful taste — rich and sweet and yummy for all the folks who like peanut butter with a fresh roasted flavor.

There's always a lot of satisfaction in working out a way to make something *better.*

We've always found it so . . . Recently, after ten years of experimenting, we discovered a special way of making Peanut Butter so that it would have *no* oil on top.

And *that* means a Peanut Butter that is sure to stay moist and creamy and easy to spread until the very last morsel is used.

We patented the process, of course, and made it exclusive with Heinz . . . So now *all* the flavor of the choice, fresh roasted nuts remains in the butter.

With every one of the 57 Varieties, the name Heinz has come to mean Flavor, due to methods exclusive with Heinz. With an established reputation such as ours, can you wonder that we regard it as our most precious possession.

lifted out, and, leaning against the cell, asked if there was a doctor in the house. Doctor Hannock, a bone specialist, responded. Making a hasty examination in the wings, he expressed the opinion that it was a bad fracture, how bad he could not tell except from an X-ray.

"You will have to go to the hospital at once," declared the surgeon.

"Nothing doing," said Houdini. He waved his hand toward the auditorium, packed from floor to gallery. "They paid their money, and I'll see the show through. Come back after the curtain."

He hopped upon the stage and did the needle trick standing on one foot. Then he went through the difficult series of demonstrations involved in his exposures of mediums. Not a thing was omitted. Almost the entire audience waited at the stage door to cheer him, and the next morning the Albany "Journal" exploited the incident in an editorial entitled "Grit."

At the Memorial Hospital they found that the ankle was broken. The surgeons reset it, and advised Houdini to lay off for a week. He insisted on returning to his hotel immediately. There he sat up all night, partly because the pain would not let him rest, partly because he wanted to devise a brace that would permit him to go on with the show the next day.

With the aid of his home-made support he filled his three-day engagement in Albany, and moved on to Schenectady for the rest of the week. Finishing there, he jumped to Montreal, where he opened October 17th.

Doctor Hannock, in Albany, had given Houdini a card to a surgeon in Montreal. Houdini went to him for an inspection of the ankle. The surgeon pronounced it well on the road to recovery, and then, his interest aroused, he asked permission to make a complete physical examination of his caller. "You have the most perfect physique I have ever seen," he remarked, after his tests; "and you are in the most perfect physical condition."

ON TUESDAY Houdini delivered a lecture on spiritualism before the faculty and students of McGill University. One of the students, who was taking courses in art, made a sketch of the lecturer, and Houdini was so pleased with it that he invited the young man to call at the theatre later in the week and do some additional studies.

The student called Friday morning with a friend. The two sat in Houdini's dressing-room while he lay on a couch superintending preparations for the performance, and reading his large mail. The ankle was still tender and he did not move about much. Presently a third student came in and the talk turned to physical endurance. The newcomer asked if it was true that Houdini could withstand heavy blows without inconvenience. The magician replied that he could do so if he had warning to brace himself. He then picked up some letters. The student said something about testing Houdini's ability then and there. Houdini, absorbed in a letter, was not paying attention, and gave an absent-minded reply which the boy interpreted as consent.

The next instant Houdini was startled by receiving a series of sharp blows on the abdomen. At the fourth blow he stopped the young man with a gesture, just as the two other students jumped up in protest.

The boys left shortly afterward and Houdini finished his mail. He felt some discomfort from the blows, and rubbed his abdomen for a few minutes, assuming that the pain was muscular. In the afternoon and evening the pains grew more acute, especially at the end of the evening performance. That night they became so bad that at two o'clock he called Mrs. Houdini. Mrs. Houdini massaged him. He could not sleep.

In the morning he fell into a restless doze, and he nearly fell asleep several times during the matinée. At the close of the performance, he complained of acute cramps in the abdomen. He went through with the evening performance with difficulty. During the intermissions he lay on a couch in a cold sweat and was unable to dress himself after the show.

That was Saturday night. He had to make a train for Detroit, where the show was due to open the next evening.

HOUDINI was so ill on the train that his attendants wired for a physician to meet him at the station in the morning. His temperature on arrival was 102°. As soon as he reached his hotel in Detroit he had a chill which lasted twenty-five minutes. Several physicians who had been called insisted that he cancel his performance. They said that his symptoms indicated appendicitis, and an immediate operation was imperative. Houdini, informed that the house was sold out, doggedly declared that he must go on. Just before the curtain went up his temperature was taken at 104°.

That was a curious performance, with the magician, suave and smiling, forcing himself through his exacting repertoire, while every gesture and motion was a torture. His attendants, in the wings, never took their eyes from him. At the end of the long first act, requiring nearly an hour of work, he fell down on the stage.

At one point on his program Houdini produced four girls from a vacant cabinet. Before the young women appeared, he always ran through the cabinet with his arm outstretched to show that the space was real and that it was empty. That night he was unable to lift his foot to step into the cabinet. He stood helplessly for a minute or two, and then beckoned to James Collins, his assistant, to help him.

He was removed to Grace Hospital and the surgeons prepared to operate immediately. He wanted to walk from his bed to the operating-room, and was angry when the physicians would not permit it.

The operating men found a gangrenous appendix, with peritonitis far advanced. So acute was the condition that the doctors agreed he could not live for more than twelve hours.

When he came out of the ether Houdini set himself grimly to fight. Twice a day the physicians posted a bulletin of Houdini's condition, which was flashed all over the country—for he had been "a story" for thirty years and he was "a story" to the end. The bulletins were not hopeful, for the physicians knew more about the antagonist than did Houdini.

At the end of seven days—it was Sunday, October 31st—Houdini said to his brother Theodore, at his bedside:

"I'm tired of fighting, Dash. I guess this thing is going to get me."

Digitized by Google Original from UNIVERSITY OF IOWA

He lay quiet for a period, his eyes closed. When he reopened them his wife was leaning over him and her arms were about him. She was crying. He could not speak to her, but his glance rested upon her face for a long moment before his head fell back on the pillow.

The Houdini properties had already been shipped back to New York, for it was realized that, even if he recovered, that particular tour was ended. Among the paraphernalia was the metal coffin in which Houdini had performed in the Shelton pool his last great feat of endurance. He had used the coffin early in the tour, at Worcester, Massachusetts. By chance the packing men had overlooked it at Detroit, and it was still at the theatre. His body was placed in it for shipment to New York, and later he was buried in it.

His funeral was held under the auspices of the Elks in New York, and he was buried close to his mother in the family plot at Machpelah Cemetery, Cypress Hills.

In attending to the many things that must always be attended to after a funeral, Mrs. Houdini, while examining the magician's personal effects, found this, his last letter:

Sweetheart, when you read this I shall be dead. Dear Heart, do not grieve; I shall be at rest by the side of my beloved parents, and wait for you always—remember! I loved only two women in my life: my mother and my wife. Yours, in Life, Death, and Ever After.

What "The Auction" Means to Me

Prize Contest Announcement

ON PAGE 156 you will find a remarkably interesting picture, "The Auction," in which the artist has portrayed a cross section from life. Look carefully at his drawing—it will open wide the door to your memories; it will stimulate your imagination. What does the picture mean to you? What personal experience does it recall? What story does it suggest?

In a 500-word letter tell us what this picture means to you. The story you relate may be either fact or fiction, or a mixture of both. Interpret the picture—that's the thing we invite you to do. You will have a good time studying it, a good time trying your hand at writing a vivid reminiscence or a bit of fiction, and you may win one of the special prizes.

For the best five-hundred-word letter we offer the following prizes: $50, first prize; $30, second prize; $20, third prize. Competition closes July 20th. Winning letters will appear in the October issue.

Address "Picture" Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of them if you want to preserve them.

Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

Kaffee Hag means coffee "Healthful And Good"

. . . coffee free of caffeine!

EVERYBODY can enjoy coffee now . . . without the penalty of sleepless nights—without the payment of nerves. Gone is the drug from coffee. Caffeine.

Kaffee Hag Coffee is a blend of the world's finest coffees—97% free of caffeine. We remove the caffeine from the *green* coffee beans. By a secret process that affects nothing else. You can't taste the slightest difference.

All the fine coffee flavor remains. The quick bracing effects. These have never come from caffeine anyhow—but from aromatic oils and warmth. Caffeine stimulation doesn't even begin until two hours after drinking. There's no such thing as missing this tasteless, odorless drug at meal-time. But if you drink it, it may keep you awake hours later.

Kaffee Hag brings every pleasure the finest coffee can give. But none of the harm. How much better for everybody! How much more delightful is this rich, mellow, *real* coffee than cheerless coffee substitutes!

Most grocers carry Kellogg's★ Kaffee Hag. Ground or in the bean. Full-pound air-tight cans. Ask for it at hotels, restaurants. On dining-cars.

We would like you to know how much it means when this pure, good coffee—without the drug—comes to your table. Mail the coupon below for a trial can.

KAFFEE HAG CORPORATION
1747 Davenport Ave., Cleveland, Ohio

Please send me, postpaid, enough Kaffee Hag to make ten cups of good coffee. I enclose ten cents (stamps or coin).

Sheet Metal
That Lasts!

You are interested in better sheet metal work. Actual time and weather have proved that KEYSTONE Rust-resisting Copper Steel (alloyed with copper) lasts longest for Black and Galvanized Sheets, and Roofing Tin Plates.

Apollo
Galvanized
Steel Sheets
for Better Sheet Metal Work

APOLLO Galvanized Sheets—the leading brand since 1884—are made right in every detail, with a good galvanized coating properly applied.

APOLLO-KEYSTONE Galvanized Sheets possess all the excellent qualities of the Apollo brand, but with the added feature of a Keystone rust-resisting copper steel base. These sheets last longest and are the highest quality sheets manufactured for roofing and siding, gutters, spouting, and general construction uses.

For tin roofs for residences and public buildings, use Keystone Copper Steel Roofing Tin Plates; clean, fireproof, durable and satisfactory.

This Company is the oldest and largest manufacturer of a complete line of Black and Galvanized Sheets, Full Finished Sheets, Automobile Sheets, and Special Sheets for all known uses; also Tin and Terne Plates adapted to every requirement. Sold by leading metal merchants. Write for copies of ROOFING TIN and ANTI-CORROSIVE METAL booklets; of special value to property owners.

Products of QUALITY and Service!

Accepted Without Pleasure

(*Continued from page 61*)

the two women fell into separate silences and lonely ones.

It did not surprise June to see Mr. Delancey again. Her mother promptly found out about him and spoke of him as a sterling young man. She told June that his name was Mr. Daniel Delancey, and June said it would be Daniel, of course.

It further appeared that the Dovers had included him at their dinner because he was highly regarded as a mining engineer. He was not a rich young man, but an estimable one whom it was well to keep an eye on and ask to large dinners when men were at a premium, just in case he turned out well.

"Under that rough exterior," said Mrs. Linden determinedly, "I am sure he has sterling qualities. And he's young, June. One must make allowances."

June could read things into those statements and allowances. Ten years ago, her mother wouldn't have permitted Dan Delancey in June's social horizon. But in ten years, with the staling and fading of opportunities, Mrs. Linden had, little by little, let down the bars. There was something rather pathetic in her manner of bringing up Delancey again and again, asking him to dinner, putting up with his crudities, and abandoning June to the admiration which increased in the young man as gradually it became clear to him that these people were not entirely out of his range.

JUNE made no pretenses. She took his admiration as if she were about to put it down some place and forget it. Never did she lift a finger to provoke it or excite it. But she wrote frequent letters to various people whom she thought might want her to work for them or with them, and the answers, if they came at all, were always alike. There did not seem to be any place in the world for a woman whose training had been for marriage and leisure, and who had to have a job before she qualified for it.

In the meantime, Mrs. Linden spoke more than once of her friends who were going abroad, of the cost of keeping the house up, of the problem of expense. By this time she had discovered that there was no wife in Rhodesia and that Dan Delancey was quite free.

It was clear before very long that he would like to ask June to marry him, and Mrs. Linden was kept busy making occasions for that. She contrived several times when Dan took June home and nights were moonlit. But that was not how it happened. It came about rather oddly in the midst of the city, at noon.

They had met each other in the street, June and Dan, and he had asked her to lunch with him. And she, indifferently enough, had agreed. They went to an unpretentious restaurant, for it did not seem to occur to him that a hotel or club was the proper place. June had never liked him as well or seen him so apparently at his ease. The waitress knew him and evidently liked him too, for she hurried the service.

"You've been on my mind a lot lately," he said. He had dropped the "ma'ams," with her at least.

"Why?" She had to offer that much.

"Because I want to marry you."

That was all there was to it. He went on to explain what he had to offer. It wasn't much. The sure salary of an expert engineer. The prospect of moving what home they might make every few years. Possibly some of the mining stock he picked up might make him rich. More likely not, for he didn't play in luck that way. He brought it out in short, business-like sentences, exceedingly in earnest.

"In return I have nothing to offer you," answered June at length.

He looked at her in amazement. Her skin was like milk, and she wore some tailored dress of dark blue which only a lady could wear with grace.

"You have yourself," he suggested, in real humility.

"Yes. I suppose so. Though even that with reservations. I don't love you."

"Of course you couldn't yet. I've had a hope you might let me earn that."

"Oh, don't—" she said.

"What?"

"Talk as if it were worth earning. My love." And again that note of weary contempt was in her voice.

"From what I've seen of love it's worth earning always. It's big business."

"Where have you seen it?"

"Different places—everywhere, savages—and civilized men. I've seen savages draw knives over it. And white men suffering at being away from their wives, suffering to the point of suicide. I thought about you the other night and wondered if I'd feel like that. I think I might."

She colored swiftly.

"As for your loving me—" the words came out roughly, almost comically—"as for that I'll take my chance, unless you love somebody else."

June smiled at her own expense, sardonically.

"No fear of that."

"Then will you marry me?"

WHEN her mother came to dinner that night, June was not there. At first she waited, and then went up herself to call her. June was sitting in that familiar, bunched-up way, as if she didn't care what happened to her figure.

"You're going to ruin your figure," said her mother mechanically. "I wish you wouldn't sit like that. Where have you been all day?"

"This morning I looked for a job."

She heard her mother's irritated breath.

"I don't see why you will make yourself conspicuous by such nonsense, June."

"It's all right," said June, "nobody wanted me. So I had lunch with Dan Delancey."

There was something flaming back of June's eyes as she looked at her mother.

"You didn't quarrel with him, did you, June?"

"No."

"Well, something happened. I can tell by your look."

"Yes. He asked me to marry him."

Digitized by Google Original from UNIVERSITY OF IOWA

Mrs. Linden grew more nervous than ever.

"You refused him!"

"No. I accepted him. I accepted him," said June slowly, "as I accept so many other invitations. Because I have no choice. Without pleasure. And I made it quite clear."

Her mother faltered at that cool statement, then regained her poise.

"June dear," she told her daughter, "you're upset. All girls feel like that. I remember after I accepted your father, I cried and cried for hours."

"I'm not crying."

"And is it going to be a June wedding for my girl June? That will give us three months."

"Any time you like," answered June indifferently, and then the mask dropped: "I'd better marry him quickly before I'm sorry for the raw deal he's getting, and let him out of it."

HE WAS, to be sure, a very gauche and awkward person, and the announcement of his wedding did not change either him or his manners. Yet everyone felt that June, considering her age and the profusion of younger and fresher girls, could not have done much better, and it was generally agreed that it was very nice for Mrs. Linden to have June settled. June fell in with all the plans for her trousseau and wedding, at least to the point of acquiescence, though she showed no enthusiasm over bath towels or tablecloths.

There was only one time when she and her mother clashed, and that was when Mrs. Linden suggested, as inoffensively as possible, that June might give Dan certain hints about manners, and that a few less "ma'ams," a little less gratitude for invitations, and a better-fitting suit of dinner clothes would improve his ensemble.

"Just speak to him tactfully, June, and I'm sure he'd appreciate it. It's in your hands now to improve him and gloss over some of these little defects. You see what I mean. He's a thoroughly nice boy. He just doesn't know—that's all."

"And I sha'n't tell him," said June. "I agree that he's a nice boy."

"But it should come from you, dear."

"It shouldn't come from anyone," answered June, with quick passion. "I have no right to assume any superiority over him. Isn't he taking me off your hands, the world's hands, offering to pay my bills and board and keep me for the rest of my life? What business have I telling him how to act? I wouldn't dream of it!"

"My dear June—it's for his own sake—"

"For his own sake he ought to be let out," answered June; and her mother was careful to go no further.

But that was the only time June spoke like that. For the most part she seemed to do her best to be agreeable. She grew prettier during those weeks, almost in spite of herself, under that constant, unremitting devotion which Delancey gave her.

He did not do the obvious things, much to Mrs. Linden's dissatisfaction. He neglected to send flowers, and he took June to the wrong places for lunch, because she never told him which were the right ones. But he gave her honor, and she clearly filled the whole of his thoughts which were

Do you really want to get ahead?

—If not, step aside for the man who does

What's the secret that explains why some men quickly rise to high-salaried positions while others never seem to make the grade?

Why was Coulson B. Hyde, for example, chosen General Auditor of the Eureka Vacuum Cleaner Company? Why was Ralph J. Daly made Secretary-Treasurer of the Detroit Fidelity & Surety Company? What prompted the great Kardex-Rand Company to select J. C. Gray as Personnel Manager?

Hyde started as a molder in a Detroit foundry. Daly started with a telephone company. Gray was a cost clerk.

None of these men had money. None of them had unusual backing. Why did they step ahead—while hundreds of men who started even with them stepped aside to let them pass?

Prepared for Bigger Things —It Paid Him Well!

When J. C. Gray enrolled with LaSalle, he sought its aid that he might be a better cost clerk—and so win a better job.

Eight years later Gray had stepped ahead to the position of Manager of Personnel of the Kardex-Rand Company.

What of the men who were clerks in the same big office where he started? The great majority of them are clerks this very minute! *They stepped aside to let him pass.*

Changing Jobs Isn't Enough—You Must Change Yourself

For three years Ralph J. Daly—graduate of the University of Michigan—taught engineering at the University of Pennsylvania. Finding that he was not stepping ahead as fast as he wished, he did what so many men do—changed fields. He got a job with the Detroit Trust Company.

But here again he found that he was making little progress—evidently the fault had not been in his field but in himself.

He enrolled with LaSalle for home-study business training.

Today he is Secretary-Treasurer of the Detroit Fidelity and Surety Company—while scores of men who were clerks in the bank at the time he started have stepped aside to let him pass!

"I Sought Opportunity—The Salary Came as a Logical Result"

When Coulson B. Hyde started as bookkeeper with the Eureka Vacuum Cleaner Company, at $150 a month, he wasn't measuring his job by his pay, but by his opportunity in his chosen field.

Five years later, he stepped ahead to the position of General Auditor, at a salary 400 per cent larger.

Meanwhile, what about the men clerking and keeping books at nearby desks? They had the same chance—but they did not take it. *They stepped aside to let him pass!*

You Must Step Aside or Step Ahead—the Choice Is Yours!

Are you really in earnest in your desire to get ahead? Then read how Gray and Daly and Hyde won promotion, as related in the column at the left.

One reason for their swift advancement, as they will tell you themselves, was home-study business training. But back of that there was another reason.

While these men were fitting themselves for the bigger job, hundreds of men about them were doing practically nothing to further their own advancement—they were waiting on luck or long, loyal service, or "something" to shove them ahead.

Actually—whether they knew it or not—these hundreds of men were one by one stepping aside to let these three men step ahead to the big positions!

Why let some other man—with no more natural ability—shove you aside while he steps ahead to that bigger place?

You know that the only thing that stands between you and that bigger position is lack of knowledge and trained ability—both of which come quickly through specialized training.

You know, too, that such training—training which you can readily get in your spare time at home—may mean all the difference between mediocrity and success—between your present job and a job that pays many times what you now are making.

The way is plain—but only you can decide whether you will step aside or step ahead.

Take that first all-important step toward success by filling in, clipping and mailing the coupon NOW.

"My Valuable Dog Was Freed From Mange"

"I followed your instructions carefully, using Sergeant's Mange Medicine and the Arsenic and Iron Pills. I am glad to say that my dog's mange has disappeared entirely."

Any dog—your dog—is likely to contract mange. It is highly contagious. It is not an easy disease to stamp out unless you know just what to give and the best treatment to follow. Use Sergeant's Mange Medicine and Sergeant's Arsenic and Iron Pills.

Symptoms of Mange

Acute itching caused by parasites attacking head, feet, legs or body. Redness, pimples, sores from scratching, thick skin with scales.

Do You Know?

Would you be able to tell if your dog had mange? Would you know what to do for him? Would you know how to safe-guard him from this dread disease? Surely these things are worth knowing. It costs you nothing to find out. There are effective remedies for this and all other dog ailments and it is a simple matter to know when and how to use them.

SERGEANT'S Dog Food

A balanced ration containing a large proportion of freshly cooked *Beef* and whole-wheat. For dogs and puppies of all breeds.

Famous Dog Book Free

We urge you to write for a free copy of Polk Miller's famous Dog Book. It contains the accumulated experience of fifty years. In clear, non-technical language it tells the symptoms of all dog diseases and explains the best treatments for each. There are useful articles on feeding, breeding and rearing dogs. This book has been the guide for millions of dog lovers. It is revised yearly and kept strictly up-to-date. It has saved the lives of untold thousands of valuable dogs. It is free.

Expert Advice Free

If your dog develops a condition not fully explained in the dog book, *write us at once.* State age, breed, sex and all symptoms. Our expert veterinarian will answer personally, sending, without charge, complete instructions for care and treatment. Sergeant's Dog Medicines, standard for over fifty years, are on sale at dealers everywhere. If you cannot obtain them, write direct. Address Polk Miller Products Corp., 1570 W. Broad St., Richmond, Va.

Write for Free Sample of Sergeant's Dog Food. We Guarantee Your Dog Will Eat It.

DOG MEDICINES
"A medicine for every dog ailment"

not given to his work. He told her a good deal about his work too, as if it were her right and interest to know.

That was in April, and in June they were to be married with some ceremony, for Mrs. Linden, having waited all these years for a wedding, did not mean to scrimp on this one. She was very busy writing the proper lists of the proper people, choosing invitations, consulting with caterers. And quietly she saw an agent and arranged to have her house put on the market, and told him to be looking out for possible buyers.

THEN came her amazing triumph. She did not hear it through Dan, who certainly was the natural channel, but through the Dovers.

"Isn't it wonderful for June?" said Mrs. Dover. "Dear June! I always have liked Dan Delancey so much. There's a certain power about him. I felt it at once."

Mrs. Linden wondered at the vigor of these renewed congratulations, and the occasion for them.

"Yes," she said, "I think he's a very genuine young man. Of course there are certain roughnesses—"

"A man with that much money can afford to be as rough as he likes. Mr. Dover says there actually *are* diamonds in those mines he owns! Doesn't it seem incredible to think of mining diamonds, my dear?"

Mrs. Linden was careful not to show either ignorance or astonishment, but she went home in a kind of daze. It was late afternoon and Dan was there. He had come in to look at June. He often did that, rather shyly, and she never was too busy to see him. She usually sat, as she was doing now, in a peacock-backed wicker chair and let him talk to her; sometimes the strain went out of her face and she looked quite contented.

"What's this pleasant news I hear," asked Mrs. Linden, "about your mines in Africa, you close-mouthed boy?"

Dan laughed.

"They aren't my mines. But it certainly was a joke on me. I took that interest for a bad debt. I never saw the property myself. A fellow wanted to go back to England—he was a one-lunger—and I gave him some money, and took a part interest in what we thought was a dead mine as payment. He was the kind of high-stepper who wouldn't borrow his fare back. He had taken some money from me before. He won't be needing to do any more borrowing, if he lives, poor fellow."

He stopped, checked by some rather painful memory of the one-lunger.

"But the mine has diamonds, I hear!"

"That's what they write," said Dan. "At least, there's a corporation over there which is pretty sound, and it seems to be anxious to get at my interest. They don't look so good, though, before a jeweler gets at them. Did you ever see a rough diamond?"

He kept slipping off the point that Mrs. Linden was interested in.

"But isn't that going to make you two children wealthy?"

Dan grinned. "It doesn't look unlikely. I don't know what I'll sell out for, but they made a pretty good offer all right. Maybe I'll hold out a while."

June was sitting up straighter. She looked very slim against the peacock chair, and he stopped to admire and wonder at her silently.

"You mean," said June, in a queer tone, "that you're rich!"

"Well," he admitted, "it looks as if we'd have plenty, all right. I was going to keep some of that news for a wedding present. But it kind of leaked out. Dover knew about it, and that was the finish. I guess it doesn't matter. You'd just as soon know now."

"Much better now," June answered slowly. There was that note in her voice which usually warned Mrs. Linden of an approaching attack of queerness, some rebellion against what was fitting and expected. But Mrs. Linden was off her guard. The news was too delightful.

June became more precious than she had been since she was a lovely little girl with all her mother's hopes and ambitions wrapped up in her, and the irritations and dissatisfactions of the past years fell away completely. Suddenly she remembered that little girl and began to talk to Dan Delancey, and he was quite sentimentally interested. June seemed not to be listening, and then finally she broke into what they were saying with a crash.

"June has always loved the out-of-doors. That's why I'm glad you're going to take her to Lake Louise for your wedding trip."

"Dan isn't going to take me for any wedding trip, Mother," said June.

"No wedding trip at all?" deprecated Mrs. Linden. "Why, I think that's foolish, June."

"No wedding."

They both turned to look at her. June had not so much as moved. Her face was paler, but her voice was quiet and steady.

"What do you mean, June?"

It was Dan who asked it first.

"I'm not going on with this," answered June. "It wasn't a fair bargain in the first place; but I did honestly think that perhaps I was the best you could do. You're rich now. You can do much better. You can get anyone you want. When people hear this, there'll be dozens of girls for you to pick from."

"Why, June!" cried her mother, "what a dreadful way to talk!"

"I'm sorry. It's hard on you, Mother. But, after all, in a way I suppose you are responsible for me. Dan isn't. And it's a sharper's bargain to tie him up with me before he sees what will be offered him now."

"I don't get it," said Dan, and moved toward her. "You mean you're throwing me over?"

"PUT it any way you please," she answered, and laid her head against the fan-shaped back of the chair, as if she were very tired. "I'm not going to marry you."

"Oh, Dan, don't pay any attention to her!" said Mrs. Linden. "June's just tired out with all this excitement and everything. She doesn't mean a word of that. I know!"

There was panic in her voice, but neither of the young people seemed to hear her. They were looking steadfastly, rather grimly, at each other.

"But why?" asked Dan again.

"I told you. Because it's a raw deal, that's all. You don't know anything about women, and so you fell for me. I've

Digitized by Google Original from UNIVERSITY OF IOWA

been going about for years without anyone asking to marry me. Trying to land someone, anyone. I was next you at that dinner at the Dovers' because they wouldn't give me a chance at the men who seemed more important. That's the joke on them. You turned out to be important. Why, now, Dan, they'll be all after you like flies. You'll be groomed and petted. They'll fall in love with you."

"But you don't—you won't?"

"Have I ever pretended to?"

"This is such nonsense," exclaimed Mrs. Linden. "You go now, Dan, and come back this evening. When this girl gets a sleep she'll feel quite different about everything."

"If you don't mind, I guess we better finish this now," he said. "I think maybe June's seeing pretty straight. You really feel that way, June?"

"I wouldn't hold you for anything in the world!"

"You don't want to hold me? Not at all?"

"I won't marry you. And I want to forget the whole vulgar bargain."

"Well," said Dan, "in that case, perhaps we'd all better try to forget."

"But you can't," cried Mrs. Linden shrilly. "Don't you understand? People have been told. You can't do such a thing. June must go through with it."

He saw June's face, imploring him to go and not to witness the hysteria which was breaking.

"Please!" she begged.

HE GAVE her one last, keen glance, squared his shoulders awkwardly, mumbled something in Mrs. Linden's direction, and went. June did not look after him. She turned to her mother and faced what had to come.

It was a succession of ugly scenes, stretched over several weeks, with Mrs. Linden ready to capitulate at any moment if June would reconsider and call Dan back before it was too late. Her reproaches, her indictments, her pathos kept coming back to that plea, endlessly, at any hour of day or night. June took all the rage as if she deserved it and admitted that she did, and was gentle with her mother's humiliation. But she would not raise a finger to bring him back.

People began to know that things had crashed, and they put their own interpretation on it, which was, on the whole, that Dan Delancey might have stuck by June—but you really couldn't blame him much, for Mrs. Linden had probably inveigled him into the engagement in the first place.

But for June it was as if the completeness of the destruction she had caused gave her the energy of necessity. A chance to sell the house came like a gift of providence, and it was she, rather than her mother, who put that through, and urged Mrs. Linden to make arrangements to join her friends in Europe.

"And what will you do here?"

"I'll get along all right. I'll find something to do."

"It's all so wrong," said Mrs. Linden bitterly, "here you might be settled in a home of your own now, if you weren't so willful, so stubborn."

"Let's not go over that again, Mother."

"And Dan Delancey is going around with Jinny Gearing. That girl!"

She costs more than a dozen typewriters!

It is economy to give her the best machine

THE ball-bearing action of the L C Smith is smooth and swift. The keys do not recoil against sensitive finger-tips—a frequent cause of *Functional Neurosis.* Nervous fatigue disappears and production increases.

What Are YOUR Mistakes in English?

They may offend others as much as these offend you

IF some one you met for the first time made the mistakes in English shown above, what would you think of him? Would he inspire your respect? Would you be inclined to make a friend of him? Would you care to introduce him to others as a close friend of yours?

These errors are easy for you to see. Perhaps, however, you make other mistakes which offend other people as much as these would offend you. How do you know that you do not mispronounce certain words; are you always sure that the things you say and write are grammatically correct? To you they may seem correct, but others may know they are wrong.

Unfortunately, people will not correct you when you make mistakes; all they do is to make a mental reservation about you. "He is ignorant and uncultured," they think. So you really have no way of telling when your English offends others.

FREE Book on English

Sherwin Cody, perhaps the best known teacher of practical English, has perfected and patented a remarkable device which will quickly find and correct mistakes you unconsciously make. Correct English soon becomes a HABIT.

If you are efficient in English, it will give you greater confidence; if you are deficient, you surely want to know it, so that you can correct your mistakes.

Mr. Cody's remarkable new invention, the 100% Self-Correcting Method, has already improved the English of more than 50,000 people. No useless rules, no tedious copying, no hard study. Only 15 minutes a day required. You learn by creating the HABIT of using correct English. Nothing like Mr. Cody's method has ever been used before!

A new book, "How to Speak and Write Masterly English," is ready. It explains Mr. Cody's surprisingly easy method. Get a copy free and learn how to stop making embarrassing errors. You do not want others to judge you unfairly. Merely mail the coupon or a postal card. SHERWIN CODY SCHOOL OF ENGLISH, 97 Searle Building, Rochester, N. Y.

"Jinny's very pretty," answered June.

"But you know the kind of person she is."

"I know. But it's not my business."

Mrs. Linden was not appeased. But she was beaten.

WHEN June actually found herself a job her mother was more depressed than antagonistic, and after the house was sold and the new owners waiting for possession, the thought of an easy, diverting hotel life in Europe began to tempt Mrs. Linden.

"You'd better give that ridiculous work up and come with me, June."

"No," said June; "I'm sticking to this job, Mother."

Mrs. Linden shuddered at the job. June answered telephones in some real estate office and was learning to typewrite. It was a thing to try to forget.

"But where will you live?" she protested.

"I've been asking about that. I can get a room in the Davenport. A one-room apartment with a bath. It's really very comfortable."

"Every old maid in town lives at that place."

"That's all right," said June, "I'm in my natural setting then. Let's look at steamship sailings. You want to get a good boat, one that will have some interesting passengers."

In spite of herself Mrs. Linden brightened.

JUNE passed. Mrs. Linden had sailed for Europe and June Linden had once more been false to the month of weddings. On the night which had once been tentatively set as her marriage one, she ate at a tea-room, alone. The thin chop, the limp muffin, the economical dessert did not seem very tempting. But she finished them and went back to the little room in the Davenport and washed out some stockings and read a book. It was a queer alternate to what had been planned for that night.

July passed and August, days trudging along one after another, lived respectably and hardly more. It was one morning in September that she first heard of Dan Delancey. Such of her old friends as she saw were tactful enough not to mention him, but in the office they knew nothing about her in that connection. The head of the firm was talking to his best salesman.

"You want to make a sale to this Delancey fellow. He's crazy with money."

"Does he want a house?"

"It's your business to make him want one. He's going to be married, I hear, and we want to get to him first. Step on it, my boy."

June felt her face flush. It was the first time the blood had come into it like that for a long time. She had closed off those quick emotions. Dan had evidently found someone, then. Of course he would. She wondered if it was Jinny. He deserved better than that. Jinny had never played fair in her life, and she'd demand a desperate speed of any man she married.

That thought was in her mind when she went out for lunch. She couldn't dislodge it, which was why she fairly ran into him before she noticed who it was. He stopped short and looked at her, up and down, queerly. It was their first encounter.

"How are you?"

"I'm fine," said June.

"You look fine. I thought you went to Europe."

"That was my mother. I didn't go. I'm working."

"Working?"

"In Liggett and Moore's. I hear you want a house. You'd better buy it of us."

He laughed. "Maybe I will. If I ever want one. Will you have lunch with me, June?"

June hesitated, and then nodded.

It was odd to be opposite him again. He ordered something, something he seemed to remember that she liked, and then sat looking at her.

"This seems natural," he said at length.

"Isn't it?" answered June.

The restaurant was the one to which he used to take her, and she had always avoided it after their break. And he seemed very familiar, and somehow comforting. She wondered why he had seemed so unlicked before, or if he had been grooming himself, or if possibly that job had been turned over to Jinny Gearing.

"I haven't been here since," Dan told her abruptly.

"It's a nice place," she said, ignoring that allusion. "Why not?"

"I understand it is a queer place to take a society girl. Most of these girls of your sort want the hotels or clubs. Why didn't you tell me?"

"I liked this. And, anyway, why should I tell you?"

"Well, somebody else did, fast enough."

She lifted her chin.

"Don't you let them tell you anything! Why should you?"

"Why not?"

That was enough. She relapsed into silence and began to eat her lunch. He had to do the talking, and he was smoother in such efforts than he used to be. And as he talked he watched her, and she began to remember that he had been about to marry her, that he had held her in his arms, that she had been curiously content to be there, not, as she was now, with a dull, drugged control, but differently.

She laid her napkin by her plate. This was all nonsense.

"I'm afraid I'll have to go back to the office now."

"There's lots of time. Don't hurry. Please. I want to tell you lots of things. You've no idea how often I wanted to tell you how square you were that day."

"Wasn't I right? Didn't they all come running?"

"I've been invited about a lot, if that's what you mean."

SHE asked the thing she did not mean to ask:

"And didn't you find you could do better?"

"I don't know what you mean."

"Didn't you find some of the girls interesting?"

"Some of them."

"I knew you would. Which ones?"

"Well," he admitted, "you know Aline Ware. She always tries to be agreeable."

June grinned at what Aline would have thought of that classification of her charm.

"What do you think of her?" asked Dan.

"I think you can do better than that!" said June. "Unless you want to run a cabaret."

Digitized by Google
Original from UNIVERSITY OF IOWA

"Jinny Gearing?"

June looked away.

"How about her?"

He pricked her into answer.

"Why don't you get a wife with brains as well as looks?" she asked impatiently.

"Didn't I try? Didn't I try once?"

June felt her heart begin to race, and it could be no old maid's heart that could go at such a crazy speed. He was leaning over the table, and it creaked under the weight of his arms.

"I've done what you wanted," said Dan. "I've looked over all those girls. And I can guess at the rest from the samples. I'm not marrying anyone. I wouldn't take a chance without love. You were right enough. I see that now. You'd have been wrong to marry me without it. It would be a rotten mess to be caught in marriage with one person caring and the other not. But I don't want any substitutes. I've wanted you—all these miserable months. And I'll keep right on, though I'll manage to shut up about it!"

June's face was scarlet, then white—no spinster composure there now.

"Then perhaps you'd better have me," she managed to say.

"But you don't want me, June!"

"Don't I? It was only after I did want you that I thought it wasn't a fair bargain. It seemed so like taking advantage before you knew about what you could have, before you knew anything about women—"

"Foolish," he said; "a man always knows all about women as soon as he's in love! He writes off all of them but one. Will you marry me, June?"

They remembered, when the quiet ceremony was over, to send a cable to Mrs. Linden. It made Europe a complete success.

Who Said the Day of Railroad Giants is Over?

(*Continued from page 25*)

the ablest railroad operating executive in the country. As his latest task, they have assigned him to New York to rebuild the Erie, the largest of the properties they control.

On the day that I saw Bernet he had a cold. On his desk in front of him was planted a huge bottle of medicine, but no spoon accompanied the bottle. I can't picture Bernet at any time taking medicine measured out into a spoon, or diluted. He takes it in the most direct way—from the bottle. And that, too, is the way he runs a railroad. Five days of his seven are spent "on the road," with the whiff of locomotive smoke in his nostrils and the song of wheels in his ears.

He isn't a talker. Shortly after he assumed direction of the Erie, some two hundred traffic men of the road were called together. The traffic men are the railroad's salesmen, and they expected from Bernet the usual sales convention speech, at least, the usual speech of a new president. Bernet arose without ceremony. His stiff gray hair was slightly mussed; his brows formed a bristling ledge behind his spectacles.

SPLASH on Absorbine, Jr. as soon as possible after exposure. It is cooling, soothing and comforting. No disagreeable odor; no stickiness; does not stain the skin. In severe cases pat the raw, blistered skin with Absorbine, Jr. diluted and soaked in absorbent cotton. It cleanses, and helps to restore the skin without leaving blemishes.

"I want ten million dollars in new business on this railroad by the end of the year," he said. "It's up to you fellows to get it! And I don't want any alibis!"

And he sat down. That was his speech.

He believes in himself. While president of the Nickel Plate he made some money—not a fortune as fortunes are spoken of nowadays—largely due to the fact that when he came to the road every spare dollar he possessed was put into Nickel Plate stock. And when he was moved over to the presidency of the Erie, he took every dollar with him and invested it in Erie stock. "Any company that's good enough to work for is good enough for my money," he said. "I want all of my interests where I work."

Let a man approach him through the medium of a lodge pin, a club membership, or any similar subterfuge, and Bernet will see red. Let an employee, or anybody, seek special consideration by any such means, and he will be in danger of being pitched bodily from Bernet's office, by Bernet.

"I've been hired to run this railroad," Bernet told me, "and I expect the men who work with me to consider themselves hired for that same single purpose. I don't care what lodge button they wear, what church they attend, who they are, or where they came from. They've got to fly the railroad flag and strike all others!

"I've been railroading since 1889," he added. "I've pleased and displeased people ever since. I have been cussed, discussed, boycotted, talked about, lied to, hung up, and helped up. I've thought the railroad business the best in the world, and the worst. There've been times when I've kept on at it only to see what in blazes was going to happen next, and there've been times when you couldn't have dragged me away from railroading with wild horses.

"But, no matter what I've thought, felt, or wanted to do, I've had sense enough to remember that I picked my job and the job did not pick me, that the railroad can get along a darned sight better without me than I can without it. And I've never short-changed my job."

BERNET was born at Brant, in Erie County, New York, sixty years ago, the son of a blacksmith whom he describes as "one of the best men that God ever let live." But for accident, or fate, he might have been a South American, for his father, a Swiss immigrant, had intended originally to locate in South America. However, when he arrived at the port of Havre, no South American vessel was sailing for two weeks, and one was immediately sailing for the United States.

"It makes little difference," said the Swiss. "I'll go to Philadelphia."

But he never reached Philadelphia either. Another immigrant with whom he became friendly was going to Buffalo. The Swiss wanderer, who was friendless in the new land, went along.

He tried farming, then blacksmithing, married, and had two sons. Times were hard, and the father was in poor health. He drifted from one job to another, from Erie County to Michigan's lumber woods, to Pennsylvania's oil fields, then back to his starting place. John, the older boy, attended the country schools, did chores to help the family income, and fought and tussled and played with the other boys of his age and station. He had a hard pair of fists.

They moved to Buffalo and young John took a job in an insurance office. He had to sweep up, empty waste baskets, and run errands. He didn't like the work, so he quit.

"I'M GOING to blacksmithing, like my father," he told the boss, and was told in turn that he was making a sad mistake.

"You'll be nothing but a laborer for the rest of your life," said his employer. "Stay here, and some day you may be a member of the firm, like I am."

"But I don't like this," said Bernet. "It ain't work that makes a fellow sweat."

Rather contemptuous of white-collar jobs, he became an apprentice in the blacksmith shop where his father worked. His father was his teacher. He learned the strength of metals, how to heat and shape steel, to pick up hot iron with tongs and not with his fingers. Then father and son opened their own shop at Farnham. Oddly, John wasn't such a good blacksmith.

Though he did not know it, he was near-sighted, and couldn't see to "finish his metal." This worried him for a time, until worry was suddenly submerged by a new interest—the telegraph key in the little railroad station at Farnham. Nightly, when the smithy was closed and supper was over, John was drawn into Farnham by the song of the key.

"How can I get into this?" he asked the station agent and telegraph operator.

"Hang around," invited the agent. "Pick up telegraphy. If you're good enough, you might get my job when I'm promoted."

So young Bernet, along with four other youths under the enchantment of railroading, began "hanging around." He did odd jobs for the agent, and in return the agent taught him the staccato code for his initials, and then his name. Finally, he was able to stumble through a complete message sending "dry" on an idle key. He kept at it with the four rivals at his heels, and when the agent was moved upward it was Bernet who got his job, at forty dollars a month!

That was in 1889 and the railroad was the Lake Shore and Michigan Southern, now a part of the New York Central System. Bernet sold tickets, handled baggage, helped old ladies on trains, and operated the telegraph key. He liked it. And one day, in Buffalo, which was division headquarters, the extra operator in the dispatcher's office quit because he hadn't been promoted to a regular operator. A new man was needed in a hurry.

"How about that chap out at Farnham?" somebody asked. "He seems to know his business. He's never asked me to repeat a message, but gets it the first time."

"Yeh, he's all right," agreed another. "Name's Bernet."

So Bernet went to Buffalo.

In those days railroads were run by telegraph. The dispatcher "talked" his orders over the stuttering key, and beside him, that a record might be kept, sat another telegrapher, whose job it was to set down on paper what the dispatcher sent. This was Bernet's task, and he gloried in it. Sitting at the right hand of the dispatcher, he was in a position to learn the ins and outs of running a railroad. The telegraph key was his instructor, the file of train orders his book.

In a high wind, one winter night, a car was blown from a siding onto the main track. A train smashed into it, and there was the very dickens to pay. Whereupon, the order went out to superintendents to put derails at such track junctions, to prevent future accidents of the kind. Superintendent Niles, of the division, invited the chief dispatcher to accompany him to locate places needing derails. His eye strayed to Bernet, at the dispatcher's elbow. "Bring the kid along too," he added.

Though Bernet worked until midnight, he was up at five the next morning to make sure he wouldn't miss the trip. It was made in the superintendent's private car. They came to one of the side tracks under consideration.

"We won't need any derail here," spoke up the maintenance engineer with the party. "The switch can be thrown so that it will act as a derail, and be left that way."

Bernet started to say something, gulped, and swallowed it.

"Out with it, kid," invited Niles.

"We're on a curve," stammered Bernet. "If you throw the switch, it will show a red light on the main track. Engine drivers are going to slow up every time they see that red light. They'll be scared to run against it."

"You don't know what you're talking about," snapped the maintenance engineer, angrily.

Bernet stooped, unlocked the switch with the key all railroaders carried, and threw it. The red light did flash its warning to the main track.

"He does know what he's talking about," said Niles. "Put this down for a derail."

AND mentally Superintendent Niles jotted down the name of John Bernet as a youngster cut out for railroading and promotion. Shortly Bernet was moved up to an assistant dispatcher's job, to dispatcher and to chief dispatcher. His rise was unprecedented in the Buffalo divisional offices.

He seemed to know railroading by instinct. The call of work to him was like the alarm gong to a fire-horse.

At thirty-three he was the trainmaster of the division. He was pretty young to be a trainmaster; too young, thought some. The feeling was that Niles had "lost his head" in promoting him so fast, and shortly Niles left the division. A new superintendent came in, and he wasn't satisfied with the way things were going; it had been suggested to him that he begin by getting a new trainmaster. He summoned Bernet.

"I haven't been trainmaster yet," said Bernet. "Somebody over my head has always done the work for me. Before you say that I'm a rotten trainmaster give me a chance to *be* trainmaster."

The division was jammed with motionless freight. The big West Seneca yards in Buffalo were tied up by one of the worst jams in the history of the road. Snow storms had slowed up the whole line. Train crews, already exhausted by overwork, were being asked for additional overwork. Engines, already overloaded, were being taxed by still heavier loads and still longer trains. They cluttered the line all

the way from Buffalo to Cleveland. So serious was the jam that the president of the road and his operating vice president hastened in person to Buffalo. The vice president was A. H. Smith, one of the ablest railroaders of the day and a future president of the New York Central.

"Fetch that trainmaster here," ordered Smith. The official party had come straight to the yard. All the officialdom of the division were standing by, excepting Bernet. They found him at the other end of the yard.

"How would you clean up this mess?" Smith demanded when Bernet made his appearance.

"Why ask me?" countered Bernet, not without bitterness. "There are older and wiser heads here than mine. They're running the business, not me."

"I am asking you," said Smith. "This isn't a question of what's been done but of what is to be done."

"Well, if I were doing it," Bernet said, "I'd give the engines loads they could pull and pull fast. Instead of adding more cars to trains that are already too heavy, I'd cut off cars. I'd cut fifteen cars off every train going out. This mess can be cleaned up in ten days if you give the men a chance to rest, and the trains a chance to move."

Smith consulted with the superintendent, who finally agreed Bernet might go ahead with his plan. Two minutes later, Bernet was on the telephone and his orders were flashing to all parts of the road—to cut fifteen cars from every train, stand them on sidings, and to go on. Trains being made up were made up fifteen cars short. The "older heads" listened, and said the man was crazy to try to move more cars by hauling fewer.

But the lighter trains *did* reach their destinations and did *not* bog down by the wayside. Engines delivered their cars and were ready to haul more. Crews made their trips in eight, ten, and twelve hours, where it had been taking them double and treble that time. With sleep and rest, they came back to work fresh and eager to get going again.

At the end of ten days the West Seneca yard was back on a normal basis, with shifting crews actually waiting for work. And John Bernet was again on his way up the railroad ladder. He became assistant superintendent, and within two years he was division superintendent. Pausing there only a year, he jumped to assistant general superintendent, and then in another year to general superintendent. Less than six years before he had been rattling a telegraph key in the night dispatcher's office at Buffalo.

THERE is an anecdote told of Bernet during this period that as much as anything else points to the reason for his spectacular rise. There was a serious wreck on the main line which blocked traffic in both directions. Bernet and one of his superiors hastened to the spot to clear it.

Presently an inquiry came from headquarters: "Ask Bernet how soon the line will be open."

"Tell 'em by seven-thirty," snapped Bernet.

The telegrapher imparted the information to Bernet's superior. "That's nonsense," said the official. "Tell headquarters we won't be cleared here before eleven-thirty."

When Bernet heard that he boiled. "They asked *me* when we'd be cleared, and I said seven-thirty," he directed. "That's my time, and if you don't send it in to headquarters I'll send it myself."

And not at 7:29, nor at 7:31, but exactly at 7:30 o'clock, the first train passed through the opened line!

And so Bernet kept on toward his goal. As general superintendent he was stationed in Cleveland. He had his own railroad car. He was called into consultation by the chiefs of the New York Central, which owned the Lake Shore road. After five years they moved him to Chicago and created for him the new post of assistant vice president. A year more, and he was a full-fledged vice president, in charge of operations west of Buffalo, the youngest high executive of the system. But Bernet's fingers itched to get control of a railroad of his own.

GOING back and forth over the Lake Shore lines he would look out his car window at the single-track line of the Nickel Plate, his next-door railroad neighbor. He watched its freights lumber slowly along, mentally noted their engine power, counted the cars per train. Here and there the Nickel Plate touched the Lake Shore, and he had opportunity to observe how it handled itself. What a man couldn't do with that old road!

One day, with A. H. Smith, he was on a train sliding into Cleveland. Smith laughed and pointed out the window at another train: "There comes the poor old Nickel Plate," he said.

"That isn't such a bad road," protested Bernet. And presently he added, "I wouldn't mind being the president of it. I'd show you fellows that it's a good road."

Smith looked at him in astonishment. "Do you mean that you would rather be president of the Nickel Plate than a vice president of the New York Central?"

"Just that," nodded Bernet, "provided I had a free hand."

Time passed. A suggestion was made to Bernet: "It might be to your profit to drop in and see O. P. and M. J. Van Sweringen, in Cleveland." That was in 1916, and Bernet did "drop in" on the Van Sweringens one day. He left them, president of the Nickel Plate.

To tell how Bernet rebuilt the Nickel Plate would require the space of a book. I'm only going to write a few short paragraphs on it; but they will give you the key to the man and to his methods. A little of what he has done on the Erie during the past year and a half will then round out the picture.

At a certain spot along the Nickel Plate there was a coal dump where trains stopped to recoal. It seemed to Bernet that it took the crews an unusually long time for the job, and this delay in trains at that point contributed to delay all trains on the road. He looked into the matter, and next door to the coal dump he found a restaurant. The proprietor was a popular chap and a good conversationalist. In consequence, after spending fifteen minutes to recoal, the crews spent fifteen minutes in the restaurant.

Most bosses would have endeavored to put an end to that delay by issuing orders against patronizing the restaurant. Bernet, on the contrary, said nothing to cause resentment in anybody; but he built a new coal dump three miles out in the country, where a new restaurant wouldn't pay; then he tore down the old dump.

Speed, and more speed; bigger engines, faster engines; full cars, moving cars—he drove for these ends. The elimination of one fifteen-minute delay did not greatly profit the railroad; but a hundred such eliminations did. For instance:

In summer, and especially in a dry summer, there was all kinds of trouble with locomotives. They got mud and other damaging matter into their boilers, owing to poor water at a certain supply point. Repairs then became necessary, and a locomotive under repair was an idle one. "Why can't we get rid of this condition by getting good water at that point?" demanded Bernet.

It was explained that every effort had been made to get good water. Complaints had been made, but had gone unheeded. In dry weather, the stream from which the water came went low. The consequence was that the water became sediment laden. It was a seasonal condition.

So, to save money and time, Bernet proceeded to spend money. He built a reservoir at the bad water point. When the water in the stream was high, he pumped his reservoir full, but kept pumping direct from the old supply for his engines. Then, when dry weather came, he used the reservoir supply exclusively.

HE BELIEVES in using only the best tools. "A workman who continues to use poor tools to save the price of good ones is guilty of the worst brand of extravagance," he says. When he came to the Erie one of his major intentions was to save money, to economize, to cut costs. And one of his first moves in this program of economy was the expenditure, during 1927, of more than twenty-one million dollars!

The Erie had some thirteen hundred locomotives, representing eighty-three different types that required eighty-three kinds of repairs. At a stroke Bernet scrapped four hundred of them, ordered one hundred and fifteen others rebuilt, and replaced those discarded with the best locomotives he could buy. The savings in repair costs alone are estimated at $3,100,000 a year.

And if he believes in tools, he even more earnestly believes in men. He told me, "No railroad, no business, no job, for that matter, is worth a darn unless the proper human spirit to achieve is behind it." And again, "A good workman will do fair work with a poor tool and excellent work with a good tool, but a poor workman will do poor work with any kind of tool that you give him."

By a good workman, he means also a satisfied workman, a man of spirit, a man who possesses those qualities which collectively go to make what we call morale. Coming to the Erie as he did, with the avowed purpose to turn the road inside out, it would have been easy to destroy the last vestige of morale. However, in Bernet's reorganization, not a single superintendent was laid off. Practically all of the important changes were in the nature of promotions!

That's John J. Bernet.

DOG BOOK SENT FREE

If you own a dog you should own this book, "Your Dog". It tells interesting facts about dog life that every owner should know. Explains dog diseases, their symptoms and treatments. Contains chapters on feeding and general care. Mailed free on request.

There's Protection in the Name, "Glover's"

It stands for the latest and safest in dog medicines

YOUR dog often requires medical care to prevent as well as to remedy sickness. On these occasions his health and happiness depend on your choice of medicines. Give him the best that money can buy!

Glover's Imperial Dog Medicines set the world's highest standard for effectiveness and safety. They are skillfully compounded according to the most advanced discoveries of veterinary science. Your dog deserves such medicines. Why not remember to get a few of the essential medicines listed below?

DISTEMPER

There are no specific drugs for its treatment or prevention. We offer separate medicines which are scientifically recognized as being indicated for EACH of the SYMPTOMS of DISTEMPER—the only method for treating this disease approved by both the Veterinary Profession and the Government. A special explanatory pamphlet on Distemper will be mailed you upon request.

OUR Veterinarian will personally advise you in any matter concerning sanitation and the health, care and feeding of your dog. In writing be sure to give full particulars concerning the dog's age, breed, sex, symptoms, etc.

My Fourth of July Wish

(*Continued from page 31*)

His sense of patriotism was too acute to allow him to appear other than at his best, no matter whether he stood before a king, or the humblest servant.

"They don't like us in Europe," is a common cry from returned tourists. What they mean is that Europe doesn't like some of us. From what I hear, I don't blame Europe. I don't like some of us overly much myself!

At home, I want Bud to realize that it requires patience and courage and self-sacrifice to be a "patriot." It requires obedience to law and a respect for the common good. There is more to it than cheering and flag-waving.

I don't want Bud to get the idea that Americans are all wise, and the rest of the world's people are all fools.

Many great men have worn strange garments. Every country has made its contribution to the world's progress. Not all the great inventors and writers and artists and thinkers have been Americans. Not by a long shot! The "Old World" is still a *good* old world.

IT IS not patriotism to denounce everything that is foreign. It is not unpatriotic to respect the worth of others.

I am certain that Bud loves and admires his mother more than any other woman. Yet he doesn't show this love and admiration by going around the neighborhood and sneering at other mothers.

Fancy his going to dinner at a boy's house and saying: "Your mother doesn't know how to serve a meal! If you want the real thing, come over to our house some day."

Yet that is the way some Americans talk when they go to another country. It isn't patriotism. It is plain boorish boobery. And they simply advertise their native land, to the best of their ability, as a land of boors and boobs. If they were *truly* patriotic, they would try to advertise America as a land where people are gentle and kindly and quick to appreciate the good in others.

But I don't want Bud to get the notion that he has all the patriotism and that his neighbor has none. Nobody has a monopoly on high thinking

He must credit even his political enemies with having a sincere desire for the good of the country. There will always be differences of opinion. But I want Bud to "fight fair" for his beliefs.

Personally, the United States seems always to have been my country, although I was born in England. Before my father came here he had a mental picture of Americans. It was not a glorified vision of a people with all the virtues and none of the faults of human nature. But he did have an ideal in mind when he told me he hoped I would become an American citizen.

"Americans are friendly," he said. "They are hard workers and quick thinkers. They like to do things. They are not prejudiced. They recognize merit and they have sympathy for the under-dog. This country will give you real opportunities. When you are twenty-one I want you to take out your citizenship papers."

He did not live to see the fulfillment of that wish. But when the day finally came, I felt that his spirit was near me; and that he was as proud as I was that I had become a real American at last.

I want Bud to be proud when he, too, reaches his citizenship at twenty-one. But he need not show his pride by boasting. He can show it much better by so living that he will be an upright, loyal, law-abiding son to the country which needs such children.

So the wish I made to the supposed fairy still stands. I want my boy to love his country! For if he does that he will try to be honest, brave, cheerful, kindly, helpful, tolerant, clean, industrious, and law-abiding.

He will fight against injustice; but he will respect the rights of others. He will be willing to work for his money. He will be patient in adversity and generous in prosperity. Foreigners will find him both a gracious host and a gracious visitor. Success will not make him boastful, nor failure turn him to bitterness.

During the war the billboards carried huge posters which read:

YOUR COUNTRY NEEDS YOU

That poster ought still to be on the billboards throughout the land. It is all wrong to suppose that the only time our country needs us is in time of war. It needs us every day.

I want Bud to realize this. He is only fifteen. But his country needs boys of fifteen to show themselves as manly, courageous, clean-thinking lads. It needs them—it needs *all* of its children, with our dreams and our hopes. We ought to love our country well enough to give her the best that is in us, every hour of every day.

He need never mention the word "patriot." I hope that he will never undertake to tell another where the path of duty lies. But I hope that he will go quietly and ungrumblingly about the business of everyday living. That he will cheerfully give his best to the task which may confront him. I hope that he will ever strive to be all that is implied in the phrase, "a good American citizen." I trust that he will vote regularly and pay his taxes ungrudgingly. I want him to obey his country's laws, even when he does not whole-heartedly approve of them. I want him to be willing to die for his country, if need be. But, day by day, I want him to be willing to *live for it.*

THAT'S my idea of patriotism. All that the Flag, and the country, and the government can confer on us is the opportunity to be a true man, or a true woman. They give us no wisdom that we do not earn; no courage that we do not ourselves supply; no eminence, unless we climb the heights.

Therefore, the best patriotism is to be, not "one hundred per cent American," but to do our best to be one hundred per cent *a good citizen.* And the only advertisement we can write of our country, the only one that will carry real weight, will be written in our own lives.

Late American Lowboy

(*Continued from page 21*)

crossing the street with determination, she licked chocolate from her fingers and followed.

When Jim-Jams reached the Smedlay barn he found Braddy gravely inspecting a pair of curiously shaped pieces of rusty iron.

"What are they, butterfly hinges?" asked the collector.

Click looked a warning at the uninvited guest.

"I guess that's what they are." He cocked his head on one side for a better view. "They look kinda like butterflies."

"Awf'ly good looking," said Braddy, in the language of the tribe.

"Aw, they're the bunk!" Jim-Jams exploded. "They come off an old buggy or something. Don't spend away your money on that stuff, Brad!"

"I guess Brad has a right to buy what he wants to with his own money," said Click. "I guess he knows more about grasshopper—"

"Butterfly," said Braddy politely. "How much are they?"

"Le's see now. I'll tell you what I'll do. You're a purty good friend of mine—you can have 'em for a quarter."

"Good night!" exclaimed Jim-Jams.

"That's cheap for nice gr—butterfly hinges. You couldn't buy—" A new look of irritation came over the inventor's face. "What's the idea of ever'body comin' here? Am I havin' a party, or what?"

IT WAS Tilly Rickhill, fair, fat, and nine, who now darkened Click's doorway—and life. Jim-Jams seized upon her eagerly.

"Looka here, Till. Click is tryin' to soak Braddy a quarter for them two rusty old iron things. That ain't fair, is it?"

Tilly looked inquiringly at her unwilling host, and asked:

"What're you going to do with all that money, Click?"

"W'y, I'm goin' to buy some nuts and—and bolts and screws and nails for a thing I'm makin'."

Tilly's face brightened at the word "nuts," then fell. Click was evidently talking about hardware. There was no nourishment in that.

"No; a quarter's too much. You hadn't oughta cheat Braddy like that."

"I don't mean a quarter for just them," said Click. "Can't you wait till a person is through speaking?"

He laid the awfully-good-looking zoölogical hinges on the bench, then dramatically produced the extinct battery of a flashlight, a crank from a Ford car, a delightful patent medicine bottle, and the remains of a bicycle pedal.

"A quarter for the whole lot," he announced.

"That's cheap," came a new voice at the door. It was that of Breckinridge Jones, and if Breck came, could Allen Landsford be far behind? So the gathering was now enriched and enlivened by the addition of these two choice spirits, cronies of Click, allied and associated powers.

BUSINESS, today, is a matter of MEN—MEN who produce things, MEN who sell things, MEN who direct things.

And yet, many a business that would not operate a single day without insurance on its PROPERTY goes on year after year, taking a chance on the MEN who are the real cornerstones of its success.

Every key man in your business—partner, officer or department head—should be covered by a Provident Mutual Business Life Insurance Policy that will provide funds for his replacement, for carrying on during the critical period of readjustment and, in some instances, for purchasing from his heirs his interest in the business.

Write for booklet, "So I Took the Forty Thousand Dollars", giving some interesting facts concerning Business Life Insurance.

ALL THIS MONEY in one month *from* Short Stories

"Actual cash sales for work done in January amounted to $1643! I have received $730 from my February submissions, with four novelettes not yet heard from," reports Lieutenant Arthur J. Burks, successful Palmer student.

There is no reason why you, too, cannot write stories that sell. If you have imagination—the urge to write—the Palmer Institute Course in writing can back your ambition and initiative and help you produce the kind of stories that magazines want right now.

"The Palmer Course would have saved me years of labor," writes Jim Tully, author of "Jarnegan," "The Circus Parade," and stories appearing in Vanity Fair, Liberty and American Mercury. Palmer training strengthens and enriches your writing ability. Many professional writers have also been helped by Palmer training. If you want to write stories that pay dividends, use coupon.

Jim Tully

PALMER INSTITUTE OF AUTHORSHIP
Dept. 122-G, Palmer Bldg., Hollywood, Cal.

No salesman will call on you.

"Well, all right, I'll take them," said Braddy.

He produced twenty-five cents from his pocket, and all the younger set was thrilled to note that there was much more where that came from.

"I'll deliver 'em home for you," said Click. "They're too heavy for you."

"Don't we have to fix that picket?" asked Braddy.

"I'll fix it before night. Don't you worry."

The whole party assisted physically or morally in delivering these goods to Braddy's back yard.

"Now you come over to my house," proposed Jim-Jams, "and I'll show you some better stuff than that. More antiquer. I've got a whatchamacallit there I'll sell for a quarter. It's solid silver or something. It's got grapes and bananas and stuff like that carved on it."

"Well, all right," said Braddy.

Since nobody was willing to allow this infant industry out of sight, all hands went along to Jim-Jams's house, and the army picked up volunteer recruits as it went along.

"Why do you like old things so much?" asked Tilly, who was walking beside the popular Braddy on the way to Jim-Jams's exhibit. She could not conceive of spending money for things not to be taken internally.

"It's heredity."

"What's heredity?"

"You catch it from your mother," said Braddy.

IT WAS a happy and tired little boy who crawled into his darling old four-poster bed that night shortly after supper. It was the end of a perfect day. His money was gone to the last penny, but safely stowed away behind the cellar tank were incredible treasures.

He realized that some of the things, like bicycle pedals and flashlight batteries, were probably not eighteenth-century enough for Mother's tastes. But everything was old and shabby and rusty and tarnished, nothing was 'trocious or new. He had bought with great shrewdness, and always paid less than the asking price, just as Mother did in antique shops.

There were those awfully-good-looking butterfly hinges—any mother would love them. The whatchamacallit he had got from Jim-Jams was as heavy and black as coal, a pot or pitcher or something.

There was a kind of candlestick that might provoke enthusiasm, a little stool made of "antiquewood," a thing that he was practically sure was a door knocker, and another that was possibly a jam hook—an article that he had heard highly spoken of, but had never seen.

There was a cracked teacup, maybe Spode, a pinch bottle, and the larger part of a mirror, that he had got for a song.

He had never had a more pleasant and stimulating day. He had collected friends as well as antiques. All were good to him, asked him to their barns and garages, spoke nicely to Blimp. Whenever he bought anything, they all went to a store and got some candy or something, but he always gave his share to Tilly Rickhill, because it was bad for teeth and tummy to eat all those sweets.

It had been a day crowded with stirring events—two dog fights, three boy fights, getting chased out of Mr. Reisling's barnyard when they were looking for free antiques, Breck Jones's falling into a ditch, and Jim-Jams getting hit with a rotten apple.

"I've had a very happy day," he told his mother, "and I've got a surprise for you!"

"Don't get me all excited. Good night, honeybunch. Go to sleep promptly."

Braddy did so, and this was probably the shrewdest thing he did that day. Because the gracious old Sillinger sitting-room promptly became no place whatever for a boy of a sensitive nature.

When Bettina Bradford Sillinger came down-stairs from the task of laying the lowboy away for the night, she found her husband comfortably settled in his favorite chair, with his favorite evening paper.

He seemed so peaceful and contented there before the fire that Bettina procrastinated before the deed she had to do, rearranged the flowers in their vase, straightened the magazines on the butterfly table.

"Nicky," she asked, "are you feeling fairly strong?"

"What's that, Bet? Sure, I'm all right."

At that moment the telephone bell rang, and both winced from the untimely blow. Bettina laughed nervously and ran to take the message. The eyes of Nicholas Sillinger went back to his paper, but his ears went to the telephone. His wife's voice had the polite, not the cordial, note. She was obviously speaking to somebody she did not know very well.

"Oh yes. How do you do? . . . Oh, I'm awfully sorry. Not serious, I hope. . . . Braddy did? Why, I'm terribly surprised. It isn't like him at all. . . . Well, he's gone to bed now, but I'll have it out with him in the morning. . . . No; he ate his usual hearty supper. As a matter of fact, he doesn't care much for that sort of thing. . . . Yes. . . . Yes. . . . I hope she'll be all right. I'll call you in the morning. . . . Yes, hasn't it been beautiful?

"It's that Mrs. Rickhill," Bettina explained. "She says that Tilly— Oh, there it goes again!"

This was a different note.

"Oh, hello, Gertrude. How's everything by you? . . . No, I haven't heard a thing." There was a long silence on Bettina's part, and her husband judged that Gertrude Jameson was delivering something of an earful. All he could get out of it was that Braddy would be carefully examined on the subject in the morning. "No, that's all right, dear. I wouldn't think of it. He's got to learn to abide by his bargain."

"What's all this?" asked Nicholas.

"YOUR son has been running fast and loose, spending money like water and ruining the health and morals of the younger generation!"

She explained further: It seemed that Tilly Rickhill's tummy was in a serious state, that she had declined supper for the first time in history, and was now in bed running a temperature. James Jameson was likewise without appetite, and was suffering from certain bruises and contusions.

Rumors were abroad that others were in trouble also, that certain citizens were complaining of depredations and breaches

I'll Pay Lazy Men Good Money

HERE is an opportunity so great that even lazy men can earn up to $100 a week! Think, then, what men with an average amount of ambition can do with this opportunity. LOOK!—see what men with just ordinary ability and a fair amount of ambition can do! Louis George was selling house numbers when he started with me—now he is one of my $10,000 a year men and will be in the $18,000 class before the year is over. L. D. Payne, Iowa, was a barber—he made over $4,500 his first 200 days with me and now he controls a business that pays $500 to $600 every month. Hundreds of others amazed at their own huge earnings.

A BUSINESS THAT HAS MADE FORTUNES

Here is a business that is making fortunes for wide-awake men—here is an uncrowded field with unlimited possibilities—FIRE PREVENTION! Cash in on the demand for fire protection which has been created by millions of dollars in advertising by our company, insurance companies and government bulletins. State and city fire ordinances actually force business your way.

100 MEN NEEDED AT ONCE

Increased demand makes immediate expansion of sales force necessary. Successful applicants will be assigned to paying territories immediately. Pay starts at once—pay checks mailed every Saturday. Full time men preferred but there is room for a few spare time men who wish to later work into a big-paying full-time business of their own. Write at once for application blank and details of position.

Ray C. Hahn—Director of Sales

FYR-FYTER CO.

1-G Fyr-Fyter Bldg. Dayton, Ohio.

How Corns

Calluses are ended now

This new way stops pain in 3 seconds

SCIENCE has perfected new methods in ending corns and callus spots. No more paring. That is temporary; that is dangerous.

You touch the most painful corn with this amazing *liquid which acts like a local anaesthetic.* The pain stops in 3 seconds. You wear tight shoes, walk, dance, in comfort . . . instantly!

Then soon the corn begins to shrivel up and loosen. You peel it off with your fingers like dead skin. The whole corn is gone. Works on any kind of corn or callus, hard or soft; new or old. Ask your druggist for "Gets-It." Results are guaranteed.

"GETS-IT" *World's Fastest Way*

of the peace, and that Braddy's wealth was at the bottom of everything.

"How much did you give him, that he could corrupt Pequot like this?"

"Three dollars," said Nicholas miserably. "It was for a present for you, and he has spent it for something else. Why, that's dishonest!"

"No; maybe not. Gertrude says he's been buying junk. James broke down and confessed. He himself sold Braddy an old tin coffee pot or something that he found in a junk heap. He got a quarter for that. Gertrude offered to repay us, but I said we'd stick by our bargain and take our medicine."

"Quite right, of course."

"She thinks he bought a lot of old stuff from the other children, too. He told me to-night that he has a surprise for me, so I suppose I get all that junk."

"Well it *was* a shock," said Nicholas. "I'm glad you prepared me."

"Oh, my goodness, I didn't know about that until just now! That isn't the shock. You've still got that coming." Bettina laughed sheepishly. "It's along the same lines, only worse. The truth is, I've been up to my old tricks. That hundred dollars you gave me for clothes. Well, in a word, I spent that for an antique!"

"You have a right to do what you please with your own money." His tone implied that she had no such right whatever, and was so interpreted.

"I didn't mean to do it—honestly, old Nick. I drove over to Milltown to go to Marie's, where they have just the kind of exterior decorations a ragged wife needs. I parked the car near Jefferson Street, and walked toward the store, but I had to pass Kessler's. I couldn't go all around Robin Hood's barn just to keep from passing Kessler's, could I?

"Well, right there in the window before my eyes was a fanback Windsor chair exactly like ours. That pattern is awfully rare, you know. He asked a hundred dollars for the chair, and I bought it so quick he looked unhappy because he didn't ask more. It will be delivered tomorrow, and that will be the biggest birthday I ever had. Now we've got a pair, and they're worth much more than they would be separately.

"What do I care for clothes? I'll stay at home, and sit in my lovely chairs, one on this side of the fireplace and one on that!"

"I see," said Nicholas. "Don't you think it's a little chilly in here?"

"Chilly," Bettina answered, "is exactly the right word!"

NICHOLAS was running true to form. If annoyed he invariably went downcellar.

"When he wishes he could shake his wife," thought Bettina, "he shakes the furnace."

As the peevish husband turned on the light, he saw Blimp, the popular lowdog, chewing on an unfamiliar piece of wood. When this was taken away from him, the delighted dog wagged himself violently, and darted through the narrow opening into Braddy's warehouse. In a moment he came back, dragging a burlap bag. The idea seemed to be that he could bring things as fast as Nicholas could confiscate them.

Nicholas took his flashlight and squeezed

An Opportunity to share in the *Net Profits* of an *Investment Trust*—

AMERICAN *and* SCOTTISH INVESTMENT CO.

— modeled after highly successful English and Scottish Investment Trusts for which GEORGE M. FORMAN & CO. has acted as American Investment Advisor for many years.

Three-fold advantages are offered the investor in the common stock of American & Scottish Investment Company—an Investment Trust of the "Management" type—managed by GEORGE M. FORMAN & COMPANY:

(1) Through the broad diversification of high grade securities held by the company, he gains in safety for his funds.

(2) He shares in the net income and profits of the company accruing from close and skilled supervision of the investments. His income is not limited to any fixed return.

(3) He gains directly from any increase in the market value of the stock as the company builds up a reserve.

We suggest that you mail the coupon below for a circular describing this investment opportunity in detail.

Make Your Dreams Come True

"EVERY-TIME I saw our new secretary, Miss Clarke, I was so impressed. Her clothes were just right—how I envied her! I just couldn't help it!

"She walked around the office with such a reliant air, and made friends of all of us. She frequently was given preference over the rest of us—called upon to do special work that gave her a chance to show her ability—and eventually this was sure to lead her into a bigger position.

"Then one day it dawned upon me that it was a matter of clothes. I was timid because of my cheap, ill-fitting clothes, while she was confident, knowing she looked her best. She was going forward and I was standing still.

"And so, Margaret Clarke, it was a happy day when I joined our Club. My wardrobe isn't overstocked, but thanks to you and The Pin Money Club, I can afford better-looking clothes and more of them than my present salary could buy for me.

"I've been getting along famously in my office work, too. Again I must say you gave me my start, and I am so thankful!"

WHAT IS THIS CLUB?

IT is called The Pin Money Club, and business girls and home women, the mothers of little children, too, are helped to turn their spare moments into dollars and cents in the pleasantest way. If you have been wishing for some new clothes or money for anything else these lovely summer days, let me show you how to earn it in the money-making department of The American Magazine. Just address your letter to

Margaret Clarke

Secretary, Pin Money Club,
The American Magazine
Department V
250 Park Avenue, New York City.

himself into the private quarters. There was an orange box full of astonishing things. He looked down upon this treasure chest, thought deeply, then lifted it over into the light and summoned Bettina to witness the exhibition.

"See what your son has done with the three dollars I gave him. There's the child of an antique fiend for you. Take a look at that lovely bunch of junk!"

Bettina took, as requested, a look, and the first thing she saw was a piece of cardboard bearing the penciled words: "Hapy Berthday for Mother."

"Bless his darling heart!" said Bettina. "I never was anything special extra at spelling, either."

"I don't think you realize how serious this is."

"Maybe I don't understand. Did you give him the money for some specific thing—as you did me?"

"N-no. I told him to use his own judgment, but—"

"Well, he did. It was a poor thing, but his own. He thought this rubbish would please me. He's imitative, collective, secretive—all absolutely normal for his age. What's the idea of the iron cream pitcher?" She took this filthy object in her hand and examined it gingerly.

"Probably that's what James made him pay a quarter for. Lon will have a fine story for the train to-morrow morning! I'll never hear the last of this. My pride in Braddy will be hurt."

"Sometimes I think your pride could do with a little hurting!"

"You know what they'll think—if they're too polite to say it: Following in Mother's footsteps."

"YOU talk as if I were given to drink or something." Bettina was rubbing the bottom of the possible cream pitcher, trying to find out what it was made of. "I'd rather have Braddy throw away his money for trash like this than for *eating* trash. You'll notice *he* didn't go to bed with a stomach ache. He was chivalrous, and gave his to a girl. . . . This thing might not be so terrible if it was cleaned up. Maybe it's pewter—it's rather heavy. I wish there could be one thing in this terrible mess that I could honestly praise!"

"Dear, I want you to do one thing for me." There was an unusual note of firmness in Nicholas's voice. "You say that pair of Windsor chairs is valuable. Let's sell them both. I'd like to be able to prove to others that your knowledge of period furniture has a commercial value. We need the money, anyway. Then buy yourself some nifty clothes, and we'll live in the twentieth century for a while. Are you on?"

"I'm on," said Bettina bravely. "I'll let Kessler find a buyer. He has more nerve about asking high prices than I have."

"You're an angel to do this!"

"I don't mind—I mean, not v-very much. Braddy's antiques will console me. Now put 'em back, so he'll never know we peeked."

Thus happiness returned to the head of the house of Sillinger. Nicholas did not know that his wife ran her hands lovingly over the velvety surface of the fanback Windsor, and looked with a sinking heart at the place across the fireplace where its duplicate was to have stood.

Nicholas came home the next night bearing a box of roses in honor of the day. Bettina wore a new gown, which was duly pronounced "nifty."

"You don't mean you sold your antique already?"

"No; not exactly; but Kessler gave me an advance on it."

"That's splendid!" He now looked at his scrubbed and polished son and heir. "Well, Brad, I hear you went on a tear yesterday."

Braddy looked at Mother in a way that implied secret diplomacy.

"Ever'body got well," he said. "Nobody died—Tilly or anybody!"

The boy's eyes strayed toward the fireplace, and were quickly averted. The observing father followed the look. Now his face showed astonishment, concern.

"Why, that's the new chair! Don't they look fine—the two of them? Only I understood—"

"It's a grand story," Bettina answered, as she opened her box of flowers; "but we think it ought to be served with dinner, don't we, late American lowboy?"

Braddy's eyes, arms, legs, and yellow curls danced with excitement.

"Now it can be told," said Bettina, when the time seemed ripe. "Braddy's present to me was a box full of quite nice things he bought from the boys. The best-looking object was a tarnished old pitcher he got from James Jameson.

"I started cleaning it with a toothbrush, and I found a mark on the bottom—a jiggly rectangle with the letters, 'P.R.' inside. Then I got excited and went to see Master Jim-Jams. At first it was hard to get anything out of him, because he thought I wanted our quarter back; and there wasn't any quarter—'it was all et.'"

"Yes, his father joshed me about that," Nicholas interrupted. "They all had a good deal of fun over me, especially when I lost fifty-eight cents at auction."

"Just wait till you hear. James finally confessed that he had found the thing in the public dump heap where the boys were digging a cave. There are some foundation stones there, so a house must have stood on that lot once."

"It's been a dumping ground as long—"

"Oh, *please* keep still, Daddy!" begged the excited boy.

"So all hands agreed that the thing, whatever it was, belonged to us fair and square, and we took it to Milltown with us, because we had to take the chair to Kessler. He said, yes indeed, he could get a fine price for the pair; gave me back my hundred dollars on account.

"THEN I showed him the pitcher thing, and he lost interest in chairs. He said it might be very important and could he work on it for an hour or so? Braddy and I went to Marie's and tried on dresses—I mean half of us did.

"When we got back to Kessler's you'd have thought we were the Queen of Sheba and Son. He had cleaned up and tested the cream pitcher, and made an enormous discovery. It is a missing piece in a famous set. The Metropolitan Museum has the teapot and sugar bowl, and there's a standing order with all dealers for the pitcher. It was made by Paul Revere, and it is probably an absolutely unique design.

"Kessler will put the thing through for

us, and our share of the loot—grab your father, Braddy!— The noble house of Sillinger will get fifteen hundred dollars!

"Play that over on your cash register, old gold-digger!"

"Oh, Braddyboy," said Nicholas fervently. "You Napoleon of Finance!" Finally he was able to speak coherently again. "The things I'll say to Lon Jameson!"

"No doubt you'll make yourself obnoxious. Braddy and I have nicer natures. We're going to give a big party to all the children who helped him yesterday, and ruin their tummies some more."

"It's rather too bad you have to sell the thing," said Nicholas grandly.

"Not at all. It's a museum piece—it has no business in a mere home. What do you suppose was the first thing Braddy said when we heard the glad news. 'Now, Mother, you can take home your awf'ly-good-looking fanback Windsors!'

"And there they are, sitting pretty by the fireplace. The new one has a cardboard tag, 'Hapy Berthday for Mother.' Of course we owe Kessler a hundred dollars; but what's a hundred dollars to people of our means?"

"Nothing whatever," said Nicholas loftily.

"Nothing whatever!" said the late American lowboy.

My Adventures in Broadcasting Sporting Events

(*Continued from page 47*)

in that game I made some reference to the well-worn joke about Pittsburgh being a smoky town, and referred to the way in which my collar got soiled. I got many a letter calling me to terms for casting this aspersion upon the fair name of Pittsburgh and a room full of collars from various sources—all sizes, by the way.

It is not merely one's interpretation of the rules and one's pronunciation and choice of words that must be watched. Out there, in that huge radio audience, are experts on everything in the world. At one game played in St. Louis, during a lull I noticed a flock of birds flying south over the field. I mentioned this fact, saying that a flock of ducks was flying south in V-formation. A letter came promptly from Sherrill, New York, saying:

I am writing you to put you wise for future use. You said that a flock of ducks was flying south, and shortly after you said they were flying in V-shape. Now, this is what I want to put you wise to: Wild geese fly in V-shape, but ducks any old way. The one at the point of the V is the leader, and the rest go where he does. So those were geese, not ducks.

Thus, I am picking up all sorts of miscellaneous information.

The hardest baseball game I ever broadcast was one that was never played. In the series between Washington and Pittsburgh, the last game was to be played in Pittsburgh. The teams stood tied, and this seventh game was to decide the series. The day opened dull and threatening. A drizzling rain fell at intervals. But the crowd came—forty-five thousand strong.

AGENTS WANTED for Local Territory

Fifteen minutes before the game was scheduled to begin, I went on the air. The radio audience wants to hear what is happening as the players warm up and as the celebrities file in.

Those fifteen minutes are by far the most difficult part of the program, for the game furnishes its own material for broadcasting. But this day, just about the time I started at the microphone, the rain came down. Newspaper men scurried out of the press boxes. But I had to stay at the mike, which was completely exposed.

Meantime, Judge Landis sat in his box imperturbable, grim, sweeping the field, the air, the heavens with his eyes, undecided whether or not to call the game off. With that huge crowd of fans present, with everybody keyed up for the last game, and the players and attendants worn out, he did not want to postpone the game unless he had to.

Meantime, I stood there in the rain, soaked to the skin, talking, talking endlessly as the minutes wore on, running out of material constantly, yet forced to stand my ground and keep feeding talk to the great listening audience of the air.

AT THE end of an hour and ten minutes, Judge Landis called the game off, and I sent a fervent prayer of thanks to heaven I don't know what I would have done to keep that talk going had it not been for Nick Altrock and Al Schacht, the two famous comedians of the Washington club. In spite of the rain, they kept up their clowning, and I was able to relay their monkey-shines to the radio audience. That day Nick Altrock did the most comical thing I have ever seen him pull. While the rain was coming down and the field was a sea of mud, he got down on his stomach at second base and swam to third. After the game, I got this letter from him:

Mr. Gramm, dear sir and etc: I want to thank you for broadcasting me on your radio set, as I have never been broadcasted before and didn't realize what a pleasure it was. Mr. Christy Walsh told me about you broadcasting me and I was astonished as I thought that I would have to be present at the time. However, it is a great pleasure to know that there are people who take interest in me without my consent.

Me and my partner, Al Schacdt, which is a name you spell the best way you can, are both deeply grateful, but I think I am more considerate. Al and me both worked hard to amuse those forty-five thousand people who had been sitting in the rain for three hours waiting for the sun to do something bright. And I guess we certainly made them all laugh. I thought that Judge Landis would fall out of his seat when I was swimming from second to third base.

I want to repeat that I want to thank you again in the first place. My partner, which is still Al Schacdt, also wants to thank you, if possible.

If there is anything we can do for you, just notify us at the earliest opportunity, and we will give the matter deliberate consideration.

Yours on the dotted baseline.
(Signed) Nicholas Altrock.

.....
(Newspaper co-respondent and Man of Letters)

What was the most exciting baseball game I ever broadcast? I think the listeners-in will agree with me that the last inning of the last game of the last World's Series carries off the palm for breathless excitement. You will recall that the New York Yankees had defeated the Pittsburgh Pirates three straight games. If they won the fourth, that would not only end the series but would blank the Pittsburgh team. The fourth game was played in New York, and 60,000 fans went to the Yankee Stadium confident that Miller Huggins's mighty machine would put the final crusher on the visitors that day. Gamblers were betting 20 to 1 that the Yankees would win.

Now, when the Yankees went to the bat in the last half of the ninth inning, the score stood three to three—a tie. Two of the Pittsburgh pitchers had blown up, and the last hope of the desperate Pirates, John Miljus, was in the box. Miljus had been a minor-league pitcher for ten years. He had finally squeezed into the big league, but the breaks had been against him. He started on the Brooklyn team and failed. Now he was with the Pirates, and was put in the box after all the stars had been humbled. The first man at the bat for the Yanks in the ninth was Combs and he got to first base on a little single. Koenig followed, also making first on a fumble.

Then the great Babe Ruth strode to the plate. A homer now would end the series in a blaze of glory. But the Pirate captain stepped from the dug-out and signaled Miljus to pitch four balls to Ruth—to walk him. A growl of anger at this rumbled from the crowd. That filled the bases—Combs on third, Koenig on second, Ruth on first. And nobody out.

It looked as if the show was all over as the giant figure of Lou Gehrig loomed at the plate. Here were the bases full, a third-string pitcher on the mound, and one of the greatest batters in baseball facing him. Gehrig had made more runs that season than any man in baseball history. But in a few moments the crowd was electrified as it saw the mighty Lou strike out. Next came Meusel. Meusel is a giant. He has a long record of home runs. He had not done very much in the series and was due for a hit. A little single would have ended the game. Meusel might even knock a homer. And then, while the great crowd held its breath, the big minor-league pitcher struck Meusel out. The stands were shaken by the mighty shout that swept over them. The whole situation had changed—the bases full, two out, the end of the ninth. Every nerve had tightened. It looked now as if Miljus might hold them. And then came to the plate Lazzeri—another home-run hitter.

THIS game was being played in New York. The huge stands were jammed with New York rooters. A few minutes before, they were howling for the blood of the audacious Pirates. But now, in a trice, the mood of the vast throng had changed. The heart of every man, woman, and child in those stands went out to that solitary figure on the mound—that big, hulking pitcher, kicked about the big league, and now standing upon the very threshold of undying fame in baseball. These old human hearts of ours can be very selfish and narrow and small upon occasion, but how they can spring open in a burst of generosity when they are touched by some big human dramatic force!

Now the New Yorkers wanted the Pittsburgher Miljus to fan the New York Lazzeri. Miljus wound up upon the mound. The pitch was coming. A silence as of the grave fell upon the multitude.

The infield moved farther out for the heavy-hitting Lazzeri. Miljus, with his whole soul in the pitch, the opportunity of a whole life in his grasp, lurched in a tremendous effort, and the ball flew from his hand. Suddenly it swerved. A groan rolled out of the stands. It was a wild pitch. The catcher leaped frantically for it. But it sped past him. The next instant Combs raced over the plate. For a moment the crowd was dazed. Miljus stood rooted to the box.

A wild pitch!

It was a pitiful, harrowing, heart-crushing anti-climax to one of the greatest moments in baseball.

How I called those plays I do not know. I only know that my own breath was almost shut off with the excitement of that dramatic moment. Strange! It is only play. It is only a game. What does it matter? Nothing much, perhaps. But down in the bottom of all our hearts is the hunger for romance and adventure—a romance of that old yearning which used to carry us out of ourselves as kids. And out there in the baseball field, or in the boxing arena, instants like this rush upon us, sweeping us out of ourselves, lifting us out of the drab, uninteresting level upon which we habitually walk. Moments that carry us along with the players in the field, or the fighters in the ring to the dizzy heights of some great moment.

THE most exciting fight event ever broadcast was undoubtedly the Dempsey-Firpo fight. I did not do the broadcasting in that extraordinary battle. It was done by Major Andrew White. But I sat with him and assisted. I cannot possibly express in words the height to which my own excitement rose. That vast throng around the ring was in a state of utter delirium. At the end of the first round, in which Firpo was knocked down seven times and Dempsey himself was knocked clean out of the ring by the giant Argentinian, newspaper men, veterans of scores of ring battles, went almost insane. As for me, my heart was thumping at my breast until I thought it would rend my ribs. And in the midst of it all, the voice of Andrew White went resolutely on describing the terrific encounter and its events as they crowded across our vision.

I take my hat off to Major White!

I want to take this opportunity to impress upon radio fans the difference between "announcing" a program and "announcing" a fight or ball game. The latter is strictly not announcing at all, but a new kind of reporting, in which the announcer must send out his description, hot and hurried, as the events sweep before his eyes.

He has no time for preparation. He has practically no time for thought. The punches crash over, fists fly; the ball flashes, the player speeds down to his base; the football team, after a hurried huddle, forms and in an instant crashes into its opponents.

All these things happen in a twinkling. They flash upon the eye of the announcer, and his tongue must translate the dramatic action into dramatic words which reproduce the scene to listeners thousands of miles away, sitting in quiet dining-rooms and libraries. I get reproached for mistakes by the fans after such a bit of reporting. I know I make them. One of

Wash Them Again - and again

the uncanny feelings of the broadcaster is the sudden, swift realization of a mistake almost the instant he makes it. In my own case, my impulse is to dive into the microphone and pull it back. But the broadcaster's mistake, once over, has passed on forever.

The first time I was ever called on to do this kind of broadcasting was at the Greb-Wilson fight. Wilson was the middle-weight champion. Greb was the challenger. I went out to both camps to visit the fighters and prepare myself for the ensuing ordeal. It is interesting to note that in one of these camps I found a young chap training to take part in one of the preliminaries. He was Jack Delaney, who later became light heavy-weight champion of the world.

The great event took place at the Polo Grounds in New York. At the appointed time, I took my place at the ringside. And there I had an experience very much like one which happened to a little office boy in our studio. We were to have Cardinal Hayes of New York in an address. This little chap was a devout Catholic, and he was very much impressed at the prospect of seeing and meeting a real live cardinal. He was told at home that the Catholic on meeting a cardinal kneels and kisses the ring of His Eminence. Well, this little fellow practiced faithfully what he was to do when he was presented to the great prelate. That night, Cardinal Hayes was sitting in the studio, surrounded by his retinue, when the little office boy was brought in to meet him. The kid sidled shyly over, and when the cardinal put out his hand, the boy quickly grabbed it, shook it timidly, blurted, "Hello, Father," and fled from the room.

At the Greb-Wilson fight, I was sitting at the ringside, the microphone beside me. Suddenly someone put the microphone into my hand and said, "Mac, you're on the air." Then I started talking. And after a while it was all over and a new middle-weight champion had been crowned. But what I said, or how I said it, I can never tell.

AT a big sporting event, one of the problems is to keep out of the microphone the things we don't want in it. In a studio we can control every whisper. But at a baseball park, football game, prize fight, or other big public event, the announcer is usually jammed in among a crowd of persons, each intent upon his own reactions. And at a fight or game, some excited fan is apt to give vent to his feelings in strong language which would not sound very pretty over the air. A little wire runs from the microphone, terminating in a small button. A slight pressure on this button shuts the mike off and on. Like most announcers, I carry the end of this wire and its button in my pocket, with my finger ready for instant action. If anything occurs, or any thoughtless conversation crackles around me, a slight movement of the finger—and it is shut off. This will account to the reader for occasional little momentary breaks during such an event. The announcer gets so that he works this little button almost unconsciously.

Every now and then the radio audience hears the roar of the crowd. This is accomplished as follows: A cluster of large microphones is arranged at the neutral corners of the ring. Pointing in all directions, microphones gather in the bellows of the crowd. They also can be shut off and on at will. And so, whenever the announcer wants to send out the applause or cheers, the glee or the wrath of the big throng, he merely switches on the noise microphones. These may be switched on full, or they may be used to filter in a low rumble, forming a realistic background for the exciting story the announcer is sending out to his listeners.

The radio audience always likes to hear from the principals in a fight or ball game. But this is not always an easy stunt to pull off. Like most other persons, these fighters and ball players fight shy of the mike. Many a time I have called one over to say a word or two to the unseen audience, only to have him struck dumb—paralyzed with mike fever when the little tin instrument was put before him.

THE most completely disturbed man I ever saw before a microphone was Paul Berlenbach, who was middle-weight champion at the time. We had him come up to the studio to make a little talk. He sat there like a fighter in his corner waiting to go into a scrap that meant certain disaster. Berlenbach is a very courageous fellow. I have seen him sitting in his corner gazing placidly across the ring at a powerful adversary who in a few moments planned to knock him cold.

The little tin mike did what no ring opponent had ever been able to do. It completely unnerved Paul. The perspiration stood out on his forehead as he waited to be introduced. He would get up and pace up and down the studio. If he had had to wait much longer, I do not know what would have happened to him. And when he started to speak, he was almost dumb.

A good many people have said that the fights over the radio are frequently more exciting than they are in the ring. I am afraid the radio audience has been a little spoiled by the Dempsey battles. That extraordinary, colorful, smashing battler manufactures drama in a ring faster than an announcer can feed it into the mike.

It is not so with all fighters, or even with all champions. I broadcast the elimination fights through which Mr. Tex Rickard selected Gene Tunney's opponent in his coming battle. And they were not very exciting affairs. The attitude of the radio audience and that of the audience at the ringside toward an interesting fight is quite different. The crowd around the ring gets its fight spectacle directly from the fighters. If the contest is slow and unexciting, the spectators blame the fighters. But the radio audience blame the announcer.

As an instance of how the radio announcer gets blamed for what happens in an event he is reporting, I recall the World's Series game in which the pitcher walked Babe Ruth four times. Baseball fans resented that. They said it wasn't playing the game. It wasn't sportsmanship. And they seemed to feel that it was all my fault. But of course I did not walk Babe. I enjoy seeing the bambino send the ball flying over the bleacher as much as anybody does. But I did have to announce what happened.

Just one thing more: In the old days, I used to go to prize fights as often as I could

Mellin's Food A Milk Modifier

The Taste of the Baby's Food

If the baby could talk he would say that his mother's milk makes a strong appeal to his taste. He would also, if able, express verbally his distaste for some mixtures which are forced upon him in spite of his physical protest.

If the baby is fortunate enough to have human milk his taste is satisfied as well as his needs for nourishment. It may happen, however, that his mother cannot nurse him and some substitute for human milk becomes necessary.

The taste of Mellin's Food is so appealing that the baby takes the mixture eagerly, and rarely if ever is it necessary to force or urge nourishment prepared from Mellin's Food and milk. The baby's nutritive demand will also be satisfied if he is fed upon milk properly modified with Mellin's Food; therefore to force the baby to take distasteful mixtures is a needless and unwarranted procedure.

Mellin's Food Biscuits

Especially suitable when it becomes time to wean the baby from the bottle.

A sample box sent free, postage paid, upon request.

Mellin's Food Co., 177 State St., Boston, Mass.

It doesn't have to be Christmas

to make somebody a present of a good flashlight. Man or woman, boy or girl, will find a hundred uses for it, indoors and out, daytime and night.

Of course I'd be choosey if I were making the present, and I'd be sure the one I gave was a genuine Eveready—loaded for darkness with genuine Eveready Batteries. That'd be my way of making *sure* that my gift was as trusty as it was good-looking.

afford it. And, of course, I could only afford a seat a very long way from the ringside. Now when I announce, I have a seat right at the ring with no one and nothing between me and the fighters. When Dempsey was knocked out of the ring by Firpo, he fell right into my lap.

Now, having seen fighting at close range and at long range, I want to say this: The man right at the ringside sees the fight, but the man far back hardly sees it at all. At a distance, one sees the arm swing and then hears the resounding rap of the glove, and the groans of the crowd at what is supposed to be a terrific wallop. But the man at the ringside knows that the blow meant nothing—that it was blocked by the other fighter. The little sharp, short, powerful blows delivered at close range, which do the real damage, are scarcely seen by the crowd at all.

A friend of mine went to the Dempsey-Firpo fight. His ticket cost twenty-five dollars. When the first round opened, he saw Dempsey rush out of his corner, a savage mix-up, and then Firpo go down. Then the crowd, in a delirium of excitement leaped to its feet, and my friend could not get sight of the ring again. When he got home, he learned from his family, listening in at the radio that Dempsey had been knocked out of the ring.

Now we are approaching another championship fight. And, of course, the personality of the champions dominates interest.

THIS is a good place to give a little piece of testimony I have never before been called on to offer, about a much-disputed incident: You remember that Tunney was knocked down by Dempsey in their second fight and was allowed a long count. Many have insisted that, had the count been correct, Tunney could not have arisen at the call of ten. Perhaps no one was nearer Tunney that night than I was. He was on the floor in a sitting posture. I was a few feet away outside the ring. My face was on a level with his. And I could look right into his eyes. When he first went down, his eyes were glassy. He was certainly stunned. But before the count had reached seven, his eyes had cleared. I saw them plainly. Reason, consciousness, was back on its throne. Fully aware of the situation, the champion looked to his corner for advice. I think there is no doubt that he would have got up if the count had gone on in the regular manner.

TEN years ago, when Irwin S. Chanin put up two little houses on less than the proverbial shoe string, folks called him crazy. To-day, he's spoken of as the Crœsus of Broadway. This young chap—he's only thirty-five—has built houses, stores, apartment and office buildings, war buildings, theatres, and hotels. Soon the largest hotel in the world, Chanin-built, will be rearing its fifty-two stories skyward. Next month, Mary B. Mullett makes Chanin's operations in the real-estate field read like a tale from the Arabian Nights. Geometry and "knowing when to stop" are two things to which he attributes his accomplishment; but, as you may guess, there are plenty of other things that remain to be told.

College Man Wins Big Advancement

—*by the Accountancy Route*

Ralph J. Daly, college-bred engineer, had made an excellent record at the University of Michigan—so satisfactory, in fact, that for three years he taught engineering at the University of Pennsylvania.

Seeking a greater opportunity, he gave up teaching for business—joined the Detroit Trust Company—but there he found himself doing little more than marking time.

Mr. Daly saw that he needed a grasp of business principles and methods which his college training had not supplied. He enrolled with LaSalle for home-study training in Higher Accountancy.

Today he is Secretary-Treasurer of the Detroit Fidelity and Surety Company—a position which he credits largely to the practical training which he got from LaSalle. *"I feel that it was the one great factor," he writes, "which enabled me to find myself in the business world."*

Send for Salary-Increasing Plan

Do you appreciate what accountancy *means* in the business world? Do you realize that it constitutes the indispensable foundation for success in any business undertaking? Would you seriously fit yourself for positions paying $3,000, $5,000, $10,000 a year, and even better?

LaSalle has prepared a 64-page book entitled "Accountancy, the Profession that Pays." The information it contains is of very real and definite value. It will pay you well to read it. And — LaSalle will send it to you *free.*

Balance the two minutes that it takes to fill out the coupon against the rewards of a successful career—then clip and mail the coupon — NOW.

FAMOUS FEET

how they're kept free from corns

©B. & B., 1928

MARY EATON'S *Famous Feet*

"My idea of a queer fad is to cultivate corns . . . when Blue-jay is as easy to get as a druggist's cheery smile." So writes Mary Eaton, star of Broadway's musical comedy hit, "The Five O'clock Girl."

There are more than a million walking advertisements for Blue-jay . . . for 28 years the standby of the feet. No other way accomplishes Blue-jay's results . . . For the Blue-jay way is logical and safe. The amount of the medication is standardized in each plaster; you cannot apply too much or too little. The soft, velvety pad stops the shoe-pressure and that stops the pain. Then the medication ends the corn. Improved package, with new white pad, at all drug stores. *For calluses and bunions use Blue-jay Bunion and Callus Plasters.*

THE new
Blue-jay

THE SAFE AND GENTLE WAY TO END A CORN

1000 HOTEL POSITIONS OPEN!

Hotels, restaurants, clubs, apartments, hospitals, institutions, schools and colleges everywhere need trained men and women. Over 70,000 positions paying $2,500 to $10,000 a year open annually in hotels of the United States. Nearly one and three quarter billions of dollars' worth of NEW HOTELS, CLUBS and INSTITUTIONS being built this year will need over 200,000 trained men and women. Hotels start you at salaries up to $3,500 a year, with living usually included.

BE A HOTEL HOSTESS
Hotels, clubs, apartments everywhere are calling for hostesses, managers, etc. Splendid salaries, fine living, luxurious surroundings for you!

Previous Experience Unnecessary

You can have one of these fascinating, big-pay positions. Thru our Simplified Study Plan we give you the valuable knowledge that it has taken successful hotel men years to obtain. Age is no obstacle—young and old alike have equal chance for success. A common school education is all you need.

We Put Our Students in Touch With Positions

We train you and put you in touch with big opportunities. All of your training under the personal supervision of Clifford Lewis, Managing Consultant for over 225 hotels thruout the United States. Our students employed by leading hotels everywhere.

Send today for Free Book, "Your Big Opportunity," showing how we can train you for one of these splendid positions, and explaining our Money-Back Agreement.

Uncle Ephraim

(*Continued from page 56*)

the town council. He could have been mayor. From time to time, popular movements looking toward hoisting him into political office would crop up. But when they were brought to his attention, he would always put a stop to them with a slow, negative movement of his ponderous bald head, a puzzled, speculative look upon his face. Sometimes he would say: "No time!" And then point to an unfinished job upon his bench, and elaborate: "Work."

Just the same, he had his political influence—it was no infrequent thing for the City Fathers, as they were jocosely called, to adjourn a meeting in the town hall and call on Uncle Ephraim before making a decision.

I was present when he was asked his opinion as to whether the town should buy a chemical fire engine to replace the old hand-pumped affair which had been burned up in the last conflagration, and this time he spoke two words.

"Eph," said Clem Salters, who was the mayor at that time, "what's *your* judgment on this chemical proposition?"

Uncle Ephraim gazed at a shoe on which he had been lavishing the caresses of his art, ran his fond hand over the fine stitching which he had just completed, his profound, calm eyes beaming on the leather with immense satisfaction from under the great dome of his philosopher's head, and, without looking at Clem Salters, he murmured:

"Fine work."

Clem went away and bought the chemical engine, which proved a great success; and more laurels were added to Uncle Ephraim's flowering reputation.

THERE comes back to me, out of the fog of the years, many a gleaming recollection of the weighty affairs that Uncle Ephraim was forever settling in our town.

There was the Cheevey case, for instance. When the Rev. Mr. Cheevey, one of the ministers, who had been a widower for three years, thought of marrying again, his congregation quite naturally took sides on the matter. Mr. Cheevey could scarcely have hoped that in a community so eager for his welfare, and so full of willingness to be helpful to him in all the details of his achieving it, such an important matter as his second marriage could remain his own private affair.

It was, indeed, a widely public matter within twenty-four hours after he had hesitantly spoken of his intentions to one of the deacons. Some people said at once that it showed disrespect to the memory of his late wife, and to her family; she had been a favorite socially and the daughter of the town's principal banker. Others said that it was all right for Mr. Cheevey to marry again, but that he should marry a girl from his own congregation instead of this lady from a neighboring town whose father was reputed to be a freethinker, and who was said to have expressed herself publicly as having no intention whatever of teaching a Bible class.

There were several weeks of discussion, during which poor Mr. Cheevey may well

Digitized by Google Original from UNIVERSITY OF IOWA

have wondered whether he was going to be able to call his soul his own, ever again. And then the matter was laid before Uncle Ephraim. By that time it had actually become confused, somehow, with a school election which was about to be held. One candidate for trustee, I believe, said that Mr. Cheevey should not marry again, and the other took the radical position that it was exclusively a matter for Mr. Cheevey to decide.

Uncle Ephraim solved the whole problem with a sigh. Perhaps it was construed as a sigh at the thought of young love balked and frustrated; at any rate, a kindlier note prevailed from that moment. Mr. Cheevey, with this Ephraimic endorsement, married the lady of his choice, who made him a good wife, raised up seven creditable children, gave incontrovertible proof that her father was not a freethinker after all, became herself a social favorite, and joined with grace and zeal in all the more uplifting communal activities of the place.

MR. EMIL HOSTETTER, on the strength of one of Uncle Ephraim's grunts, bought several acres of land at the edge of town, and two years later sold it at a very good profit indeed to the promoters of a new branch line railroad.

Mrs. Josie Clemmens, whose husband had been all but completely alcoholized for a quarter of a century, called on Uncle Ephraim, and with many tears put the case before him. On the strength of a sneeze and the eloquent lift of a bushy left eyebrow, she departed from his shop and put an advertisement in the "Weekly Banner" to the effect that she had left James Clemmens's bed and board forever, and would no longer be responsible for any debts contracted by him; after which she started a boarding-house, hired a sturdy negress to cook and keep Mr. Clemmens away with a broom, and began to prosper in a modest way.

I went in to see him on a matter of my own one day, when I was still a young fellow. I have forgotten now what it was exactly—one of those knotted perplexities of youth which seem so impossible to unravel at the time, and which uncoil themselves with such amusing facility a few years later.

And I somehow got the impression, as Uncle Ephraim sewed and chewed and gazed at me with the wide eyes from beneath the great Socratian dome, that he was perhaps a bit stupid, on that day at least; maybe the notion came to me because I got from him nothing that I could construe as an endorsement of my own unconsciously preconceived intention. But, at that time, I did not trust my feeling that he might be stupid; the town and the countryside were thoroughly convinced of his wisdom, and so, of course, I must be wrong.

And yet, from that day skepticism with regard to Uncle Eph began to undermine my faith. I began to observe him, with the growing thought that maybe he was not Solomon after all. Then I was away from the town for some years. Shortly after I came back, as luck would have it, I stumbled upon the secret of his reputation for wisdom; it was on the evening of the day that he was sixty-five years old that I made my discovery.

A great number of his friends had given

Chew DENTYNE ..and smile!

Armpits Dry and Odorless

MORE than a million men and women, formerly victims of excessive underarm perspiration—its odor and destructive stains—now keep their armpits dry and odorless by using NONSPI (*an antiseptic liquid*) used and endorsed by physicians and nurses.

You can keep your armpits dry and odorless—you can save your clothing—you can free yourself from the embarrassment caused by underarm perspiration and its odor. A few drops of NONSPI used on an average of twice a week will keep your armpits dry and odorless.

NONSPI, used and endorsed by physicians and nurses, does not actually stop perspiration — it destroys the odor and diverts the underarm perspiration to other parts of the body where there is better evaporation.

NONSPI will preserve that sense of cleanliness so essential to all well groomed men and women. NONSPI will keep your armpits dry, odorless and sweet. Use it the year around—spring, summer, fall and winter.

Try NONSPI! Purchase a bottle from your Toilet Goods Dealer or Druggist for 50c (several months' supply) or if you prefer

Accept our 10c Trial Offer (several weeks' supply)

The Nonspi Company

LIQUID HAIR DRESSING

As necessary as the morning shave

him a birthday party, a "surprise" party engineered with the connivance of his excellent and voluble wife, who was as great a believer as anybody in his prophetic vision. It was late of a summer evening; the festivities were over, the guests had all departed, his wife had gone to bed, and Uncle Ephraim and I sat together in the bright moonlight on the front veranda of his home.

He was pleased. He was touched. The moon beamed down on him, on his great round face and lordly gleaming head, and he beamed back at the moon. His friends and neighbors had given him a big gold-headed cane, and engraved with many flourishes in the gold was the legend: "Speech is silver, but silence is golden."

The Rev. Mr. Cheevey had made the speech of presentation, the same Mr. Cheevey whose happiness he had assured aforetime, and Mrs. Cheevey had been there beaming matronly upon him; and the city council and the mayor were there; the plush parlor had been full of those who had profited in one way or another by his benignant thoughtfulness, and many of them had remarked how like he was to the steel engraving of Benjamin Franklin over the mantelpiece, only Uncle Ephraim was wiser looking.

Mr. Cheevey's speech had been a graceful one; he told Uncle Ephraim how much he meant to the community; how much he had meant for decades past; how his kindly counsel and sage advice had been the dependence and the refreshment of his grateful fellow-citizens. Uncle Ephraim's speech in reply had been characteristically laconic; he had said:

"Huh? Thanks."

NEVERTHELESS, he was pleased; pleased and touched. And now, after the party, as we sat on the porch together he held up the cane and caressed its gold head.

"Fine work," he said.

I took advantage of this rarely loquacious mood. I deliberately tried to draw him out.

"Uncle Eph," I said, "I don't know anyone who better deserves such a tribute as you received to-night."

"Huh?" said he.

I repeated my remark.

"Oh," he said. And then, apologetically: "I'm a little deef."

"You are?" This was news to me, and I had known him all my life. It struck me suddenly that perhaps it might be news to most of his friends and neighbors. I wondered.

"How long have you been a little deaf, Uncle Ephraim?"

"Forty years." Then, after a pause: "Sorry I couldn't quite ketch all Mr. Cheevey said."

"Do you mean to say that you didn't understand that he was speaking of all the good counsel and advice you have been giving people all your life, and the influence for good you have been?"

"Yeah. Heard that stuff. What'd he mean?"

This was getting more and more interesting to me.

"See here, Uncle Ephraim, don't you realize that you've got the reputation in this town for being a regular Solomon?"

He turned his large head toward me, and the bright moonlight shone into his serene, considering eyes.

"Who? *Me?*" he said.

There could be no doubt that his surprise was quite genuine.

"What else," I said, "do you suppose they pulled that party for and gave you this cane?"

"They *like* me," he said, contentedly. "I do good work! Make good shoes! Mind my own business!"

I persisted: "Don't you know that this town hangs breathless on your words—even on your grunts and winks—and lives and marries, dies and buries, buys and sells, on your advice?"

He stared in silence for a full minute, and then he ejaculated:

"Well, I swan!"

And again there was no doubt that he was really astonished.

"Why do you think people come to your shop and tell you all their troubles and problems?" I asked him.

"OFTEN wondered!" said Uncle Ephraim. "Wondered for *years!* Always thought I'd *ask* sometime!"

He was silent, and then he gave one of his infrequent chuckles.

"Never listen to 'em, much," he said. "But at that, I guess I ketch a good deal more of what they're sayin' than the dern fools think I do. They think I'm deefer'n I really am!"

"Uncle Ephraim," I said, "they don't know that you're deaf at all. Did you ever *tell* anyone but me that you are at all hard of hearing?"

He considered carefully for some moments, and then shook his head in negation.

"Do you really mean to tell me that you have never known that you have the reputation for being a sage?"

Again the negative movement of the great impressive head.

Determined to persist to the uttermost, I caught at a recent instance.

"See here," I said, "Lew Ballinger's daughter Emma ran away and married a stranger to her family last month, and he turned out to be a crook. Passed bad checks and was pinched on their bridal trip. Emma wanted to stick to him. Said she could reform him. Lew came to your shop wanting to know whether to let Emma try it or not, and you advised against it. And now she's home again. Don't you remember about all that?"

"Recollect Lew tellin' me somethin'," said Uncle Ephraim, indifferently. "Wasn't interested, much."

I supposed that he must have sighed or grunted, and that Lew had construed it the way he had wanted to construe it, really, deep down in his heart.

THERE was another silence on the front porch, and then Uncle Ephraim volunteered:

"Never been interested in other people's business. Mind my own."

"Why do you let people go on and on talking to you, then?"

"Not polite to interrupt," said Uncle Eph. "Don't have to listen, anyhow."

"Tell me, Uncle Ephraim," I begged, "what *are* you interested in?"

He got rid of a big chew of tobacco, and then said, simply:

"Leather!"

"But what do *you* think of, yourself, all the time these people are talking to you?"

"Leather!" said Uncle Ephraim.

I looked at him and wondered. Presently he developed his theme with a wonderful flight of eloquence.

"I *always*," he said enthusiastically, "I *always* been interested in *leather!*"

"But you never talk about it much," I said. "You never talk about *anything!* That's one way you've got this great reputation for wisdom. Why don't you ever talk, Uncle Ephraim?"

And then came what I honestly believe to be the longest speech of Uncle Ephraim's life—his most extensive oratorical flight. Said he:

"Tobacco! Like tobacco. Can't chew and talk, the same time. Can't throw good chew away just for the sake of *saying things!* Nothin' to say worth throwin' away a good chew of tobacco for. Huh? Let 'em talk! I work. Mind my business. Don't answer. Don't always hear. Just work. Chew. Mind my business. Huh?"

And there it all was! The secret of the sage was out at last. I thought of the vast influence this man had exerted for forty years over the lives and destinies of hundreds of people, and I wondered at the world, and I wondered at human nature, and I wondered at the manner in which reputations are achieved.

JAMES LORD PRATT is a much-to-be-envied man. He has traveled the road to happiness and has found the pot of gold at the rainbow's end. Money? Not much, as worldly goods are counted these days! Work? Well, you're getting warmer. But you won't get *really* warm until you read the article about him next month. It is a piece of writing with a great lift to it.

The Story of the Great 101 Ranch

(*Continued from page 55*)

and calves. In Louisiana, Kansas, Arkansas, Texas, and in other states of the South and of the Southwest, and even down in Old Mexico, were other huge pasture lands under special lease for the purpose. Toward these scattered points the thousands from the Florida ranges moved by railroad.

In eight hundred cattle cars comprising thirty long trains they moved. Animals already prime for the market were segregated and sold in the stock yards of cities through which they routed—sold by the carload, at auction, and invariably at a profit. Ten thousand head were transported to Oklahoma, there to be pastured on Miller-owned land and later transformed into beef in Miller-owned slaughter houses. By the first day of June not one cow, steer, or calf of the original thirty-six thousand was left in Florida—a feat unexcelled, if ever equaled, in the history of American agriculture!

"Oh, but of course these Miller brothers really aren't *farmers!*" you will say. "They must be big business men backed by a million or two."

That is the most astonishing part of the tale. They actually *are* farmers! In Okla-

homa you will hear that they are the foremost farmers of the world!

The farm called "101 Ranch" is a veritable agricultural kingdom. It comprises 110,000 acres that sprawl like patchwork over the Oklahoma plains in Kay, Noble, Osage and Pawnee counties. Here is an apple orchard that in 1927 produced a crop of 40,000 bushels, with not much more than a third of its acreage bearing; a corn field that yielded 150,000 bushels and wheat fields that average yearly 45,000 bushels of grain.

The miles of fences on this farm are numbered by the hundreds, its cattle and hog herds by the thousands. It maintains three hundred employees, four hundred and fifty work mules, a hundred brood mares, and a hundred cow ponies, all exclusive of stock used in the 101 Ranch Show, which I shall tell about later on. It grows everything, from the common farm products to figs and okra. I inspected packing houses wherein are dressed five hundred cattle and a thousand hogs a month; I saw oil wells supplying crude oil, and a refinery turning it into gasolene for tractors, engines, and power houses; I saw a farm on such a scale of magnificence that what I had previously regarded as big farms dwindled to the insignificance of back-yard gardens!

"When we began here," explained Zack Miller, "we figured it wasn't much harder to do things in a big way than it was to worry along in a small way. We figured it was no worse to fail big than to fail little; but ever so much better to *win* big."

THIS enormous enterprise grew out of a little mud hut in the prairie, when the rolling Oklahoma plains belonged to nobody; it grew out of failure and debt that would have crushed men less stalwart than the Millers; it grew before the driving force of men whose boldness and vision defied the strides of progress itself and guided them to their own ends; it grew by virtue of sheer might.

Zack Miller told me part of the story. Other parts of it I picked up about the ranch office, in newspaper files, and from an old-timer or two in Ponca City, which is nine miles by paved highway from "101" headquarters.

The 101 Ranch was originally what its name implies, a great cattle range made up of land leased from the Indians. It was late in 1871 that Colonel George W. Miller, founder of the ranch and father of the present owners, arrived in Springfield, Missouri, then the end of the railroad. He was a Kentuckian and his intended destination was California, to which he purposed to journey by covered wagon. Accompanying him were his wife and two-year-old son, Joe—Joseph C., eldest of the Miller brothers, who died a few months ago.

Southwestward struck this little caravan, which bore all of the possessions of the Millers. After leaving Missouri behind, it was Colonel Miller's intention to follow the Arkansas-Indian Territory border and then take the southern route to the Pacific coast. However, as they progressed westward, he kept scanning the vast prairie lands with a speculative eye. Here at his very feet was opportunity, while California was as yet even beyond the setting sun. This was cattle country, without cattle.

Winter was coming on. Miller pitched camp, held there by the charm of the prairie. He was a born trader and an opportunist, the kind of man who will go to town with a buckboard and pair of colts and return home with a spring wagon, a mare, and a couple of cows. There were settlers scattered not distant from his camp who had hogs they wished to dispose of, and Miller began to "swap" various possessions for hogs. That winter he converted the hogs into hams and bacon. As soon as spring set in, he set out with his cured meat for Texas, for there were cattle in Texas.

Reaching Fort Worth, Miller traded bacon for steers—Texas longhorns. Rapidly accumulating a small herd, he struck back with it over the Chisolm Trail, grazing his cattle as he went. This herd was the nucleus of the great 101 Ranch to be, and was so successfully marketed at Baxter Springs, Kansas, that Miller gave up all thought of California, and plunged into the cattle business.

HIS first ranch, located around what is now Miami, Oklahoma, was known as the "L-K." But as the railroad moved westward, Miller moved with it, establishing headquarters at Winfield, Kansas, and leasing lands in the famous old Cherokee Strip.

The "Strip" was a cattleman's paradise. Government-owned, in the very pathway of the Texas cattle trails over which tens of thousands of cattle moved northward to railroad yards, land in the "Strip" was to be leased for from two to five cents an acre per annum. The grass was rich. There was water. The winters were mild and the summers long. Not a fence stood in all of the "Strip," so that the vast herds could roam at will until the round-up.

It was in this country that Joe Miller, eldest of the brothers, was reared, and that Zack and George were born. They grew up in the cattle country as a cattleman's sons, schooled to ride, to rope, to brand, and to shoot. A hut made of sod was their earliest home; cowboys were their associates, the plains their life. It was the West of the old days, of the open range whereon buffalo roved in herds that blackened the prairie. They were reared as cowmen, and as pioneers.

In 1879 Colonel Miller adopted the "101" brand, and not far from what is now Ponca City reëstablished his ranch under that name. Even at that early date, he had visions of the ranch becoming a permanent institution that would not be wiped out by the westward march of settlement.

Cattlemen, as a class, had little use for the settler in those days. The settler disturbed the freedom of the range, brought boundary lines and fences, and insisted upon planting wheat and potatoes where nature had sown only grass. But instead of railing at the settler, Miller saw ahead to the time when the settler would rule the prairie, establish towns and counties there—and markets. The trader in him looked ahead.

When the first wire fence was built in the Cherokee Strip, in 1880, to enclose an extensive pasturage, it was Colonel Miller who built it. At the same time he began leasing lands along the Salt Fork River from the Ponca Indians, against the day when the Cherokee Strip would be thrown

Sport means danger for expensive watches. So outdoor men carry the Yankee. It isn't expensive—but it is sturdy and dependable.

Ingersoll

YANKEE

$1.50

Radiolite $2.25

You get the things you want when you buy the Yankee for $1.50!

Appearance looms big in people's minds these days. So we've kept the Yankee right in step with good style and good taste. Closer casing, antique bow and crown, and a *glass* "crystal" that cannot shrink or discolor like celluloid are features that make the Yankee a clean-cut, modern watch.

The Yankee combines the accuracy proved by searching tests with the sturdiness and strength that come from sound, solid construction.

And, of course, it has back of it the Ingersoll Service Department where repairs, if needed, are made promptly and at nominal cost.

INGERSOLL WATCH CO., Inc.

Service Dept. Waterbury, Conn.

open by the Government to the homesteader. That day came in 1893. In a single day the homesteaders, like locusts, swarmed over the "Strip" lands and swallowed them. But on the banks of the Salt Fork, 101 Ranch was a fact.

It was a ranch, however, and not a farm. The Miller business exclusively was cattle. They did not own a blade of wheat or a stalk of corn. Agriculture to them was an unknown science.

That same year came a business panic. A great commission house in Kansas City failed, the house that had acted as agent for Colonel Miller in all of his cattle transactions. He had had a three-hundred-thousand-dollar credit on the books of this house, money due him for cattle sold. At one stroke this credit was wiped out. It was discovered, also, that various notes, held by Eastern banks, which the agents should have paid off out of the credit account, had not been paid. 101 Ranch was not only penniless but it was deeply in debt, and it was a "panic year."

"The Eastern bankers sent in men who took all of our cattle," Zack Miller told me. "They took everything but the cripples and the runts. When they got through, all we had left was eighty-eight old horses and a handful of cows. We were as flat as the prairie."

Joe, the eldest brother, was twenty-four years old at this time, and Zack was sixteen. Young as they were, the two boys already were the chief lieutenants of their father. The third brother, George, was only ten years old and not to take his place until later. The crisis marked the older boys' entrance into the management of the ranch.

THAT winter, in order to get money enough to carry them through until spring, they sold their few remaining cows to the Indians. During the long winter evenings they sat about the fire and planned. They had the old horses and their acres of leased prairie land as yet untouched by the plow. Homesteaders had proved the fertility of that prairie land.

And in the course of those conferences around the fire, the idea of a great farm was born. It was not to be the usual type of farm of a few hundred acres; no, it was to be a regal successor to the cattle ranch. Their herds had numbered thousands of head. Why could not their crops mount to thousands of bushels? It required no more knowledge to plow and plant a thousand acres in wheat than it did to plant a hundred, or ten!

They needed implements and seed grain, and money which would supply both; but they had reputation. It was known in those parts that the Miller word was good, that they paid what they owed, if not in this year then in the next, or next. When winter broke in 1894, the needed plows were ready, the seed grain was on hand, and workmen waiting. Old Colonel Miller himself stuck the nose of the first plow into the dirt.

There was no time to prepare a variety of crops. In one grand gamble with soil and season they planted wheat. Yet it was not a blind gamble, for wheat had already proved itself the king of crops of the West.

The wheat came up, almost five thousand acres of it. By June the harvest was under way, and never before had there

A real sports watch! Keeps dependable time, and doesn't get out of kilter easily like delicate wrist watches.

Ingersoll

WRIST WATCH

$3.50

Radiolite $4.00

Two new features for the Ingersoll Wrist Watch:

1. A chromium finish back that doesn't corrode from perspiration. A watch with the ordinary nickel back will corrode and mark the back of your wrist. The Ingersoll won't.

2. A new, heavy, stitched leather strap. This comes in both calfskin and pigskin. It is very strong and will not curl.

And the Ingersoll Wrist Watch still has the never-to-be-changed features of sturdiness, timekeeping accuracy and dependability.

And for good looks there is the comfortable, smart tonneau shape, the mat finish metal dial, the artistic numerals and hands, and the glass "crystal" that does not discolor or shrink.

No other wrist watch has *all* these features, and no other wrist watch gives such value for only $3.50!

In back of every Ingersoll is the Service Department at Waterbury, Conn. If your Ingersoll Wrist Watch gets broken, you can send it there for repairs. These repairs will be made quickly and at nominal cost.

been such a harvest in that new country. The prairie acres yielded 70,000 bushels of wheat—and wheat at Chicago was $1.20 a bushel!

The story of that wheat harvest, the story of those Florida cattle, both are typical of the Millers and of how they built. From the very beginning they have thought in terms of thousands and tens of thousands. Their rise is the logical child of their vision.

The Millers have not been afraid to venture. When they have lost, they have tried again. If I can make you understand that spirit, and it is a spirit of boldness, I can make you understand the growth of 101 Ranch as a farm.

WHEN Colonel Miller died, in 1903, not one acre that he left to his three sons was owned. To-day, Zack and George own 45,000 of the 110,000 they operate. The vast orchards were planted by the brothers; the modern farm buildings were erected by them; they built the slaughter and packing houses, put up hundreds of miles of fences, and introduced power machinery. They established herds of blooded cattle, added a variety of new crops, initiated scientific methods in every department of the farm, and began systematic experiments in an effort to improve upon what they had. The farm's greatest growth, in a word, dates from 1903, and is still in progress.

To trace this growth in detail would require the space of a book. What I sought, and got, were some of its high lights, typical of the whole. One of the most striking of these, and best illustrative of the character of these brothers, is the story of the Miller tannery.

They had put their packing house in operation, and soon a huge accumulation of raw hides was on hand. The price offered for these by tanners seemed to the Millers to be too low, as compared to the price for finished hides. They said, "We'll tan our own hides."

A tannery was built close to the packing house. A cyclone swept it away, leaving only the foundations behind. They immediately built a second tannery at a cost of sixty thousand dollars. It had been in operation only a short period when it was destroyed by fire. On the very next day following the fire, a third tannery building started to rise out of the ruins, and this time fate let it stand. Its vats were filled, its boilers fired, and raw hides began to move through the tanning processes that converted them into leather. Then came the third blow, and hardest: tanned hides, which had been selling at fifty cents a pound, dropped to three cents a pound, much less than it was costing the Millers to tan them.

Beaten? Not these brothers. Away down in Austin, Texas, a wholesale harness house went bankrupt. The news was carried to Zack Miller as a passing bit of gossip. He took the next train to Austin and bought the bankrupt business, lock, stock, and barrel. To friends, the act seemed little short of insanity.

"You've got a tannery on hand that's losing money," they argued. "Now you up and buy a harness house that experienced harness men couldn't make go. You've gone loco."

"Looks that way, sure enough," agreed Zack, and began to move the harness-making equipment of the bankrupt business up from Austin to the tannery, which was jammed with unsold hides. There, on the second floor, he set up a harness shop.

Next, he brought from Austin employees of the smashed concern who were skilled in the art of harness-making. He showed them the stacks of finished hides. "Go ahead," he directed, "and turn this stuff into saddles and sets of harness."

A cowboy is particular about his saddle. He likes it to be the best that he can buy. Zack Miller had his Austin workmen turn out saddles to order; he had them turn out work harness. Men came in from more than a hundred miles distance to get saddles made, and they went home with harness, hams, bacon, flour, all their conveyances would carry. Then the ill-fated tannery burned a second time; but this time the Millers did not rebuild. They had sold the Austin stocks, and also had disposed of their hides, as well as thousands of dollars' worth of farm products.

THEN there is the story of how the vast orchards of "101" came into being. Two years after the brothers fell into possession of the property, Joseph Miller, one day, was in Winfield, Kansas, on business. An acquaintance told him of two carloads of young apple trees standing unclaimed on the railroad siding, awaiting a buyer.

"Where's the owner?" inquired Miller.

"Oh, a nurseryman got over-enthusiastic and had the trees shipped in here, with the intention of peddling them out to farmers," it was explained. "Now he can't pay the freight charges due. Anybody who wants apple trees can buy the whole lot for the freight bill, a cost of about two cents a tree."

The trees already had stood on the siding for several days. Miller promptly bought the trees. He was willing to do what others were not—to wait out the years until these nursery trees would be old enough to bear.

The young trees were rushed to the ranch, and fifty men put to work setting them out, as there was danger that further delay might result in the loss of the whole purchase. In the general mix-up, the trees also had become mixed, so Miller had to plant them regardless of variety, as they came from the cars. When the job was completed he had one hundred and sixty acres of trees.

That was twenty-two years ago. Of the original planting, about 6,000 trees, covering a hundred acres, stand today. Thirteen years ago they gave their first yield, amounting to $3,000. Since then, $170,000 worth of apples have been picked from this orchard. Its mixed varieties bear fruit from June to November. And additional to this orchard, another of 170 acres has been planted, and in a year or two also will be bearing. The Millers value the original orchard at $100,000.

A third orchard of 175 acres is devoted exclusively to experimental purposes. No two trees in this orchard are of the same kind. One great project has already been an outgrowth of it, a tract of 50,000 black walnut trees.

I saw fig trees, English walnuts and persimmons bearing at "101," products of this experimental orchard. Zack Miller plucked a fig from a tree and talked of the fig orchard that was to be planted in this soil, where nobody but Joe Miller believed

Digitized by Google Original from UNIVERSITY OF IOWA

figs would grow. "They show that anything is worth trying within reason, regardless of how much cold water the experts throw," he said.

Zack Miller took me onto the prairie and showed me one of the strangest cattle herds on this earth. Originally, those great expanses of flat country had belonged to the buffalo. Unattended by man, the buffalo herds had flourished and grown to number millions. The buffalo was hardy, a meat animal, the native of the place chosen by Nature herself. The Millers conceived the idea of perpetuating the virtues of the buffalo in a new breed of cattle.

So, after careful selection, they crossed the buffalo bull with the common range cow. To-day they have two hundred of the new cattle, thriving and increasing, the beginning of a herd.

The success of this "cross" led to an even odder one. One of the banes of the cattleman is drought. "Could such a thing as a drought-resisting cattle breed be produced?" asked the Millers. In some parts of the world such breeds existed, but it was impracticable to import them in numbers. It was decided to import a few of a chosen breed and introduce their blood into their herds.

The sacred Brahma cattle of distant India were picked for the experiment. Small Brahmas were crossed with the Jersey cow, and big Brahmas with the common cow. The product was not only a drought-resisting animal but a wonderful beef animal. Zack Miller pointed out to me yearlings in the mixed Brahma herd that would bring one hundred dollars on a weight basis as against sixty dollars for a yearling of the common cow.

THE Wild West show known as 101 Ranch is another unique activity of these farmers. Driving northward with some cattle, in 1882, old Colonel Miller found Winfield, Kansas, attempting its first country agricultural fair. To "help out," Miller had his cowboys stage the first rodeo, or round-up demonstration, including feats of roping and horsemanship. Twenty-two years passed. The National Editorial Association decided to hold its 1903 convention at 101 Ranch. The Miller boys, recalling the show given by their father at Winfield, decided to stage a similar show for the entertainment of the visiting editors.

As sort of a rehearsal to the convention show, however, they put on a round-up exhibition at the ranch in 1904. They wanted to see how the idea would "go" with spectators about home before trying it on the visitors next year. To their astonishment, as words of the exhibition-to-be spread through the Southwest, people began to pour in to the ranch from all parts of that country. On the day it was held fifty thousand had assembled at the ranch.

The convention round-up repeated this success, and then the idea of a similar show, which would travel over the country like a circus, occurred to the Millers. At the outbreak of the World War, this show was temporarily shelved. But in 1925, it was enlarged and put on the road again. Already it had earned for the Millers more than one million dollars, and has become the largest show of its kind.

The Luckiest Thing That Ever Happened to Me

FIRST PRIZE

I Missed Sudden Death by a Few Seconds

AT THE age of fifteen, I decided it would be interesting and pleasant to view a construction crew at work. As one of my father's best friends was a construction engineer, I had no difficulty in getting one of his foremen to act as a guide for me. He took me to a large office building that was under construction in Kansas City, where we lived.

At about ten o'clock in the morning I had tired of walking around the building. The foreman was scheduled to get back to the office at that time, so I decided to rest a while before going home.

I sat down on an empty box and took off my hat, for the day was very warm. After wiping a little perspiration and a great deal of dirt off my face, I began to get interested again. The air-hammers were beating out a sharp rat-a-tat-tat on the hard steel. Cranes squealed and growled. Bricklayers shouted at one another, while a big negro, waiting for the elevator with a wheelbarrow full of cement, yodeled like a Swiss mountaineer. Just at the moment I thought the negro's voice would surely crack I noticed that my hat had fallen off my knee where I had placed it, and had rolled about ten feet away. Directly above me a group of steel men were playing ball with red-hot rivets, but I was not aware of this until later.

I was almost too lazy to go over and get my hat, but a gust of wind helped me to rise quickly, and as I stooped to retrieve it there was a tremendous thump behind me, followed by several loud warning shouts all around. Imagine my terror when I turned and saw the box I had been sitting on reduced to splinters, on top of it a keg, which had burst wide open and scattered rivets for about three feet around.

That is the luckiest break I have ever had, and I was certainly thankful that my hat fell just when it did, and that the gust of wind played its part. But the crew seemed not to share my opinion, for if I had stayed to listen to their speech I could not have retained my self-respect. I made a snappy exit. H. L. G.

SECOND PRIZE

A Lucky Impulse Saved a Life

WE WERE spending the winter in Florida. Not because we are members of the idle rich class who yearly migrate to that land of sunshine but because the doctor had said my health demanded it.

So my husband obtained a job in a charming little city on the west coast where some friends from our home town in Indiana were living and, with our two wee daughters, we went South for the winter.

One day, as I sat on the porch of the big frame apartment house where we lived, I saw my little girls across the street playing in the park. I noticed my three-year-old girl sitting on the ground. Her stocking was falling down, and she looked like a forlorn little gamin.

Rising from the porch, I started across toward her. I was delayed a moment by a car passing. Then I darted across, and, bending over her, began to adjust the refractory supporter.

I felt a terrific blow in my back, but had the presence of mind as I fell to swerve away from the baby.

People at the apartment house who saw the incident, rushed to my aid. An ambulance was called, and I was taken to the hospital. At first it was thought that I might not recover.

Yet, even if I had died, that impulse to cross the street, that pausing an instant for the car to pass, that bending over my darling wee one at the moment I did combined to make the biggest piece of luck I ever had.

For the thing that had happened was this: an immense coconut had fallen from the palm above my little girl, and, had I not been there to catch its weight, it would have crashed upon my baby's head!

And so, although I shall never fully recover from the effect of the injury, I profoundly thank the god of chance who saved my daughter's life. L. W. B.

THIRD PRIZE

If My Horse Hadn't Stumbled

IT WAS during the first year of my married life: I was teaching a country school about three miles from my home. As the roads were bad for a car, I frequently went on horseback. On this particular morning, I rode a very mettlesome young horse. When I was a short distance from home, on my return trip, a neighbor's dogs ran out and began to snap at my horse's heels. Dogs had barked at her before and she was afraid of them, so she began to run. She was noted for being the fastest horse anywhere around and I was rather proud of it, so I let her go.

When about half way home she stumbled. It wasn't enough to slow her up or to make me lose my seat, but it caused me to duck my head for the fraction of a second. As I did so my hat was violently jerked off. I stopped as soon as I could, and returned to find that it was a telephone wire, which had become dislodged from its pole and hung across the road that had caught my hat. If the horse had not stumbled, and I had been sitting up straight, it would just have caught me under the chin. At the speed I was going I would have been beheaded or my neck would have been broken.

My husband, watching fearfully from our home barn, and knowing the wire was there, fully expected to see me killed. As I have spent several happy years since then, I fully appreciate the act of Providence which caused me to duck my head at exactly the right second. B. M. B.

"I'm going to raise his salary"

"I've had my eye on him for some time and I know he can handle bigger work.

"He studies those I. C. S. textbooks every chance he gets, and I want to tell you it has made him a valuable man for this business.

"I'm going to raise his salary and give him that new job we were talking about. I wish we had more men like him."

How do *you* stand when your employer checks up his men for promotion? Does he pass you by as just a routine worker, or does he think of you as a man who is ambitious to get ahead? Won't you be far more likely to get the promotion if he knows you are studying at home and are really preparing yourself to handle bigger work?

Think it over. Then act. It takes only a moment to mark and mail the coupon and find what the International Correspondence Schools can do for you, yet that one simple little step may be the means of changing your whole life. "Do it now."

INTERNATIONAL CORRESPONDENCE SCHOOLS

I Like to Take a Bath but I'm Not an Old Soak

(*Continued from page 53*)

hook me into saying "Yes" and paying $3.50 to $5.00.

And, of course, the clerk knows, and I know, that there is always a bathroom adjacent to the room where a man in the mood for ablutions can get his wash. But, like the Mr. Milquetoast of Webster's cartoons, I am never strong enough to look a hotel clerk in the eye and let him know that I am the kind of person who could sleep with a bathrub more than ten feet away.

YEARS ago, bathing required effort, resolution, and even personal courage. A bath was decidedly a hardy enterprise. It called for patience, determination, a rugged constitution, and no small measure of dexterity.

The foottub, washtub, or even the old-fashioned tin boiler did for the baths of the great majority.

The first houses I remember as a boy had no bathrooms. The landlord advertised gas as a luxury, and "All modern improvements," which came in later, consisted of hot-water tanks and curiously barnlike rooms, usually in the attic, called bathrooms by virtue of their principal item of furniture—a tin or galvanized iron tub encased in stained wood.

I retain a vivid picture of the first bathtub back home. It was located between two huge windows in a big unheated room on the top floor. It was not designed for comfort or beauty. Indeed, it looked like a tin cradle set in a wooden box. The tin of which the tub was made had been enameled, but the enamel came off in large flakes, giving the tub a mottled and dissipated look. Water was supplied through small faucets, and the water stream was so frail that it took from a half-hour to a full hour to fill the tub to the required depth.

A bath could not be obtained as a matter of mood and impulse. It had to be planned. First, the gas under the big boiler in the kitchen had to be lighted. Those old-time gas heaters gave forth stubborn flames. You could heat a tank full of water in about half a day, if you were lucky and persistent.

Naturally, in big families there had to be a schedule of bathing. No more than two people could easily take a bath the same day. Saturday and Sunday were the bath days, and it required a week-end for a family of five or six persons to tub harmoniously.

And even when the water in the boiler got hot, that did not mean that you were to have a hot bath. The bathroom of which I speak was as cold as all outdoors, and the hot water cooled almost as fast as it came out of the faucet. Taking a bath in those days held all the joys of a plunge into a barrel of water in an icehouse.

Children to-day like their baths. They even cry for them. But in those days, a boy looked forward to a bath just as he anticipated a trip to the dentist's office. I must have been fourteen or fifteen years old before I showed any signs of weakening in my conviction that an indoor bath once a week in summer and once a month in winter was ample, except for coal miners, chimney sweeps, kalsominers, and wagon greasers.

Antipathy to the bath was fairly general. At any rate, there was certainly an almost unanimous feeling that it could be easily overdone. Frequently, a bad cold would be attributed to "that bath he took a few days ago," such a diagnosis always bringing warm endorsement and support from the young folks.

I can remember reading in the papers that a Mr. Armitage, a wealthy neighbor, had sustained fatal injuries through slipping and falling in a newly installed bathtub, and secretly hoping it would lead to a campaign to abolish tubs.

Even to-day, I retain a little of the feeling that a bathtub, while not exactly dangerous, is not to be trusted. It is nothing like the virile, hard-boiled, rough-and-ready, simple but honest bathtub of my boyhood. That old tub has none of the soft and beguiling nature of the modern tub. Its attitude was: "Come on in and take your punishment like a man!"

The bathroom of to-day lures you, entices you, coaxes you. It even vamps you. It has charm. It suggests comfort, ease, and luxury in every line and curve.

A BATH used to be an individual's private business, but it is now a topic of conversation. Women discuss their "lovely hot baths" at bridge parties and teas. At lunch and at business too many men boast about their cold plunges. The bathroom has become almost the best room in the American home. Many a bathroom of to-day costs more than a Colonial home of yesterday.

Don't get me wrong. I am not opposed to bathing; in fact, I think it is often a good idea. All I claim is that it should not be the main purpose in life. I admit that there is a place in the home for the bathtub. In fact, it may be conceded that there are two or three places. But when you go above that number in a six-room flat, you are overdoing it.

BECAUSE a New York subway guard called a station so indistinctly that a young man passenger misunderstood him, the Michigan Bell Telephone Company has, for its president, Burch Foraker. But between the guard's chewed-up words and Foraker's present position is a story of marvelous executive ability, fine friendships, business wisdom, and the admiration of thousands of men for a great leader. Next month we publish that story, knowing that everybody who reads it will get something extremely valuable. For it contains the secret for which we are all searching—the secret of getting along with folks.

His SECRETS of SUCCESS Are Worth Knowing

George Frank, Leading Clothier of Maysville, Kentucky, Tells FARM & FIRESIDE in an Interview How He Built His Business

WHAT it takes to make a small-city clothing store successful this man has!

As a boy and young man it took George Frank 16 years to save his first thousand dollars to set up in business for himself.

Today he's the leading clothier in Maysville, Ky., a thriving town of about 7,000 population situated right in the heart of the White Burley tobacco district. That means of course that it's a good farm trading center, a fact that George Frank has capitalized on 100 per cent—with the result that he has added a big volume of farmer trade to his town sales.

He Tells FARM & FIRESIDE

How has he extended his trading area 20, 30—even 40 miles away from Maysville? This is what FARM & FIRESIDE wanted to know when it heard rumors of this enterprising merchant's record. So an interviewer was sent down to get the inside story of his merchandising secrets. And this is the interview that's now published in folder form, a copy of which any small-city dealer can obtain free for the asking.

A "Chain" Store?

For instance, why does George Frank say—"*My store is a link in the biggest chain in the world*"?

That sounds ridiculous on the face of it, of course. For you know from the start that he is an independent dealer—and that his store is NOT a chain store.

Yet this is just an example of the originality of his viewpoint. And when he explains WHY he says his store is a link in the biggest chain in the world—you get the point. And you see that he's got a real idea here that throws an interesting sidelight on successful merchandising in *any* line of retailing.

"Garnishing" the Store

And again, where he says—"*Experience has taught me that in one direction you can go the limit in 'garnishing' your store. But in the other direction—well, there's a fine point to stop at before you go too far.*"

What does he mean?

His ideas on this subject may strike you as a bit revolutionary at first. But when you analyze them they're as sound as a dollar. And it's interesting to note what he had to say to the store expert who came to him with an elaborate proposition for "modernizing" his store from top to bottom!

Extending Trading Area

After you talk to George Frank for 15 minutes you sort of get used to the surprises he springs on you.

But there's one more coming to you—and that's when he tells about how he has pushed his trading radius out as far as 40 miles away from Maysville. You'll agree that there's no stopping this enthusiastic and aggressive merchant—and that if he lives long enough he'll be using radio and airplane couriers to advertise and deliver his merchandise at longer range than any small-city store ever dreamed of doing.

A Kindly Competitor

But from the foregoing, don't get the idea that George Frank is a dangerous and unpleasant competitor to have doing business in the same town with you. Far from it! He's one of the best-liked merchants in Maysville—100 per cent cooperative at all times, kindly, and highly regarded by competitors as well as his customers. And this is right in line with the fact that he's a true-blue Rotarian.

Weekly Cash Prize Drawing

Another interesting point in his interview is where he tells how he and 24 other local merchants award a $25 cash prize every Saturday night at the local theatre—to some lucky customer of one of the 25 stores.

Of course there's nothing new in this idea itself. But the way it's handled in Maysville IS new. And it may suggest a similar plan that other merchant groups in other towns can try out.

His Advertising Secret

One of the highest spots in his interview with FARM & FIRESIDE, however, is where he discusses local store advertising. He knows what he's talking about, for he *does* get his advertisements read—and acted upon. His sales prove it.

Send for His Interview

FARM & FIRESIDE'S interview with this successful clothing merchant is now published in a folder, a copy of which you can obtain free simply by sending in the attached coupon.

FARM & FIRESIDE'S Service to Small-City Retailers

This is another interview in FARM & FIRESIDE'S series—which makes available to retailers the tried and proven methods for building farm trade, as used by outstandingly successful merchants.

And this work is just a part of the service FARM & FIRESIDE renders in meeting the obligations of leadership in the farm field.

As every dealer knows, the advertisements in this magazine are a real force in influencing more than 1,200,000 farm families to buy. And a glance through any issue immediately shows why this is so—for here is a hundred-per-cent-*personal* magazine—edited straight to the *individual* and read with *warmer interest* than any other farm publication.

That's why dealers are finding it so profitable to feature and push products advertised in FARM & FIRESIDE—and why manufacturers' advertising in this magazine shows such steady growth.

Like a Conquering Army THESE BOOKS

have marched triumphant through the centuries

THE libraries of the old world and the new are crammed with volumes, shelf on shelf, which a thousand men in a thousand lifetimes could never find time to read. And millions more volumes have passed forever into oblivion, not even to find shelter in the archives of public libraries.

Yet *these* books have come thundering down through the centuries, influencing, teaching and delighting mankind with their indomitable power. They are as new and invigorating as when their immortal authors instilled in them the breath of eternal life.

Emerson once said: "Would that some charitable soul, after losing a great deal of time among the false books, and alighting upon the few true ones which made him happy and wise, would name those which have been bridges or ships to carry him over the dark morasses and barren oceans, into sacred cities, into palaces and temples."

It was one of the monumental achievements of America's greatest educator, Dr. Charles W. Eliot, to bring together the truly great books, to sift the pure gold from the mass of writings the ages have produced. For forty years President of Harvard University, Dr. Eliot realized the need of a library offering everyone the culture which a university strives to give.

The Five-Foot Shelf (Harvard Classics) is the magnificent result of his inspiration and knowledge. These books are the criterion of all literary selection. Through them people have found that the classics are not dull—but intensely stirring; not beautiful antiques, but lively, stimulating modern thought with vital application to everyday life.

In this wonderful library are the writings of 302 immortal authors.

The busy man and woman of today need not stumble through hopeless masses of reading matter, for in the Harvard Classics are the books that live forever, the books that have as proud possessors more than a quarter of a million intelligent, ambitious families.

These books stand for stimulation of thought and, above all, endless enjoyment. They are the books which have won for themselves the well deserved tribute, "A liberal education in fifteen minutes a day."

P. F. Collier and Son Company has published good books since 1875. By the famous Collier plan, you can pay for these books while you are reading and enjoying them.

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

(The Harvard Classics)

Grab It!

(*Continued from page 45*)

but the accident frightened her. She watched and listened to me after that.

"You mustn't think, because of this anecdote, that girls are more difficult than boys to handle in a flying act. If anything, girls are the steadier. They work right through from spring to fall, in rain or snow or stifling heat. Girls can catch as well as men, too. Most of my company can catch as well as fly.

"A flyer, as I have pointed out, is almost literally in the catcher's hands. He or she merely has to obey orders. It is the catcher who completes the trick. So, while a flyer has to have the daring, a catcher must have judgment and make decisions almost automatically. A catcher who has done nothing else but catch is used to swinging head downward on a swaying trapeze, timing his swing with the flyer's swing and trying to be at the proper spot when the flyer comes toward him at forty miles an hour. If the flyer has not left his perch properly or, after leaving the perch, lets go his trapeze bar too late or too soon, the catcher has either to revise his calculations or manage to guide the falling body he cannot catch.

"I always try to train my company to do double duty, because I never know when someone will be out of the act through injury. I don't count sickness, because we never have that in my company. No one ever lays off because he isn't feeling well. But accidents are unavoidable as long as human beings are what they are; and because I train my flyers to be catchers as well I've proved that catching has nothing to do with weight.

"In the early days of flying-return acts it was assumed that one must be extra strong and heavy to seize and hold a flying body. I exploded that theory long ago. I weigh 175 pounds. My star flyers are my wife, Mayme, who weighs 132; Bert, who weighs 138, and Harold, who weighs 125.

"But Mickey Ward, who weighs less than a hundred pounds, and who began her professional life as a flyer, is now catching in the act. She can even catch me without straining her shoulders or arms. How is it done? That's one of the tricks in our peculiar trade. Part of the explanation is that I 'take up' as I catch hold. My arms are not extended at full length. As our hands meet, I gradually straighten out my arms. Of course, on the return swing she holds my dead weight in her hands, but it never seems to bother her.

"ONCE a flyer has had a season on the road he generally becomes a confirmed trouper. During the first six *days* he may try his best to get out of it—may beg me to cancel his contract. But I haven't had a first-season performer actually quit, not in many, many years—even after a long spell of rain and mud.

"Each performer's wardrobe must go into one small trunk. That trunk has its regular place in the ladies' or the gentlemen's dressing-room. It is never more than three feet from another performer's wardrobe trunk. They must do all their dressing and undressing, ironing, mending, and making up, elbow to elbow.

"Three times each day they sit, each in his own place, on a hard blue plank at the same table in the circus cookhouse or dining tent, side by side with the same persons, all season long. Each night each one occupies his regular berth in the circus Pullman cars, usually only half of the berth at that, for space is at a premium on a circus train as well as on a circus lot.

"Of course the unmarried girls have a sleeping car to themselves and are in charge of some married woman, while the single men have their own sleeping car. But all the youngsters must be in bed by eleven o'clock. The circus management sees to that. And there's virtually no variety to circus life. Up at seven, out at eight. Breakfast by nine. Lunch at noon. Matinée from two to four. Supper from four-thirty to five-thirty. Two hours for visiting or mending in the circus back yard or for a little shopping in town. Night performance from eight to ten—and then to bed, to wake up in another town.

"After a month or so of traveling, the different towns make little impression on the circus trouper. In fact, they all look alike to him. Towners seldom interest us. Still less do we speak to them. Our job, as circus flyers, is to entertain them for half an hour a day. Beyond that we seldom go. We live in the tents, among ourselves.

"WITH this daily, rather restricted, program, you can realize that if the members of my flying-return act didn't like their jobs they couldn't stand the discipline. Yet I've had flyers or catchers with me for fifteen years. Most of them marry when very young, nearly always in their branch of the profession. That's natural enough, because they are thrown together constantly. At one time I had three married couples in my act, not counting Mrs. and Mr. Eddie Ward. And marriages made on the circus lot are nearly always permanent. A divorce is still big news in circusdom.

"You may be surprised that one can be a Flying Ward for fifteen years, and thrive on it. That's where another tradition comes to my mind. It is the tradition that we troupers lead such hard lives. Some of the days *are* dark and dreary. I've showed in sixteen days of rain on end. When a circus strikes a rainy spell like that almost everything mildews on the show, including the dispositions of the company. Incidentally, the wardrobe and property men are likely to 'blow' for drier fields.

"For weeks on end the male members of The Flying Wards have loaded and unloaded their own and their fellow troupers' wardrobe trunks and carried them, dripping, in and out of soggy dressing-rooms, in addition to which they have hung, guyed, and leveled their big steel rigging—a rigging which weighs two tons. And each night they have taken down, packed, and loaded that same rigging.

"But, except from dampness, the women seldom suffer in any weather. Even when they double on tight wires and swinging ladders and, as iron-jawed butterflies, hang by their teeth in the big-top's dome, they work no more than two hours daily. During the other hours they can rest or do whatever pleases them. Trouping does not make them old. And they have neither the time nor disposition to be dissipated. Good food and plenty of water and fresh air, to say nothing of their exercise, keeps them young.

"Just look at my wife, Mayme. She has been trouping with me for twenty seasons, barring the four weeks she laid off each time she had a child. Mayme is now well in her thirties and doesn't make any secret of it, either. But she hasn't gained in weight or lost agility. Do you know of any mother of three children—a boy of twelve, a boy of eight, and a girl of five—who can, with her eyes blindfolded by a handkerchief and her body bound in a gunnysack, throw a double somersault across forty feet of space into her husband's hands twice each day?

"That's a good example of circus discipline. We've done that trick so often that she doesn't miss my catch once in fifty times. When she does get by me, she is always close enough so I can guide her with my hands and see that she falls into the safety net on her shoulders or her back.

"Neither the boys nor girls in my act smoke or drink. They don't want to, and I wouldn't let them if they did. But I don't smoke because it might affect my work. It's business before pleasure in the circus flying game. That's why I don't allow any liquor drinking, either.

"WHAT do members of the act earn for doing their daily bits? Anywhere from twenty-five dollars to one hundred dollars a week, with food, berth, and railroad transportation furnished by the management, unless we are playing fair-grounds dates or indoor circuses in winter time. Then I pay board, bed, and transportation, in addition to all salaries.

"I've saved enough in thirty years to buy a small farm near Bloomington, where I have a nice home and two big training barns. I also have a good one-hundred-and-twenty-acre farm near Cedar Rapids, Iowa. I run those farms through relatives and make them pay. I'm going to stay on a farm when I get old enough to quit the road. That'll be about ten years from now.

"Thousands of circus people have saved their money and bought farms. It's natural for us to go to farms. While trouping we are close to the soil unless, if we're aërialists, we're in the air occasionally."

"I'M a good husband, though a poor one," says Archie Chadbourne. Next month he explains how, although always broke (Archie is a truck driver supporting a family on twenty-five dollars a week), he manages to keep himself sold to his wife. It is a delightful article, for Archie Chadbourne is a genuine philosopher. He was born that way.

"Do this – and your Corns will stop hurting in one minute!"

WHAT you need to really enjoy freedom from corn pain is not some powerful *medication* to destroy your corns, but a healing *corrective* that *removes the cause.*

For that purpose you need Dr. Scholl's Zino-pads—a thin, protective, healing pad that acts on the scientific principle of *correction* and *absorption.*

Zino-pads end pain the minute they are applied—not by deadening the nerves, but by *removing the cause*—pressing and rubbing of shoes. Relief is so instantaneous and complete, you speedily forget you ever had a corn.

It's the *only* way to heal corns *naturally,* and the only way to keep *permanently* rid of them. If new shoes should make the spot sore or tender again, you have only to apply a Zino-pad and the possibility of another corn is *positively prevented.*

Contrast this quick, safe, sure, scientific, *natural* healing corrective with many old-time powerful liquids and caustic plasters that *ignore* the cause and, as a consequence, never keep you rid of corns—often making toes sore from acid burn.

Dr. Scholl's Zino-pads won't harm the tenderest skin; they can be worn indefinitely on one spot with perfect safety. Physicians recommend and use them in their practice.

Zino-pads are also made in special sizes for Callouses and Bunions. Buy a box today. On sale at all drug, shoe and department stores—35c.

For Bunions

Dr. Scholl's Zino-pads for Bunions stop pain at once, protect the swollen joint from rubbing and pressing of shoe. Safe, soothing, healing.

For Callouses and Burning Soles

Dr. Scholl's Zino-pads for Callouses immediately relieve pain and remove the friction and pressure of the shoe. Also instantly effective in relieving burning soles.

Made in the Laboratories of the Scholl Mfg. Co., Chicago, World's Largest Manufacturers of Arch Supports, Foot Comfort Appliances and Foot Remedies

Dr Scholl's Zino-pads

Put one on—the pain is gone!

THE FAMILY'S PROBLEMS

Don't Ask Your Money Where It Went—Tell It Where to Go!

THIS is the fighting slogan with which Inez Meyring has helped hundreds of families and individuals in her home town of Seattle, Washington, to untangle their knotty financial problems. Mrs. Meyring is the director of the Home Service Department of the Puget Sound Savings and Loan Association. It is her job to encourage people, especially women, to open savings accounts in her institution. Often the first step in her program is to get her prospective clients out of debt!

"Women," said Mrs. Meyring, "do most of the buying and all of the managing in the majority of homes. Inevitably they handle a large part of the incomes, so I planned a campaign that would appeal especially to them. I talked before various clubs and women's organizations on the subject of savings, budgets, and thrift, until it dawned on me that these women had no money to save. Most of them had spent their money months in advance, and many of them were head over heels in debt besides. They were, in many cases, trying to meet instalment payments that were in excess of their incomes. And they were nearly all women with good incomes too. By that, I mean that few of their husbands were making less than fifty dollars a week.

"I soon saw that actual personal contact was the only way in which I should be able to help these women, and at the same time win them for the bank. So I sent out invitations to wives to visit our budget classes, or to make personal calls by appointment to discuss their household finance problems. I also broadcast talks to women during morning hours.

"ONE woman who brought her money troubles to me in those early days is now one of my very best friends. When she first came she was in despair. She had bills all over town. She and her husband were paying on furniture in two different stores, paying on an automobile, a washing machine, a piano, and goodness knows what else! The husband was getting seventy-five dollars a week, and he was utterly discouraged. He had heard of our service over their unpaid-for radio. It was he who urged his wife to come to the bank and find out what it was all about.

"She made a clean breast of things and gave me all of her bills. The grocery bill alone was two hundred dollars! The situation looked pretty bad, but finally we got a budget worked out. Of course I had refused to touch the affair unless they would agree to put a certain amount into a savings account every month. We paid so much a month on each bill, according to its size, and kept a certain amount for current living expenses, which were put on a cash basis at once. Every week the woman brought me her husband's entire check, and I gave back to her just the amount that we had agreed upon for living expenses, kept the rest, and personally paid all of her bills. To-day, these same people have made a nice payment on a little home of their own; they are well on their way out of debt, and are about the happiest couple in town.

"People often come to me with the idea that I am against buying on the instalment plan. Not at all; I simply believe that folks should use a little judgment in assuming obligations. 'Own your own home' would be a hollow admonition without the part-payment plan. Many other things that come under the headings of both necessities and luxuries are possible to the majority only through the instalment plan. It is the instalment complex that causes distress and ruins many a home. Forming a new debt before the old one has been canceled—and never saving a cent!

"Helping people save is, of course, my business. It is the thing in which I am primarily interested. When people have reached the point where they can tell their money where to go instead of asking it where it went, then, and then only, will they get their money's worth.

"BUT how do you get folks started to save?" I inquired.

"First," she told me, "I help them fix upon a definite objective. I remember one man who said that he had always wanted a little store of his own. I finally persuaded him to start a savings account with his store in view. He began with a very small amount, but week after week he increased his deposits. At last he had saved fifty dollars, and one day he came with the request that I draw it from the bank for him. He was going to use it to make a payment on a little stand outside the city limits.

"I drew out his money for him; but the next week he deposited as usual. His savings had grown to $150 when he again asked me to get his money for him. This time he was going to move his little store to a location in town. For three years after that, he continued to work at his trade and to make his deposits regularly, while his wife kept the store. Then he, too, went into the store, and in 1927 that man's business amounted to $12,000!

"While it usually requires an objective to start people on the road to a savings account, almost invariably those who once start become established savers. People soon realize that a savings account is the only sure road to independence.

"The best way is to start with a small sum which you are reasonably sure of being able to keep up. Those who begin with a modest deposit are surprised at the rapidity with which it grows into an imposing sum. There is only one iron-clad rule to successful saving, and that is: Make your deposit before you pay out one cent for anything else. You will be amazed at the ease with which you can stretch the remainder to cover the things which you can't do without." H. C. C.

"Go ye into all the world and preach the gospel to every creature."—A drawing of Christ and Saint John, by Eugène Burnand

A Roughneck's Religion

By Albert Payson Terhune

On a dingy May night in 1927, a Boy was flying through the black reaches of upper and lower air at something more than a hundred miles an hour; bucking sleet storms and cross-currents; gloriously facing the Unknown. He was not a "flying fool," but a shrewd mathematician as well as an adventurer. He was wagering his glowing life on the accuracy of his own computations. Incidentally, he was carrying the hopes and fears of the whole Western World.

On that same dark May night, a prize fight of much attraction was staged in New York. The banked acres of seats were jammed with spectators.

The bulk of the folk at this battle were as the bulk of folk at every prize fight. In brief, they were Roughnecks. That is the truest and most forceful way to describe them.

Into the ring stepped a man who might perhaps be described as the most complete specimen of the genus Roughneck I have known. He was the leathern-lunged and leathery-faced announcer. Waving his shirt-sleeved arms for silence, he bellowed forth an impromptu speech, his raucous voice piercing the looser volume of sound, which presently hushed itself to deathly silence. In effect, his speech ran somewhat like this:

"Laaaay-dees an' Gent-ulll-mun! I don't know what you folks believe in, or what you don't believe in; and I don't care. But Slim Lindbergh is up in the air, some place between here and Paris, France. I know you're all of you rooting for him to win through, safe. So I'm asking you to help him the only way you can. I'm asking you to stand up, *for one minute of silent prayer for him.*"

There was no instant of hesitation. There was no snickering or repartee from a crowd whose specialties are snickering and repartee. As one man, that vast multitude of Roughnecks surged wordlessly to its feet. For a long minute the throng stood with bare heads bowed. From tens of thousands of hearts arose

Digitized by Google

UNIVERSITY OF IOWA

a tumult of fervid appeal—in a dozen languages and in no language at all—for the well-being of the steady-souled Boy who was flying blindly through that murky night.

Perhaps more eloquent petitions have pierced less far beyond the frontier of the stars and toward the ears of the Hearer and Answerer than did this multiple silent supplication of the Roughnecks.

As the sacred minute ended and the people sank back into their seats, the radio announcer spoke through his microphone to perhaps a million stay-at-homes who had been fidgeting with annoyance at the sixty seconds of stillness which blocked their craving to listen in on every ringside detail. Said the announcer:

"This great audience has been standing in a minute of silent prayer for the safety of Lindbergh. I ask you to do the same."

There is no record of innumerable groups of listeners who got up from easy chairs, laying aside cigars or glasses, and who stood in rapt silence, praying, until the minute was past.

Then, life went on again—the smoking, the chatting, the drinking, the reading; the avid animal interest in the two men who were to hammer each other so vehemently in the ring. But —for sixty seconds—hundreds of thousands of hearts had been lifted to God in pure and unselfish entreaty for the safety of a fellow man. All as the result of the plea of one Roughneck to a mob of fellow Roughnecks.

Yes, I have spun the yarn to some length. Perhaps most of you have heard it before. But it bears retelling. For, to me, it is one of the most beautiful stories ever told; as well as the most significant.

Not from the Roughneck has come the horde of sneers at religion, either now or in the past. The Roughneck has ever been sound, to the core. He has left doubts and atheism and higher criticism and the like to the Intelligentsia ("the High-brow Bunch," as he would call them); and to the Parlor Intellectuals who go smugly on, thinking 44-caliber thoughts with 22-caliber brains, and seeking to lead the Roughneck unleadables.

I like the Roughneck. Perhaps I like and understand him because I am one of him; and because, off and on, for a half-century, I have associated much with him. It is he who is the backbone of religion—not of dogma nor of quibble, but of the terribly simple and irresistible religion which made him stand in silent prayer at a prize fight.

So it was, nearly two thousand years ago, when Christ walked the earth. The Bible tells us: *The Common People heard Him, gladly*, and that the Scribes and Pharisees did not. Even in that day, you see, the Roughneck and the Intelligentsia were arrayed in opposite religious camps.

I have just bragged of myself as representative of the Roughneck's clan. So it follows that I should outline his religion as correctly as I can. I can do it, I think, in one short sentence. Perhaps that may not be complete; but at least it will strike the keynote. Here it is:

A Roughneck believes it is a million times better to DO good than merely to BE good.

That is his creed, as I understand it; though I much doubt if ever he has put it into words, even in his own innermost mind. And if you will stop for a moment to think the definition over, you will realize it has been the keynote of every great religious teacher, as well as of every truly great man, since the beginning. For Greatness means Accomplishment.

DRAWING BY GEORGE GIGUÈRE

Had Christ been content to sit in holy contemplation, in the Syrian desert, abstaining from sin and training His thoughts to sanctified reverie, he might have been sublimely good. But His name would be as utterly forgotten to-day as is that of any bygone yogi or medieval hermit. Nor would we have any Christian religion.

It was in His deeds of healing and of self-sacrifice, in His boundless generosity and tolerance, that He touched the souls of the Roughnecks of His day; not by His mere sinlessness. It was on the Cross, and by His miracles, not during the forty days of lonely fasting, that He founded Christianity.

Said Talleyrand, a born Intellectual:

"Any man can found a religion!"

Napoleon, a born Roughneck, made curt reply:

"Yes—if he chooses to die for it."

If Columbus had been content to crouch over maps and charts in the dust of an attic library all the days of his life, he might have died with a great knowledge in his brain that there was a continent which could be reached by sailing westward. But it was only by sailing westward at risk of life and prestige that he made himself immortally great.

The Wright brothers could have solved and then hugged to their hearts, the secret of aviation; for they were wise. But they found greatness in doing, not in being. Do you get the idea? Nowhere else does it apply as tremendously as in religion—the simple and mighty religion of the Roughneck.

In an office where I worked in my newspaper years there were all elements of men, from the super-Intellectual to the sub-Roughneck. A reporter died, leaving a large family in dire and immediate need.

One of the editorial department Intellectuals commented to me, in precise terms, on the sadness of the case, dilating on the "criminal non-providence of the semi-poor."

A sport-notes gatherer, who had risen from office boy to pork-and-beans pugilist, and then had drifted back to the newspaper, listened with perplexity-furrowed brows to the long homily. The Intellectual finished his sermon by saying:

"Of course, like everyone else, I regret the matter. I—"

"That means you're sorry for the poor guy's folks, don't it?" interrupted the sporting man.

"Naturally," assented the Intellectual. "Naturally I am sorry for his impoverished family. But—"

"How sorry are you?" insisted the Low-brow.

"I'm afraid I don't grasp your meaning," stammered the Intellectual, in evident worry at the other's vehemence.

"Here's what I mean," gruffly explained the Roughneck. "You say you're sorry for them. Well, so am I. I'm sorry fifty dollars' worth. How sorry are *you?* Come across!"

I have no shadow of doubt this Intellectual was a thoroughly good man. I doubt if he had a single sample-size sin to his debit. The sport-notes Roughneck was no model for any growing boy. Yet—he was "sorry, fifty dollars' worth," a sum nearly double his weekly salary, a sum which must represent (and later *did* represent) a pinching and scraping and a tightening of the belt—a sum he gave, gladly, to lighten the poverty of the widow and children of a man he had never liked.

To me, that is not only a case of Roughneck religion, but of white Christianity as well. And it is but one of a hundred like instances which I have picked up during my long association with Roughnecks.

Here is a wholesale example of the same thing; an occurrence too common, nowadays, to be worth news comment, yet hardly a week passes when it is not enacted in any and every big city:

A DESTITUTE child or woman or man is brought into a police station. Now, there is organized charity which takes care of such cases. But do the police wait for that charity's sometimes cumbrous wheels to get into due motion? They do not. At once they go into action. The hat is passed. A goodly, if ill-spared, collection is taken up to relieve the immediate needs of the sufferer. The Roughneck's religion is exercised to practical effect.

It is the same throughout the tenements—almost the only "neighborhoods" left in modern cities. Countless columns of "human interest stuff" have been printed in countless papers, telling of the glorious self-sacrificing generosity of Roughnecks toward other tenement-dwellers who have met with sudden misfortune through fire or accident.

Stanley Huntley, in a book published nearly a half-century ago, told how the first church happened to be established in a Dakota mining camp. A traveling minister came thither. One Dennis Hanaffin, the guiding spirit of the camp, announced that they had given Satan a fair deal, in their gambling dens and saloons, and that it was only square they should do the same by the Almighty.

Accordingly, the chief gambling house was set aside for the religious experiment. The minister opened his first service with

"And the common people heard him gladly." Christ at Emmaus, from the painting by Léon Lhermitte

prayer—a simple Roughneck prayer for simple Roughnecks. Then he preached a sermon along the same lines as the prayer—a sermon aimed at the heart as well as at the brain. It held no flowery language. It was crude. But it was strong. And it hit its combined target.

When the sermon was ended the minister announced that the service would close with a hymn. There was an awkward pause. In all that bunch of dissolute Roughnecks there was not one who knew the words or tune of a single hymn. Dennis Hanaffin went into executive session with a few of the best singers. Then he said to the preacher:

"We don't savvy no hymns; and the only song we know that's fit to sing in church is called 'Whoa, Emma!' So—"

"Sing 'Whoa, Emma!'" commanded the preacher. "If you sing it to the praise of God, and if it's the nearest to a hymn that you know, it will be acceptable On High."

ACCORDINGLY the Roughnecks rocked the flimsy building to the thunderous strains of "Whoa, Emma!"

As the shouted rendition ended there were tears in many eyes. For the men had been singing "to the praise of God," urged thereto by the minister's prayer and sermon. Dennis Hanaffin cleared his throat and said, huskily:

"If the angels, Up Yonder, really crave grand music I'm here to hope they had sense enough to lay aside them golden harps of theirn, and listen to us a-singing. Now comes the collection! And," with sudden grimness and a hitch of his pistol holster, "gents, *I'm* a-passing the hat."

He passed it. Into the greasy sombrero every worshiper dumped his money. Many were using poker chips (redeemable for cash at any reliable gambling-house in the camp) for currency. Thus the hat contained more chips than dollars. The minister blinked dubiously at the double measure of chips.

"But what am I to do with these?" he asked, bewildered.

"Well, parson," answered Dennis Hanaffin, "you can either cash 'em in or you can play 'em; whichever you've a mind to."

The minister cashed them in; and he used the whopping big sum as nucleus for a fund to build the camp's first church. In less than ten years there were three churches, and the frontier camp had swelled to an orderly city.

The Roughnecks had made good. Their religion had proved itself the real and mighty thing. All because a traveling parson had the good sense to speak to them in their own language, instead of antagonizing them with the highflown language of the Intellectuals.

I don't know what your religion may be, you who read this article of mine; nor is it any of my business. My own beliefs are those set forth in the Bible, though I do not force those beliefs on anyone. I mention all this, lest some of you be shocked when I speak now of certain Biblical Roughnecks. I do so in all reverence; and I take my facts wholly from the Bible's New Testament; which, to me, is the indisputable fount of Truth.

Just because a man or woman happens to be a Biblical character does not make that man or woman sacred. If it does, then we must worship Judas Iscariot and Cain.

The mortal characters in Holy Writ were humans, like our present-day Roughnecks. The term "Roughneck" applies most aptly to most of the twelve Disciples. Assuredly, during the time our Lord was still on earth, few of them merited the prefix of "Saint," however much their later holiness and martyrdom may have earned the sacred title. I am speaking of them as they were, before the title was earned.

A little earlier, a true Roughneck fared forth into the wilderness, wearing the skins of slain beasts and with unshaven face and unshorn head, and making his diet on wild honey and on the dried bodies of locusts. Harsh was his speech. To Herod, the ruler of Judea himself, he thundered fierce denunciations of Herod's morals. Also he proclaimed the Messiah; and, when the Messiah had arrived and begun His earthly ministry, the locust-eating Roughneck stood aside and made his own fame as nothing, in order that all honor might be Christ's.

The man in beast-skins, who denounced kings and made ready the road for Jesus, was John the Baptist. Not a drawing-room figure, surely; not even an Intellectual. But he lived and died for his religion; and he suffered martyrdom for what he deemed right.

I HAVE spoken of the bulk of the Disciples as Roughnecks. They were. Nearly all of them were drawn from the peasant class: fishermen and the like. Had Christ gone forth into the colleges and synagogues and picked for His Disciples only the wisest and best men of the day, there would have been less to wonder at in their final achievements in going forth, inspired, to preach the gospel until martyrdom (*Continued on page 96*)

He bent his white head over the maze of symbols and hieroglyphics which made up the cryptogram

The Sting Of The Wasp

By RICHARD CONNELL

Illustrated by FREDERIC DORR STEELE

THAT night Matthew Kelton was working over a new puzzle, a cryptogram—a most difficult one. He had given himself till five in the morning to solve it. Then he would brew himself a cup of tea and go to bed. There was a smile on his face, which was rather like a ripe crabapple. He was getting the key to the cipher. But then, he usually did.

Matthew Kelton had one passion—puzzles. Having had the forethought to make a neat fortune for himself by inventing some new chemicals, he was able, in middle age, to retire and devote his life to his favorite pastime. Any sort of riddle held a fascination for him; but what interested him most was the deepest, strangest riddle of all—the riddle of human behavior.

The clock in the corner of his prim old-fashioned study struck midnight. He bent his white head over the maze of symbols and hieroglyphics which made up the cryptogram. Then his telephone rang. With a certain mild impatience he went to answer it.

"This is Evan Turner," said the voice at the other end of the wire.

"Hello, Evan. Something wrong? Your voice is tense."

"Can you come to the house of Guy Oakley—that big, ugly place on Dark River Road—at once?"

"I'm rather busy. What for?"

"Because," said Turner, "they've just found the body of Lewis Cope there—and he's been murdered—shot."

"Any idea who did it?"

The man at the other end of the wire hesitated. Before Turner could answer, Matthew Kelton said, "They're accusing Guy Oakley. Isn't that the situation?"

"Yes."

"Does he admit it?"

"No."

"Has he an alibi?"

Again Turner hesitated. "No. Not a conclusive one, anyhow."

"Doesn't sound like Oakley," said Matthew Kelton. "Still, you never can tell. Repressed men explode sometimes. Well, what do you want me to do?"

"Drive over here immediately."

"But why, Evan? I'm deep in a real puzzle. I see no puzzle in the killing of Cope. The bitter hate of Oakley for Cope, and Cope for Oakley, has become a classic, like the friendship of Damon and Pythias. When two strong men hate like that, something is bound to happen. Apparently, now it has."

"My duty is to do everything I possibly can to save Guy Oakley," said Turner. "That's why I'm turning to you. You might see something the police would miss. You'd be doing me a great favor, Mat-

Matthew Kelton goes to the insect world for help in solving the strangest riddle of all—the riddle of human behavior—and thereby hangs a corking mystery tale

thew, to come over."

"Simple, vulgar murder fails to interest me much. It's worse than stupid—it's in bad taste," said Matthew Kelton. He thought a moment. "You say that Guy Oakley has no real alibi?"

"I'll be frank with you, Matthew. He hasn't. A jury would laugh at his story, and hang him without leaving the box."

"H-mm. Now *that* is interesting. In fact, I scent the elements of a puzzle. I'll be right over!"

THE residence of Guy Oakley, the banker, was a vast and gloomy mid-Victorian house, on the edge of an extensive pine wood.

Matthew Kelton was shown into a large somber drawing-room, full of black walnut furniture. A group of men had gathered there—Oakley, Evan Turner, Police Captain Lamotte, Doctor Ussher. They bowed toward Matthew Kelton as he came in.

"Evening, Mr. Kelton," the police captain said. "A bad business, I'm afraid."

"Crime always is, Captain. Well?"

"Come into the library with me, Matthew. I'll give you the facts," Evan Turner said.

Matthew Kelton followed the lawyer into an austere, book-lined room.

"Oakley is my client," said the lawyer. "I don't dodge the fact that the evidence is dead against him. He hated Cope, and Cope hated him. It's an old story, and not a pretty one."

"A woman?"

"Yes."

"Mrs. Cope?"

"Yes."

"Go on."

"THEY were sworn enemies. Their hatred was almost a religion with them. I'm not going to keep any important fact from you, Matthew."

"Quite right."

"Only a week ago I had dinner with Guy Oakley in this very house. I've been his attorney for years, but I've never been a close friend. I doubt if he has any."

"Strong, silent men are apt not to."

"Well, the cocktails warmed up Oakley, made him communicative—for him. We were talking along about nothing in particular, when suddenly he burst out, "That cur, Cope! I saw him to-day, looking at me with those evil green eyes of his. I'll never be happy—or safe—while he's in the world. I'd kill him like a rat if I thought I could get away with it!"

"I told Oakley he was a fool to talk like that—to me, or anybody. He calmed down, and said he didn't mean it. But he did, Matthew."

"No doubt. Well, what then?"

"Here is what happened to-night: Oakley had dinner alone. He had four stiff cocktails, a half-bottle of sauterne, and a high-ball. So Reeves, his butler, testified. Liquor, as I know, always made him sullen, even savage. He was in a decidedly bad humor, Reeves says, when he went into his library immediately after dinner.

"At half past nine, Lewis Cope came to the house. He was in dinner clothes, and he seemed to be in a high state of excitement, Reeves, who let him in, says. He pushed past Reeves, and went into the library. Reeves heard the sound of angry voices, as if Oakley and Cope were having a violent row. Reeves went down in the cellar to look at the furnace fire, and was there possibly eight or nine minutes.

"When he came up-stairs, no sounds could be heard in the library. Somewhat alarmed, Reeves tapped at the door and, getting no answer went in. Oakley was sprawling in a chair, apparently in a drunken stupor, for there was a half-bottle of rye and a glass on the table. Cope had gone. Reeves helped Oakley up-stairs, and put him to bed. It seems that Reeves was rather used to that sort of thing."

"Solitary drinker, eh?"

"Yes."

"Bad," said Matthew Kelton. "Bad."

"At twenty minutes past eleven," continued Turner, "Oakley's chauffeur and his wife, and the gardener and *his* wife

"To my astonishment he did not attack me. Instead, he backed away, smiling that terrible smile"

Original from UNIVERSITY OF IOWA

returned from town in the station wagon. They'd been in to see a movie. As they came up the main drive the car's headlights picked up something white, lying by the roadside on the lawn, about twenty-five yards from the house. It was Cope's shirt front. He had been shot through the heart. Slight powder marks were on the shirt, as if he had been shot from a distance of two or three feet.

"Without stopping to make any sort of examination, the chauffeur and the others drove down Dark River Road about a quarter of a mile, to where a state trooper is stationed, regulating traffic. Sergeant Lester, a keen young officer, came back with them, and with his flashlight made a thorough examination of the body and the ground around it. He found no weapon. He 'phoned for Captain Lamotte, who arrived shortly with Police Surgeon Ussher.

Doctor Ussher said Cope had been dead about an hour. They went into the house, and woke up Oakley. He appeared to be groggy from the drink, but the shock of seeing Cope's body sobered him completely. He kept a tight grip on himself, however. Said nothing. Merely stared at Cope.

"Captain Lamotte, who was watching him closely, says that he read in Oakley's face a fierce hate for Cope, even in death. Captain Lamotte is a man of action. He said to Oakley, 'Did you do this?' . . . 'I didn't,' said Oakley. 'I wish I had!'

"I arrived just then and shut up Oakley. Also, I persuaded Captain Lamotte not to arrest him formally until you had a chance to look things over. Bankers can't afford to be arrested, even if they are entirely innocent."

"AND it's even worse if they're guilty, I suppose," said Matthew Kelton. "Evan, I don't see much hope for Oakley. I dare say Lewis Cope was no ornament to society—a vicious, ill-natured fellow, I've always heard. Even so, it was mad of Oakley to kill him, especially like this."

"Drink-crazed," muttered Turner, more to himself than to Matthew Kelton.

"Beginning to work out your line of defense, eh?"

"Looks as if I'll need to."

"What about self-defense?"

The lawyer shook his head.

"Not much chance. There was no sign of a struggle, as Sergeant Lester will testify. Oakley denies emphatically that he had any sort of physical fight with Cope."

"Suppose you ask Mr. Oakley to step in here a moment. I'm not the sort of man who can tell a guilty person from an innocent one by feeling his pulse, but I'd like to ask a few questions."

The lawyer went into the other room and returned with Guy Oakley. The banker was a big man, fifty, perhaps, with the lined and seamed face of a man who has known much worry and sorrow in his life.

"Have a cigar, Mr. Oakley," Matthew Kelton greeted him. "I have these made in Havana." He offered Oakley his case. The banker took a long cigar, lit it. His fingers, Kelton noted, were steady.

"Now, Mr. Oakley, please tell me, briefly, what happened to-night," Matthew Kelton said, as casually as if he were asking for a description of a card game.

"I didn't kill Cope," said Oakley. He sank into a chair, as if he were very tired.

"That's what Turner and I will have to prove," said Matthew Kelton. "Help us by telling us exactly what occurred."

"I've been on the ragged edge, lately," the banker said. "Nerves all jangled. Business worries—and Cope. I think he hated me on sight. I know I took a strong dislike to him when I first met him, some seven years ago. That happens sometimes, you know.

"Then—four years ago—we got into that mess. We both behaved pretty badly, I guess. It was a nasty snarl of treachery, deceit, lies all 'round. It's all over now. She—she's dead. But our hate lived. Cope I knew to be vindictive—and subtle. I've seen him watching me with the eyes of a snake, waiting to strike. I waited. It was harrowing."

"Naturally," said Matthew Kelton. "Then?"

"To-night I drank too much at dinner. I've been doing that lately. An escape, you see. Afterward, I went into my library, with a bottle of rye. Frankly, my idea was to drink myself unconscious. I was well on the way when suddenly Cope came into the room. I thought at first it was some ghastly vision my disordered senses had conjured up.

"Then Cope began to talk. 'You're afraid of me, Oakley,' he said. 'You have reason to be.' I thought he had come to kill me."

"WERE you armed?" Matthew Kelton asked.

"No."

"You own a gun, though. Where was it?"

"I have several. Two. One was in a drawer in the dresser of my bedroom." The banker hesitated.

"And the other?"

"In the pocket of the suit I took off when I dressed for dinner."

"I see. Go on."

"Cope stood there looking at me. His face was the face of a crazy man. He smiled, a terrible smile. Then, very quietly he said, 'I've good news for you, Oakley. A doctor examined me to-day. You'll be delighted to know that my lungs are bad. I'll be lucky to live out the year. I hope we'll meet in torment.'

"He stood there looking at me with his green eyes. I burst out, 'Get out of here!' He dropped his quiet manner. 'Why don't you kill me!' he shouted. 'I will,' I said, and started to struggle to my feet. Because of the drink my body was not under good control. To my astonishment he did not attack me. Instead he backed away, smiling that terrible smile.

"'Not to-night,' he said, and laughed. I'll hear that laugh in my dreams. 'No,' he said, like a man talking to himself, 'I'll not kill you to-night. And you can't kill me, Oakley, because I've been dead for years.

"'But some day I will kill you, Oakley. You can look forward to that. Yours will not be a pleasant death. Good night!'

"He turned and went quickly out of the room. I stood there a moment or so, dazed. Then I downed a whole glass of rye, and sank down on a chair, pretty thoroughly knocked out. The next thing I knew Reeves was putting me to bed. That is the absolute truth!"

"You heard no shot?"

"No."

"You did not follow Cope out of the house?"

"No."

"Mr. Oakley," said Matthew Kelton, unexpectedly, "why do you wear only one stud in your evening shirt?"

The banker glanced down at his shirt front. It had two buttonholes. The top one held a black pearl stud, set in platinum. The bottom hole was empty.

"Couldn't find the other one," the banker said. "Maybe the burglars took it."

"What burglars?"

"My house was burglarized a couple of months ago, while I was away. They made off

With a powerful electric torch, Matthew Kelton made a brief examination of the body

with some plate and jewelry. Nothing very valuable."

"That's all for the present, Mr. Oakley," said Matthew Kelton. The banker joined the others in the drawing-room.

Matthew Kelton gravely puffed at his cigar.

"I don't envy you your job, Evan," he said. "I've seldom listened to a clumsier and less plausible story."

"It might be true."

"That's what you'll have to convince a hard-headed jury. But, Evan, bear this in mind: there are times when nothing is more unbelievable than the truth. I'd like to see Cope's body."

Matthew Kelton, together with Turner, Captain Lamotte, Doctor Ussher and Oakley, went out to the spot where Cope's body, covered with a blanket, lay, awaiting the arrival of the coroner. Sergeant Lester was on guard.

With a powerful electric torch, Matthew Kelton made a brief examination of the body.

"Found anything new, Sergeant?" he asked.

"I've got the bullet, Mr. Kelton. Dug it out of the ground. It went clean through him."

"Let me see it, please."

The sergeant dropped a small lead pellet into Matthew Kelton's palm. Kelton examined it closely.

"What do you make of it, Captain?"

"I know a bit about guns. Hobby of mine," the police captain said. "But this bullet is something unusual. Steel nose. Very long. Like a small nail, almost. Too big for a .22 caliber. Too small for a .32. I can't tell what sort of gun fired it. I'd say, though, that it was fired at close range and by a steady hand."

"Obviously," said Matthew Kelton, studying the bullet. "Guns are a hobby of mine too, Captain. Now, it's my opinion—an opinion merely, you understand—that this bullet was fired from a Skomak pistol."

"Never heard of one," said the police captain. (*Continued on page 86*)

The Chanins

Crazy! That's what people them, but those who said qualify as

IT'S funny about Irwin S. Chanin. Just as he was getting used to being called "crazy," and was beginning to enjoy it, people stopped doing it! Instead, they commenced to speak of him in awed tones as "the Crœsus of Broadway."

This transformation, from crazy to Crœsus, occurred in the short space of a few years. Even among the romantic stories of American business it would be hard to match the Chanin record.

He is small, clear-skinned, dark-eyed, and ordinarily looks as serious as an undertaker. But as he told me about those years when he was called "crazy," his eyes sparkled and he chuckled like a mischievous boy.

As he is only thirty-five years old, his real boyhood is not very many years behind him. He says he never played when he was a youngster. If so, he is making up for lost time. For he seems to get as much fun out of work as any boy ever found in play.

DURING the past few years, Chanin has been a sort of Mysterious Stranger in New York business affairs. When he and his brother Henry began putting up big buildings in New York and Brooklyn, people said: "Who in the world *are* these Chanins?"

Gradually, it was discovered that the two young men, not then out of their twenties, lived in Bensonhurst, a modest suburban section of Brooklyn.

It was discovered, also, that, as recently as 1919, they were practically without a dollar. Yet in 1924 they bought a Brooklyn business site for $850,000 and started the construction of a $5,000,000 office building. No wonder people said they were crazy.

But not everybody said it, even then. Irwin Chanin himself was *sure* he wasn't crazy. He managed to make a few other men share this certainty. And to-day those men are boasting, with pardonable pride, of their shrewdness in picking a winner.

once said about it could never alienists

If the less shrewd ones had known Chanin's whole story they might have sized him up more correctly. He is one of those amazing young Jews who perform what seem to be miracles of achievement. We watch them with curiosity, envy, and sometimes with resentment. We might better try to find out *how they do it!* That was what I tried to discover about Irwin Chanin.

He was born, October 29th, 1892, in Brooklyn, his father and mother being immigrants from Russia. After reaching this country the father became a painter. Then he began to get small contracting jobs: repairs and finishing interiors.

Instead of spending his earnings, he saved thriftily. By the time Irwin was six years old his father had accumulated about ten thousand dollars.

He and his wife were lonely in this country, for their friends and relatives were in Russia. Moreover, in Russia a man would be *rich* with ten thousand dollars! So the Chanins took themselves, their three children, and their little fortune, and went back to their native village in the Ukraine.

"I couldn't go to the public school there," explained the present Broadway Crœsus, "because I wasn't born in Russia. But that was really a lucky thing for me; for I loved to study, and in the private school which I attended there was almost no limit to the amount of studying I could do.

"I used to go to school at eight in the morning. Except for the time I took for lunch, I was there until seven at night. Or, if I went home at five-thirty for supper, I would go back to school, and stay until eight or eight-thirty. I never played. But I didn't miss play, for I loved study better than anything else.

"WHEN I was about nine years old, they started to build a railroad through that section. There was no school on Saturdays, so I used to watch the men who were surveying the line.

"The engineer in charge would set up a mysterious-looking instrument which I know now is called a transit. He (*Continued on page 122*)

How *to* Live *in a* Small Town

By Dorothy Walworth Carman

Mrs. Dorothy Walworth Carman and her daughter on the lawn of their home in Maplewood, New Jersey. Mrs. Carman is author of "Faith of Our Fathers," "Pride of the Town," and "Chickens Come Home to Roost"

MAKING a success of life in a small town demands a special technique. The city dweller can shut himself off from his kind quite completely. If he wants friends, he can pick them, while in a small town they are apt to be forced on him.

On my street in Maplewood, New Jersey, I am in constant contact with the daily lives of at least twenty families—their comings and goings, their habits, their relations with each other.

I have enough literary material on my street to last me a lifetime, if I dared to write it. And yet my neighbors lead quite normal lives. But what happens inside them as they go about their business—their opinions, their family adjustments, their efforts to play the game—make a panorama of unfailing interest.

Lately I have been thinking about what I have called the "special technique" of living in a small town. All my life I have lived in one—and it is not surprising that I have come to a few definite conclusions. That "special technique" has a number of very definite principles and it is these which I am going to try to describe.

1. *A Sense of Humor.* This characteristic is rarer than people think. Nobody will admit he lacks it. Ellen Glasgow, in a late novel, mentions a certain Mrs. Spearman who assured everyone that she had no flaw in her sense of humor, "but the things other people laughed at never amused her."

I am not attempting to define a sense of humor, but, whatever it may be, it keeps you from getting pompous. Moreover, it enables you to get through cheerfully the minor irritations that are sure to arise in small-town relationships.

A city dweller has only the relations of his immediate family to keep smooth. A small-town dweller has an enlarged family life, sometimes containing a whole street.

But a sense of humor will keep the little events which crowd in on a small-town dweller from seeming too calamitous. Your day will not be completely ruined because the neighbor's dog tracked up your new-washed porch with his muddy paws, or your neighbor across the street refused to pay for the window his boy broke. After all, you will reflect, porches and dogs and windows are small details in the great scheme of things.

There is one woman in our town who has no humor in her dealings with the rest of us. She is continually dashing up our hill to tell us that our children have been teasing her little Gertrude. One would suppose that the teasing of little Gertrude shook the stars in their courses. The result is that this woman is not popular, and we all confess to a secret, evil joy when her offspring suffers some minor mishap. I have often thought that her life would be made over if she would only cultivate a sense of humor.

Humor is more than just a nice thing to have around the house. There is a ministry about it. It sweetens situations, it brightens whole streets. God put it in the world as one of his blessings. Cultivate it. It's of prime importance if you wish to live peacefully in a small town.

2. *Tolerance.* This attribute is invaluable in small-town life because it helps you to get along with the conflicting opinions around you. Suppose my neighbor on one side is a rabid Republican, and I am a rabid Democrat. We should soon come to blows if at least one of us did not have tolerance.

When you are tolerant, you do not necessarily believe your neighbor is correct in his opinions, but you respect them. Tolerance is best expressed by Voltaire's famous words to Helvetius: "I wholly disapprove of what you say, but I will defend to the death your right to say it."

I have often thought that "live and let live" was a very good motto for small-town life. Don't expect too much of people; don't try to drag them up by main force to your own standard; take the beam out of your own eye, and remember that we have all sinned and fallen short of the glory of God.

3. *Kindliness.* This means the small acts of thoughtful good will which make existence more pleasant and which distinguish civilized society from that of savages. I recall, in Mount Kisco, New York, a dear old lady whom everybody called Auntie Bennett. I was only two years old when I lived in Mount Kisco, but I still hear stories about her. For one thing, she had everybody's birthday in a book, and everybody's birthday was remembered with a greeting. When there was sickness in any house, Auntie Bennett came to the door as surely as the doctor.

Now we cannot all be Auntie Bennetts, but we can all be kind. We can realize that the man across the street likes to have his birthday noticed, though he may pretend he doesn't. Suppose you send the woman up the block one of your pies once in a while. Telephone Mrs. Horton and ask after her little girl with the broken arm. Stop Fred Jones on the street and tell him you hear he has been made president of that men's club, and congratulate him.

Those small attentions require little time, and they make such a difference. I knew a good citizen who died, and when the letters of condolence came to his family, they mentioned most often the *everyday* kindness which this good man had performed. He had not waited for some large occasion to be noble.

4. *Human Interest.* All of us are interested in our own kind, and we should be. It is a form of unselfishness to enjoy other people. We should not appear bored when Mrs. Wayne stops us to say what wonderful progress her Alfred has been making on the violin. We should be so genuinely interested that we do not interrupt her with tales of our own child's precocity. We have all known people who talk animatedly enough about their own

Digitized by Google
Original from
UNIVERSITY OF IOWA

affairs, but who get that far-away look in their eyes whenever anyone else's affairs are mentioned.

Somebody has defined a bore as a "man who talks about himself when I want to talk about myself." Consider your neighbor's affairs almost as entertaining as your own, and you will be bored more seldom!

5. *Discretion.* By this I mean absence from talebearing and scandalmongering. In a small town, where much is known of one another's lives, the temptation to gossip is almost irresistible, and men are as guilty of it as women. When they get together in the evenings at their lodge meetings, they repeat all the rumors their wives have told them. But if a man or woman wants to be well liked, he had better not be known as a talebearer. We are all of us human enough to listen to such a person, but we never respect him.

And, it is a good thing to remember that some day a tale may recoil on you with uncomfortable consequences.

6. *Neighborliness.* Robert Frost has a poem about a New Englander building a wall and saying, "Good fences make good neighbors." It is true that much strife can arise over a boundary undefined. But we should learn to be good neighbors, even without fences.

My husband and I are friends with our neighbors, and I do not believe it is solely on account of the barberry hedge that separates us so definitely. It is because my neighbors have learned the art of being interested without being inquisitive. They run over to see me, but not too often. They do not embarrass me with over-attention, but neither do they neglect me. They are considerate, and when they put their car in the garage late at night, they are careful not to be noisy enough to waken me. They mind their own business, yet they do not hold aloof.

I think the whole twenty families of us on my street try to be decent to each other, especially in such practical matters as restricting our dogs, cats, chickens, and children. We seek to be gracious, also, in the matter of lending and borrowing. There is a time in the life of every woman when she is in the midst of baking and lacks just one egg. There is a time in the life of every man when he is in need of a tack hammer or a rake.

Lending, you know, may be a fine art. My neighbors all have equally fine morals, but there is one neighbor I would rather borrow from than anybody else. She knows how to lend something as if you were doing her a favor, instead of the other way around. She never acts as if it were too much trouble, not even when you interrupt her in the midst of crullers, and that is a test.

When my husband and I first moved into our house, our lawn was in a frightful condition and our new lawn mower had not yet come from the store. So we asked a near-by householder for hers, and though she lent it, she did it sourly, with the request that we pay her fifty cents for sharpening it afterward. Though, in the subsequent years she lived near me, I found her a woman with many good traits, I never quite forgave her for the lawn mower. The advice "neither a borrower nor a lender be" cannot be kept in a small town. You must learn to lend graciously, but you must borrow as seldom as possible, yourself. And whenever you are forced to borrow, *pay it back*, even to the half teaspoonful.

7. *Contentment.* By that word I do not mean placidity, but relish for everyday life. It might be better defined as the enjoyment of monotony.

We should learn to appreciate our familiar, repeated blessings, such as log fires, warmth, food, sunrises. We should cultivate a liking for habitual actions. For myself, I enjoy opening the back door and bringing in the milk bottles. I always pause with a milk bottle in either hand, and take a deep breath and look over my back-yard domain.

This seems a very little thing to do, but I tell you those milk bottles of mine have given me much pleasure in the course of my married life. Milk bottles, log fires, and sunsets are no flashes in the pan as materials for happiness. They are what President Eliot used to call "durable satisfactions."

It is a good plan to like conversation, too, as a durable satisfaction. It is a discouraging sign when we must pull out the bridge table every time the neighbors come over. Once my husband and I went to call on some total strangers who had just moved to town. We hoped to get acquainted with them because we had heard they were very nice people. We had scarcely got into their house when they pulled out the bridge table, and the conversation for the rest of that evening was confined to trumps. When we came away, we both remarked that we had not become acquainted with them at all.

8. *Magnanimity.* One of the signs of "large-mindedness" is lack of false pride. We should never be too proud to beg pardon once in a while. In a close community life, there cannot fail to be times when we hurt someone's feelings, unintentionally perhaps. We should always be willing to make it right. There are too many men who have stood on their little dignity, and said they would be willing to let bygones be bygones if the other man would apologize. Apologize yourself. It never lowered any man to apologize, though there seems to be a strange notion that it does.

Bear no grudge if you want to be happy in a small town. Be slow to take offense. Overlook much. And when it comes your turn to forgive, be a good forgiver.

9. *Modesty.* This means not boasting about yourself and your success.

There are times, among our intimates, when we can all let loose and tell of our good fortunes. But it is better in everyday life not to vaunt our blessings, lest we make other people uncomfortable. Remember that not everyone may be so fortunate, and the tales of your triumphs may ring harsh in other ears. Edwin Markham tells us that "we've each a darkening hill to climb," and if your hill happens to be brighter than some others, don't make a point of saying so.

10. *Interest in Work.* Perhaps I should have said hobby. At any rate, both men and women should have the satisfaction of contented absorption in some activity. It is good for the disposition. When we are absorbed, we are not apt to be "touchy." We don't stop to bother with small worries.

Well, there are my ten recipes. What are yours?

(*The End*)

Neighbors

By Arthur Guiterman

IG WAS a Paleolithical cave man,
A glum and morose though undoubtedly brave man.
His muscles were big and his body was burly;
His manners were rude and his temper was surly;
Aloof and suspicious, he lurked in his cellar,
And never consorted with any nigh-dweller.
But better days dawned on his narrow horizon,
When, houghing the mammoth or chasing the bison,
Or heaving a boulder on some such occasion
As that of repelling a foreign invasion,
Or facing the tiger whose tooth was a saber,
He learned that he urgently needed his neighbor.

Directly thereafter, he found himself wishing
For someone to growl at while hunting or fishing,
For someone to envy his prowess and cunning,
His skill with the throw-stick, his lightness in running.
And next he observed that in moments of leisure
Companionship failed to diminish his pleasure.
When frisking and playing, to make him contented
He wanted a comrade—and Sport was invented.
And, oh! how it heightened the joy of endeavor
When clansmen applauded and said he was clever!
In wrestling and racing and tossing the caber
He found that he notably needed his neighbor.

This World is an Inn, if you please so to term it,
Where Man is a Guest, and he isn't a Hermit;
He has to put up with the Inn's other lodgers—
These pushing young upstarts, those grumpy old codgers;
And soon, as a rule, he is rightly persuaded
To greet and be greeted, to aid and be aided;
For Friendship is good in our joys and our troubles;
Each sorrow it halves and each pleasure it doubles.
Then don't let your bailiwick languish without you,
But try to put up with the people about you;
For, whether in happiness, grieving, or labor,
There's no one but sometime has need of a neighbor.

Another of SCATTERGOOD'S *adventures with the* SIX BIG MEN

Strawberries *don't grow on* Poison Ivy Vines

By CLARENCE BUDINGTON KELLAND

Illustrated by PAUL MEYLAN

NOBODY," said Scattergood Baines, "was ever yet so determined but what he could be made to change his mind, sooner or later."

"But Father's awful set," said Freddie Norton; "and Ma's set, too. Seems like neither of 'em can endure the thought of it. All you got to do is say *Haddy* or *Half Acre*. . . . And it's mighty hard on *her*."

"Her" was Freddie Norton's new wife, married by the young man out of that place of evil repute, Half Acre; and, as if this were not sufficient, she was of the blood of the Haddys—the Six Big Men who ruled that village of illicit stills and outcasts and fugitives—of unspeakable occupations and unlawful professions.

Lawyer Norton was proud. His forbears had lived in Coldriver since there had been a Coldriver. He had married a Higgins, of Higgins Bridge. As Lawyer Norton had said publicly in the post office, he would rather have seen his son dead at his feet than married to a Haddy.

So these two young people, who had been thrown together by chance or by fate, were not altogether happy, even though Scattergood, after seeing the girl and determining in his mind that she was good and not evil, had helped her to escape from her six huge brothers and had given her to Freddie Norton to have and to hold.

Recognition meant so much to the girl, who from birth had been deprived of everything which a decent environment can provide. Freddie could endure, but she—she was pitifully eager to be received by Coldriver and to have that dreadful past forgotten. She yearned to know good men and good women and to be as they were.

But Coldriver followed the lead of Lawyer Norton—and said hard things against Scattergood Baines for meddling in the matter. So Scattergood had taken the young couple home to Mandy, his wife. And there they made the best of it until public opinion should change, or until time should accustom the village to the presence of a real, live Haddy within its limits.

"You could go some'eres else, where folks don't know ye," said Scattergood tentatively.

Freddie shut his mouth grimly. "We're goin' to stay right here. Nobody's goin' to drive us out. Neither of us has done anythin' to be ashamed of; and if folks are goin' to be so dratted cussed ingrowin', why, they'll just have to sit and chew on it. No, sir, my wife and I stay right here."

"That's what I'd do, seems as though," said Scattergood. "But maybe you didn't stop to think of them Six Big Men. I warrant you they hain't satisfied. It might be safer if you was to go off some place. Them men is the kind to hold a grudge."

"So am I " said Freddie grimly. "I haven't forgotten, either. And, anyhow, I got her."

"You done so," said Scattergood, "and when Mandy gits through teachin' her how to cook I dunno but what I'll offer to swap—if you got suthin' to throw in."

"She's a kind of a miracle," said Freddie gravely. "I don't calc'late I'll ever understand it. Seems to me like she was all good. Yes, sir, everythin' about her's just as sweet and wholesome and all. And those she comes from are all bad. Did you ever see the like before, Mr. Baines?"

"I don't call no instance to mind."

"None of that wickedness she lived amongst ever touched her. Sometimes I get the idea she didn't see it or understand it; and other times I think she's awful wise and saw it all, but was able to hold it away from her. . . . It's just as if you was to find a strawberry growin' on poison ivy."

"What we got to aim to do," said Scattergood, "is to show folks they won't come out with a rash and an itchin' if they touch her. Time'll do it."

The old hardware merchant arose.

"Don't git no more impatient'n ye kin help," he said. "You can't ever tell what'll turn up."

He went out and untied his rotund old horse and drove into town, but not to the store. He stopped before the door which gave onto the stairway leading up to Lawyer Norton's office, and alighted. The stairs creaked under his weight and he puffed a bit as he got to the top. He was not the sort to knock on doors; that was a formality necessary to other people. Scattergood just opened and went in.

LAWYER NORTON was sitting behind his desk, and as Scattergood entered he looked up with an expression of mingled grief and anger.

"I didn't think you'd be comin' here, Scattergood," he said.

"Me? Why not?"

"The turn you done me and my wife ain't a good turn. Marryin' our son to a Haddy!"

"Have ye seen her? Eh? Have ye talked to her?"

"No; and we won't ever."

"Hain't that kind of harsh, don't ye think? Convictin' without a trial, hain't ye?"

"When she's ruined his life he'll be comin' back to us, Scattergood. And if I was you I wouldn't go nigh my wife. She's bitter. I ain't thinkin' kindly of ye, by no means, neither."

"Been friends a sight of years, hain't we? Ever ketch me in a meanness?"

"Not till now."

"I kind of figgered you wouldn't like it," Scattergood said, "not at fust. . . . Um. If you hain't ketched me in no meanness for the forty year you've knowed me, it looks like that was evidence maybe you hadn't ketched me in no meanness yet."

I AIN'T no doubt you meant for the best," said Norton. "But I calc'late you thought more about that girl than you did about my son. She's beholden' to you, as anybody'll say, but we Nortons ain't."

"Won't ye come to see her?"

"No."

"If you was to talk to her, and look at her eyes, now—"

"I don't need to talk to her to tell what blood's runnin' in her veins; nor to look into her eyes to tell what's bred in her bone."

"G'-by," said Scattergood. "I didn't much expect you'd come. . . . Um. . . . Ever hear of a strawberry a-growin' on a p'ison ivy vine?"

"Never; and neither did anybody else," said Lawyer Norton stiffly; "and that's just it!"

"But," said Scattergood, "if you was to go along and was to stoop down and pick a strawberry, and then found it growed on a p'ison ivy actual, you'd have to b'lieve it? Eh? Wouldn't ye?"

"No," said Lawyer Norton. "It ain't in nature."

"Offhand," said Scattergood, "a body 'ud say you was right. And mebbe ye be."

"So you got your doubts," said Lawyer Norton.

"I got no doubts what your son's picked is a strawberry," said Scattergood. "G'-by."

Scattergood called on the sheriff of the county, and was made as welcome as an individual of his political importance naturally would be made.

"Sheriff," he said, "I'm lookin' for a leetle favor. You know Half Acre, Sheriff?"

"Yes, dog-gone it. But it seems as

Digitized by Google Original from UNIVERSITY OF IOWA

though I can't git nothin' to lay my finger onto. They been perty quiet there these last few years—outside of their own town. We don't pay much attention to what goes on inside. Have them folks been annoyin' ye?"

"Not to speak of," said Scattergood. "I was jest kind of cur'ous. Allus gittin' cur'ous about suthin', seems as though."

"It's a healthy sign," said the sheriff.

"Now what I want is this—if ye kin contrive it for me. I want you should ketch me one of them Half Acre folks. Not jest any of 'em, but an old one. I want one that's lived there from 'way back. Jest fetch him in, so's I kin talk to him a minute; and then we'll let him go ag'in. Don't forgit; it's an old one I want."

A DEPUTY who stood by a window in the office turned: "Old Man Herts from there is in town, kind of half-way drunk, like always, and wanderin' up and down. I could git him perty quick."

"Fetch," said Scattergood, and settled down to wait.

In half an hour the deputy returned with an old man whose long, straggling, unkempt hair had a dank and greasy and untouchable look. His features were bloated, and his whiskers were stained; but his eyes were red and irritable and threatening like those of a cornered hen hawk.

In the middle of an old and musty vault stood a tiny, grimy, dusty safe of ancient manufacture

"What you fetchin' me in fer? I hain't done nothin'. You folks wait till I git home and tell about this. Somebody'll wisht he hadn't never meddled with me."

"Set down," said Scattergood. "You hain't arrested nor nothin'. You're jest asked to stop and talk a minute. Lived in Half Acre quite a spell of time, hain't ye?"

"'Tain't none of your business; but I guess nobody's lived there much longer,"

Digitized by Google
Original from UNIVERSITY OF IOWA

said the old man proudly.

"I calc'late you've knowed most of the folks that lived there?"

"All of 'em."

"You never knowed a man of the name of Lawson?" said Scattergood.

"Never was no sich feller."

"Mem'ry hain't failin', is it? Don't find no difficulty recollectin' things?"

"I tell you the' never was sich a man!"

"And I tell ye," said Scattergood, "you forgot, or don't want to tell."

"I hain't!"

"You folks wait till I git home and tell about this," said the old

"WHY," said Scattergood, "I bet you forgot folks a heap more important there than Lawson. I bet you don't recall Old Man Haddy himself."

The old fellow sneered. "I kin draw ye his picture," he said.

"Kind of a middle-sized man with red hair," said Scattergood.

"Naw, he wa'n't, nuther. He was the biggest of the lot, and his hair and whiskers was black, before they turned."

"To be sure," said Scattergood; "you remember better'n I do. I calc'late it was ol' Mrs. Haddy I got in mind. It was her that had the red hair."

"She didn't, nuther. And she wa'n't middle-sized. That old woman was nigh as big's her husband, and her hair was jest as black, and so was her eyes. All them Haddys was."

"And ye don't know this here man Lawson?"

"Never was sich a feller in Half Acre."

"Then I calc'late I must 'a' been mistook," said Scattergood, "and much obleeged, and sorry we troubled ye. G'-by."

The old man paused in the door and leered. "I'd jest as soon not be you," he said maliciously, "when them boys git around to ye!"

"G'-by," said Scattergood imperturbably.

The sheriff turned an inquisitive face. "Who's this feller Lawson?" he asked.

"Ol' Man Herts was right," Scattergood said placidly. "There never was no sich man."

"W-al," said the sheriff, "I'll be jiggered!"

"G'-by, Sheriff, and much obleeged."

"G'-by, Scattergood."

The old hardware man went home, packed his canvas telescope, and took the evening train to the state capital. There he engaged in literary pursuits in the reading-room of the state library. He read for two days—newspapers. But the papers he read were dust-covered and yellowing. At the end of the second day he returned to Coldriver.

SCATTERGOOD sat on the piazza of his hardware store, leaning back in his reinforced arm chair. His eyes were shut, and he frowned. Slowly he lifted one foot, and as slowly lowered his right hand to its laces, which he untied. Presently he sat barefoot and comfortable, and his toes moved rhythmically in the sunshine. But the solution of his problem did not come, even in these favorable circumstances. After a time he opened his eyes to see Pliny Pickett coming down the street to make his report as conductor of Scattergood's eighteen-mile railroad.

"Afternoon, Pliny," he said. "Afternoon. . . . Um. . . . Got any idees, Pliny?"

"Concernin' what?"

"Anythin'," said Scattergood. "Jest anythin'. . . . S'pose, f'r instance, that there hoss over there knew suthin' you was all het up to find out; but you couldn't up and ask him right out, because you knowed he wouldn't tell ye. How'd ye go about it to find out?"

"Take a gad to him," said Pliny.

"About all you git with a gad," said Scattergood, "is resentment, and seems as though the world was too full of that as it is. No; if you want to know jest how a hoss is goin' to act in any given set of circumstances, you got to *be* a hoss. Hosses and folks acts different. Fat folks and slim folks acts different. Dark folks and light folks acts different. Good folks and bad folks acts different. And it stands to reason any one of them kind'll know more about how his own kind's goin' to act, than any of the other kinds will."

"To be sure," agreed Pliny, who was not sure at all.

"And the nex' best thing," said Scattergood, "is to pertend you're the kind you're studyin' over. And pertend how he feels and pertend how he thinks—like the feller that found the lost cow by per-

Digitized by Google

UNIVERSITY OF IOWA

man. "Somebody'll wisht he hadn't never meddled with me"

tendin' he was a cow, and actin' accordin'."

"Seems as though," said Pliny.

"W-al, did ye ever stop to think that a scheme a criminal thinks up to fool somebody is the kind of a scheme that 'ud fool himself? Yes, sir. He considers and considers, and then he hits on suthin' he knows'ud bamboozle *him* if it was put up right. And so he feels sure it'll bamboozle the other fellow."

"Sounds reasonable."

"It's more'n reasonable," said Scattergood, "it's *so*. Now, I was readin' in the papers—lemme see—what was I readin'? About sharpers, it was. Pliny, did ye ever stop to think what a good sharper I'd be if 'twa'n't for the impediment of bein' honest? Kind of queer. Looks as though bein' honest was kind of a drawback for a feller that was ambitious to be one of these here confidence men."

"It jest seems to me," said Pliny, "as though you wa'n't talkin' sense a-tall."

"It seems like that to me a heap of times," said Scattergood; "but this here hain't one of 'em. I'm bein' deep and searchin'. I'm plumbin' depths of human conduct, and discoverin' a sight of whys and wherefores. . . . Now what was that there scheme I read about? Had suthin' to do with a safe. . . ."

"Hain't got no idee," said Pliny.

SCATTERGOOD sighed. "Anybody come up on the train—in special?"

"The senator, he come."

"Johnny Bones come? Um. . . Didn't calc'late to go past his house, did ye? No sich idee entered your head?"

"I could."

"Uh-huh. But ye wouldn't stop."

"I might."

"Dew tell. Figgerin' to call on the senator, and him with a silk hat and a Prince Albert coat and all! Looks perty slick when he's got up all regardless, don't he? Any purpose in p'tic'lar for stoppin'? Anythin' you got to say to him?"

"I guess I'd tell him you'd admire to see him."

"Didn't say so, did I? Didn't hear me say so?"

"No."

"G'-by, Pliny."

"G'-by, Scattergood."

The old man sat back again at ease, nor did he trouble his mind with reflections upon the impropriety of a barefoot old hardware merchant sending for a United States senator as if he were a clerk in a grocery. Class distinctions never were apparent to Scattergood, and, anyhow, as he would have said, "he had raised Johnny Bones from a kitten. . . ."

AND Johnny came, after a time, thinking no more of the impropriety of the summons than Scattergood did. Being a senator had not changed Johnny—which was one reason Scattergood had made him a senator.

"Johnny," said Scattergood, "be ye so busy senatorin' around you're pressed for time?"

"I can make out to find a little leisure."

"Good. . . . And you got to keep your hand in."

"In what, Scattergood?"

"Practicin' law. Mebbe the' 'll come a day when you won't be a senator no more, an' 'll have to go back to work."

"Have you some legal business?"

"No; but I know a client that's lookin' for a lawyer."

"What kind of a case?"

"W-al, it's a sort of a will case, as you might say, and a kind of a case to recover the estate of a deceased person, and kind of various and sundry other things. But you 'n' me kin handle it, all right, I calc'late."

"Who's the client?"

"Freddie Norton's wife—her that was a Haddy."

"And there's some estate due her?"

"Seems as though."

"Who's got it?"

"Them Six Big Men, seems as though."

"There's a fine chance she ever gets it," said Johnny; "or that there's any left to get!"

"I got an idee this here one'll be found as intact as it started out to be."

"Yes? And how do we proceed?"

"W-al, fust off, you write a letter to the boss Haddy, demandin' the return of this here estate. Um. . . . Without openin' it."

"Openin' what?"

"The safe."

"This is the first I've heard of a safe."

"'Twon't be the last. Yes, sir, you'll demand they send (*Continued on page 127*)

Where Jim Pratt Found
The Highroad *to* Happiness

By M. K. Wisehart

Yesterday is but a Dream,
And To-morrow is only a vision;
But to-day well-lived
Makes every Yesterday a Dream of Happiness,
And every To-morrow a Vision of Hope.
Look well, therefore, to this Day.
"*Salutation of the Dawn*"—*From the Sanskrit.*

A TALL, spare man, straight as an iron rod, bronzed by the sun and the wind and the fire of his forge, you see him at work to-day, at the age of sixty-seven, in his blacksmith shop in the little town of Essex, Connecticut, six miles from where the Connecticut River empties into Long Island Sound. A little red-brick building with slate roof, small-paned windows and wide-swinging doors, the place has about it all the old-time enchantment, and the grime and the soot and the dust of the regular village smithy.

Time was, and that one day in 1896, when Jim Pratt's father shod twenty-five horses by daylight in this little shop. To-day, of course, horses come few and far between. A blacksmith from the soles of his feet to the tip of his peaked leather cap, Jim Pratt has branched out into a new sort of ironwork. The few horses that are around Essex are shod there, to be sure; and with my own eyes I have actually seen the job being done. But, mainly, Jim Pratt and his helper are engaged in the making of hand-wrought hinges and latches, and they will accept any other job that is strictly in the blacksmithing line.

Though automobiles often stop at Jim Pratt's shop, it is never for repairs. The owner of a limousine, having passed the time of day with the smith, may be seen to come from within toting a newly made but old-looking and odd-looking fireplace fender, which he stows away in the back of his car; or perhaps the trophy which he brings out of this sooty little palace of antique reproductions is a Maine peavey fire poker. Right here, before I go any further, let me tell you about this poker!

Some years ago, Jim Pratt went down in Maine on a hunting trip, and among other things he saw how the lumberjacks handle their peaveys. Now, the end of the peavey is a sort of spike, but a spike with a screwlike twist in the end. Jam your peavey into a log, and you can tug all day and never get it out until you give it a turn which backs out the screwlike twist. And when Jim Pratt saw the peavey at work he was no longer interested in bear or caribou or moose; all he wanted was to get right back to Essex and try out one of those peavey screw ends on the tip of a fireplace poker. When this was done, it worked like a charm! With it you can lift your log, place it where you will at your leisure (swing it around your head if you like!), and you can't lose or even get rid of it until you unlock the combination by the same little backward twist that releases the peavey used by the lumberjacks.

Myself, I class this as a first-rate and original application of a worthy invention. Nevertheless, I must say at once that I have not set out to tell you of Jim Pratt because he is an inventor. Talk with him, and you learn that he has knocked around the world some. Widely read, highly intelligent, with a unique way of expressing himself at times, he is the associate of bankers and manufacturers, including not a few millionaires, and an ex-governor or two. Also, he is the eighth generation of Pratts to own this shop and do blacksmithing on this same spot. For the village smithy was actually founded 'way back in 1678 by John Pratt, eldest son of Lieutenant William Pratt, who came from Salem, Massachusetts, with Hooker in 1639, to settle Hartford. It has been in the Pratt family ever since, a matter of two hundred and fifty years.

INTERESTING and important historically as these facts certainly are, neither do they account for my telling Jim Pratt's story here. In short, the reason is to be found in an incident which, to begin with, had nothing at all to do with Jim Pratt. Let me explain:

Recently, for purposes of his own, a professor of economics in a university in New York City made a survey of a somewhat unusual nature. Fifty students, ranging in age from nineteen to twenty-six —twenty-five young men and twenty-five young women, chosen at random from the professor's classes—were asked to answer with care and truthfully, or not at all, three questions, as follows:

1. What do you want to do?
2. What do you want to be?
3. What do you want to get out of life?

In answer to Question 1, as was to be expected, all named vocations for which they are preparing. The tabulated results appear below:

Young Men		Young Women	
Manufacturing	8	Teaching	10
Lawyer	5	Librarian	4
Selling	4	Retail selling and buying (department store)	3
Teaching	2	Home-making (marriage)	7
Ministry	1	Banking	1
Engineering	2		
Writing	2		
Banking	1		

The striking thing about the answer to Question 2 was this: a majority described the type of person they admire and would like to live with, and said they would *like to be such a person.* But the most interesting result of all, I think, appeared in answer to Question 3. Eighteen made answers that were repetitions in one form or another of Questions 1 and 2. None expressed a desire to make a great deal of money; but thirty-two gave as their goal the acquisition of a moderate income and financial independence, so that they might be free ultimately to accomplish some good in the world in spheres connected with or outside of their chosen profession.

Later, I talked with a number of these students. Briefly summarized, the conversation in each case was something like this: "And you think that if you achieved a reasonably successful position in your profession and were the kind of person you describe in your answer to Question 2, you would be happy?"

"Why, of course!" or, "Yes, indeed!" or, "I feel certain of it," was the response.

Happiness, of course! Though not one of these fifty students declared it in so many words in answer to Question 3, it struck me that these responses indicate that, consciously or otherwise, what our young people are seeking to get from life is happiness. The old, old quest, to be sure; but a search that cannot succeed if followed without regard for that law of life which seems to say that no man can be happy unless at work, and unless he feels that his work is useful.

So I found myself asking this question: "Just what *is* happiness?" I tried to define it, and I found no definition that satisfied me. It did occur to me that what we call happiness can come about only as a distillation of a rich, ripe, free, and varied experience; that it is the inextricably interwoven pattern of a useful life in whatever sphere; and it was then that I thought of Jim Pratt. For Jim is certainly the happiest man I know. If ever a man has traveled the Highroad to Happiness and found the legendary pot of gold at the end of the rainbow it is he. So presently, we shall hear what wisdom he has garnered from a wayfarer's experience on this particular highroad, but first let me tell you something about how he started out in life.

LIKE most youngsters who have access to a blacksmith shop, Jim Pratt, as a boy, was fascinated by the cherry-red hearth of the forge, by the ringing anvil, the big leather bellows pumped by hand. Essex was then a fishing town, and there was much work to be done for the ships—iron work for masts, bands for the booms, bobstay and channel irons for the main rigging. Not one, as now, but, in those days, six blacksmiths were kept busy in this little place; and the wits made some merry verses bringing in the names of all the jolly smiths and imitating the rhythmic "bing-bang-bing" and "ding-dong-ding" of the hammers of the master smiths, alternating with the resounding blows of their helpers' mighty sledges:

"Ten pound ten!" says Uncle Ben,
"Six pound six!" says Bela Sticks,
"Strike a little harder!" says old Asa Parker,
"Who can beat that?" says Elias Pratt,
"I can, I can!" says Seidelman,
"Tut! Tut! Tut!" says 'Gov'nor' Foote."

Jim Pratt didn't (*Continued on page 131*)

"SO YOU are to hum again, Jim," said one of the seventh generation of Pratts to one of the eighth, who, after seeking his fortune in the wide world, had returned home to become the village blacksmith. Above you see a picture of a really happy man, Jim Pratt. Jim makes the anvil ring in the same village smithy that his great-great- (you can work it out for yourself) grandfather, John Pratt, founded in 1678. Few horseshoeing jobs come his way now; but in the red heart of his forge he fashions reproductions of Colonial hardware that sell like hot cakes and keep the forge fires burning.

STORMS

By ARCHIBALD RUTLEDGE

FAR back into the lonely mountains I had driven to see an old friend of mine, an aged German cabinetmaker who has a tiny shop in the depths of the wilderness. The shop is equipped with modern machinery, the power being supplied by water from a trout stream that has been dammed.

After I had secured the black walnut plank for which I had searched the valley towns in vain, and was saying good-by, he looked southwestward with the just appraisal of a man who knows weather, his kindly blue eyes glinting with sudden brightness.

"You will be in a storm," he said; "it will be on you before you are half way home."

"Do you think I ought to start?" I asked.

"I would like to have you stay with me; but a storm will not hurt you."

A far light came into his eyes, speculative, philosophical: "A storm does good. Something in here," and he tapped his broad chest, "something in here rises up to meet it. A storm makes a better man of me."

A half-hour later, when the tempest overtook me, I experienced what my old friend had said. With the rain rushing like a river, and with the wind wildly bowing the tree crests; with the stark spearheads of lightning riving the lost landscape, and the deep thunder detonating grandly, a wild joy was in me—wakened from I know not what obscure depths of being—a feeling that I was at war with one of the ancient devastating forces of nature.... Something in the heart does rise up to meet a storm, and no other kind of occasion appears to call it forth. Blessed are storms. They rend and mar; but they strengthen and they mightily build.

AT THE far turn of a golf course, recently formed out of valley land totally wild, there stands, on a little hill, a massive white oak. Its age cannot be under two centuries. A tolerant old giant it is, rugged, hale, and conquering. Two features about it impressed me most: one is the fact that it grows literally out of the rocks; the other is that, because of its extremely exposed situation, on a hilltop with no windbreaks near, it is powerfully writhed. The living limbs are gnarled; the trunk is quite visibly turned and twisted. Tenoned in the rock, implanted in the very foundations of the world, plunging its life-bringing roots far into forbidding places, it is a proud and ancient patriarch, illustrious and invincible.

Here is an outpost that has escaped no storm. Its strength has been shaped by hardship. A champion, strong, it is the product of those very forces that we usually consider to be the most destructive and discouraging. Here is a powerful warder of the vale. Here is a grand old bugle horn, summoning the mortal spirit straightway to arise and to meet, as it has done through the centuries, whatever storms may come—learning grace from the sunny days, and power from the tempest. Rugged Triumph!

PHOTOGRAPH BY CHAS. T. CUSHING, N. Y.

Old Oak, you speak to me of what you have faced, endured, overcome. And that furious rage that was the storm's has now passed, by your resistance, into your own being, to abide there as gracious and seasoned power. Perhaps, after all, the Indians were right in believing that the valor of the enemy that they overthrew became a part of their own strength.

THE more natural people are—in the sense that they live close to nature—the more closely they watch the approach of storms, the better they understand them, and the more elemental is the ingenuous joy with which they prepare to meet them. I try never to lose an opportunity of associating with such people: they teach me much of the ancient wisdom of simple and humble humanity. I love the forest because of the people who live in it; I admire their objective way of living, their obvious motives, their honest struggle for existence; the hard hands, the clear eyes, the manly thought, the hale, direct speech. One of my woodsman friends never says, "The wind is rising." Looking with falcon eyes that are wont, in not unfriendly fashion, to estimate all nature's doings, he marks the untidy clouds in the west, where the stormy glory of a wild sunset is

Burch Foraker *talks about*

Leadership

By William S. Dutton

"BROOKLYN BRIDGE!" called the guard, and the down-town elevated train ground to its momentary stop at Park Place. Passengers jammed the car aisles, pushing, hurrying.

"What station did that guard say?" queried a young man who straightened up uncertainly in his seat.

"I think he choked," said his companion. "You'd think they would teach these guards to speak English."

The two, on their first visit to New York, twisted their necks in an effort to look out the car window, hoping to catch sight of a station sign. The train gates swung shut and the train behind its puffy little engine swung into noisy motion again, just as the station sign of Park Place flashed into view.

"Hang that guard!" exclaimed the first young man. "It *was* the station for Brooklyn Bridge after all. Now we'll have to go on to the next stop and hike it back if we want to see the Bridge."

The guard yawned. He didn't look like an agent of destiny, and even less did he look like a molder of men's careers. And yet, in the light of time, he had unwittingly become both!

The other day, thirty-one years after that trivial incident in the New York traffic, I sat in the office of Burch Foraker in the handsome new Bell Telephone Building in Detroit. Mr. Foraker is president of the Michigan Bell Telephone Company, one of the main links in the great Bell System of national communication. He is one of the best known of American Telephone executives, and it is said of him that he has "made" as many Bell company executives as any other man.

"What's your story?" I asked Mr. Foraker. "How did you climb into this job?"

He smiled. "You can put it down to accident."

"Yes?" I said skeptically.

"It was an accident," he repeated. "I wouldn't be here to-day—there isn't a chance in a million that I would—if it hadn't been for an elevated-train guard, whose name I don't even know. I met him but once and never saw him again to my knowledge, and yet he was the man who launched me in the telephone business."

And then Mr. Foraker told me of that long-ago adventure in the Elevated Railroad in New York City when he and a companion, unable to understand the guard's cry, had been carried one train stop beyond their destination, which was Brooklyn Bridge. That day Foraker never saw the big bridge at all!

"Both of us were students in Cornell University, at Ithaca," he explained, "and when vacation came along we decided to start it off with a trip to New York City to see the town. Neither of us knew anything of New York; but of course we had heard of Brooklyn Bridge, the Statue of Liberty, and the Zoo. We agreed to visit the bridge first, and got on an elevated train to go there. If that guard had called out the bridge stop in an understandable way, we most certainly would have left the train there. As it was, we passed the bridge and went on to Cortlandt Street. Walking back along Broadway, we had to pass the offices of the New York Telephone Company—and there it happened!"

"What happened?"

"A SUDDEN impulse to go into that office and apply for a job!" said Mr. Foraker.

"Up to that moment," he went on, "the idea of getting a job in New York hadn't entered my mind. I still had a year more of study at Cornell, to get my diploma. My chum and I had come to New York with the intention of staying for two or three days. Our sole object in coming was 'to see the town'.

"Then, looking up, I saw the name of the telephone company. I stopped. The telephone was still new and I thought of its possibilities in the future. The name on the building struck a spark in my imagination. Maybe it was the romance in the thought of talking over wires; I don't know.

"I drew my chum into the doorway. 'Wait here a minute,' I said. 'I'm going inside.' He looked at me as if I had gone crazy, but he agreed to wait. I went in and asked for the general manager, nothing less. A few minutes later I was in the presence of J. J. Carty, who was to become one of the world's greatest telephone engineers. He was busy in a conference, but was kind enough to come out in person to ask me, a mere kid, if I'd mind sitting down until he finished his business. He was in shirt sleeves, smoking an old pipe; and he was as cordial as if I'd been an old friend.

"'Gosh!' I said to myself. 'How I'd like to work for *him!*'

"Well, the details are unimportant. Mr. Carty sent me on to H. F. Thurber, a young man of twenty-four, who later became president of the New York Telephone Company, and in a half-hour I joined my chum, who was still standing on the sidewalk wondering what had become of me. I had a job at ten dollars a week and was to start work Monday."

"But what about your college course?"

"I was through with college!"

"And the bridge, and the Zoo?"

"Forgot 'em," said Mr. Foraker. "I had to hustle back to Ithaca to close up business there and get my things. A couple of days later I was helping install telephones, and I've been in the business ever since." He smiled. "I'm sorry I never learned the name of that elevated guard."

BUT it took more than accident to make Foraker the president of the Michigan Bell, one of the important assignments in the Bell System. When Foraker was picked for the presidency, in 1926, his record over almost thirty years disclosed a surprising fact: he had never failed in an assigned task! Furthermore, scattered throughout the country, filling posts of responsibility in almost every Bell company, were men who had been trained by Foraker. He was known as a man of "ten thousand friends."

For a lifetime Foraker's guiding interest has been in men, wherever and however found. There is a story of how his men in the plant department, in New York City, attempted to stage twenty dinners for him in a single night and to bestow upon him a fortune collected by individual donations. But that we'll come to presently.

Foraker's real story is an answer—or as near as you can come to one—to that perplexing question of

"Be Careful How You Treat Them!"

"ONE of the gravest mistakes we make," says Mr. Foraker, "is in trying to judge young men by what they are now. What counts more is what they are going to be. In my time, young fellows have worked under me who later became my superiors. They came to me hat in hand, with no mark to distinguish them from a hundred others. I didn't know it, but in my own hands then, to make or break, was my own future, because the day was to come when I was to be the worker and they the bosses over me. I am here to-day, in large part, due to the men who've had jobs in my gang. Those who have gone ahead have pulled for me; those still below have pushed for me. It might easily have been the other way 'round."

Original from UNIVERSITY OF IOWA

"What makes leadership?"

On one of the walls of his Detroit office hangs a picture of an old mill that is still standing not far from the village of Hillsboro, Ohio. Burch Foraker's great-great-grandfather built that mill more than a century ago and a few miles from it, fifty-five years ago, Burch Foraker was born.

His father, a Civil War veteran and a banker in a small town, died when Burch was three years old. The widow with her two small sons went to live with the boys' grandfather on a farm. The little family's only inheritance was a good name and a very small estate, which Mrs. Foraker refused to touch.

"The money's for the boys' education," she said firmly.

BURCH grew up between the farm and Hillsboro village. He went to school in Hillsboro—a small, wiry, good-looking kid with eyes full of mischief. He was a good student and had a code of his own. For instance: "Clothes don't make the gentleman" was an axiom drilled into him at home: a man in overalls could be a gentleman—as he often is. He heard much from his mother about "false pride," and "fairness," and "tolerance." At the age of sixteen, after graduating from high school, he went to work to learn from life.

Mr. Foraker, one of the most popular business leaders in America, is president of the Michigan Bell Telephone Company. He was born near Hillsboro, Ohio, fifty-five years ago, worked at odd jobs, studied in various places, and finally landed with the New York Telephone Company. His ability to win the affection of his associates accounts, in part, for his rapid rise

"My first job," he related, "was that of a helper at the Hillsboro railroad station. The pay was one dollar a day. Among my other duties, I had to stand under a sweltering sun and check hides as they were loaded onto the cars. The hides were raw. It wasn't a nice job.

"Two or three other boys worked at the station. One day the telephone rang and one of them picked up the receiver to answer. 'Hello!' he shouted. 'Naw—Yeh—I don't know! I tell yuh I don't know.'

"I snatched the telephone from him. He didn't know who was on the other end of the wire, nor did I. But it made my dander rise to hear a boy talk to anybody in that fashion. I apologized over the telephone to a man who, I afterwards learned, was of great influence in that section of the country. And here a dollar-a-day station hand might have turned that influence against the railroad!" The incident taught young Foraker his first lesson in business: To be civil to all men at all times. Especially was it dangerous to be uncivil to folks one didn't know.

Years later, in New York, Mr. Foraker was charged with the hiring of large numbers of men. To the dismay of some of his associates he insisted upon himself, or another in authority, seeing every applicant. Most of the men were plain day-laborers.

"What's the sense of wasting time with these fellows?" protested an associate. "We're hiring only ten in every hundred."

"That's the very reason we should see them," replied Foraker. "Every man who comes here for work goes away with a definite impression of the company. He's either going to say we're a good company to work for, or a bad one. We are building our reputation as employers with every man we see, whether he is hired or not.

"In that line of men," he continued, "it's possible there is a future bank president, or industrial leader. How we treat him to-day may determine how he treats us to-morrow, should we need his help. Maybe we won't have a job for him; but that only makes it more imperative that we be fair with him, because we've got to disappoint him. He is giving us two or three hours of his time—for nothing; surely we can give him two or three minutes of our time—for something."

Another lesson was learned by young Foraker at the Hillsboro station. There was only one railroad line into the town. Whoever traveled or shipped goods had to use that one line whether he chose it or not. The station master was a czar of peculiar power therefore. It wasn't deemed wise to win his disfavor.

One day the biggest shipper in town, a manufacturer who supplied the railroad with more business than any other in Hillsboro, complained mildly of the way his freight was handled. He was told in so many words to "go hang." However, he continued to complain, and the station agent continued to shrug his shoulders indifferently. The big shipper finally lost patience and made a threat.

"If you don't like the service we're giving you," retorted the agent, "you might go ahead and build your own railroad."

WHEREUPON, the unexpected happened. The shipper *did* build his own railroad, a line that carried his freight eighteen miles across country to a rival carrier! Young Foraker was an eye-witness to the occurrence.

In Detroit the other day, I was told the following anecdote of Foraker, the public utility executive, and I leave it to you to connect the two. In an office having direct dealing with the public he sensed that something was wrong. He couldn't put his finger on the trouble; but he knew trouble was there. He spoke to the manager.

"Personally, I think we've been doing well," said the manager. "Two weeks ago I had a check made of every customer leaving the office. Only about one in every hundred had any complaint to make."

"How many in every hundred *complimented* you on the attention he had received?" asked Foraker. "How many left here enthusiastic enough to talk about it to their friends?"

The manager could recall only two compliments.

"There's the trouble," said Foraker. "Any reasonably attentive clerk can satisfy, but it takes a good clerk to please; and you have got to please if you're going to make friends."

Back in Hillsboro, therefore, the station boy learned little (*Continued on page 82*)

WOOD ENGRAVINGS BY HOWARD MC CORMICK

BARRETT WILLOUGHBY *tells you about* DR.

The Man Who

Doctor Georgeson, the plant wizard of Alaska

AT SITKA, one summer day, I was walking with Dr. C. C. Georgeson, the plant wizard of Alaska. We made our way through a field of ripe strawberries. Clean, dustless, knee-high, the green rows sloped fanwise toward distant, glacier-hung mountains shimmering in sunshine that warmed the fragrance from crimson berries at our feet. I plucked one, too large for me to encircle it with forefinger and thumb, and bit into it. Firm, cool, delicious, it melted in my mouth.

We halted beside rows of peas upheld by brush. Again I was impressed by the dustless Alaskan green that knows no insect pest. The luxuriant vines were eight feet tall and heavy with six-inch pods, exactly like the plump ones featured in seed catalogue illustrations. They popped with crisp vigor when I broke them open. The peas were sweet and tender, and of that ineffable freshness that marks the flavor of all Alaska-grown vegetables.

Where peas ended, potatoes began. The lusty, verdant lines were starred with flowers in which bumblebees stood on their heads for honey. "This variety yields splendid harvests as far north as Coldfoot, sixty miles *beyond* the Arctic Circle," remarked the doctor. "And it is up there, just where the Yukon sweeps north across the Circle, that we have developed a wheat which matures in eighty-two days from seed."

I turned from the thriving acres to look at the man who has accomplished what everyone once said could not be done. He stood, a Viking in aspect, six feet tall, massive-shouldered, vigorous, and straight as an arrow. His years are seventy-six, yet beneath thick sandy hair was a face scarcely lined. His eyes were blue and bright, his upheld chin firm, and a trifle arrogant—the chin of a leader who never ceases to fight for the cause dear to him.

"Act as if the country were your own, and go ahead." Such was the gist of the instructions given him by the Secretary of Agriculture who first sent Dr. C. C. Georgeson into the North to see what could be done toward developing homegrown products for Alaskan settlers. And it has been on that principle that he, one of the world's great experts in cross-breeding, has thrown the best of his energy and talent into evolving plants and cattle suited to conditions he found there.

I knew there lay behind his great agricultural achievement more than a quarter-century of fighting—fighting adverse climatic conditions, lack of funds, discouragements, and failures; fighting, too, the disbelief and derision of the very people for whose benefit he was giving his work and genius.

One of the first, and perhaps one of the most important skirmishes in his struggle began way back in 1900, at Washington, D. C. The Committee on Agriculture was about to bring its session to a close one morning, when the door of the committee-room opened and in strode a tall, sunbrowned man—Georgeson, from Alaska.

The chairman recognized in him the agronomist in charge of experiments begun two years before in what Washington was pleased to term "the land of the polar bear and the gold pan." He knew Georgeson had been working for weeks trying to get Alaska's annual appropriation for agriculture raised to fifteen thousand dollars. "It's no use, your coming before this committee for a hearing," he said quickly. "Your appropriation is twelve thousand dollars a year, and we're not going to allow you another cent."

A murmur of approval ran round the table at which the members were seated. In those gold-mad days of the Klondike and

GEORGESON
Put The Midnight Sun To Work

Nome, who cared what Alaskan ground produced if it was not gold! Twelve thousand a year for crop experiments in "the frozen North" where, every one of them was convinced, nothing could grow, seemed not only enough but far too much.

"I won't ask you for an extra dollar." Georgeson was addressing the chair in the deep voice that hinted of his Danish birthplace. "All I want now is a chance to tell you the truth about Alaska."

"But we already know all about Alaska," declared the chairman.

"Mr. Chairman"—a member from Kansas broke in—"*you* may know all about it; but *I* don't. Perhaps there are others here who also would like to hear what Doctor Georgeson has to say."

A few minutes later the man from Alaska had the floor.

He challenged attention at once by stating that the gold country had agricultural possibilities of more intrinsic value than all the mineral wealth then coming from the ground.

"You believe that nothing will grow in Alaska. Well, I believed that too, when I was sent up there two years ago. But, gentlemen, this is the country I found:"

And then what a land he described to them! A sunny, summer-land, with wild raspberries reddening from the southern boundary to the Yukon; wild strawberries sweetening in the shadow of glaciers beyond the Copper River; wild currants ripening under the midnight sun a hundred miles above the Circle. And that same sun, during growing time, working twenty-four hours a day, making the whole section a veritable hothouse. He spoke of the surf-drenched coast line, where migratory ducks fattened on wild rice that tapped a man's shoulder; the Kenai Peninsula above the sixtieth parallel, where wild hay grew eight feet tall; the great valley of the Tanana, farther north, a-sway with native redtop reaching the height of a bull moose's head; fertile land that could be brought under cultivation and made to produce food for millions of people; the Arctic slope, with vast meadows stretching away toward the Pole.

He told of the twenty-two different kinds of native grasses greening Alaska's soil in summer; with sixteen varieties of wild berries ripening on her hills and in her valleys; with two hundred and seventy species of wild flowers blooming all the way from her forest lands on the Canadian line, to her tundras, that edge the Arctic Ocean.

Such was the untilled "frozen" North that inspired the doctor's speech before his committee. He made Alaska plead for herself, for, true to his word, he did not ask for that extra three thousand he wanted so much; that three thousand which would bring the Territory's appropriation up to fifteen thousand—the annual amount then allowed each state in the Union for agricultural experiments.

ALASKA is thirteen times larger than the State of New York. It is three times the size of the German Empire; it is larger than England, Ireland, Scotland, Norway, Sweden, Finland, and Denmark combined. Perhaps it occurred to the committee that, after all, fifteen thousand a year was not too much to allow a man who was working out the agricultural destiny of such an empire. Perhaps they may even have remembered how little Alaska had received in return for the millions in fur and fish and gold it had poured into the coffers of the United States since its purchase.

At any rate, they gave Georgeson what he wanted, and the big sun-browned man went North again, and redoubled his efforts to put back into the ground something which might sustain those homeseekers he felt sure would come after the gold-diggers had looted Alaska of her mineral wealth, and left her.

Visible evidence of Doctor Georgeson's genius—a huge rutabaga and a great head of lettuce, both grown in Alaska. There are scarcely a hundred frost-free days in parts of the "Frozen North," but during the growing season, the sun is on the job for twenty-four hours a day, making of the whole section a veritable hothouse

More than a quarter-century has gone by since then. To-day great dredgers crawl like monsters through the worked-out placers of the Tanana and Yukon valleys, remining the low-grade tailings left from that earlier golden time.

The men who run them pause in their labors to shout greetings to farmers hauling loads of northern wheat to the flour mill operating near Fairbanks, in the very shadow of the Circle. The trade mark of that milling company is the Midnight Sun, and the mill grinds Alaska-grown grain into flour.

To-day, "Alaska grown" is a phrase seen on advertising placards as far south as Seattle, and the vegetables and berries so labeled command the highest market price, because of their

Part of the experimental farm at Sitka, where the vegetables live up to the glowing promises made in seed catalogues. Those are pea vines over to the left, where the man is standing

rare quality and of their surpassing flavor.

To-day, Alaska's annual appropriation for agricultural experiments is seventy-six thousand dollars, and on the mailing list of the Government's stations are names of thousands of home-makers in the country who keep pace with every new development in horticulture and animal husbandry. A request on a post card brings to these farmers, free of charge, anything from a package of seeds to a fruit tree, and bulletins setting forth what Doctor Georgeson and his staff have learned from experiments in growing these things.

Such is the fruit of the resourceful genius, the indomitable faith, the prophetic vision of the big Danish-American, who, even now, is often called upon to convince skeptics that the Territory is not a frozen waste.

"BUT I'm always able to understand their skepticism," he told me, "because of my own prejudices before I saw the country. On my first trip up here, I was praying every day that I'd be recalled. Having a wife and three little children, the prospect of exile in what I then believed to be a frigid wilderness was appalling. I found nothing on my journey to reassure me, either, for it was the spring of 1898, and my steamer was crowded with gold-seekers stampeding to the Klondike.

"They all looked on me and my mission with pity and derision. I recall a stop our ship made at Juneau, and a stroll through the narrow streets of that mining town. I passed a group of high-booted, sombreroed miners standing outside a saloon between drinks, discussing free-milling ore and placer gold. One of them nudged another and pointed at me: 'Hey, boys, pipe the Alaska farmer! Ho! Ho! Ho!' Their hilarious scorn followed me down the street."

Doctor Georgeson had been advised to establish his first station at Sitka, which was then the capital. When he arrived at his destination, one rainy May day, he found that the land set aside for government experimental crops was a tundra swamp into which deer sank to their bellies, to become the prey of Indian dogs. The doctor hadn't a moment to lose if he was going to put in a crop that year; but immediate cultivation of such aquatic soil was, of course, out of the question. He promptly borrowed the back yards of the governor and the Russian priest, and in these small plots laid the foundation of agriculture in Uncle Sam's empire of the midnight sun.

"Other citizens, also, loaned me portions of their yards until I had in all about three acres for my experiments that first year," continued the doctor. "With a shovel, also borrowed, and the help of an Indian boy, I prepared the ground and planted the seeds I had brought with me. My plots were scattered all over the village, and, having insecure fences or no fences at all, the local boys, cows, pigs, and tame rabbits rollicked joyously through them. Hens, which in Sitka fly like sea gulls, flocked to the feast I had unwittingly prepared for them, and when, by chance, they overlooked anything, the seeds came up to become the playthings of diabolic ravens, which, with almost human malice, pulled up the little plants, merely to inspect their other ends."

Alaskan dahlias

UNDER these exasperating conditions, Doctor Georgeson managed, by a miracle of vigilance, to protect part of his crop, which rewarded him by doing remarkably well.

In the meantime he had set a man with a yoke of oxen to draining the tundra. "Oxen, deliberate, but steady workers, were better for this job than horses, because they did not become excited and hurt themselves when they sank over their knees in the muck," explained the doctor. "But the work went on slowly because it was nearly impossible for me to get laborers then and for many years after. Wages were high, my appropriation small, and all the men in the country were rushing to the gold-fields. You couldn't blame them—for who (*Continued on page 78*)

"I Could Never Fear Death Again"

By Frederick L. Collins

WE WERE an hour out of Strasbourg when the thing happened. The Argonne and St. Mihiel were well behind us. The long white road to Paris lay just ahead. The great airplane had been working beautifully. Then, all at once, it didn't.

I knew nothing about airplanes. I had never left the ground before in anything giddier than an elevator. But I had ridden in everything on wheels from a tractor to a sightseeing bus. And I knew the sound of a gasolene motor when it was beginning to go wrong. This one sounded as if the garage man had let out all the old oil and had forgotten to let in the new. There was the recurrent knock-knock of a straining piston that comes just before, and just after, it breaks. And—what was more alarming—the face of the French boy beside me had gone Chinese white.

He was a good boy, that French aviator; and although he was separated from me by a tornado of wind and noise that made speech as useless as a fifth-wheel brake, we had managed to become very good friends. He had just been telling me in sign language that he had been down there, below, in the war. And a brave soldier he must have been. For now, as he faced death again in the familiar airways he was almost stoic in his calm. With his left hand he tightened the leather strap that bound him to his seat. I did the same. He threw me a look of silent understanding. Then, with the forefinger of his right hand, he made one final gesture—*down*.

It was somewhere around this moment that I died.

Of course I didn't die in the physical sense. If I had, I might never have known how I felt. But for one eternal moment, I *thought* I was dead. As far as my own feelings were concerned, I *was* dead.

And it was unlike any death that I had ever imagined.

Perhaps I should have said in the first place that the French boy and I were not alone in the plane. Directly below where I sat, through a square peephole in the roof I could see my fellow-passengers—a mackintoshed Englishman and his umbrella-ed wife, who had boarded the craft at Budapest, the second stop in the long flight from Constantinople. At least, I could see them if I cared to look. But, as a matter of fact, I had paid very little attention to them—until now, when, for some inexplicable reason, they suddenly filled my mind and heart.

At Prague, I had grudgingly offered the young Englishwoman my seat by the pilot in the open air; but I had been indecently glad when she refused it; and at Strasbourg, where we stopped for food, I did not repeat the offer. In fact, I scrambled back to my perch, while they were still playing with their tea-basket, in a cowardly fear lest they might rob me of my advantage.

I had always been a supremely selfish man. I had never hesitated to secure my own comfort at the cost of discomfort to others. It had been as natural to me to grab the best seat in that plane as it is for the earliest and greediest bird to catch the fattest worm.

But now—

WELL, the French boy and I had had our warning. We had seen the skies vanish and the earth rise. Even now, we could see the spot where we were about to crash. But those two knew nothing.

She was one of those sample-size English girls who tuck so neatly under the elbows of their towering husbands. And I found myself thinking that she was too pretty to die. The man, too, was quite a decent chap. I knew by his collar bone that he had been a British soldier.

I remembered now that I had seen him pointing out this spot and that, where he had done his duty. They had lived for the pleasure of these hours, when they should be sailing over the fields "where John had fought."

But why should I think of these English now, when rocks and trees, shell holes and trenches, were rising against me, when the very earth was hurling itself at me for my destruction? I wouldn't think of them. I would think of my own precious skin. But, somehow, my eyes no longer obeyed the dictates of my brain. They refused to leave the shaken figures of those two caged-up human beings, rushing unwarned and unaware to meet their death.

Down we went. One thousand feet. Two thousand feet. Only a few hundreds more in the final thousand lay between us and the shell-hardened ground.

I suppose I was scared. I wouldn't have much respect for the intelligence of a person in my circumstances who wouldn't be scared. But I don't especially remember any sensation of fear—at least for myself.

Something far more important was happening to me. Here I was, plunging headlong to my own destruction. The boy beside me, struggling with his controls, breathed only a stoic despair. The plane lurched and staggered. The earth rose to engulf me—and I didn't care. I had forgotten myself.

I was loosening the belt that I had so carefully tightened. I was leaning forward to call something—I know not what—of cheer and encouragement to those strangers. It was not important that I was doing these things. They were of no importance anyway, and of no avail. The important thing was that, in this supreme moment, I wanted to do them.

Alive, I had thought only of myself. Dead, I thought only of others.

I had often wondered what it would be like to be dead—and now, suddenly, I knew. I don't mean that I saw a vision. I don't say that I saw heaven. I saw a Frenchman's gold signet ring, an Englishman's worn coat collar, an American's leather shoe lace untidily tied. I saw clouds that reeled like drunken scarecrows, trees that jumped at me out of forest depths, suction—yes, I *saw* suction—so swift it hurt.

These things I remember. They were not visionary, not heavenly; not beautiful. The beautiful thing was that I saw all this un-beauty without feeling it. I was untouched by it; detached from it. *I was away from myself.*

My heaven didn't have any of the conventional accouterments. But it was not without a transforming splendor that made the old look new. For, as you see, the least familiar figure in that strange place was myself!

I NEVER will know what happened to the plane. But, somewhere in the last two hundred feet, the gallant boy in the pilot's seat, wrestling silently with the stops and levers on the board in front of him, managed to gain a partial momentary control over the crippled craft. We swerved—oh, so little!—to the right. And slid, rather than fell, into a boggy marshland in the middle of the River Meuse.

The ship was wrecked. So were some badly shaken nerves. But, as far as I was concerned, nothing mattered so much as the almost unbelievable thing that had happened to me during the sixty seconds I was so gloriously dead.

I could never fear death again. At a distance of several years—even of several miles—it had been a terrifying thing. But when it came right up to me and touched me on the shoulder it wasn't at all unfriendly. It didn't hurt me. It changed me. My brain acted as it never had acted. My heart responded as it never had responded. My soul—for now I knew that I had a soul—rose to meet a Force, which my eyes had never seen and my hands had never touched.

How did I know that I had a soul?

How do you know that you have hearing, sight? By using them. And, for the first time, I was using my soul.

How did I know there was a Force?

How do you know there is faith, love? By experiencing them. And, for the first time, I was experiencing God.

Maybe—I don't know; it's only just supposing—but maybe, heaven is like that!

ARCHIE CHADBOURNE *tells*

How *to be* *a* Good Husband *though* *a* Poor One

PHOTO BY H. L. STANDLEY, COL.

Archie Chadbourne is a truck driver for a department store in Colorado Springs. He is also something of a humorist, philosopher, and writer, as you will see from this article, in which he tells how he hid his dumbness from his wife!

I REMEMBER distinctly my first lesson in making our family happy by keeping myself "sold" to my wife. She made some candy the first week of our married life. When I arrived home from work, she offered me some and then placed the dish on the buffet. After supper was over and the dishes were done we sat reading the newspaper a while. Ione said, "Have some more of the candy. It was good, wasn't it?" She got up to pass me the dish, and there wasn't a crumb left.

Ione looked at me without a word. You know how still it gets before a bad storm. Well, you could have heard a pin drop, while I sank deeper and deeper into that chair and paid strict attention to my reading. Without meaning a bit of harm, I had eaten the whole dish of candy that brand-new wife of mine had made. Of course that was definite proof that the candy was good; also, it was proof that I was a big, overgrown hog.

At home when Mother or my sisters made candy, they just naturally expected us boys to eat all they set out. What they did not want eaten they hid. Therefore, I had thought nothing of completely devouring Ione's candy. Well, believe me, Ione's viewpoint was not the same as my mother's. She had not expected to take me to raise, supposing that I had already been taught a few of life's niceties. By the time she got through explaining to me how tiny I was, I was even smaller than that. It seems that Ione does not eat her candy as I eat mine. I stay with it until it has disappeared, but Ione likes to have it sitting around to munch on one or two pieces a day, or to be eaten when company comes in.

It took me a long time to resell myself to her, and it was not a nice occupation for a self-respecting man. And I have had to resell myself on numerous other occasions, simply because I am merely a poor dumb-bell of a husband in his normal, raw state. If Ione hounded or nagged me, I presume I might get hard-boiled and never would care for a resale any more than she would, but Ione does very well, considering what she has to put up with.

I do not believe it would be quite so hard to make myself solid with my wife if I had plenty of money and could bring home a box of chocolates, a new record, or piece of jewelry, or take her to the opera when the air at home gets too highly electrified for comfort—but I cannot do those things. I have been married about twenty years, and I have been broke all of the twenty, so broke that I cannot attempt to do those exquisitely nice things which help to put a fellow over when he has blundered.

I simply do not have the money for such an investment. I fail to make my running expenses, let alone extras. I have had nothing to sell all these years but poor little me, and so I have given rather close attention to the product and to the market conditions, and so far have made the original sale stick.

The trouble with a lot of us husbands is that we are all out of breath by the time we have caught a wife. Our courtly manners barely last through the honeymoon, we must hustle so fast making a living. We never fully regain our former pep. We mean all right, but the zest of the chase is over. We argued and pleaded, and finally convinced her that we were by far the best buy on the market. We whispered in her ear, and there were no mental reservations, "Now, dearie, if you'll just be mine, I'll make you the happiest girl in the world 'till death us do part'."

And after the vows are said, we quite frequently forget to make good.

YOU know what a business house does when it buys a piece of machinery and the factory which guarantees the thing makes no effort to render service on it: It simply sends the machine back, C. O. D., and writes a letter telling the factory to throw the thing in the junk where it belongs.

Now, suppose you came home from work some evening all tired out with the day's struggle, expecting to offer your usual three grunts for the evening meal and maybe four for your bed, and found a note on your empty plate which read like this:

DEAR HUSBAND: When you married me you promised faithfully that you would make me happy. (Notice, she doesn't say a word about making a living—only that you promised to make her happy.) You haven't even tried to make me happy. You spend too many evenings and too much money away from home. You can spend them all away, hereafter. When you are home you sit around like a wart on a log. You are not mean; you are not sour; you are not sullen. You are simply dumb. You do not function. Take yourself back, for you are not what I thought I was getting when I took you for better or worse. You are worse.

I'll not say that nine out of ten husbands need that kind of message. I do not believe they do. But too many of us fellows who have to work hard and get little for our labor, too many of us who have nothing at all besides ourselves to sell, take too much for granted. We think the "old lady" ought to know we still love her, though we haven't mentioned it since Hector was a pup. It sounds silly for us to

Digitized by Google
Original from UNIVERSITY OF IOWA

talk that way to our own wives. Gosh, didn't we marry her? She ought to know we love her, or we would never have conferred that favor upon her!

I will be perfectly frank: I do not come home every evening with a smile, and kiss Ione and tell her I love her. She would brain me. Nor do I kiss her every morning before I go to work. There are so many ways of showing affection that you must show it according to disposition.

Only, for heaven's sake, do let the wife know what you are driving at. I'll tell you what I can and do do: I can come home and sit in the little rocker right in the road between the kitchen table and the stove, and give her a little pat as she passes me and say right out of a clear sky and apropos of nothing: "Honey, you sure are nice. I kind of like you." I can say that without dodging, for she'll merely tell me to get out; that I'm trying to make her hurry along with the eats.

Or, maybe I'll come home sometime and find Ione's eyes a little red and her temper pretty brittle, and it looks like there'll be a hard squall before the evening is over. I'm no mariner, but I know the storm signals. It's highly probable that she has just received a nice long letter from that windy cousin of hers who married so well, and who lives on a lake and who has boating parties and week-ends, and everything; and the only lake we ever live by is when it rains and fills our back yard and cellar with muddy water and bullfrogs.

Well, that is not the evening for me to seek the little rocker and repeat some silly nonsense about thinking she is hot-dog. It is the evening for me to remain sort of inconspicuous, like a tree toad, and think up something to say which has no reference to love or matrimony or divorce.

It is my cue to act as though nothing strange has come under my observation—just appear as dumb as I am. Be myself, so to speak. I have those spells, too, when the world is all against me and I just hate everybody, whether I want to or not. The fact is, I sympathize with her heartily. But I do not sympathize out loud. I simply radiate it. Maybe that is not scientific, but I believe a man just naturally radiates what he feels, whether it is his loves or his hates. It goes to make up his personality, I guess; whatever that is.

OH, YOU say, this bird sure hates himself. He thinks he's some sheik. You'd like to hear the woman's side of that yarn. Well, I'm not modest. A too-modest salesman never put over anything, and I've spent a good many years trying to keep myself sold to Ione. I've made a study of being married successfully, and I'm willing to put down a lot of things I have learned, and let you judge for yourself if I know my onions or not. Yes; and I'll tell you before I am done just what Ione says about it too.

I remember the first time I proposed to Ione. I was so cock-eyed sure that she would fall into my arms that I did not rehearse my selling argument as much as I should. That proposal was as weak as the story you tell your wife when you want to spend a night up-town with the boys. We rode around about half the night drawn by a ring-boned, spavined, flea-bitten nag I had hired at a local livery stable. Those were the days before automobiles were as common as they are now. Finally, the old horse went to sleep directly beneath a street lamp not two blocks from Ione's home, and I proposed with nothing to distract her attention but the moths jazzing around the light.

I do not remember my exact words, but I do remember distinctly what Ione said. She said: "NO!" And followed it with the command: "And you can remove your arm and take me home instantly. See that milkman gaping at us."

As a matter of fact, she was not at all certain that she could stand me as a steady diet, morning, noon, and night. It took me six months longer to convince her that I was a good buy. I said: "Honey, Dearie, Lovey, I'll make you the happiest girl in the world. I am going to get ahead, and you'll be somebody big; we'll travel—you can pick your gowns in Paris; we'll have a summer cottage and a winter palace, and —and—and—" You know how it goes. I wasn't lying to her, either. I was simply fooled on my capacity to make good. So many of us are at that particular time of life.

I have not been able to give her money, nor the prestige of any worthwhile position, nor travel, (*Continued on page 104*)

If You Ask Me:

Self-pity is the greatest dope in the world

A MAN whom I have known for eighteen years died the other day. As far as age goes, he was in the prime of life. In reality, he was a soured, embittered old man.

Never have I had an ambition to write epitaphs, but if I were asked to turn out one for my departed acquaintance I should be tempted to say:

> Here lies Henry Blank,
> Aged forty-two years,
> He spent more than twenty of them
> In feeling sorry for himself.

Henry got the self-pity habit in college. When he did not "make" the football team his pride was hurt. He felt that he was the victim of special injustice. So he took a stiff dose of self-pity, and liked it. He refused to play his best on the scrub team, like a good sport, and became a "beefer."

This fact kept him out of the best fraternity. Disappointment again! More stiff doses of self-pity. He gradually quit seeking within for explanations of failure, and found justification in circumstances—the envy or the stupidity of others. He took to self-pity as some men take to drink.

Leaving college, Henry got a fairly good job in an architect's office, a line of work for which he had real talent. But promotion and pay didn't come his way as fast as he thought they should. Again he felt that he was being discriminated against. He grumbled and moaned so much that he was finally fired.

Always and always Henry felt that fate was using him badly. He never "got the breaks." Soon, self-pity was etching acid lines in his face. He had few friends and no pals. In fifteen years he held seven jobs. In none of them, it appeared, was he "treated right." Finally, he began to fail in health, as he had long since failed in spirit. Death must have been a blessed boon to him.

There are lots of Henry Blanks in the world. Their great dope is self-pity. It's mighty easy for anyone to become an addict. Self-pity is insidious. You have to keep taking it in larger doses to get any kick out of it. For a while, your mourning may excite the sympathy of others. But your fellow men can feel sorry for you only so long. After that, you bore and irritate them.

All of us have adversity in plentiful doses. No one has a monopoly. If a man bends before it and broods over it, he can soon build up a pretty good case that the stars in their courses are fighting against him. He increases his doses until a permanent quitter is born. And his story ends right there—save for some forlorn footnotes!

Merle Crowell

"People Come *to* See *the* Scenery *but* Stay *to* Watch *the* Bears"

By Frank J. Taylor

IT MAY be true that "there's no place like home" on work days, but when holidays come most folks want to roam. There is a hangover of the nomad in nearly all of us. Every now and then we fairly yearn to go and see the world.

Not long ago, I tracked a few hundred thousand modern nomads to their objective in Yosemite National Park, high in the Sierra Nevada Mountains. W. B. Lewis, the superintendent of the park, told me that during the eleven years he has been in charge of Yosemite no fewer than a million and a quarter visitors have trekked over the winding mountain roads to the show place of the Sierras. Four out of five of them came in their own cars. They were mostly city folks, but they seemed perfectly at home around their flickering camp fires.

"People want to escape the routine of the cities," explained Mr. Lewis. "They enjoy the luxury of the open spaces. They long to be gypsies. Not forever, of course, but long enough to be glad to get back home. Our ancestors roamed the forests for food. Folks to-day roam it for thrills."

"What gives them their biggest thrill?" I wanted to know. "Yosemite Falls or the Big Trees?"

"Wrong both times," replied Lewis. "Meeting a bear face to face is the most thrilling thing that can happen to a visitor here. If a dozen people were watching the Falls and a bear came along, they would forget all about the Falls and watch the bear every time. They might watch Yosemite fifteen minutes, but they would watch the bear as long as it stayed where they could see it.

"In the summer time," Lewis went on, "more than half of the motorists camp out. Many of the folks who are here right now will come roaming back in midwinter to see Yosemite in a different mood. They come for the snow sports, too. In the winter most of them prefer the hotels and lodges. But nomads know no season. I'm surprised at the number of people who take two vacations a year now.

"The scenery in Yosemite is all on such an immense scale that people soon want to be relieved of it. I have taken visitors to Glacier Point, and heard them say, as they looked across the chasm at that sea of mountain peaks, 'I would just like to sit here all summer.' That view fairly takes your breath away. But an hour later they would be planning to go down to the Valley. The thing was simply too stupendous. They enjoyed it. They raved about it to others. But they longed to get back in the sheltered Valley."

Mr. Lewis and I drove through the camp grounds in Yosemite Valley. There were at that time about eight thousand campers scattered through the forest. Families were busily cooking supper. There were wood stoves and fireplaces and open fires and gasolene burners. There were gay-colored tents that looked fresh from mail-order catalogues. There were pup tents, and army tents, and tepees and lean-tos that converted limousines into camps on wheels. There were sleeping bags and army cots and folding beds and real bedsteads. All was a gay jumble.

"Automobile accidents are rare," the superintendent declared. "In the eleven years that I have been at Yosemite, I recall but one fatal accident to a visiting motorist. That is a safety record that few cities can equal. People are more careful in the mountains. Besides, we patrol our roads and see that they drive slowly.

"THERE are a few simple things motorists should know about driving in the mountains. First, go into low gear and stay in low whether you are going up or down a steep hill; second, use the brakes only to stop or slow down, never ride the brakes to hold the car back, low gear compression will do that; third, keep both hands on the steering wheel; fourth, when you want to look at scenery, stop the car and park it; fifth, go slowly, never more than fifteen miles an hour.

"Of course," he went on, "it is against the rules to disfigure rocks, trees, or anything in the Park. Flowers must not be picked. We want to keep Yosemite as nature made it.

"The public has changed a lot in recent years. When I first came to Yosemite, it was a common practice for visitors to carve their initials in the bark of a Big Tree, or to paint their names on a rock at the end of a hike. But not any more. Folks are learning to appreciate nature. The last time we had a case of willful defacement, we imposed a very effective penalty. Two young fellows painted their names and addresses on rocks all along the Tioga Road. We followed them up and located them in a camp where they were spending their vacations. They changed their plans, and instead spent their vacations with us, removing the paint from all those rocks!

"The only shooting allowed in Yosemite National

Park is done with cameras. It pleases the wild animals more and delights the hunters just as much. Since dogs and cats have been excluded from the Park, the wild animals have ceased to be wild. Huge elk, their antlers silhouetted against the cliffs, pose in the meadows of the Valley for the camera enthusiast. Twenty thousand deer roam at random through the Park. And many of them are so tame that they will eat from a visitor's hand.

"I like the bears best of all our Valley animals, just as the visitors do. They're so sort of human! The bears are the clowns of the forest. No wonder people prefer them to scenery.

"Did you ever see a bear scratch his back? It's an amusing trick. He grabs a low-hanging limb of a tree and drags it across his back with a sort of sawing movement.

"MY FAVORITE bear is a big brown one that we call Old Billy. He frequently comes around to our back porch in the evening. We hear him scratching on the door, and that's his way of knocking. I gather up some pieces of meat, bread, and cake and go out. Old Billy will be patiently waiting for me. I sit down on the edge of the porch. Old Billy squats on his haunches. I give him a piece of bread, which he eats gravely. Finally, I give him the cake. Then we sit there and look at each other like a couple of old cronies visiting; when I rise, Old Billy gets up too, and ambles off just like a neighbor who has sat his visit out.

"The great sport of the Yosemite bears is knocking over the garbage cans. They bang them off porches and from the platforms on which we place the cans for the garbage collector. One spring I tried putting our garbage can on the ground and leaving the lid off, so that the bears could get at the food without knocking the can about. They never touched either the can or the food. When we put the can back on the platform, they knocked it down again.

"That's a good joke, from a bear's point of view. But a bear doesn't like to have the joke turned on him. He doesn't like to be teased.

"ANOTHER dangerous pastime is trying to make a bear jump. The bears have become so tame and friendly that people sometimes treat them like dogs. But a bear either can't jump, or he won't jump, for candy or anything else. The person who tries to make him jump by holding food out of his reach is likely to get a good hug or a good wallop.

"So far as I know, a bear will never pick on a human, unless he is tormented or is cornered. That goes for practically all wild animals. They depend upon their ability to flee, for their safety. People frequently surround bears up here, in their enthusiasm for pictures. That is bad business. As soon as the bear realizes he is surrounded his instinct for safety leads him to make a break for the woods. If you happen to be in his way you get upset. If you want to feed or photograph a wild animal, the best place to be is right in front of him. Then he isn't afraid of you." (*The End*)

The crouching carcajou on the spruce bough

PAUL ANNIXTER'S *thrilling story—*

Enemy

ILLUSTRATED BY CHARLES LIVINGSTON BULL

THOUGH it was only the last of October, a hush as deep as mid-winter lay over the forested slopes of old Table Mountain. Those late flyers, the killdeer, had gone south. Even the hardy meat birds, the ravens and the crows, were decamping in great talkative gangs between sunrise and dusk each day, a good three weeks before their usual custom. The keen wind that had risen with the black and red streaked sunset, swept down from the mountain heights, eddying the dead leaves and whispering eerily of imminent snow.

For those who could read the almanac of the woods, all signs were of the worst this fall. The silence that swathed the forest was more than autumnal stillness, for not even in the under-world of thicket and bracken was there a stirring of life.

It was a fatal seventh year of no rabbits, which the Indians have learned to anticipate and dread, when the prolific cottontail and northern hare, the mainstay of all the meat eaters of the forest, had been decimated by plague, and had brought forth no young. The bug and grasshopper crop had been phenomenal, and wild oats had matured no seed—hence, grouse and partridge were also scarce.

Hard indeed would be the lot of those meat eaters who tarried the winter on the slopes of Table Mountain.

As if it were a disembodied voicing of this knowledge, a thin ululating cry came shuddering up along the forested valleys as the last daylight faded in a melancholy flare of smoky-red and umber. Thin and attenuated as the death tick of a beetle, the cry punctuated the frosty silence across miles of forest—the long-drawn-out hunting call of a wolf pack.

Three times it sounded, nearer each time, until it echoed along a spruce-shadowed ravine less than a mile away. Beginning in a series of short barks, it rose rocketing in a long quavering howl filled with all the menace and savagery of the terrible days of mid-winter, an unprecedented thing for the time of year, and another omen for the ear that could interpret.

The eleven big gray timber wolves that made Table Mountain their home were rallying nightly during this lean fall, under the leadership of a crafty old male, though ordinarily they would have been hunting singly or in pairs until the heavy snows of January. Already there was urgent need of their pack efficiency to keep life between their gaunt ribs. Tonight they were following a well-run deer trail up from the foothills.

AS THE bitter stars began to scintillate above the black pine spires, the eleven wolves swept out of a gap in the hills across a mile-wide swath of dead and blackened stumpage left by a last-year's forest fire, running silently now and in spread, fan-shape formation. They wasted no breath in useless yapping, but drew and quartered every thicket as they passed, for a strong scent told them that deer had been feeding on the new young grass amid the stumpage less than a half-hour before.

Well to the front of this particular

gathered himself together by imperceptible degrees

Allies

In which a great gray wolf matches wits with the man who had sworn to get him

band, near the wily, long-jawed leader, ran a young male wolf who by every look and action advertised the fact that he was second in command of the pack.

In height he stood almost an inch above any of his fellows, and he was further set apart by the lighter coloring of his coat about the chest and flanks, relic possibly of a cross with a more northern strain—the fierce white wolves of the Barrens. His deep-set eyes had a fierce yellow-green flare in them, betokening perhaps less of craft and trickery, and more of fearless, indomitable savagery. Between this wolf and the leader existed a tacit watchfulness and a recognition of possible developments.

Had things gone their natural course, a clash between these two would have been unavoidable: sooner or later the gray-white male would have been seizing the leadership for himself. But the trend of this night's events was to change all that. One of the band presently gave the short, high yap that signaled a new, fresh trail, and the band swerved to investigate.

It happened that a long-legged lynx, also with a mind turned to venison, had ventured down across the burning, drawn by the fresh deer tracks. She was slipping along through the burnt snags when the eleven wolves swept down on her without sound.

OFF she went for the nearest timber—doubling her absurdly long hind legs in grotesque bounds which not even the northern hare could hope to overtake—for a quarter of a mile or so. But cats are proverbially shortwinded, and the leather-lunged pack must soon have pulled her down had there not come such a slip behind the scenes as so often happens in the drama of wild life.

Right in the midst of that glorious chase, with the lynx barely holding her own, came tragic dénouement. A metallic clank sounded suddenly in air—or overhead, or underground—it could hardly be said which, the horrible sound that every wolf knew all too well. As if a bomb had riven them assunder, the pack flew apart in eleven different directions; or, more accurately, ten, for one of their number had stayed behind, pitched forward on her chin as if at the end of a taut rope.

That wolf happened to be the mate of the light-colored male who ran by the leader's side, and she had run squarely upon one of the cleverly planted traps of Mart Brenner, a settler, who a month before had built himself a cabin just over the next ridge.

The pack, that had melted into nothingness at the snap of iron, now paused and turned to gaze. They saw a fearsome sight—the figure of the captive she-wolf gone suddenly mad in the middle of the blackened burning, leaping and rending the trap and herself in her great extremity.

All thought of the fleeing cat whipped from their minds, the others sat on their haunches to watch, horror in their greenly glinting eyes. Drawn as by a magnet all moved closer, cautiously, for fear of other traps that might be 'round about.

And as they came horror slowly faded, mouths lolled open in strange caricatures

Digitized by Google
Original from UNIVERSITY OF IOWA

of grins. Sheepishly, as if a bit ashamed, they fell to weaving in and out among one another, as their noses savored the fresh-spilled blood.

With her right foreleg broken, and bleeding profusely, the she-wolf snapped insanely at all in sight. All saw the pass to which she had come. She was now no longer a cog in their well-knit organization but all at once a broken and useless link. And there is no place for the maimed, the weak, or the aged, in the feelingless law of a wild pack. Very well the captive knew the meaning of their silent return, the different hue she now saw in the fire of their eyes. And her mate knew likewise. The slightest thing now would set them all slavering for her flesh.

The law of the pack is fate itself, and the average wolf would never have dreamed of forestalling it. But the light-colored male was nothing if not an individual. He, too, edged forward with the others, with an air of disarming sangfroid, lolling his tongue. But he was watching keenly the while with his cold, crafty eyes.

IT WAS the wily old leader himself who precipitated things. With a sudden rabid snarl, he sprang in and seized the trapped female by the throat. Her mate, who had been waiting for just that move, countered it with a lightning strike of his own. His long, keen jaws chopped, laying open the old leader's neck, then chopped again, and the latter loosed his hold.

But the gamy rescue had come too late. The body of the young female now lay still, and her mate, seeing she was beyond his aid, leapt aside in a desperate break for the open.

But murder lust was already loosed, and when the gray leader voiced the high signal that meant kill, the pack sprang forward as one. Two of them found the young male before he could win through the closing ranks, and his left foreleg went with a sickening crunch of bone.

Had the pack fought as tame dogs fight, there would have been no more to relate of this particular wolf—but wolf warfare is chop, dodge, and run. For a few moments things hung at an ugly balance. The young male fought, grimly, hopelessly, as a matter of course, for his life; but what was one against nine?

Then an opening showed itself for an instant. Through it he sprang, flicking out of the picture beneath the very jaws of the closing pack. In his extremity he ran then, as if his mangled leg did not exist, defying the fiery anguish of the splintered bones.

The turning of a wolf pack on an injured member is no nice thing to see or hear. The silence of the mountain night was made hideous with a long, quavering wail—interspersed with the high, sharp yapping that ever betokens bloodlust—as the nine swept after him, running so close they might all have been covered with a tarpaulin. Cannibalism was in the cry, fiendishness and a strain of insanity.

The young male had seen the ghastly finish of too many a hurt and infirm member of the pack. His shattered leg was telling on him now, and soon the pack began to gain, the terrible ululation of their cry like the chill breath of death itself.

Down a dense, spruce-shadowed valley the young wolf plunged at his three-legged lope, eye out for any chance shelter. It was but a matter of moments now before the end. Then, within a hundred yards, a miracle turned up the thing he needed—a strange sanctuary indeed, but perfectly ordained to save the plucky fugitive.

Mart Brenner, the settler who had taken up a timber claim on Table Mountain, had built his split log cabin at the head of the valley, and it was in Brenner's woodshed that the young wolf took refuge. It was timed to a saving second, for the pack was almost up to death range.

In the doorway he whirled to guard the entrance. The nine pursuers came to a skidding stop, in consternation. For in the air was now the dreaded scent of man, the upstanding Enemy himself. And in the open doorway stood the young male bristling like a devil, the flash of his white fangs proclaiming the heavy price he would exact from any rash enough to enter.

IT WAS a bit too raw, as sportsmen say, for the nine, who were but playing for the carcass of their stricken fellow. The light-colored male, who was playing for life itself, was a super-thing, beyond fear even of man, and so it was he won. Once nonplused, the pack's morale was broken, and presently all nine slunk off. And so for the time being the young male was safe. But out of the happenings of that night were to rise consequences that were to change his entire life.

For a quarter of an hour he lay where he was, doctoring his injured leg with healing tongue. In his great stress he was strangely oblivious to the man-scent that permeated everything here. His hackles rose instinctively at the dread propinquity, but, queerly, man seemed by far the lesser danger now.

His fear was largely supplanted by sorrow over his slaughtered mate. He remembered now the four motherless whelps waiting for food back in the home den. As soon as far cries told him that the pack was hunting in a distant valley, he slipped forth and made his way by devious courses back to his little family.

It was the profoundest moment of the

Digitized by Google Original from UNIVERSITY OF IOWA

He slipped forth in the growing light, his litter trailing behind him

young male's life when, with his clumsy, gray-brown whelps whimpering about him for food, it dawned on him all that was expected of him through the coming months of hunger. Gone were his days of heedless maledom, as a mere bringer of meat. Now, if his little family was to survive, it was up to him to play the difficult rôle of double parent and protector, the while he hunted for five avid gullets. Furthermore, he must do it all in spite of the combined menace of his erstwhile pack and this new enemy, the man who had settled in the spruce valley.

HIS first move must be to seek out a new den, remote and unknown to his former mates. He waited till the flush above the eastern mountains trembled with the coming dawn, then slipped forth in the growing light, his litter trailing behind him. Before noon he found what he wanted, a perfectly ordained den amid a tangle of inaccessible deadfalls that choked the throatlatch of a rocky gorge. And, whether by fate or by chance, that gorge marked the head of Mart Brenner's spruce valley, less than a mile above the settler's cabin.

Nightfall found the four whelps tearing at a fresh-killed partridge in the new dwelling, while the father lay on guard in the entrance. He had entered upon the greatest struggle of his adventurous career—a fight for the existence of his little family against the hand, fang, and talon of everything that dwelt on the slopes of Table Mountain.

NOW, Mart Brenner, after the habit of humans, considered the dark spruce valley his because he had "taken up" part of it as a timber claim. The valley with its close-standing ranks of jack-pine and Alaskan spruce would one day mean a fortune to Brenner. In the meantime, while he made good his agreement with the Government for its possession, he set about making a living with trap and rifle, for he was a woodsman of sorts.

With the first snows, he laid his trap line along the seven-mile length of the valley bottom. But he was not long in discovering that he had a noteworthy rival in the great gray wolf who denned at the valley's head and regularly included Brenner's trapping district in his hunting range. As a hunter, the big wolf was proving himself to be incredibly efficient.

Nightly Brenner had heard the Table Mountain wolf pack harrying the surrounding valleys for food, under the goad of their fierce hunger, and for a time he never dreamed that any lone wolf existed in the region. But a week after the first snowfall he found the remains of one of the five pigs he had intended to carry through the winter, slaughtered less than fifty yards back of his woodshed. And the tracks in the snow showed plainly that a single wolf had done the work—a wolf of amazing size and possessed of a peg leg. Furthermore, the killing had been done in broad daylight, an unusual thing in wolf tactics.

His ire roused, Brenner sought the life of the marauder. For the better part of two days he tracked the big wolf constantly. Three times he caught sight of him in his comings and goings, and fired, but missed aim by reason of the gaunt beast's amazing craftiness and speed.

The pique of mere anger had been back of Brenner's hunt until he gained his first fair glimpse of the culprit; then other and larger possibilities opened up. The old woodsman knew at once that the gray-white wolf was the largest of his kind that had ever lived in that region—the largest he had ever seen in twenty years of life in the New Brunswick forests.

Immediately his hunt began to mean more than revenge. Such a specimen was highly valuable. Many wealthy sportsmen frequented these forests each fall who would be glad to pay and pay well for such a specimen, dead or alive. And many a museum would prize such a head and skin for mounting.

"I'll have that darn peg-leg's pelt before the week's up," he proclaimed grimly, and forthwith summoned all his craft for the setting of traps and deadfalls.

THE following day he found the hidden den amid the blow-downs, and there he planted three artful sets, one directly before the entrance, and two others—the important ones—at either side. Then he legged it homeward, full of confidence, never dreaming that the gray-white male had been a witness of his tactics from a well-chosen lookout on the ridge above.

In the new and arduous responsibility that had been thrust upon him, the lone male wolf had grown ripe in wisdom. Quick to see that his own pack was a greater menace than man, or any of the solitary marauders (*Continued on page 112*)

Becoming *a* Father *at* 60 *is a* Liberal Education

By LINCOLN STEFFENS

"IT'S all right," said a young lady member of the staff, "for Mr. Steffens to write about the advantages of becoming a father after you are old enough to be a grandfather. And it's all right for him to talk of his young wife—but how does *she* feel about it all? That's what I should like to know."

A good many millions of persons have made much the same comments when a young girl married a man much older than she. You are naturally curious to know more about these seemingly strange matches—and next month you can know more concerning them. For Mrs. Lincoln Steffens has written an extraordinary article, in which she, out of her own experience, tells you why she considers herself lucky in having married a man old enough to be her father! You will find in the accompanying article, and in the one to appear next month, something to think about, talk about, and argue about.

THE EDITOR.

BECOMING a father for the first time when you are old enough to be a grandfather is a fortunate arrangement, I find—for the father, and, I am told, for a young mother. I was nearly sixty when Pete was born. I had retired; writing some, but my active life, my "career" was all over and done with. I could devote myself to the child, and I did. I am making him my chief concern. Whether this is good for the first-born himself is a question Pete is too young to answer. He is only three and, though some experts declare that the most important period of education is before that age, I feel that my experimentation with Pete is not complete. He still changes my mind and his disposition. But as for me, his father, I can say, in general, this:

The man who puts off parenthood till he is old enough and free enough and wise enough to enjoy it, becomes a father, a grandfather, and a child again, all in one, a triple happiness few young fathers can know.

Young fathers frequently are busy and vain. They think that the home is the woman's place, down-town is theirs. The excuse they give is that they have a living to make, a home to build, a career to hew; or if not these, then they still have their masculine pride to protect. What young husband would let his foolish young wife go forth to make a name for herself, while he stayed home to mind the baby? What self-respecting young father would encourage the mother of his child to avoid the menial tasks of the cradle, in order to perform them himself? Only a shameless grandfather would do what I have done for Pete, and yet, by doing it, I have discovered that for ages women have been elbowing us men out of one of the greatest happinesses of life.

Pete, by the way, is what I hear people call my son or our baby. We have never thought of him as an infant, or as mine or ours. Pete was an individuality from the start, a regular fellow, and when he came, he was so self-sufficient that the nurse chucked him on a cot to look out for himself while she and the doctor took care of his mother. And that's how I first saw him, lying alone, patiently waiting his turn, independent, self-reliant, an equal, as he has been ever since.

One day recently, when I was sweeping out the garage, he walked into my cloud of dust. I rebuked him.

"Get out of this," I shouted.

"No," he answered quietly, firmly, "Pete stay."

Half humorously, but at some length and with some rudeness, I scolded him.

"What do you mean by walking into my work and my life the way you do, uninvited, taking the center of the stage which I used to occupy; owning me, my wife, my house, as if everything were meant only for you? Where did you get the idea that you are the head of the family, the dictator of all work and all play, stopping the one for the other, and—" so on and so on.

He looked up at me, listening with twinkling eyes till I had exhausted my tirade, then he said calmly:

"Papa, now say it nicely."

And I had to say it, as I had been advising him always to say things, nicely. He thinks that a rule for him is a rule for me, for us, for all. When I repeated my remonstrance politely, he said:

"Now Pete go," and he marched off like an obedient child. Which he is not.

Pete has something much better than obedience to give us: he has courtesy, and he has humor. He had these gifts from the very beginning, and a little inquiry among other parents seems to justify me in my theory that human beings are born with good will rather than subordination, and that they are governable, from infancy up, much more gently than we think.

THE first time I noticed this in Pete was when he was a few weeks old. He put his thumb in his mouth. He did not do that often, and I didn't want him to acquire a taste for it and the habit, so I jerked his hand away. He looked up at me, and deliberately put his thumb back into his mouth. Again I thrust it aside, and again he, slowly, defiantly, put his whole fist in his mouth. It was our first fight. Then I had an idea: I smiled. I knocked his hand away more forcefully than before, but I laughed; I laughed it off. He studied me a moment, saw that it was a joke, smiled himself, and left his hand where I had laid it by his side. It was just as if he had said:

"Oh, you were only playing. I thought you wanted to fight, and I'd have fought. But if it's only a joke, why, of course . . ."

By a few such lessons as this, he taught me to ask, not to command him to do or not to do things, and I generalized his instructions. I learned that he is very obliging when we make a reasonable request and express it courteously. He likes to please. A lively sense of approbation or of disapprobation was inborn, I think; at any rate it came early.

Children, like primitive man, like the animals, birds, and fishes, know not shame—and they don't need it. Maybe we grown-ups don't need it either. I am teaching Pete to hide certain unpleasantnesses without it.

Laughter is his (*Continued on page 148*)

Lincoln Steffens

LINCOLN STEFFENS is one of the most colorful journalists America has known. He became nationally famous when, as a result of his sharp writing, several of the biggest cities in the United States cleansed and reformed their governments. Mr. Steffens was born in San Francisco in 1866; was educated at the Universities of California, Berlin, Heidelberg, Leipzig, and the Sorbonne. Among his books are "The Shame of the Cities," "The Struggle for Self-Government," "Upbuilders," and "The Least of These." You see Mr. Steffens here with his three-year-old son, Peter.

ZANE GREY'S

Strange and thrilling drama of frontier days

Sunset Pass

Illustrated by W. H. D. KOERNER

THERE were thirteen of the Prestons—"the strange, wild Prestons of Sunset Pass"—and Thiry was the lovely eldest daughter of the clan. They were newcomers in Wagontongue, and Trueman Rock had never heard of them until he came back after six years' absence in Texas, with the ten thousand dollars he had made in a cattle deal, and the purpose of looking in on his old friends and passing on again. But on the very day of his return he met Thiry Preston, and Rock—famous in all that country as cowboy, gunman, and lover—lost his heart to her promptly and completely.

He invested his money, bought a magnificent white horse, and rode sixty miles to Sunset Pass to ask Gage Preston for a job. He had been insulted by Ash Preston, the eldest brother, and ordered to keep away from Thiry; he had been warned against Ash by all his friends; he had heard vague and ugly rumors about Gage and his sons—but he had read suffering in Thiry's lovely face, and he had pledged himself to drive that shadow from her eyes, though he risked his own life in doing it.

Gage Preston gave Rock the job of overseeing his younger sons on the range, while Ash and the older ones attended to the extensive butchering which had been made the chief business of the Preston ranch. On his very first night Thiry implored him to go away, and her distress only confirmed the dreadful suspicions that had been growing in his mind. He refused to leave, accepted all Ash's insults, and bided his time. At last his opportunity came:

Amy Dabb, an old sweetheart of his, now married to a rich cattleman, was giving a Fourth of July ball in Wagontongue, and Rock got permission to ride in ahead of the rest. He stopped where the butchering was done, examined the whole place, and found just what he had feared—hides of another brand, the Half Moon, hidden in sacks with quicklime, which would destroy them and with them all evidence of theft. While he reconnoitered he saw Clink Peoples, foreman for a rancher named Hesbitt, who used the Half Moon brand, also looking over the butchering grounds. But Peoples rode off without having discovered the hides. With a heavy heart Rock went on.

At Wagontongue all was gayety in anticipation of the dance. Rock bought a gambler's outfit for the masquerade, and, coming out of the store, encountered Amy Dabb in reckless mood. She wheedled out of him the secret of his disguise for the evening; and with that knowledge went straight to Thiry, who had just arrived in town. By the time Rock and Thiry came together by a store that afternoon Thiry was so angry and so hurt by the things Amy had told her that Rock almost despaired of making his peace with her again. But she forgave him at last, and accepted his version of things.

And then, in the street, they came upon Amy Dabb and Clink Peoples. Amy was so frightened, and Clink was so plainly threatening her, that Rock ordered Amy home with Thiry and Alice, and challenged Peoples for an explanation of his conduct.

(*The story continues*)

PART V

THE red-scarfed rider had evidently had a drink or two but he appeared level-headed, and slowly the geniality with which he had accosted Amy Dabb faded into cold, watchful speculation. His tawny gaze swept Rock from head to foot, and back again.

"Howdy, Mister Big Hat," he replied, in imitation of Rock's greeting to him.

"My name is Rock."

"Aboot had thet reckoned," returned the rider guardedly.

"You're Hesbitt's foreman, Peoples," went on Rock, curtly. "He told me you were lookin' for me."

"I shore was."

"Ahuh. Reckon you didn't look very hard," rejoined Rock, in slight derision.

"Wal, I cain't say there was any particular call to rustle."

Thus these two range riders measured each other. Rock's reaction was vastly diverse from that following his encounter with Ash Preston. The foreman of Hesbitt's outfit appeared to belong to that type of cowboy whom Rock was wont to believe the salt of the earth.

"You're not drunk," replied Rock. "How's it you insult a married woman on the street?"

"Is thet any of your bizness?"

"It shore is. I'm an old friend of Amy Dabb's. Rode for her husband. Reckon it's not exaggeratin' to claim I'm his friend too."

"All right, Rock, I apologize," returned the foreman readily, though resentfully. "But it shore ain't because I think I ought to."

"I heard what she said, and your answer. Now, tell me, square, don't you think it was kind of low-down to brace her, right on the street?"

"Rock, I reckon it was," responded Peoples, staring hard. "But how aboot my takin' you as a slick hombre, a liar, sweet on her yourself, an' wantin' the inside track?"

"Peoples, you can take me any way you like," responded Rock, speaking hard. "But if you do it that particular way you've got trouble on your hands right now."

"So I aboot reckoned," nodded the rider. "Strikes me I've got to take a lot for granted aboot you. Shore, you know more aboot me than I do aboot you. It ain't a very square deal all around."

"I would take your word, if you shook on it," replied Rock.

"Wal, I guess I'd take yours."

"All right. We're gettin' somewhere," said Rock, more heartily. "Now, Peoples, tell me why you were lookin' for me."

"Easier'n your other cracks," replied Peoples laconically. "I kept hearin' aboot you out on the range. Then lately you come back an' went to ride for Preston. Thet made me curious, an' I reckon I jest wanted to meet up with you an' see for myself."

"See what?"

"Wal, Rock, do you know one of them queer range shadows is creepin' over the Prestons?"

"I've heard so," replied Rock gloomily. "But I'm hopin' it will blow over."

"Natural. But if it doesn't—if it clouds up black—you're shore goin' to get rained on, cowboy," said Peoples, with dark significance.

"Peoples, I like Gage Preston," went on Rock. "Do you know him?"

"Shore. Like him fine too."

"I DIDN'T take to Hesbitt," mused Rock, as if making comparisons.

"Shore, I never did either," admitted Peoples. "But—wal, I'm responsible for his stock. An' you can bet your bottom dollar I'd never be responsible for Preston's. An', now, aboot your connection with him. Let's just say there's somethin' off-color about him—speaks high for him to have you in his outfit. True Rock, clean an' square range-rider! Old hand at the game! Rode for the best ranchers in the territory! . . . Sounds awful good, when some new cattleman like Hesbitt or some wonderin' puncher gets to talkin'. . . . Rock, if Preston keeps you out there it's a safe bet he *is* rustlin', an' will ring you in with him, by hook or crook."

"So that's your angle?" muttered Rock, in deep thought. "Suppose I were to tell

Digitized by Google
Original from UNIVERSITY OF IOWA

Ash Preston what you just said?"

"Wal, you'd drive me into a gun deal. An' you'd be breakin' confidence. After all, Rock, I cain't prove nothin'."

"I'll keep my mouth shut," rejoined Rock, and indeed his lips were tight as he spoke.

"All right, thet's what I'd expect. An' I'll say a little more: It always struck me thet this bizness of Ash Preston's chasin' the punchers away from Sunset Pass, on account of his sister, was aboot half fraud. I'll bet that's a put-up job between Ash an' his father."

"I don't know. Sure, he tried to chase me away," acknowledged Rock.

"An' played thunder doin' it! Rock, take my hunch for what it's worth. As I'd take yours: Grab the girl an' raise the dust away from Sunset Pass. For if anythin' ever comes of this deal—as I suspect—an' you're still with Preston in any capacity, I swear I cain't see how you'd ever square yourself on the range."

THE new town hall was the finest structure in Wagontongue, and the civic authorities, who happened to be mostly members of the Cattle Association, were proud of it and its expression of a progressive and prosperous community.

It was of Spanish design, low, rambling, many-arched and aisled, painted white, with red tiled roof. The outside had been draped with flags and bunting in celebration of the national holiday. Two aisles with arched walls formed the outside of a large patio. Here, and everywhere, gay, many-colored Chinese lanterns hung, singly from the tops of the arches and in strings across from wall to wall. Flowers and desert shrubbery lined the walks and circled the fountain, where water tinkled musically. Flags and sage and evergreen furnished the interior decoration, very simply and attractively.

Trueman Rock strolled from the town hall, which he had inspected along with a multitude of visitors, back to his hotel. The street was full of people. Lobby and saloon were noisy, smoky. He went to his room to avoid the crowd. Events had multiplied already this day. What would the dance and the Fourth bring about? Rock was inclined to the idea that it might be just as well for him to spend the rest of the day in his room. When he left it next he would be in masquerade.

Darkness had long set in when he left the hotel. He ran the gantlet of merry jests, admiring glances from dusky eyes, laughter and query, to the entrance at the main corridor of the hall. Inside the door was a gate guarded by men, one of whom was the town sheriff, very important and pompous, with his silver badge conspicuous. Two placards struck Rock's eye. One read: "No Admittance to Anyone not in Masquerade." And the other sign, larger, read: "Check your Hardware and Bottle."

"Howdy, gambler," greeted the sheriff. "'Scuse me while I search you. Mrs. Dabb's orders."

His second slap at Rock located the gun under the long frock coat.

"Ha! Not on the hip! Hangin' low, eh? Wal, cowboy, unbuckle an' pass."

The heavy gun belt went into the hands of an attendant, who deposited it on a shelf, where already a row of weapons glittered. Rock received a ticket.

Rock passed on down the corridor to where it opened into the patio. There was music somewhere and sound of voices and laughter. Then he saw masqueraders in goodly numbers, and he strolled down the right aisle, where under every arch gay young people, safe in their disguises, ogled the strollers and made remarks. The lights from the lanterns were just strong enough to lend glamour and softness to the Spanish aisles, the beautiful patio, and the brightly clad maskers.

A GIRL, slight of stature, passed Rock, to peer at him with challenging eyes, disguised if not hidden by a red mask. Her costume was Spanish, gold and black, very graceful and pretty. It could not be Amy, for surely she would wear something magnificent. A masker in cowboy attire accosted her, to be gayly repulsed. She passed on, and Rock forgot her in his growing, searching gaze for someone he would know the instant she appeared.

Presently someone took his arm lightly.

"*Buenas tardes, Señor,*" said a low voice at his elbow.

Rock bowed gallantly to the slim creature on his arm. He did not recognize her, but saw that she was the Spanish girl in gold and black.

He cared nothing for Preston's sudden blows. He broke through them, beat him back, and knocked him against the wall

"*Buenas tardes, Señorita,*" replied Rock, peering into the black holes in the red mask.

She averted her face and walked with him, surely aware of the attention they roused. Rock grasped suddenly that there appeared to be a little pressure on his arm, a gradual but sure guidance of his steps. Being intent upon this unknown lady who had taken possession of him, Rock had not observed where they were heading. He was to find that they were entering the dance hall, where many masqueraders had assembled, plainly awaiting the mysterious first partner that chance might bestow upon them.

This Spanish girl was enterprising, not to say bold. Rock felt himself further drawn into the subtle charm of the atmosphere. Then the orchestra burst into music, a languorous Spanish waltz, once Rock's great favorite. The girl who had led him there swayed to the rhythm toward him, slowly lifting her hand to his shoulder.

"You handsome gambler! You don't know me!" she cried in arch reproach.

"Amy!" exclaimed Rock incredulously.

"Sure. Do you like me in this costume?"

"Great! You sure are a Spanish girl. Fooled me plumb good."

"Not a soul recognized me," she said in delight. "I'll tell no one but you. . . . Come, this is your old favorite waltz."

Before Rock knew what was happening she was in his arms, light as thistledown, and they were whirling, gliding, to dreamy strains that found the old chord deep in his memory.

"Trueman, hold me tighter," she whispered, and leaned back against his arm to look up at him. The dark eyes seemed inscrutable wells under the red mask.

"Behave yourself, Mrs. Dabb," he returned warningly, with a laugh. "Reckon I don't know quite all due my hostess, but I'm sure, not that."

"Well, if you won't I'll have to hug you," she went on. "Oh, I could hug you and kiss you before everybody! . . . Trueman, *what* did you do to my husband?"

"Did I do anythin'?" asked Rock, helpless in the unexpectedness of this attack. His old knowledge of Amy's resourcefulness tried in vain to fortify him.

"DID you? Trueman, he came home the other day, at noon—something unheard of," she went on swiftly. "He told me you'd been in to see him. That you had raked him over the coals. That you had cleared up something about you and me! Then he told me he had been sore and jealous for a long time. He admitted being mean, selfish, suspicious. He'd neglected me shamefully. He would turn over a new leaf. He would try to be young again. Oh, he knocked me cold! Since then he has been like he was when he courted me. . . . And, most amazing of all, he's to drop in here to-night—in masquerade. He wouldn't even tell what he'd wear."

"Good lord!" said Rock under his breath.

"You should say, '*thank* the good lord.' How'd you do it, old boy? It's a miracle. And maybe it's not too late. I was—I guess—on the ragged edge."

"All past, Amy," he said cheerfully.

"I don't know, Trueman. But I'm happy to-night, as I haven't been in years. . . ." Then leaning her head forward to his shoulder, she grew silent.

Rock was reminded that the better side of Amy had always come uppermost when she was dreamily, happily excited. When she was jealously excited, she was as tractable as a wildcat. Around and around they swung amid the colorful murmuring throng. The scrape and thud of cowboy boots drowned the patter and slide of lighter-footed dancers. Then suddenly the music ceased.

"Trueman, you always were such a wonderful dancer," murmured Amy, still under a spell. "I wish I had every dance with you."

"You flatter me, Amy. But it sure tickles me."

"Of course you'll dance often with Thiry Preston?" she asked, the old jealousy flaring up.

"Reckon I haven't the nerve yet to ask even one. Besides, I probably won't recognize her."

"Bah! That girl couldn't disguise herself in a burlap sack," returned Amy, flippantly.

Amy's last words added to Rock's sudden realization of what thin ice he was skating on.

"Trueman, I'll (*Continued on page 73*)

BROWN BROS.

The mass of intricate cables that traverse underground New York

Under *the*

Lie Its Arteries of

As told by RICHARD KENT

ONE autumn noonday some fifteen years ago, a party of New York City officials, including many distinguished engineers and a celebrated jurist, the late William J. Gaynor, then mayor of New York, together with a score of newspaper men, dismounted from a New York Central train under the brow of Breakneck Mountain on the east bank of the Hudson River.

In long, silver, pencil-like diagonal strokes from beyond the Catskills and over Storm King Mountain on the west bank, a sleet storm raged. Not because of the gale above, but because of what was to be encountered deep down in the bowels of the earth His Honor doffed his squarish derby for a rubber helmet, and over his black overcoat slipped a yellow waterproof.

With the engineers, he stepped onto a crude, roughly constructed elevator that was to take him down below the bed of the Hudson. In two groups, the party descended. Down, down, down, went the elevator in a swirl of damp and darkness, through a shaft cut in solid rock, not to pause until it came to rest a fifth of a mile below sea level.

Out under the river, westward, stretched a seemingly endless tunnel. Dimly lighted by electric lamps strung on temporary wiring, the granite walls, rough-hewn with blasting, dripped moisture. Here and there were deep puddles. For fifteen minutes the silent procession trudged westward—a silence broken only by a splash and a restrained exclamation.

"Here we are, Your Honor! Half way!"

The procession halted, but nothing much was said. A flashlight shot its long ray into the cavern still farther out under the Hudson's bed. A warning shout was given. Having ascertained that the way was clear, an engineer showed the mayor an electric switch mounted on a rough board panel. The mayor closed the switch.

Instantly, there was a fearful roar, the rock strata under the Hudson shook. Presently, there was the grim smell of smoke:

"Hi! Yi! Ki! Yi!"

With this yell, three American-born workmen came hurtling through the six-foot aperture opened by the mayor's blast. Having descended by a shaft on the west bank of the river, they now joined the party that had come from the east. For a tunnel had been bored from each shore. The three workmen were to be the first to pass through the united tunnel from end to end!

As the exulting echoes of the workmen's shouts died away, financiers, engineers, and newspaper men all gathered about the mayor, curious to hear what he would have to say down there one thousand one hundred and fourteen feet below the surface and under the middle of the Hudson.

"THE occasion of this simple ceremony here today," he said, briefly, "is the firing of the last shot that is to make two great tunnels into a greater one. Three thousand and twenty-two feet long, and fourteen feet in diameter, this united tunnel now becomes what engineers know as an inverted siphon, one of the great engineering feats necessary to the construction of the Catskill Aqueduct which will furnish New York with its principal water supply. More than a hundred and twenty miles in length, it will be the greatest aqueduct in the world, comparing in magnitude and cost with the great canals and transcontinental railroad systems!

"But, hark! This is but one of the long line of historic aqueducts. The earliest of which there is a precise record was built two thousand six hundred years ago by Hezekiah, King of Judah. Fearing an attack by the Assyrians, Hezekiah built an underground tunnel about one thousand and seven hundred feet long, to carry water from the river Gihon to a reservoir or pool called Siloam. Hewn out of rock, this pool was seventy-one by seventy-five feet. Thus, Jerusalem had its aqueduct and reservoir.

"Let us not forget that the Romans knew how to build aqueducts. They built so well that two of theirs supply the city of

UNIVERSITY OF IOWA

Sidewalks of New York

DRAWING BY ADOLPH TREIDLER

Traffic, Heat, Light, Sound, and Water

Rome to this day. However, the longest of theirs is about half the length of the one we are building here.

"One other thing: Let me remind you that the waters which will rush through this tunnel will flow on and on and *under the streets of New York*, through a thousand branches. At its lower end, for a distance of fifteen miles or more, at a depth of from three to eight hundred feet, this aqueduct will pass under the city—under Central Park, down Broadway and Sixth Avenue, under Fifth Avenue at Madison Square, under the East River at Delancey Street to Brooklyn; then under the harbor to Staten Island."

THE Catskill Aqueduct was completed at a cost of two hundred million dollars. Any drop of water to be seen dancing, shimmering, glinting in the sunlight in some Catskill rivulet has in prospect a journey to New York. Assuming that it gets a good start to-day, it may, with luck, say good morning to the New Yorker in his shower bath three days hence!

Most visitors to New York marvel at her sky line and vistas. But think for a moment of those greater marvels underground! When in the metropolis, you ride to the top of a skyscraper in an elevator, you watch her sky line aglow at dusk, or perhaps in some distant city you hear a voice brought from New York by wire or wireless. Every miracle of the sort depends upon a giant Hercules and the sons of Hercules who dwell *under* the city streets and spring into action in response to valves, switches, and push-buttons operated from above.

Under the sidewalks of New York! Here are lodged what have been called the city's vocal cords, her muscular, nervous, and alimentary systems. Here dwell the genii of a great city's Aladdin Lamp whereby the routine marvels of everyday life are wrought. Elves and giants, cables and tiny wires, running in an ordered chaos, there are telephone, telegraph, and power lines, pneumatic tubes, and transit tunnels side by side with great channels of pure and sparkling water, huge sewers, and endless pipe lines for gas and for scalding steam.

Recently, at the request of the Editor of THE AMERICAN MAGAZINE and in company with a number of different engineers, each a specialist in his own field, I made a tour of underground New York. In this article I am going to tell you of some of the most interesting things I saw and heard. To begin with, I want to say something about what is unquestionably one of the greatest engineering marvels of all time—the building of the subways.

In operation in New York to-day there are a hundred and twenty-four miles of subway tunnels and six hundred and twenty miles of tracks. A new subway, extending from the southern to the northern end of Manhattan Island, with arms reaching into all the other city boroughs, is now being built. This will add fifty-seven miles of tunnel (route miles) and a hundred and seventy track miles to the present system—a total of a hundred and eighty-one miles of tunnel and seven hundred and ninety miles of track!

When in New York you go into the subway as a matter of course. You marvel at the vast tides of people flowing through these transit arteries; for, in a year's time, the number of passengers using the subway is several times greater than the entire population of the United States. Have you ever stopped to think how these subways *got there*, and of the unique engineering problems involved?

Assume, for a minute, that a gigantic cleaver were to descend upon Manhattan Island and split it from end to end along the line of Eighth Avenue and Central Park West, where this new subway is being installed. You would be amazed at the sight disclosed. For you would behold thronging skyscrapers and densely populated apartment houses and ten miles of street railway all propped up temporarily on stilts of timber, concrete, and steel. While rock is being drilled and blasted thirty or fifty feet below the surface, trolley cars and motors pass by overhead; while the foundations of skyscrapers and apartment houses are removed (and replaced) to let the new tunnel go by, the thousands who work and live in these buildings pass in and out, and live their lives as though nothing out of the ordinary were going on below!

GO DOWN into the subway excavation by one of the ramps by which motor trucks bring out excavated material, dirt, and rock, and what do you see? Steel girders thrown across the street, and wooden posts supporting them. On top of the girders rest the planks which make a temporary covering for the street. Technically, this is known as the "cut and cover" method of building a tunnel. First, the street is excavated to a depth of

Digitized by Google
Original from UNIVERSITY OF IOWA

twelve feet, and then provided with this temporary wood pavement, which stays there until the steel and concrete tunnel is completed.

But suppose the excavation were made and the tunnel projected regardless of obstructions? Scores of great buildings would come toppling down. Pipes for water, gas, steam, sewers, telephone and telegraph lines, and power cables would be cut. A deluge would follow! Whole sections of the city would be paralyzed in their business and social activities!

So the obstacles encountered by power shovels and cranes are cared for as they are met. Temporary systems for water, gas, and electric current, and temporary sewer flumes are all laid, out of the path of the work. Electric cables are suspended from the beams that carry the street's wooden pavement. Even the foundations of skyscrapers and private dwellings must be juggled with.

At the upper end of this new subway, near One Hundred and Seventy-fifth Street, is a church beneath which the subway must take a drop of a hundred and fifty feet, and at the bottom of this drop there will be stations reached by elevators. Meanwhile, with this work going on below, services have continued in the church.

Off Broadway, on Forty-second Street, is the New Amsterdam Theatre. When a branch of the subway was being built directly beneath this theatre the performances were given as usual, neither the chorus girls of the Ziegfeld Follies nor persons in the audience knowing what went on below.

HOW is it that a new foundation can be built for a great building that presses down with a load of many thousands of tons? The process is known as "nibbling." Earth is excavated beneath the foundation a few feet at a time. A steel cylinder is then driven down to the depth of the subway and filled with concrete. Presently, the weight of that portion of the building directly above the cylinder is transferred to it.

Cylinder after cylinder is thus inserted, until eventually the whole structure is carried on a new foundation. And when the tunnel has been put through, the weight of the whole building may again be transferred to the roof of the subway, which, in places, is built strong enough to sustain skyscrapers twenty-five stories high.

Burrowing in this fashion under the streets through an area congested with pipes and cables and foundations is not only the biggest construction job ever undertaken by a municipality, it is the wonder of engineers in an age of engineering marvels. Beside it, the building of the Pyramids was a pygmy's task. Imagine! In digging this tunnel from the southern to the northern end of Manhattan Island, six million cubic yards of earth and rock must be excavated. That is sufficient to cover a great city block to the height of the Woolworth Tower. Excavations, tracks and the steel and concrete housing of this new subway line will cost $400,000,000 and $200,000,000 more for signal systems, cars, and other equipment. Ten million dollars a mile for a four-track line! A venture such as only the richest community in the world could afford!

Now the first colossal underground marvel with which any visitor to New York immediately comes in contact on arriving in the city by the New York Central lines is the Grand Central Terminal itself. Here, in the vicinity of Forty-second Street and Park Avenue, 3,200,000 cubic yards of dirt and rock have been excavated, creating an underground area for terminal uses of more than forty-eight acres.

TWENTY years ago, trains bringing passengers into the Grand Central arrived through an open cut that extended from Fiftieth Street to Forty-second Street through Park Avenue. Between Forty-second and Fiftieth streets all cross-town thoroughfares were closed to traffic; and the yards could be crossed only by means of foot bridges. As for the yards, they were filled with steam, and belched soot and smoke.

To-day, these same cross streets are open to traffic. Looking up Park Avenue you would be struck by the magnificence of the vista. Numerous great buildings surmount the tracks. Yet the marvelous feature of this whole achievement is down there underground—a vast network of tracks and signaling systems, heating and communicating lines, pipe subways and ventilating systems. And under the streets, in the heart of the city, entirely out of sight, some six hundred trains consisting of from four thousand eight hundred to five thousand two hundred cars, arrive and depart every twenty-four hours!

Recently, when passing through these underground labyrinths in company with an engineer attached to the staff of the Grand Central

DRAWING BY BYRON MUSSER, INC.

The thirty-six-story New York Central Building, designed by Warren Wetmore, stands above two tiers of railroad tracks, supported by steel columns that extend down into bedrock. To the left of this great structure, several stories underground, is a giant powerhouse, indicated in the drawing. The hundreds of trains that pass daily down Park Avenue and under huge apartment houses and office buildings were not interrupted by the erection of any of these skyscrapers

COURTESY BOARD OF TRANSPORTATION, N. Y.

Terminal, I asked this question: "What is the most interesting thing from an engineering point of view that the traveler can *see* when passing in or out of this station?" After a moment's reflection, he replied emphatically: "It is under Forty-fifth Street!" And so we went out on the upper track level to the platform where passengers arrive from distant through points such as Cleveland or Chicago.

FROM that platform under Forty-fifth Street, directly underneath Park Avenue, we could see the sky through a network of structural steel. A great girder was swinging in midair. The din of riveting was terrific. "But this isn't anything unusual," I remarked. "A visitor to New York could see the same type of construction going on above ground any day and get a better view of it."

"One minute! Let me explain. Here you stand amid the very foundation members of a skyscraper. Above, they are now erecting a thirty-six-story office building to be known as the New York Central Building. Down here, under the street, between the tracks and through this platform on which we are standing, are nine thousand tons of steel uprights and cross members, which will support this building and, in addition, part of Park Avenue itself.

"Bear in mind that this is but one of nineteen great buildings directly over the terminal yards. The New York Central leases what have come to be known as 'air rights'—the right to build over the tracks. Such is the demand for space in this part of the city that some of New York's best known buildings have been constructed in this way, including the Commodore Hotel, the Hotel Roosevelt, the Grand Central Palace, and many others.

"The underpinning of each of these buildings consists of steel columns fifty feet high; and in these buildings thousands of people live and work the year 'round, many of them never knowing that hundreds of trains a day are passing directly beneath them. No one in these buildings is ever conscious of the slightest vibration due to the railroad operations below. That was one of the complicated problems that had to be solved before their construction was possible."

"How was it accomplished?" I asked.

"All the way from the street level down to solid rock six feet below the roadbed of the lower track level, the great steel supporting columns are kept entirely separate from the track structure through which they pass. The building foundations and the track structures are not in contact at any point *for as much as an inch*. That is why you see these cross-members of the building supports twisted into such strange and ungainly shapes.

"The bottoms of the steel uprights rest on girders set in cement. Complicated and expensive, this method of construction eliminates vibration, but still it might be possible for sound to be communicated through the bedrock from the tracks and thus find its way upward to the buildings, where it would arrive in the form of vibration. So, underneath the steel upright there are vibration mats, consisting of alternating layers of lead, asbestos, and sheet iron, an inch in thickness.

"These buildings above the tracks have no basements. Hence, it has been necessary to provide central power and heating plants for them. Hot water is driven a mile in its circuit to most of these buildings. Steam for heating and cooking in restaurants has to be furnished in the same way, also ice water for drinking."

"WHERE are the power plants that do this work?"

"One of them is ninety feet below the surface directly under Forty-third Street. To make room for it there 37,000 cubic yards of solid rock had to be excavated. In this power plant, which is three hundred feet long and seventy feet wide, there are six boilers of 1,400 horse-power each. You will be interested to know that in a year's time for these basementless buildings over the Terminal tracks, the Grand Central power stations provide steam in a quantity sufficient to heat 12,000 houses, or a city of 60,000, throughout the entire winter season."

Now, the one thing on which practically everything else in a great modern city depends—telephone, telegraph, radio, the city's activities whether at work or at play—is *power*. In New York, as in some other large cities, power is carried under the streets. As a rule, in the metropolis the (*Continued on page 107*)

When

SHIPMATES

are put in command of rival ships and fall in love with the same girl—there's bound to be a story

By CAPTAIN DINGLE

Illustrated by ANTON OTTO FISCHER

WITH feelings not easily described, Ned Marshall had watched the "Tara" sail for home. The "Tara" was a bigger ship than his own beautiful command, but Marshall could never be induced to concede the "Tara" any superiority over the "Centaur."

Doubtless, with the full week's advantage at the commencement of the long passage home from Shanghai, Jim Glamis would make his big ship sail for all he was worth; and he might make Boston Light before Marshall brought his "Centaur" into sight of it. But Boston was a long sail distant from Shanghai, and ocean races were never won at the start. It was the finish that counted.

Besides, there were compensations; and one of these was Helen Truxton, who joined Ned Marshall on the Bund the moment the "Tara" vanished down the reach.

"We'll see no more of the 'Tara' this side of Boston," the girl laughed a little breathlessly. Her eyes danced with life, and her hair blew in the crisp breeze. She looked very clean and sweet, like a smart new clipper, and Marshall colored deeply under the fire of her eyes.

"If she carries a breeze like this we won't," he said. "But with light breezes the 'Centaur' won't grudge her twice the start."

Ned escorted the daughter of his owner back to her hotel, and seemed all unconscious of the fact that many a good-looking man regarded him enviously.

"I expect Father will let you take the 'Tara,' when Jim takes over the new ship," she said as they came in sight of the hotel. "I shall tell him to, anyhow."

"Thanks, Miss Helen, but I wouldn't give up the 'Centaur' for her."

"You still think you can beat her home?" The girl laughed, not so much in derision as with a challenge.

"Since you and Mr. Truxton are sailing home with me, you'll be there to see."

"I do hope you will! But won't Father be mad! Perhaps you had better not, even if you can." There was a hint of mischief in the girl's suggestion. She glanced keenly at Ned from under her sun hat, and dimples came into her cheeks when his teeth showed in a tight-jaw grin of determination.

"Your father employs me to sail the 'Centaur' at a profit, and getting my ship home as quickly as possible is part of my duty, Miss Helen. Besides, it's always been a point of honor between Jim Glamis and me to beat each other, if it can be done fairly. We win or we lose with a good heart."

Now it was Ned who looked slyly at the girl, and she caught the glance and colored.

"A contest is always thrilling," she replied, and bade him good-by.

Ned went aboard his ship, full of cogitations. It was impossible for him to feel hurt at any good fortune that might come to Jim Glamis. He hoped, and believed, that Jim could never feel envious because of any good that came to him. They had been boys at home together, had gone to sea together, and had risen to command of old Truxton's two crack ships together.

Of types so different that people wondered at their fast friendship, big, burly Glamis with the roaring voice and the forceful physical courage, and slim, fair-haired, broad-browed Marshall, were both superb seamen; both among the smartest of their profession.

As for courage, either in the way of seamanship or personal test, no man had ever seen Ned Marshall or Jim Glamis decline an issue; few had ever seen either take the short end of an argument.

"I'm glad old Jim's getting the luck," decided Ned, as he changed from shore clothes into uniform. "But I'm going to beat him home, just to show 'em that they didn't pick so cleverly after all!"

PERHAPS there was a tiny trace of envy in Ned, for all his decent manhood. A man must be very near to perfection to be without a bit of envy when he sees another, no better than himself, secure the promise of such a double prize as the command of a brand-new ship, and the wholly charming daughter of the owner for a wife.

In justice to Ned, he did not dwell upon the almost certain circumstance that the husband of Helen Truxton would in the not distant future come into the management of the entire fleet of Truxton ships, even if he did not actually own them. And he did not feel altogether resentful about the new ship. His "Centaur" was good enough for any man. The new ship would have to be a flyer to bring any chagrin from the commander of the "Centaur."

But there was Helen. Ned had never spoken. He was slow to express himself. Shy as a sailor can be. But he had hoped. And now he was almost sorry that a late arrival in China had forced the owner and his daughter to miss sailing home in the "Tara," and take the "Centaur," a week later, so that Helen might see at least a little of the land after traveling half way around the world.

The preparations for sailing, and the extreme attention given to every possible bit of the ship's gear which might in any way hinder her best performance by its inefficiency, gave Ned Marshall so much to occupy his mind that he had no time to brood over what might have been.

AND when the tug let go of the ship off the Amherst Rocks, and the "Centaur" shook out her gleaming canvas to a sunshiny, brisk, pleasant breeze that only creamily ruffled the sparkling sea, he forgot everything except the business of taking advantage of what the gods had sent.

"Mr. Hurd," he said to the mate, "please have the carpenter rouse out and rig the stuns'l gear. Tell Sails to break out all his light muslin."

"Huh! Stuns'ls? You'll have to take 'em in before dark," grumbled old Truxton, who had never seen stunsails set in all his own seafaring. He had been a cautious skipper. Perhaps that was why he became an owner. Ned Marshall paid him no heed.

"Oh, do you really think we may pass the 'Tara'?" Helen asked.

In her eagerness she laid a small brown hand on Ned's wrist, and the warmth of her grip forced him to look at her. He had to smile.

"Except for the first day after she sailed, the 'Tara' has had this sort of weather, Miss Helen. She can't carry stuns'ls. Glamis sent all his kites ashore last year. The 'Tara' depends upon stiff breezes to drive her. Are you so anxious to sight him?"

"Of course! Anybody likes a race," she said. "I like it better than anybody. Oh, do hurry those men with the stunsails!"

"Lot o' frippery!" old Truxton grumbled at her side. "The 'Tara' doesn't need frills. Jim Glamis can make her go without a lot of cheesecloth bags hung about his yards. I should think, my lass, you'd be more eager to have Jim beat us home than to have Marshall beat him."

"Why?" Helen's surprise was real. "Of course I want the ship I'm sailing in to beat everything else on the ocean! What sort of a sailor would I be otherwise? There goes the first stuns'l-boom aloft!

Digitized by Google
Original from
UNIVERSITY OF IOWA

He had need of all his sea balance to

Can I steer when they're all set, Captain Marshall?"

Ned grinned, turning away from the old fellow, but all aglow because she wanted his ship to overhaul the "Tara" for love of sport.

In the light airs of the China Sea the "Centaur" ghosted along under a cloud of filmy canvas. Smooth water helped her. There was a pleasant tumble of water at her bows—for all the zephyr quality of the breeze—and the line of bubbles alongside, the gently swirling wake, moved with a swiftness that was uncanny.

Helen steered many a full trick. Marshall had demurred at first. But in one exhibition the girl had revealed a skill of helmsmanship which elected her to a sort of freedom of the wheel. And Ned Marshall found it more difficult, day by day, to avoid giving a lot of his attention to his fair helmswoman.

"But you don't watch the men so closely!" Helen protested one evening, when he had stood behind her at the wheel for an hour. There was no need to watch her steering. She steered perfectly. And Ned Marshall abruptly snapped out of a near trance and walked forward to the poop rail, his ears and neck red as the sunset had been.

THE girl stared after him so absorbedly that the stunsails bellowed alarmingly as the ship swerved from her course; the fore-top-gallant stunsail-boom whipped, sprung, and snapped like a stick of macaroni, filling the rigging with the vast sheet of flimsy sail.

"Keep her away! Up with the helm—up with it!" shouted Marshall, more fiercely because he needed just that relief for an overcharged breast. Helen's face was redder than his had been. But she obeyed orders, and brought the ship to her course, while men swarmed aloft to repair the damage. Old Truxton appeared.

"I told you so!" he grumbled. "Now, look what a mess!"

"I did that. It'll soon be put right," the girl snapped.

"Don't tell me he's going to set that muslin again?"

"Of course he is! And he won't lose any more sails by my fault!"

It was two days later, when the coast of Borneo lay misty blue to port, and another fine weather sun was hanging squat in the west horizon, that a tiny speck of gleaming white appeared for a moment on the sea rim, far ahead. A sailor, aloft securing a stunsail boom lashing, gave the hail, "Sail ho!" and Marshall scarcely beat Helen on deck from the supper table.

"Is it the 'Tara'? Oh, where is it?" she cried.

Ned Marshall was already half way up the mizzen lower rigging with his binoculars.

But the speck had vanished with the last of the sun rays.

"We'll know what she is in the morning," he told Helen, and smiled at her disappointed face.

In the saloon old Truxton sat reading, huge spectacles on his bony nose, giving

Digitized by Google

UNIVERSITY OF IOWA

withstand the rushing weight of her . . .

no heed to ships outside of the one he sailed in.

"Father, you're not a bit interested!" Helen cried impatiently. "We're overhauling a ship, and Captain Marshall says—"

"Don't be silly, child," old Truxton snapped. "Don't tell me Marshall says we're overtaking the 'Tara.' He's not foolish enough to think that, nor I to believe it."

Helen went to her room to find some sheet music. As she rummaged through her selections she rather let her thoughts wander. Her father thought a lot of Glamis. He must, to give him his new ship and his daughter. Glamis was the sort of man to impress the old owner of ships.

He had impressed Helen too; otherwise, she would not have consented to marry him. Not that she was frantically in love with him. But she liked him well enough; her father liked him; and for years it had seemed natural that in the end she would marry him, sail a voyage or two with him, and settle down placidly at last to make a home for him against the time when her father must quit active business and leave his affairs to Jim.

For a long moment she knelt before the cabinet, the loose music in her hands falling to the floor, and there was a mist of trouble in her eyes. She glanced at a framed picture of Jim Glamis above her dressing table, and the mist deepened. Gathering up the sheets she rose, and took the frame from its hook the better to turn the picture to the light. Only the faintest of smiles twitched her lips, and the mist was still dark in her eyes as she put it back and turned down the light before stepping into the saloon.

CAPTAIN MARSHALL was at the table, reading the "Indian Ocean Pilot."

"Please sing for us, Captain. I have some songs for you," the girl said quietly. "Do you mind, Father?"

"I'm going to bed, girl; but you won't disturb me."

Ned Marshall grinned at the old fellow's ungraciousness, and riffled over the music which Helen had laid upon the piano. She idly struck the keys in soft chords, her eyes following her flying fingers.

"Sing 'Maimua,' Ned," she said in a low murmur, and seemed unconscious of having used his given name. The song she asked for was an old forehatch favorite which he and Jim Glamis had often sung together for her, when she was a little girl making a voyage in her father's ship.

She had not called him Ned since those days, and he glanced at her in surprise. But she sat there with her eyes bent upon the keys, her face shaded by her hair. He picked out the song and set it open before her. And the simple, sweet old melody filled the saloon, not muting but merging with the ship's own precious harmony.

"The boatmen shout 'tis time to part, no longer can ye stay!
'Twas then Maimua taught my heart how much a glance can say;

It Isn't The Principle It's *The Money* That Counts

By H. I. PHILLIPS

I WAS born thrifty. The first thing my eyes opened on in this world was a bunch of wall mottoes extolling thrift: "Waste not, want not," "Take care of the pennies and the dollars will take care of themselves," "If you want to know what a dollar is worth try to borrow one," "A fool and his money are soon parted."

I used to lie in my crib and stare at them. I guess before I was a week old I knew 'em by heart.

I wince at the mention of those thrift mottoes. They were responsible for a big crop of cheese-paring money grubbers, penny lickers, nickel nursers, tightwads, and skinflints. I never see a drama in which the hard-boiled old villain forecloses the mortgage and drives Nell and her husband and chee-ild out into the snow but that I am certain the old cuss was raised on thrift mottoes.

Impression of an old-school banker

Yet I must admit those mottoes left their mark on me, and even to-day I feel like a prodigal when I pay 21 cents per gallon for gasolene and then discover a station three quarters of a mile farther on with the sign "Gas, 19 cents."

Cover charges, toll bridges, service station bills, the income tax, apples at 10 cents each, $3 green's fees, 60-cent haircuts, $5.50 musical show tickets, 10-cent shoe shines with a 5-cent tip for the shiner, the 7c-cent pot of coffee, the old-time 5-cent cigar selling now for 15 cents straight, 7-cent car fares, head waiters' "gratuities," and 5-cent Saturday newspapers still pain me.

I'm for the extermination of the close-fisted and the annihilation of the tightwad. I hope I have no marked characteristics of either, yet the charge of 15 cents for a frankfurter and roll, 20 cents for a cut of pie, and 10 cents for a bag of nine peanuts just because the sale occurs inside a big-league baseball park, all but ruins my afternoon.

I just can't get rid of that quaint New England notion that a man is entitled to his money's worth, and that even a sucker should get an even break. It is only within the past two or three years that I have been able to pay $8 to $12 for a pair of theatre tickets and still get any enjoyment out of the show. That sort of thing takes practice. Even now it has to be one whale of a show to make me eliminate those old wall mottoes from my subconscious mind.

People who stress the importance of saving for a rainy day make me long for a custard pie and Charlie Chaplin's pitching arm, yet I can't recall a time since I was fourteen years old that I wasn't saving for a spell of unsettled weather. My energy in the matter would have given a bystander the impression I looked for an early blizzard. I opened my first bank account when I was sixteen. It amounted to $100, and I went down-town and walked by the bank three or four times the next day to make sure that institution was still there.

To amass money—oodles of money—was my boyhood ambition, and I believed in an early start. I hadn't met much of it, but all that I had impressed me most favorably. There was a man in our neighborhood named Charlie Waterhouse, who had a brick house with a fountain on the lawn and who used to wear a bearskin coat and drive a team of spanking bays about town. He was the personification of wealth to me, and I often tried to figure out how many years it would take at the rate I was saving (about $4 a month) to get the bearskin coat and the team of bays.

THIS determination to amass wealth was somewhat fired by the realization that my branch of the family had been strangely improvident, in spite of the wall mottoes. No member of it ever had acquired much money while he lived or left any when he passed on. There had been no Phillips fortunes. A rich relative Hadn't been sighted for generations.

I had dreams of qualifying as the family's first "wealthy uncle," or at least its "well-to-do cousin." When I had managed to get my first thousand dollars in the bank I thought this dream practically realized. It seemed too much money to trust to one bank, the more so since this bank was an old-fashioned gray stone affair; so I took out $500 and put it in a stronger-looking bank with a marble front. Both banks paid 4 per cent, and the idea of getting $40 a year from the institutions was quite dazzling.

TO PUT something in every Saturday, even when my weekly stipend as a cub reporter was $12 a week ($3 a week of which had to be paid at home for board), was my program, and I adhered to it faithfully. In fact I always put at least $5 in Saturday, even if I had to draw out $4 of it the next week to meet expenses. Still, the accounts grew, slowly but steadily until they passed the $2,000 mark. About that time I thought of buying the bearskin coat.

It seemed like a lot of money. With the possession of bank books showing that amount of wealth there came the worries that go with great riches. I began to fear gold-brick men, professional crooks, blackmailers and even gold-diggers. I remembered the words of some great capitalist: "It isn't getting money that is difficult; it is keeping it."

Life was becoming very complex.

From time to time there came thoughts of matrimony. Twenty-five hundred dollars, I figured, would be quite a nest egg. At that time, you must understand, eggs were cheap.

And nests could be had for $18 a month, including gas and electricity.

Came the dawn. I broached the question to "the only girl." It seemed but fair to acquaint her with my financial status. To tell the truth, I had long felt the urge to tell somebody and note the reactions.

"I have managed to put aside a considerable sum," I said, "through consistent saving," and struck an attitude that might have been captioned "Steel Trust Magnate Coming Up for Air."

"Have you?" she asked coyly.

"Quite a tidy sum," I assured her. "It will enable us to begin life together with the sense of security so essential to contentment." Here I crossed the room and leaned on the mantel in an attitude I had once seen in a newspaper picture of Thomas W. Lawson.

"How much?" asked the lady.

She put the question to me so abruptly,

Digitized by Google
Original from UNIVERSITY OF IOWA

that my elbow slipped off the mantel.

"Twenty-five hundred dollars," I stated proudly, coming quite close to catch her if she swooned. I was beset by a fear I should have had a doctor in the anteroom before mentioning any such staggering sum to a young lady of my own set.

"Hundred, did you say?" she asked, calmly and disappointedly.

"Yes . . . twenty-five hundred dollars, sweetheart," I assured her.

The lady never batted an eye.

"ISN'T that nice?" she remarked, in the same tone that might have been expected had I informed her that my asthma was better or that I had saved up 150 cigarette coupons.

"Not bad, is it?" I asked, still muddled by her failure to turn any cartwheels, fling her arms around my neck, give three cheers for the red, white, and blue, and cry, "Darling, I am not worthy of you. I am only a poor little girl, while you are a great big financial giant, a man of the world at whose feet many of society's darlings are ready to fling themselves. Oh, kind sir, I fear I would not be happy with such great wealth."

"Well," she said coldly, "it's better than nothing, of course."

"I thought I had done very well," I blurted.

"Don't misunderstand me, dear," she explained; "I think it's just dandy. And if we are very careful we can get along until you are able to put aside really substantial savings. I'll do all I can to help you get ahead."

"A fine chance!" I thought, words failing me. "If this girl thinks I can save more money as a married man than I did as a single one, she's crazy."

And so we were married.

Two can't live as cheaply as one, unless they happened to be a couple of park squirrels—and don't let anybody tell you otherwise. It costs almost twice as much, unless the wife is on a diet and doesn't wear hats. Marriage calls loudly for more money. We looked the town over and could see no prospects of additional shekels. I was for sticking around and waiting, like Mr. Micawber, for something to turn up. That $2,500 nest egg still seemed a lot of money to me. But Mrs. Phillips had broader views. To her it was all egg and no nest. I found her quite exasperating.

"I have always managed to save money here," I argued. "I can still do it."

"Suppose you stay here another five years? How much do you think you can save on your salary of $45 a week?" she pressed.

"Well, if everything goes well and we're economical, maybe I can save another $2,500."

"That would make $5,000. And what of it?" she countered.

"How much do you think I ought to save?" I asked weakly.

"At least a hundred thousand," she answered.

I fell to the floor and took a Gene Tunney count of fourteen seconds before rising. I was still groggy as I asked, "Are you crazy?"

H. I. Phillips finds that bills are great accelerators

"No, but *you* are if you don't get it," she replied frankly.

"How?" I asked.

"By striking out and going where it is," she said.

"I may get struck out if I do go where it is," I replied, exiting off at left.

SOMEHOW I felt certain she was all wrong; but every time I recalled her statement about $100,000 I felt more and more intrigued. That $2,500 in the two banks soon got to looking like twenty-five cents.

The wife won. We came to New York, and I got the lucky breaks. The weekly pay envelope climbed like a thermometer in a Florida sun. I began speaking of my "income," and seriously considered getting one of Doctor Eliot's five-foot shelves for my bank books.

Of course it wasn't a case of everything coming in and nothing going out. Expenses soared. They not only soared, they took dawn-to-dawn flights and good-will hops.

They established what was to me a new altitude record. Mrs. Phillips made out the monthly and weekly checks, and I never could stand the ordeal of watching her do it. The sound of check after check being torn out of a check book and put in an envelope was a terrific strain to my New England nerves.

"Are you ever going to stop?" I would cry out, in a sort of agony. "What do you think you are doing, autographing dance programs?"

"Only a few more," she would say, in her most soothing manner.

"You talked of coming to New York to get $100,000!" I barked. "We'll be lucky at the end of the year if we have that original $2,500."

"Don't worry," Mrs. Phillips would implore. "Turn your head away and stuff your ears while I am making out the checks, and it won't hurt you."

After a while I got used to it. Fears that we were becoming extravagant frequently assailed me. Bank statements have always been Greek to me, and I have never been able to balance my own check book with any marked success. Soon after coming to New York I had turned over the "business management" to Mrs. Phillips, whose capacity for figures staggers me. Striking balances is one of her favorite indoor sports. She seems to get positive diversion out of adding and subtracting. I like to see her add, but I hate to see her subtract.

We have no family budget. Nor have we much of a system of saving. What we do is to make it a rule to save a certain sum per week. If we fail to do it one week, we make up the difference the next. We don't save until it hurts, although (*Continued on page 100*)

The author's impression of himself after depositing his first $100

"Goodness, no!" said Joan, getting her cue quickly; "I couldn't possibly take care of your house, Audrey. The baby's fearfully messy, you know, and I'm a rotten housekeeper"

MARGARET CULKIN BANNING'S

charming love story of a girl and a boy who wouldn't give up their independence for all the social glamour of

The Shore Road

Illustrated by H. R. BALLINGER

IT HAD always been a place of vantage. The Indians had known that, two hundred years ago, and now the millionaires, largely for the same reasons, agreed. The great lake protected it from approach on one side—in the beginning from unfriendly tribes, later from undesirable neighbors.

At first it must have been a natural woods trail, scouting closely along that serene bank which lifted itself above a lake so rarely tranquil. There was only a narrow beach until the millionaires took the matter up. The forest had come to the very edge of the rising bank, a dark, high forest of spruce and pine, Northern trees, with branches which were sturdy from bearing heavy weights of snow, and

Digitized by Google
Original from
UNIVERSITY OF IOWA

which were slow to lose or change color.

It took about forty years for the city, spreading madly sixteen miles to the west where the lake narrowed to a point, to breed enough wealth to demand remoteness and seclusion for it. Then the millionaires, their white motor roads laid before them like stretched ribbons, came out along the lake front, appraising it, discovered great trees, gentle coves with pleasant views, and the possibility of eternal protection for their property, because of the great barrier of the lake on one side.

Like the Indians, the millionaires hunted in tribes; but managed to remain almost fiercely individual. When they took over the Shore Road—and that was what happened rather quickly—they did more than surround themselves with graceful architecture chosen from a dozen lands and histories, more than widen beaches and build iron fences or low stone walls without a trace of mortar.

They went in for horses, dogs, gardens, swimming piers, sturdy children; kept their old clothes and bought pictures; and in such ways began to build up an aristocracy, which is, after all, quite a vigorous thing to do.

THE Peels came there after the property for ten miles had been bought up, settled and, to some degree, mellowed. It was a bit of luck for them to acquire land enough to build on at all, and only the fact that Gordon Peel was one of the officers of the trust company which handled the Lyon estate made it possible. But Elsa Lyon was growing irritable about her taxes, and querulously sold Peel five hundred feet of frontage at a fantastic price, with a fine air of making him a gift.

He did not dicker over it, knowing that it was not alone land and riparian rights he was buying, but a geographical social position. He paid for the intangible, and felt it quite worth the money. For some years he had been considering the possibility of building on the Shore Road. But neither he nor Audrey, his wife, allowed their desires to become excessive until they could be gratified.

That was probably one of the reasons they had got on so well financially. It may also have explained the deliberateness of their living, which sometimes annoyed Joan beyond civility. She was Audrey's sister, and lived with them, and she used to say that every few years the Peels did over their standards of living, as most people did over a room.

The ghosts of some of those earlier movings and settlings may have been in Audrey's mind on the day when she formally took possession of the new house. It was not an agitated moving in. The decorators had been working for weeks, so that rugs were already laid.

"It's really a sweet house," said Joan, caressing a Fortuni print with a thread of silver metal in it.

"I think it's rather consistent," Audrey answered in her quiet, sure voice, turning from a conference with her decorator.

Joan said that she didn't see what that mattered, and the decorator smiled, as at some ingénue child. But Joan was not paying any attention to him. She had a way of ignoring people which distressed Audrey. For Joan did it very indiscriminately, according to her own likes and dislikes. Moreover, she quite often liked in the wrong places.

She went to a long window which overlooked the lake, and, pulling the curtains back, regarded the sun-ridden water.

"This lake ought to be good for you, Audrey."

"It's really charming. The effect this house gives is of a rather fine Italian villa on the Mediterranean," said the decorator. "Don't you think so?"

"Why not a Chicago house on Lake Michigan?" asked Joan, rather rudely.

THE decorator smiled again, as if nothing gauche did more than amuse his sophistication, and Audrey held her peace, for Joan could be provoked from one such remark into another. She had never learned the restraint that Audrey had imposed on herself so successfully, either in clothes or manner. This morning, for example, Joan's hat matched neither her dress nor coat. It was a hat that should have been abandoned several years ago, according to Mrs. Peel's standards. There was no reason at all for Joan's dressing so deplorably, except her stubbornness.

The decorator left them, his problem having been settled, and Audrey and Joan went from room to room, nearly all of them exquisitely completed.

"*You're* going to stay, you know, Audrey. Better take your hat off."

"It would be more to the point to get yours off."

"But I'm not staying."

Audrey frowned.

"I don't see why you act so, Joan. It's too absurd. We thought of you especially when we furnished this room."

Joan regarded the silk-covered bed, the tall crystal lamps on the dressing table, the chaise longue, with its taffeta pillows.

"No good," she said. "I'd muss it up. It can't be done. I've got a room in town."

"Don't you see how that looks?" asked Audrey.

"Nobody's looking. You said yourself that you expected to make almost entirely new friends out here. Don't let them know you have a sister who works. Make it one of the world's great mysteries."

And she grinned with the blithe, mischievous grin which disconcerted Audrey more than any other of Joan's mannerisms. She herself had never taken up humor.

"I don't think it's funny," she said.

"It may not be," agreed Joan. "Anyway, I think it's a grand house and full of good silk and color and everything. I hope you live in it."

"Do you think we built it to rent?"

"I mean live hard. You know—burn a few cigarette holes in things and get some of the furniture dirty. Chip a few dishes. It's all so slicked up."

"It's really rather perfect of its kind," said Audrey; "but I don't think it looks new."

"It doesn't look new. It looks as if it had been here for years. That's your smart architect and the man who did your cedar planting six months ago. But it doesn't look *used*, Audrey."

Audrey did not argue that point. She only pointed out a worn oak bench in the hall to Joan in answer.

"That ought to look used. It's two hundred and fifty years old, according to the people who sold it to me. It's never even been retouched."

Joan shook her head.

"That's not what I mean. Museums are full of old things too. What I mean is that I wish you'd brought out the old buffet and that pretty chintz lamp you had in your old room. It was kind of associated with you."

"It would be charming in an Italian bedroom, wouldn't it?" asked Audrey derisively.

"Well, I'd Americanize this house here and there if it were mine. Is this your last moving, do you think, Audrey?"

"Of course. This is where we'll always live. The lake front protects the property, you see."

"I see. Then you really are settled. I just get used to you in one place when you pop off into another. There was the flat on the South Side—that had a gorgeous view of roofs, do you remember?"

Audrey obviously didn't intend to remember.

"You never did enjoy that flat as I did. I really learned to like the city from that slit of a window in my room—city smells, even when the stock yard got vigorous. And then there was the house on Cotton Street, and the first house in Winnetka—that cottagey one, and then the last big one. You've only been married ten years, and you've had four houses, Audrey. Quite a lot."

"Well, Gordon's got on, my child."

"I mean that I hope you live forever in this one," said Joan vaguely; "and that things wear out!"

"You're a crazy child, and I wish you'd get a new hat or take any of mine, and come and live with us as you should. This is where you should make friends, Joan."

"I have friends," said Joan; "and I'm having lunch with one of them, so I have to beat it back to town."

"Martin can drive you in."

"Not me. It's only a little way to the station, and I know when I can get a train. I really want to walk. And bless you and Gordon and the new house and—the Mediterranean," she added, with the laugh that always turned up the corners of her sentimentality.

She put her head in the door a minute later to ask if Audrey would like a dog.

"I know a man in town who's got some adorable Airedale puppies."

"Don't they chew up rugs?"

"Like thunder."

"No, thanks," said Audrey, "I picked my things out too carefully for Airedales!"

PEOPLE driving along the Shore Road all remarked about the Peel house. They could just glimpse its beauty through the spruce trees which stood around it, and sometimes, in a wind, laid dancing shadows against the cream-colored walls. Those who saw it more intimately were especially delighted with the terrace in the rear of the house, which gave directly, under its gay red awnings, on the beach and lake below.

Gordon Peel himself for months never entered the driveway of the house at night without a rise of pride at the success of the place. Just at what point custom began to dull that feeling, he did not know. Possibly it may have been about the time when he began to feel the Shore

Digitized by Google Original from UNIVERSITY OF IOWA

Road rather socially cold.

There was not a trace of common climbing about the Peels. Both of them knew what social heights were left for them to scale, and were intelligently earnest about doing it. They had never made close friends, because all their houses and connections, so far, had been temporary. But now it was different. Pushing themselves was out of the question, of course. They had seen that method caricatured and failing too often to dream of attempting it. The thing to do, as both of them knew, was to qualify for the place they wished to take.

THEY had gone about it quite properly. Their house was a model of good taste. Their manners were easy and quiet and flawless. Yet things did not happen as they had hoped and rather expected. People did not seek them out, or else they came once, and then let the acquaintance lapse in a friendly enough, disinterested way. No one snubbed them or shut them out from anything. They found it easy to join the Country Club, to contribute to any of the most expensive charities.

Audrey felt herself suddenly shocked beyond her own control. There, quite near her,

But Joan, coming out for a week-end, and looking wickedly pretty in a rose-colored dress, which she wore with shoes which Audrey sighed over as unsuitable, was the most lively incident of weeks. She was the first touch of intimacy in the house.

Gordon met her in the hall at midnight one night. He had been reading late, and wondering why lake air did not make him sleepy, but only restless.

"I'm hungry," said Joan. "Do you suppose there's anything to eat downstairs?"

Gordon laughed. He could always get Audrey's point of view on her sister, and yet Joan amused him.

"Sure you can."

"Audrey's asleep," said Joan. "Come along on, and I'll make you a sandwich."

It was the first food that Gordon had eaten in his new house without having it formally served to him. With a butler and several maids, there had been no excuse for intrusion into the rubber-tiled pantries and kitchen. As for robbing his own icebox at night, that was one of the things he had left behind him years ago, shortly after they left their first flat. Audrey hadn't encouraged such things. Besides, he had begun to diet.

Joan got out the bread.

"You used to like onion sandwiches, Gordon."

"I do. I haven't had one in ages."

"This is your big moment then," said Joan. "Now, while I make them—I'm going to put in some salad dressing too—tell me all the neighborhood news. Tell me about the rich!"

He shook his head.

"Sorry. It's not a neighborhood that gossips."

"All neighborhoods do. But Audrey was never one to hang over fences. You probably miss a good deal. The Lyons live in the palace that looks like Wedgwood china, don't they? But who's in the Farrington family on the west?"

GORDON said he didn't know. He knew Farrington and had met his wife. It was his impression that there were a couple of daughters.

"I know. That's the Farrington girl who married an Englishman, and didn't like it much. She was going to get a

UNIVERSITY OF IOWA

smiling at everyone in a perfectly friendly way, stood Joan, and Mark was beside her

divorce, and then he wanted to go to Parliament and somehow they squared things up."

"Where did you hear all that?"

"You hear a lot," said Joan sagely, "around a well-connected morning newspaper like mine. How about some milk?"

"I'll join you," said Gordon; "this is your party."

She poured the milk.

"Tell me who lives around the bend about half a mile down, in that gray clapboard house that rambles all about and has such nice gardens."

"That's Jim Ranger's house."

"Oh," said Joan, "so that's where they live, is it? Nice house."

"What news do you pick up about them?" asked Gordon, a trifle ironically, for the Rangers' house was the social keystone of the Shore Road. Minor groups traveled around them, like small constellations about the greatest one. But if you hadn't known the Rangers from birth, Audrey had remarked one day, you'd probably never have more than a bowing acquaintance with them.

"I'VE heard the name," answered Joan, filling up their glasses again with milk.

"That's not water, you know," protested Gordon.

"Afraid there won't be enough for breakfast?" she asked, and the question harked back again to that first flat, and was so familiar and yet so absurd in the midst of the impressive, beautifully equipped kitchen that they both laughed.

"My word, you were crazy about Audrey! I used to think it was so romantic. You wanted to give her the earth."

"I still do."

"You pretty nearly have, it seems to me," remarked Joan, and began washing up the dishes.

"Let that stuff go," he protested.

"No—I'm naturally housewifely. I like to keep in practice."

"For what?"

"Any emergency," said Joan.

SHE went back to the city on Monday morning after a Sunday of swimming and leaving things about in the wrong places. But when she had gone, the house was so quiet that even Audrey felt oppressed, and drove into the city herself in spite of the heat to buy some things she did not especially want.

It was a dull expedition, and that night at dinner she looked so tired that Gordon, in whose ears some remarks of Joan's had occasionally repeated themselves all day, remarked that he thought it was time she went away for a while.

"Why don't you go to Europe for a few months?"

"Will you come?"

"I can't. But perhaps Joan—"

"No; I don't think she will. It worries me about Joan. It's so ridiculous of her to work like that all summer."

"She looks husky—huskier than you do, Audrey. Why don't you drink milk the way she does?"

"I'd be a sight," said Audrey. "I'd get fat overnight."

Gordon did not refute that. He knew it was one of the articles of Audrey's creed.

"Well, anyway," he urged, "how about a little autumn Paris?"

Audrey went. Not that she really wanted to go, but she felt that it was necessary to go somewhere. The women who lived around her all came and went constantly, and she felt it must be made part of her routine. She did not like travel. Audrey (*Continued on page 143*)

He Studied Art While Learning How To Mount Animals

PHOTOGRAPH BY M. BAMBERGER & CO.

Charles Livingston Bull, noted animal artist, whose pictures of American wild life illustrate the story, "Enemy Allies," in this issue. Mr. Bull commenced his career as a taxidermist. He is an enthusiastic fisherman

CHARLES LIVINGSTON BULL is famous for his illustrations of animal stories. In this issue of THE AMERICAN MAGAZINE you will see his pictures with the story "Enemy Allies." Often before you have probably seen and enjoyed his work in this and in other magazines and books. For he is a prolific worker, and a very distinctive one.

Mr. Bull is famous in his field for three main reasons: The first is that he is a skillful artist; the second is that he is a hard worker, and the third is that he knows animals and birds from the inside out, the outside in, and every other way. Literally, he knows them from the inside and from the outside, for before he became an artist he was a taxidermist.

"When I was twelve years old," he says, "I went to work in Ward's Museum, in Rochester, New York. This museum preserved skins and mounted animals and birds for exhibits all over the country. My job, at the start, was scraping the inside fat and grease off of animal skins. It was a smelly job that brought me an income of three dollars a week. For years I worked for Ward's Museum, rising gradually to a degree of skill where I could mount animals and birds. While I was there, Barnum's famous elephant, Jumbo, died, and we mounted him. I helped. We also mounted some of the game killed by Buffalo Bill.

"One of the biggest jobs I tackled for Ward's was the mounting of between four hundred and five hundred birds for the Guatemala exhibit at the World's Fair in Chicago. The exhibit was late in preparation, so I had to rush. The Guatemalan Government wanted every bird native to that country in its exhibit, and I fixed up the skins at the rate of a dozen or more a day. Later on, I went to South America on a visit, and saw the Guatemalan birds in actual life. Only then did I realize what a poor job I had done on the Fair exhibit!"

From Ward's Museum, Mr. Bull went to the National Museum, in Washington, D. C., where he was a full-fledged taxidermist.

"I was at first more interested in the animals themselves," he says, "than I was in drawing them; but I have always been able to draw. My mother says that from the time I was four years old I could draw any animal I saw, and draw it fairly well too. But I had not thought seriously of becoming an illustrator until after a year or more in Washington. I had mastered the structure of animals and birds. I knew their muscles and bones as a surgeon knows the human anatomy. If a deer scratches behind his ear with his hind foot, I know exactly what muscles will be used in the operation, therefore I can draw a deer in that position. My experience as a mounter of animals is invaluable to me. Without it, I could not do my work. For ten or eleven years I studied the anatomy of animals and birds, and then I was ready to make some pictures. One of the first stories I ever illustrated, by the way, was for THE AMERICAN MAGAZINE.

"I left the National Museum after I had sold a few pictures, came to New York, and have lived in or near that city ever since. For many years I lived just across the street from the Bronx Park Zoo, where daily I studied animals and birds. At my home in Oradell, New Jersey, where Mrs. Bull and I have lived for twenty years, I always have animals about me. For a time I had a herd of deer. Last year, when THE AMERICAN MAGAZINE sent me a story about a wild turkey gobbler, I bought a real wild turkey for a model, and still have him. He is a great bird too. I have no idea how many animal pictures I have made—thousands of them, probably, and of almost every family of animals.

"'How do you get animals to pose for you?' is a question I am often asked. The answer, of course, is that animals will not pose for anyone. I have a photographic memory, and if I see a goat running, I can recall accurately just how he worked his legs at a given time in his run. This mental picture, together with my knowledge of the physical structure and the habits of the goat, enables me to draw him as the story calls for him to be. If I see animals fighting, I have a definite, clear recollection of at least one position which they assumed in the course of the fight.

"Sometimes when I take a story to illustrate, I make an outline of an animal, then go to a zoo and sit by the cage of that lion, tiger, or whatever it is. I watch him closely as he walks, leaps, crouches, and from his positions I correct my outline, and then carry it home to be filled in. It takes me about ten hours to draw an ordinary animal picture. My working hours are probably the craziest in the world, for I begin at four in the afternoon and work until two the next morning. This curious habit of mine makes some

Digitized by Google
Original from UNIVERSITY OF IOWA

people think I am not sociable, because I rarely go out in the evening.

"The story in this issue of THE AMERICAN MAGAZINE is an example of my luck in finding models. A wolverine is an uncommon animal, and rarely seen by man. He will not live long in a zoo, and in the wild places where he lives he rarely shows himself. But it happened that I was in the Bronx Zoo one day when a live wolverine was shipped there. I got permission to remain near his cage. All day I waited, but he did not come out of the shipping box into the cage. Finally the zoo was closed, and dusk came on. Then the wolverine, thinking himself alone, came out. He tried all the bars, he climbed about, he looked everywhere for a place of escape. He did not notice me, as I sketched him in many positions. So far as I know, no other artist ever had such a chance to study a wolverine, and get direct sketches of him from life. I used those sketches in illustrating 'Enemy Allies.'"

Mr. Bull makes many trips to the woods. He goes annually to Canada and to the South, where he lives in the open, sitting often for hours with his field glasses, watching some eagle on a far-away perch, or some animal as he steals out for food or water. Thus he is able, always, to draw his animals in natural and true poses.

JAMES C. DERIEUX

Armless, He Drives His Own Airplane

WHAT would you do if, just when you were getting your start in life, both your arms were cut off and you faced the dragging years permanently and totally disabled? Would you give up, become a burden to relatives and friends, or would you begin life anew and in the course of a few years realize your chief ambitions?

This was the problem faced by Loxla Thornton, thirty-five, expert mechanic and railroad man of Fresno, California, when in 1918, shortly after his marriage, he fell between the cars of a freight train and lost both arms. His left hand was crushed so that the arm had to be amputated midway between the wrist and the elbow, while his right arm was severed just below the shoulder.

Imagine your feelings if some day you awoke in a hospital and found yourself armless, especially if you had depended upon those same arms to provide a livelihood! Imagine the difficulty of picking up broken threads, planning life all over, facing the world with what most of us would consider a hopeless handicap!

With a background of three years in the navy, unlimited optimism, and a determination not to give up the ship, Thornton took a long breath and started in again; and briefly this is what he has accomplished since he was crippled for life:

With the aid of a steel forearm and hand, which he attached to the stump of his left arm, and with the aid of a versatile right shoulder he has learned to fly—a lifelong ambition—and is to-day believed to be the only armless aviator in the world.

He drives his own automobile in the heaviest traffic and into the high Sierras of California.

He supervises his thriving machine shop and foundry, which he has built up to one of the best in the Fresno district, and now employs normally fifteen mechanics. The plant is worth approximately one hundred thousand dollars.

He hunts, fishes, rides a bicycle, shoots a gun, signs his own letters, and checks, dresses and feeds himself, and enjoys life generally, as does any healthful, successful, normal young man.

"What did you think when you discovered yourself armless?" he was asked.

"My first thought, when I realized that both arms must go, was to wonder what kind of artificial arm I could buy; my next was to cast about for something new to do. Of course it was a shock, and I could have worried myself insane if I had let go; but I couldn't afford to do that."

Thornton solved both of his problems in a short time:

Five months after the accident, he had purchased and mastered his "educated arm" and was selling automobiles for a Los Angeles company. Later, he went to Fresno and borrowed sufficient money to start a machine shop in a small way, which was another of his lifelong ambitions. Making a specialty of rebuilding motors, he has since personally supervised this enterprise and has invented several mechanical devices which he uses in his shops.

Without doubt, Thornton's most unique achievement was learning to fly, a thing he did in the face of the earnest advice of his best friends. To-day, however, he is considered one of the smoothest and most dependable flyers in a state which has more than its share of good birdmen.

"I had always wanted to fly," he explained in his characteristic cheerful way, "but it was not until I had become established in business and after I lost my arms that I had the time and the money to try it. All my friends advised me that I was crazy to think I could manage it with only my "hook" to depend on. They said I needed two good hands and a good head, but I was determined to give the thing a trial, figuring that just because it had never been done was no good reason why it could not be done."

"Finally, I persuaded a former army aviator who didn't care particularly what became of him to take me on as a pupil. It wasn't so tough after that."

Thornton was given fifteen hours of dual instruction, asked what kind of flowers he preferred, then turned loose. The expected crash did not materialize. His first landing was on three perfect points. The rest was comparatively easy.

Since then he has done several hundred hours in the air, carried passengers, learned all the stunts known to present-day airmen, taught two other men how to fly, and enjoyed it all immensely. Scarcely a day passes now without a "hop" and, strange to say, he has never had a crash. One tail skid only has been lost.

Of course you wonder how he does it. He has to be strapped into his plane (he now keeps from one to four of them ranging from a fast little scout to a four-passenger carrier); then his left hook is tied to the "stick," or control, for safety sake. The throttle and switch he operates deftly with his right shoulder, and the

rudder just naturally seems to fit his feet.

Thornton, like every flyer, living and dead, has had his close shaves. Once, when he had attained an altitude of fifteen hundred feet, he decided to loop. Pulling back on the stick he obtained no action, and was horrified to see that his steel "arm" had come apart in some way, and that his "hand" was hanging foolishly to the control.

"How did you manage to get down without breaking your neck?" he was asked.

"I hardly know," he replied. "I do know that I ruddered her fast and furious with my feet to keep on an even keel, juggled the stick with my knees, and landed somehow. The boys kidded me about my porpoise landing until they saw my 'arm' dangling from the control.

"I would much rather be piloting a ship," Thornton says, "than driving a car or a pack animal. It is much safer; you have more room, and there are fewer reckless drivers to contend with."

FOREST TALMAGE HUMPHREY

Her Business is Making Hand-Painted Lamp Shades

"I STARTED on my own back porch eight years ago, with one baby on my lap and the other pulling at my skirts," said Virginia Darling.

I looked around me.

We were standing in a big, barnlike studio on the top floor of a tall building in New York City. Down at the north end of the room, where the light poured in through great windows, a dozen or more young artists bent over their work. Some were sketching designs; others were painting free-hand on parchment lamp shades. Scattered about the long room, groups of girls were sewing shades, or sorting and packing them. On every hand, piles of finished shades stretched ceilingward.

My roving glance finally came back to the pretty, bright-eyed woman at my side. I knew that Virginia Darling had, in a remarkably short time, built up, absolutely single-handed, one of the biggest businesses of its kind in the country. I had been told that her hand-made, hand-painted lamp shades can be found in all the smart gift shops, and in the interior decorating departments of all the big department stores in New York City.

"But you say you had no money and no business training to begin with?" I asked. "How on earth did you do all this?"

"Well," she confessed, "it didn't seem quite so simple eight years ago, when I was suddenly faced with the necessity of earning my own living and that of my two small children. Up to that time, the only money I had ever earned in my life had come to me as the result of a few painting lessons I had given the children of neighbors in my home town in Missouri. This didn't last long, because I got married in less than a year after I completed my course in the Chicago Academy of Design.

"We came straight to New York. My husband worked in the city; but we found it cheaper to live in a nearby suburb. For four or five years, I was chiefly occupied with my housekeeping and my babies. But I never let go of my 'relief work.' This is what I called my painting, because it meant change and relaxation for me. Every day I sketched or painted a little, or read articles on art. Occasionally I managed to get away to go into town to see an exhibit of some sort. These were my red-letter days. One winter, my husband looked after the babies two nights a week while I came in for an evening course in art.

"When I unexpectedly had to become the breadwinner for my little family, I already had sold a few lamp shades to friends who admired those I had made for myself. But when I decided to try to earn a living at making shades, I made up my mind not to rely upon the patronage of my friends to get started, but to seek a market at once among dealers.

"I made up some samples and came into town with a bursting suit case and a fast-beating heart. I picked one of the biggest gift shops in the city to try my wares on first. I had to wait two hours before the buyer got around to me and my bulging suit case. By this time all my hopeful pride in my work had oozed out of me. But a stubborn determination to see the thing through kept me rooted to my place in the long waiting line of those who, like me, had come in search of a market.

"Finally, it came my turn to go in and display my wares. I was too frightened to talk; I just laid my samples out in a row, and waited. The buyer looked them over, and said: 'I like these. Bring me a dozen by next Wednesday.'

"I suppose I went home on a slow local train, but I felt as if I were flying every step of the way. I got my materials together and I worked feverishly to finish the shades by the date set for their delivery. When I turned them in, I came away with an order for a hundred dollars' worth of lamp shades!

"I knew that I had bitten off a big mouthful. Of course the buyers thought I had a studio, or workshop of some sort, and a corps of helpers. They didn't dream that I was designer, working force, and saleswoman, all in one. All this in addition to cooking three meals a day, and keeping my house and my children decent, mind you! However, I called in a friend who had deft fingers and a knack for painting, and we got that order out on time.

"At the end of six months, I had several hundred dollars saved up. I decided that I could make money faster by opening a combination tea room and gift shop. I rented the ground floor of a delightful old house on Madison Avenue and did all the decorating myself. People came in to eat my food; but they remained to rave about my lamp shades. When they learned that I had made them myself, they begged me to take orders. Soon I came to the conclusion that the only money I was making came from the sale of lamp shades. I gave up the tea room and put all of my energy to work turning out shades.

"Borrowing a thousand dollars from one of the dealers who had been interested in my work from the beginning, I rented a bright sunshiny loft and converted it into a workroom. Then I began looking for young designers with a flair for originality.

"That was four years ago, and the new business thrived from the beginning. We have doubled and trebled our output every six months or so."

Mrs. Darling owns a charming home in Tuckahoe, a suburb of New York City, where she keeps house for her young son and daughter.

MILDRED HARRINGTON

When she found herself left with two small children to support, Mrs. Virginia Darling turned her hobby for making pretty hand-painted lamp shades into a profitable business. Mrs. Darling lives at Tuckahoe, New York

The amazing story of Soup

Read how, almost overnight, it captured America; and is now eaten daily in millions of homes....

STRANGE, isn't it, that not so very long ago the people of America were not eating soup regularly as they do today! It was an occasional dish in most homes . . . always enjoyed, but not served frequently. It was apt to be reserved for special feasts and for entertaining guests.

How different today! Soup is now an everyday family dish in thousands and thousands of homes. People realize that the many blended savors and flavors in soup offer a variety and an appeal to be had in no other food. For sheer enjoyment nothing can occupy its place in the menu.

But in addition to this, is the important action of soup in stimulating the appetite and the digestion. The hot liquid encourages the flow of the digestive juices and thus makes all you eat do you more good.

Today the Red-and-White Campbell's Soup label is familiar to housewives the country over. . . . Its widespread reputation is eloquent proof of the change in the eating habits of the nation.

The moment housewives realized the advantages of soup, they eagerly welcomed the opportunity to obtain it in the condensed Campbell's form . . . soups of such outstanding quality, yet requiring but the addition of an equal quantity of water, bringing to a boil and a few minutes' simmering. Ease and convenience!

That most famous of all the Campbell's Soups . . . Tomato . . . will tell you at a taste why people are enthusiastic about these soups.

The complete list of Campbell's Soups is printed on every label. Your grocer has, or will get for you, any of these soups you select. 12 cents a can.

Tomato Aspic for your summer salads

Tomato "aspic" jelly for delightful hot weather dishes! Soak two tablespoons granulated gelatin in one-half cupful cold water. Dissolve in one pint boiling water. Add one-third cupful sugar, one-half teaspoonful salt and one can Campbell's Tomato Soup. Pour into a cold wet ring mold and set in cold place to chill.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

ROBERT KOCH
1843–1910

SERVING A SCIENCE THAT SAFEGUARDS LIFE

When he began his experiments, Robert Koch was a country doctor, isolated, untaught in the art of research, lacking financial resources!

But in his heart there was an earnest desire *to know*. As a doctor he wanted to save life scientifically, not by guesswork. So through years of lonely searching, years crowded with patient experiments, he labored *to learn the cause of disease*. And the achievements which rewarded his perseverance and efforts have identified him as one of mankind's truest benefactors.

It was Robert Koch who discovered the bacillus that causes anthrax—the bacillus that causes tuberculosis. It was Robert Koch who isolated the *comma* bacillus, the specific organism in cholera. It was Robert Koch who *proved* that bacilli cause disease. Robert Koch, the fighter of disease, one of medicine's immortals. . . .

At the time that Robert Koch was setting out upon his researches, the House of Squibb had been established almost twenty years. Already it was an important factor in the development of those products upon which we rely to safeguard health and life. It was always among the first to materialize the new discoveries of science and research for practical and exact use.

Today, after almost three-quarters of a century of service, the name Squibb is still recognized as full guarantee of skill, knowledge and honor in the manufacture of products used exclusively by physicians and surgeons. Similarly, it is equally valued as positive assurance of purity and reliability in the purchase of products for the home medicine cabinet.

In ordering such products as Bicarbonate of Soda, Epsom Salt, Tasteless Castor Oil, Milk of Magnesia, you can confidently specify those bearing the Squibb label. For the purest materials go into their manufacture and the same high degree of scientific skill as is used in the preparation of Squibb's vaccines or antitoxins.

The "Priceless Ingredient" of every product is the honor and integrity of its maker.

Sunset Pass

(*Continued from page 53*)

have to stand for you paying some attention to Thiry," went on Amy passionately. "But be careful. If you dance more with her than with me—Lord help *her!*"

Amy must have had certain duties as a hostess, for with this she slipped away from Rock and mingled with the laughing, curious assemblage. He made no effort to follow, but haunted the long corridor, studying the new arrivals. He was at the entrance to the patio, standing close to the wall, when a small party entered the corridor and came quickly down.

"Look!" spoke up a woman to her neighbor on a bench near Rock. "That girl in white. Colonial wedding gown! Isn't she lovely! Who can it be?"

This remark caused Rock to take a second glance at the entering party. And it struck him that the girl in the wedding gown was certainly worth looking at. At first she did not appear to be masked at all, but as she drew closer he saw that she wore a close-fitting mask, scarcely any whiter than her powdered face.

Her hair was done up in some amazing style, and as colorless as snow. Arms and neck, of exquisite contour, likewise were of a dazzling whiteness. The gown, one of those hoop-skirted, many-ruffled affairs Rock had seen in pictures, took up the space of three ordinarily dressed women. Indeed, there appeared scarcely space enough for the girl to pass him.

Trueman flattened himself against the wall. Nevertheless, the young lady so marvelously gowned was forced to sweep her skirts aside to avoid contact. The momentary halting of the party, evidently to choose a direction, brought this Colonial masquerader so close to Rock that he meant to step forward and allow her more room. But she seemed to be looking at him, and he felt suddenly rooted to the spot.

"Gurls, you shore passed the dressin'-room," remarked one of the youths.

THEY turned, some of them laughing, and the wonderful girl in white pressed close to Rock in passing, still apparently gazing at him. As the soft, fluffy, perfumed gown swept him, Rock felt a hand touch his, slip a folded paper into his palm, with quick pressure. Then she passed on and he leaned there, staring. She vanished with the others.

Rock's trembling fingers tightened on the paper. It was a note. That girl had been Thiry. In one glance she had pierced his disguise. And he had been far indeed from returning the compliment. What a joke on him! His vaunted perspicuity, his vain sense of a lover's assurance, went into eclipse. And in its place shot a thrill at her cleverness, her superb masquerade.

Coming down to earth with a jerk, Rock peered into his palm at the note, then rushed off to find a light by which he could read it. Finally, he found one, and here, after a keen glance around, he opened the note.

Dear Trueman: I will know you the instant I lay eyes on you. Will you me? I am in terrible fear, but I will come to the dance, cost what it may.

Ash is in town, hiding. I do not know what he means. It may be there is some other reason for his action. Allie and I will go to the Farrells' to dress, and come with their crowd.

Ash never saw my great-grandmother's wedding dress. He won't recognize me, when he comes. *For he will come!* You must keep close watch over me, else I would not dare take the risk. He is capable of stripping me before the crowd. I will dance with the Farrell boys a little—the rest with you. I shall not stay till they unmask. I want to go before he knows me. You must take me away before that.

It may be madness. But I let my heart become set on this one dance. I grow furious at the thought of giving it up. I don't know myself of late. I *will* come—if only to—

Thiry

Rock did not draw a breath during his swift perusal of this note. Though he could not believe he was awake, the words were there, on white paper, in ink, clear and firm, in even, beautiful script.

What did they betray? He could not subdue his pounding heart, but he strangled the leaping, whirling, rapturous thoughts. She asked his protection. Thiry Preston—who not long before had begged him to leave her!

When Rock read again the sentence in which she confessed that Ash was capable of stripping her before the crowd, in his sudden realization of its content he froze in deadly fury. But it shook him and passed with the realization that she had promised to dance mostly with him.

ROCK placed the note inside his vest and strode back toward the corridor. As he entered it, Thiry came out of a door half way down and seemed to float toward him. They met, both aware of others present. Rock, removing his hat, made her an elaborate bow.

"Lady from Virginia, I salute you," he said gallantly.

"Sir Knight of the Card Table," she replied, and offered her hand.

Rock clasped it, and kissed it with the old-fashioned courtesy due to the character she personified. But they acted no more. She seemed silently confused as he led her to the patio. There, in the subdued glow of the lanterns, they were comparatively alone.

"Thiry! You paralyzed me," he said. "I didn't know you. I didn't *know* you. . . . And, oh, how lovely you look."

She murmured her thanks. They stood under an archway beside the fountain. The falling water tinkled in harmony with the soft strains of music. For them it was neither the place nor time for calmness.

"How ever did you know me?" he asked.

"It was the way you stood."

"Reckon that makes me awful happy—an' fearful too, Thiry."

"You! You have little to be fearful about. But I—"

"Never mind. If I ever had eyes I'll use them to-night. I'll let no insult, no humiliation touch you. . . . Thiry, where'd you get that gorgeous gown?"

"It was my great-grandmother's wedding dress. We are from Virginia."

"Virginia? Your father told me Missouri."

"Yes, after the war. I was little then. The war ruined us, and we moved to Missouri."

"Ahuh! You were always pretty to look at, in anythin'. But now you're—oh!—beyond the poor compliments—and hopes, too, I reckon, of a range-rider."

"I'm glad you like me, Trueman, but don't rub it in," she said naïvely. "In a few days I'll bake bread and milk the cows again."

"You'll be all the better for that."

THE music ceased and the gay dancers poured out of the hall to promenade in couples and quartets and crowds, all intent, it appeared, to peep under masks and find one another out.

"My brothers—the twins and Al—and the Farrell boys know me, of course," said Thiry, as if remembering where she was. "We must find them. Then, after a few dances I'll be free—if—if you—"

"Thiry, there's no if—now or ever," he replied unsteadily.

"Will you dance while I dance?"

"No. I'll watch you—and see if anyone else is watchin' you."

"Oh, but surely you must *want* to dance some?" she queried.

"Only with you."

"Not Amy Dabb?" she flashed, with odd inflection of voice.

"Not Amy Dabb," he said, turning to find her face averted.

"But, Trueman, she is your hostess. If I remember correctly, she meant to embody the duty of all her masculine guests in *your* attendance."

"Did she?" replied Rock, a little nettled at her satire. "You mean she gave you a hunch I'd dance all *my* dances with her?"

"Something or other like that," murmured Thiry.

"Reckon she was just talkin'."

"Then I was wrong to believe her. Forgive me. . . . But I didn't see how you could be so—so—such a liar."

"Thiry, I couldn't lie to you," he returned, with low voice ringing. "Save me agony by believin' that now. For some day you'll know."

"But you must dance with your hostess—at least once," said Thiry hastily.

"Once. Would you stand for it once? I mean, straight out—do you *want* me to dance with you instead of Amy Dabb?"

"Yes; I do," she returned hotly. "She hurt me. She said catty things all in a nice way. She offered to lend me a dress. She made me feel a—a country bumpkin. I told you before what she hinted about you. It's selfish, little, miserable of me, to want to show her. But she made me almost hate her."

"Thiry, my obligation is paid," replied Rock, trying to contain himself. "I have had that one dance with Mrs. Dabb. She met me. I didn't recognize her until she made herself known. It's over. So there."

"I'd like you to dance with Allie," returned Thiry shyly. It'll be fun if we can fool her."

Digitized by Google Original from UNIVERSITY OF IOWA

"Fine. Let's find her and your friends."

Thiry had introduced Rock to her sister Alice as *Señor Del Toro* of Las Vegas. And Rock felt that he had acquitted himself creditably. Alice was like a fairy on her feet, and Rock could not have forced her out of step if he had tried.

The dance was soon over, and Rock surrendered Allie to her next partner. He became all eyes then. He was no longer a masquerader, nor a lovelorn shadow of his lady. He shifted in one moment to the cool, searching cowboy on a trail. His searching gaze was concerned with the masculine element of that gay crowd.

He lounged around the door of the hall during two dances before he convinced himself that Ash was not among the cowboys dancing. Then he strolled down one long aisle and up the other, peering at every man, and into every shadow. Likewise, he searched the patio. Then he went into the corridor, and toward the entrance, where the deputy and his sheriffs still held forth.

When Ash Preston came in he would have to be masked, and he could not hide a gun from those laconic Westerners. This afforded Rock relief. Returning to his post just inside the dance hall door he took up his vigil there.

Another dance had just started. The big hall was a wonderful spectacle of movement, color, youth, beauty, and humor. Then Rock espied Thiry, conspicuous in white and notable for her grace. She was dancing with one of the lanky youths with whom she and Alice had come. As they came around in the gliding circle she espied Rock over her partner's arm. What a smile she gave him! It made his heart beat faster.

She appeared flushed under the white mask and powder. No doubt of her enjoyment! Probably for the hour she had forgotten the menace of Ash Preston. Soon that dance ended, and as the laughing throng pressed in a stream out the door, someone, a woman, thrust her face close under Rock's.

"Traitor!" she whispered, and went on. The wine-dark hot eyes through the red mask, the gold and black Spanish gown, so striking on the slender figure, belonged to Amy Dabb.

TRUEMAN whistled to keep from swearing. He had actually forgotten Amy. Dance after dance had gone by, and he had never even seen her. But his dismay was short-lived, in that he looked around from the disappearing Amy to see Thiry close at hand, coming alone.

"Señor del Toro, you look lonesome," she said gayly. "Are there no charming *señoritas* here?"

"I can see only one."

"Come. The rest are yours," she said, and took his arm.

"Has anyone discovered you?" he asked, as they mingled with the merry masqueraders in the patio.

"Only one I know of, Amy Dabb. She was quick to see through it."

"Well. Did she say anythin'?"

"I rather think so. She said: 'Hello, Thiry, you look great. But wedding gowns don't always mean wedding bells.'"

"Humph! That was sweet of Amy, now. Thiry, I reckon there's not a young man at this dance who wouldn't ring weddin' bells for you."

"Rash flattery, Trueman," she retorted. "There must be many. I know five boys who are madly in love with their respective partners."

"Thiry, I make number six," said Rock, and quickly looked away, too guilty to dare to see how she took his remark. She made no reply at all. In silence they went the rounds of the patio, then up one arched aisle and down another, back to the dancing floor.

Thiry looked up with inscrutable eyes.

"You broke your word. You make me remember," she said reproachfully, as she gave way to his encircling arm.

A pang shot through Rock, but he did not think it was remorse. The miracle that tore him was his possession of this lovely girl. She was in his arms. She yielded to, rather than resisted, the close embrace he could not have forsworn to save his life. That dance was brief as a fleeting moment, but endless in its intangible mystery and joy.

Again they strolled under the magic rose and purple of the dimming lanterns, and on to the secluded bower in the patio. Here the stars shone white and watchful through the foliage. The water tinkled off in the darkness.

"It's very . . . warm," murmured Thiry, as Rock leaned over her in the shadow.

"Why don't you take off your mask?" he suggested.

"No, Señor."

Trueman took her hand in his. It was an almost instinctive action on his part. She made no attempt to withdraw it, greatly to his surprise and joy.

"TRUEMAN, you must take me home soon," she said, as if coming out of a spell. The time and the place, the languorous atmosphere of this Spanish edifice, which, though new, seemed old in beauty and romance, the music, the dancers, the youth, had indeed called to Thiry Preston.

"Oh, no, not now. Just one more dance," pleaded Rock. "You said the rest were mine."

"But I'd forgotten."

"What?"

"Ash will come any moment. I feel it . . . here," she whispered, her hand on her breast.

"Thiry, he is not here now. I've looked clear through every man in the outfit. Please risk it."

"Well, then—one more."

But at the end of this dance she forgot again or could not resist the joy of the hour. Once more Rock led her to their shadowed corner, once more he held an unresisting hand.

"Take off your mask," he begged again.

"Can you put it back on—right?" she replied, a little tremulously.

"Sure I can."

Then she was unmasked under his worshiping eyes, under the dim rose light of the lantern above, and the far, white and knowing stars. Once she lifted her eyes to him—eyes that betrayed the spell of the moment—then no more.

"You do not talk, Señor," she said, trying for conversation.

"How can I? I'm holdin' your hand."

"Oh, so you are? Well, let go."

"Pull it away," he whispered daringly.

But she did not.

Rock won her to stay one more dance, reveled in his power to persuade her, though his conscience flayed him. What risk he might incur for her! But he gambled with his happiness.

"Trueman, we must go now," she said nervously.

"Yes. But don't you hate to?" he returned jealously.

"No, I'm too thankful for—for all it's been."

They reached the patio. Something had happened, as Rock guessed from excited voices. A girl cried out in dismay.

"Hey, look out there," called someone.

"He snatched at my mask," replied a girl angrily.

"He got mine," added another woman.

Rock drew Thiry out of the press.

"Some cowboy snatchin' masks," he said hurriedly.

SUDDENLY, into the open space before him leaped the lithe figure of a cowboy, wearing a red handkerchief as a mask. He was as quick as light—so quick that Rock scarcely guessed his purpose in time to thwart it. But Rock was on the wrong side of Thiry. One sweep of hand tore Thiry's mask from her white face! She cried out and clutched Rock's arm.

The cowboy appeared to leap up. He snatched off the red handkerchief that masked him, to disclose the livid face of Ash Preston. His evil eyes, like coals of blue fire, flashed over her face, her bare neck and arms, her spreading ruffled gown.

"Ash," gasped Thiry, clutching Rock's arm tighter. "Meet Señor del Toro—my masquerade partner!"

"Señor Hell!" he bit out, incredibly cold and fierce. Like a snake's head his hand shot out, to fasten in Thiry's bodice and tear with fiendish swiftness.

In one single action Rock freed himself from Thiry and struck Preston on the side of the face. He went down with a thud. Women screamed; men shouted excitedly, and all spread back hurriedly. Up bounded Preston with catlike quickness, his hand flashing back for his gun. But it was not there. He had passed the sheriff, and had forgotten. If it were possible, his wolfish face gleamed fiercer. His tawny hair stood up.

"Greaser, I'll kill you for thet!" he ground out.

"*Caramba!*" replied Rock, and made at Preston with terrific fury. His onslaught was like a battering-ram. He cared nothing for Preston's sudden blows. He broke through them, beat him back, and knocked him against the wall. Ash fell, but got up cursing, to come back wilder than ever, his face the redder for blood. There was a swift interchange of blows, then one from Rock staggered Preston. Another, swift and hard, hitting solid like an ax on beef, sent Preston in a long fall.

Before he could rise Rock plunged upon him, beat him with right, left, right, left—tremendous blows that made Ash sink limp. Rock seized him by the neck, choked and shook him as a terrier with a rat, and, rising, dragged him to the fountain and threw him bodily into the shallow water where he lay on his back, his head just above the surface.

Rock, remembering his mask, felt for it, and found it intact. That helped release him from the grip of an awful anger. Thiry's white mask lay where Preston had dropped it. Snatching it up, Rock whirled

We Failed 129 Times

Then came the formula for this amazing shaving cream, the fastest selling in America. Try it 10 days at our expense before you buy

Gentlemen: When we announced our new shaving cream to the world, thousands of men instantly bought and tried it on our reputation.

Since then, hundreds of thousands have made our free test and proved the claims we make for it, on their own faces—in their own bathrooms. And this is the greatest practical laboratory in the world.

Yet few who know the morning delight Palmolive Shaving Cream brings, know the story that stands behind this remarkable success. In asking that you, too, try this outstanding product, we want you to know how it came to be. Mail the coupon for a free test at our expense.

We first asked 1000 men

They told us where present-day shaving preparations failed. They told us the four things they had sought in one. Then we set to work to give them these things in a new preparation.

Our great laboratory, for 65 years a world leader in soap making, went at the difficult problem offered them. Time and again—129 in all—they made a shaving cream that excelled in many respects, yet failed in one.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc — especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Please let us prove them to you.

35c

3965A

Then came success—and an added feature that has delighted all users. Now when a man sends the coupon for his trial offer, we know the chances are that he will *continue* using Palmolive Shaving Cream. For most men, we find, never return to former shaving methods.

These 5 important features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now mail the coupon

We take the risk—not you. We undertake to please you ... to win you in ten shaves. Will you give us the opportunity to prove our case? The coupon is for your convenience—to prevent your forgetting. Won't you use it, please?

PALMOLIVE RADIO HOUR

Broadcast every Friday night—from 10 to 11 p. m., eastern time; 9 to 10 p. m., central time—over station WEAF and 31 stations associated with The National Broadcasting Company.

10 SHAVES FREE

and a can of Palmolive After Shaving Talc

THE PALMOLIVE-PEET COMPANY, CHICAGO, ILL.

Simply insert your name and address and mail to Dept. B-1500, Palmolive, 3702 Iron St., Chicago, Ill. Residents of Wisconsin should address Palmolive, Milwaukee, Wis.

to see some woman in the act of covering Thiry's naked shoulders with a shawl.

"Come—we'll—get—out—of here," he panted hoarsely, and placing a firm hand under her arm he led her away from the gaping crowd, down the corridor toward the outlet. The voices of excited people grew fainter. Rock halted long enough to produce his check and get his gun belt, which he threw over his left arm.

"What's up in thar?" queried the sheriff, sharply eying Rock.

"Some fool cowboy snatchin' masks off the ladies," replied Rock, and hurried Thiry out through the crowd of Mexicans, to the street and darkness.

Thiry was weak. She leaned on his arm. Not for three blocks did Rock speak, nor did she.

"He . . . didn't know you," she burst out then. "Called you 'greaser'!"

"Yes; that's the only good thing about it," returned Rock.

She was sobbing a little and clinging to the arm with which Rock upheld her.

"He tore my waist—almost off. Oh, I don't mind the shame of that—so much. But the gown Mother treasured. She loved it so. . . . She'll be heartbroken."

"What's a dress? That can be—mended," he panted. "But I kept you there. Too long! It was my—fault—my fault. If I had only left when you wanted to go! After my promise to you!"

"Trueman, I shouldn't have gone. I knew something dreadful would happen. I *told* you. . . . Only, he was worse than I ever saw him."

"Worse! He was a hydrophobia skunk!"

"Oh, Ash! My brother!" she cried brokenly.

Her grief tortured Rock, but he did not have it in him to retract his words. What language could do justice to Ash Preston! They hurried on to the edge of the town, down the pine-skirted road. Presently they reached Winter's house, which sat back among the trees. Rock saw a light. He wanted to say good night to Thiry at the gate but could not. She still clung to him. At the porch he halted and helped her up.

IT WAS shaded there by trees, but he could still see her pale face and the great eyes, strange and dark in the night. Before he knew what he was doing, he clasped his arms around her, as she stood a little above him. She did not repulse him, but she pressed her hands against his shoulders. Thus they looked at each other in the shadow.

"Forgive me, Thiry," he implored.

"There's nothing to forgive," she faltered.

"I'll go to my room before anyone sees me," said Rock. "Ash didn't know me. He never will."

"*She* will tell," said Thiry hopelessly.

"Amy Dabb!" exclaimed Rock, with a start. "She did know. But she'll have no chance to-night. They'll pack him out of there pronto, and to-morrow I'll find some way to shut her mouth."

"Yes, you will," said Thiry, with sad derision. "Don't waste your breath, Trueman. Perhaps it will not occur to her that Ash didn't know you."

"Then let's hope for the best." Rock tightened his arms a little, drew her closer. "Thiry, kiss me good night," he whispered suddenly.

"Trueman!" she exclaimed, and tried to draw away. But he held her, and as she turned her face he managed to kiss her cheek.

"Now you've done it!" she cried.

What he had done she did not say, but she ceased to pull away. That emboldened him. Still, he drew back the better to see her averted face.

"What's one more offense?" he queried. "I've ruined my hopes to-night—or I have found them glorified. Oh, Thiry, how I love you! Kiss me good night."

"No!" Yet she seemed weakening. He felt her quiver in his arms.

"Then let me kiss you? It might be the first and last time. For if Ash finds me out, I'll have to leave this country. Else, I'd have to kill him!"

"You'd go away for me?" she flashed, suddenly quickened and vivified, and her hands went to his shoulders.

"I promise you."

"You love me so much?"

"Thiry girl, I love you more than I can prove!"

Blindly, with unreckoning impulse she bent and met his upturned lips with her own. Quickly, with a gasp, she broke away to stare a moment, as if some realization had stricken her, then she fled across the porch and into the house.

ASH PRESTON did not return to Sunset Pass for a week after the Fourth. Rumor drifted down by a rider that Preston was hunting for the Mexican who had beaten him at the dance.

It was an anxious and brooding time for Trueman Rock, more, perhaps, because of Thiry's unconcealed dread than for his own sake. Nevertheless, he never drew an easy breath, despite the rumor, until Ash returned, sober, yet showing the effects of a prolonged debauch.

One moment Rock stood on the porch, his hand quivering, while Ash strode over from his cabin. Sullen, his face black and blue, still swollen, he presented no encouraging aspect. But, manifestly, that moment proved he did not know or suspect Rock had been his assailant. Then the suspense of this meeting for Rock ended when Thiry almost fainted in Ash's arms.

"Aw, Thiry, I'm sorry," rasped out Ash, while he held her on the bench.

Rock did not tarry with the family after supper that night. He carried away with him a look from Thiry's eyes—the first in which she had met his since that unforgettable last moment on Winter's porch—and it drove him to pace under the pines, to throw back his head, to fill his lungs with the sage-laden air of the Pass, to cast exultant defiance up at the silent, passionless, white stars.

He paced a beat from the open back to the gloom of the thick-spreading trees. On the soft mats of pine needles his feet made no sound; against the black shadow of the slope his figure could not be seen. But his own sharp eye caught a dark form crossing in front of a cabin light. He heard a voice low but clear—Gage Preston's: "Ash, come hyar."

Suddenly Rock made them out, perilously close upon him. Silently, he sank behind a great log, immensely glad that it lay between him and the approaching men.

"What you want?" growled Ash.

"Sit down there," ordered Preston, with heavy contact of hand upon his son's person.

Rock felt the jar of the log where evidently Preston had pushed Ash. Noiselessly craning his neck Rock saw the dim figure of the father, bending over. Then Rock espied Ash sitting not ten feet from where he lay. It seemed to Rock that cold blood oozed from his very marrow. If caught there he would have to fight for his life. Almost he ceased to breathe. The pounding of his heart sounded like a muffled drum.

"What's got into you?" demanded Ash.

"What's got into *you*, thet you hang on in town, lookin' fer trouble, makin' more fer me?" countered the father sternly. "I needed you hyar. There's work no one else can do."

"But, Pa, I wanted to kill thet Señor del Toro," protested Ash, almost plaintively.

"Bah! Señor del Toro? Why, you bunkhead, thet make-believe Spaniard was Trueman Rock."

"No!" snapped Ash hotly. "I had thet hunch. But I was wrong. Next mornin' I went to Thiry. I told her thet black-masked pardner of hers was Rock, an' I was agoin' to kill him. She fell on her knees. An' she swore to God it wasn't Rock. Pa, I had to believe her. Thiry never lied in her life."

"Mebbe I'm wrong," choked Preston, as if a will not his own wrenched that admission from him. "But, whoever he was, he gave you plumb what I'd have given you. You disgraced Thiry. You shamed her. You hurt her so she's been ill. She—who's loved you all her life!"

"Shet up, Pa," wailed Ash, writhing. "I can stand anythin' but thet."

"Wal, you shore have a queer streak in you. Yellow clear through when it comes to Thiry. But fer her you'd be a man. An' we could go on with our work, thet's callin' fer all a man's brains. You can't be relied upon, as you used to be. Now, listen, somethin's up out there on the range. I've done some scoutin' around lately. I've talked with the Mexican sheep-herders. Too many riders snoopin' around Sunset Pass. To-day I seen some of Hesbitt's outfit. An' Slagle asked me sarcastic like why Clink Peoples was over hyar so much. . . . Ash, there's a nigger in the woodpile. I shore don't like the smell."

"Clink Peoples had better keep away from the Pass."

"There you go again. What good will it do to throw a gun on Peoples? If they're suspicious thet'd only make them worse. . . . What'd you do with them last Half Moon hides?"

"I hid them."

"WHERE? Didn't you take them to Limestone Cave, as I ordered you?"

"I packed some there. It was too far, an' I was tuckered out. I hid the rest under the culvert."

"But I told you not to hide any more there. I always was scared of thet culvert. Once a big rain washed some out. It could happen again.

"Wal, it ain't too late. I'll take Boots to-morrow night, an' we'll pack the fresh ones over to Limestone."

"No. The ground's soft since it rained. You'd leave tracks. An' thet's too risky with these new riders searchin' around.

Better leave them. An' we'll lay off butcherin' fer a spell."

"Lay off nothin'. With all them orders fer beef. I guess not. Pa, there's room fer a thousand hides down in the old well."

"Ash, I tell you we'll lay off killin' till this suspicion dies down," said Preston, in hoarse earnestness, fighting for patience.

"Wal, I won't lay off, an' I reckon I can boss the boys," replied Ash, implacably.

Then Preston cursed him, cursed him with every hard word known to the range, and some besides, cursed until he was spent from passion.

"This hyar rider, Rock," spoke up Ash, as if he had never heard the storm of profanity, "when you goin' to fire him?"

"Rock? Not at all," replied Preston wearily. He was beaten.

"Wal, then, I will. He's been around too long, watchin' Thiry, an' mebbe us too."

"Ash, haven't you sense enough to see thet Rock's bein' hyar is good for us?" asked Preston, girding himself afresh. "Never was a rider hyar so trusted as Rock. Thet diverts suspicion from us. It was lucky he came."

"But he might find us out."

"It ain't likely. Shore, he doesn't want to."

"He might stumble onto it by accident. Or get around Thiry, an' scare it out of her."

"Wal, if he *did*, thet wouldn't be so bad. She could keep his mouth shut. He loves her well enough to come in with us. Only, I'd hate to ask her to do it."

"AN' IF she did win him over, what would *he* want?" hissed Ash.

"Huh! Reckon thet's easy to answer. An' I'm tellin' you, Ash, Thiry would like Rock if she had half a chance."

A knife plunged into Ash's vitals could scarcely have made him bend double and rock to and fro, like that thrust of Preston's.

"She'd like him, huh? So thet's why she made me promise not to pick a fight with him. . . ."

"Wal, Ash, if circumstances come up we can't help or beat, what'n hell can we do? I told you ages ago thet Thiry is bound some day to love some lucky rider. It can't be helped. An' it might be Rock. Which'd be most infernal lucky for us."

"Lucky fer him! Haw! Haw! . . . I'd shoot his heart out!"

Preston rose to loom darkly, menacingly, over his son.

"You can't murder him in his sleep, or shoot him in the back. Thet'd look bad in Wagontongue. It'd just about ruin us. An' if you call him out to an even break—why, Ash, he'll kill you! Savvy? Rock is cold as ice, as quick as lightnin'. He has a hawk eye. I'm warnin' you, Ash!"

(*To be continued*)

The Man Who Put the Midnight Sun to Work

(*Continued from page 38*)

would dig stumps when he might dig gold!"

The doctor did all his own surveying. The erection of a building for government headquarters was begun; but through lack of funds winter arrived to find the Georgeson family living in a bare-walled shell with neither plumbing nor stairways.

"Yes, we were a bit cold sometimes," he admitted; "but our view was the finest in the world! Our house is built on historic Castle Hill, one of the most beautiful spots in Alaska. It is the site where, behind a circle of mounted guns, old Baranoff, first governor of the fur colonies, maintained his log stronghold, and kept his keen eyes on the Thlinget Indians, continually lying in wait to massacre him and his fur hunters.

"Our incomplete headquarters were luxurious, however, compared with those of Professor Isaac Jones, whom I later left in charge of the station I established on the Arctic Circle at Rampart. We had no money to build him a house, so for a year he occupied a dilapidated cabin borrowed from a wood-chopper. The roof leaked so badly that he had to put a tent up inside the cabin.

"Single-handed, with nothing but a spade and a mattock, this loyal fellow, a graduate of the Kansas Agricultural College, grubbed stumps and cleared half an acre of ground, where were begun our most successful experiments with wheat."

IT IS now possible to go anywhere in Alaska by airplane; but in the days when Doctor Georgeson started out to look over his five hundred and ninety thousand square miles of territory for the purpose of establishing experimental stations, there wasn't a railroad, or even a highway, in the country. Transportation facilities by boat and pack train were meager and uncertain, and high freight rates prevailed all over the Territory.

"Hundreds of thousands of dollars," said Doctor Georgeson, "were annually expended for provisions which I felt the country itself could be made to produce. You can see how I thrilled to the wonderful work ahead of me—the glorious struggle to create new varieties of plants and new types of domestic cattle suited to the country, so that settlers might in the future be more independent of the outside world, and sustain themselves by the products of Alaskan soil."

SUCH was this pioneer agronomist's high ambition for the country whose atmospheric conditions alone might have daunted the stoutest heart. Alaska has a dozen different climatic belts. Its frost-free period, during which all planting, developing, and maturing of crops must take place, is seldom more than ninety days. Its temperature ranges from one hundred and twelve in summer, to eighty-six below in winter; and while there are regions in the interior where no drop of rain falls during the growing season, there are other areas along the coast that are numbered among the rainiest places in the world.

Sitka, where headquarters are maintained, is situated in this latter belt. "This station really has the worst growing climate in the Territory," admitted the doctor. "But we know that anything raised successfully here will grow anywhere else in the country. All this land you see under cultivation was wrested from the bog. It is made up of peat and volcanic ash. Though Alaska has many valleys of fertile soil there are also thousands of acres of such tundra swamps, and our experience in draining and preparing this one will be of untold value to farmers of the future. It has taken time and much hard work—but the result is gratifying."

Proof of his words lay all about me—triumphs of horticulture over which the tourist of to-day exclaims with wonder. I saw fields where men were gathering cabbages weighing from fifteen to twenty pounds each. One, unusually large, completely filled a wheelbarrow, and was later found to weigh thirty-four pounds. Celery, lettuce, and cauliflower all grew on the same generous scale, and the rhubarb had stalks as large around as my arm.

The doctor asserts that the Territory is the greatest berry country in the whole world, and I could well believe it as I looked at the heavy transparent clusters of currants, glistening red and white in the sun, the weighted branches of gooseberry bushes with their amber- and plum-colored fruits, and the tall rows of vines, in the thick of which an Indian housemaid was picking raspberries as large as walnuts.

Perhaps Doctor Georgeson's finest creation is the Alaska strawberry, eight of which have been known to fill a quart basket. They are almost devoid of acidity and will bear shipping long distances. Their fragrance is such that half a dozen will scent a room. They ripen in July and August, when as many as two hundred in all stages of development may be counted on one plant.

THIS fruit is the result of crossing the domestic berry from the States with the sweet wild strawberry that grows in profusion on the sand dunes along the Alaskan coast.

"The perversity of the wild berry was a source of many surprises, not only to me but to Luther Burbank, who was greatly interested in my experiments with it," the doctor declared. "At his request I sent him some native plants. He wrote back that they didn't know how to behave when they reached California: they started blooming in the dead of winter, flaunting their gayety in the faces of decorous California berries that were doing their best to get a little rest before spring! Here at Sitka, that first year we planted them in good soil and treated them like royalty. They rewarded our tender care by remaining absolutely sterile. The next spring we put them into the poorest soil we had, and ignored them. They overflowed with the lustiest blooms you ever saw. From them we took the pollen and transferred it by hand to flowers on domestic vines. When the resulting berries ripened we washed out the tiny seeds and planted them. Hundreds of little plants came up. At the end

CHRYSLER PLYMOUTH

CHRYSLER PLYMOUTH

Plymouth Two-Door Sedan, $690

A NEW CAR . . . A NEW CAR STYLE

$670 AND UPWARDS

Coupe	$670
Roadster	670
2-Door Sedan	690
Touring	695
De Luxe Coupe	720
4-Door Sedan	725

All prices f. o. b. Detroit • Chrysler dealers are in a position to extend the convenience of time payments.

A NEW ZENITH OF LOW PRICED CAR-LUXURY AND PERFORMANCE

Plymouth Features.—New slender profile chromium-plated radiator.—Long, low bodies.—Generous room for 2 to 5 passengers, according to body model.—Luxurious deep upholstery and appointment detail such as you expect only in cars of far higher price.—New "Silver-Dome" high-compression engine, for use with any gasoline.—Smooth speed up to 60 and more miles an hour.—Characteristic Chrysler acceleration.—Unbelievable smoothness of operation at all driving speeds.—Body impulse neutralizer.—Chrysler light-action internal expanding hydraulic four-wheel brakes—no other car of this price possesses this feature.

With the new Plymouth, Chrysler is the first to give, at so low a price, the advantages of performance, riding ease, dependability and full adult size which characterize fine cars of higher price.

It is so revolutionary an advance over other low priced cars, it is such conclusive evidence that the past year's strides in the science of manufacturing have multiplied the purchasing power of the motor car dollar, that you will surely want to see it and drive it.

A Plymouth ride is the best demonstration of the ease with which it leaps from 5 to 60 and more miles per hour—the quiet of its power and the smoothness of its flight. You yourself must put your foot to the light-action internal hydraulic 4-wheel brakes to know the confidence of the fastest and safest deceleration you have ever experienced.

And above all, you must see its beautiful lines and finish, and stretch at ease in its deep-upholstered, full adult-size bodies, to comprehend how completely the Plymouth surpasses cars heretofore sold under $1000.

Please see and ride in the Plymouth. We believe you will discover there has never been a car anywhere near its price that can approach the Plymouth for power, pick-up, smoothness, easy handling, safety, quietness and roominess—nor that can equal it in beauty and style.

New Chrysler "75"—priced from $1535 to $1655 New Chrysler "65"—priced from $1040 to $1145 All prices f. o. b. Detroit.

of three years these hybrids bore fruit, but, though we had thousands of new varieties, there was not one satisfactory strawberry among them!"

It took twenty-five years of patient experimenting with more than twelve thousand different varieties of hybrids to evolve the present delicious berry, which is as much at home on the Arctic Circle as it is in the mild climate of Sitka.

"It was eight years before we found apples that would ripen in this climate." The doctor chuckled reminiscently. "When I first came here, I thought we could develop an Alaskan apple by crossing a States variety with the wild crabapple that grows so well in the forests along the coast. To produce such a hybrid, blossoms of the native crab were cross-fertilized with pollen of several different early apples. You can imagine my joy when many of them set fruit. Each twig that bore hybridized apples was labeled, and the clusters protected by paper bags. Everyone in the village was advised of the experiment and warned against disturbing those bushes. Then, just about the time the fruit was ripe, the Indian women came along and gathered every one of my apples and made them into jelly!"

POTATOES form Alaska's most important crop to-day, especially in the interior, where high freight rates double the price of imported vegetables. When Doctor Georgeson came to the country, he found potatoes being grown by descendants of the Russians in small boxed beds heaped with soil to a height of three feet. In such gravelike plots the planting was done hit-and-miss fashion. After that, nothing was done until harvest. The tubers were very soggy and unfit for long storage.

Through years of experimenting with some fifteen hundred varieties, Doctor Georgeson has evolved a hundred and seventy kinds of potatoes suited to Alaska. In the Matanuska Valley farms have produced eleven tons to the acre.

Of the seven experimental stations established in the Territory, three were abandoned for lack of funds. Because of the greatly varying climatic conditions, those in operation to-day are situated in widely divergent regions. Each station deals with a class of projects suited to its particular locality.

The Fairbanks station, close to the Arctic Circle, specializes in the growing of grains. At first thought this seems hardly a possibility, since the ground, frozen to an unknown depth, is covered with moss, which prevents its thawing. When the moss is removed, however, the ice melts rapidly, and the soil is of such quality that, despite the shortness of the season, amazing yields are obtained. The largest recorded at Fairbanks are forty-one bushels of spring wheat to the acre, and seventy-nine bushels of oats to the acre. This in a region with scarcely a hundred frost-free days in a year!

But one must remember that during this growing time the sun is on the job for nearly twenty-four hours a day, and the earth becomes a regular forcing bed.

Though the great sunny valleys of the Tanana, the Yukon, and the Matanuska are especially adapted to and now noted for the growing of cereals, every variety of barley, wheat, and oats raised there is a special creation evolved for Alaska by Doctor Georgeson and his staff. All parts of the world have been drawn upon to furnish grains for these experiments.

Alaskan barley, for instance, had its origin on a plateau eleven thousand feet up in the Himalaya Mountains, where barley matures early but is so heavily bearded and so small that it is practically useless. The little immigrant from India retained all its undesirable qualities when it grew in Alaskan soil, but— This is what happens when an agronomist decides to mould nature to his will:

At a time when the barley is about to blossom delicate instruments are used to open a single budding grain. The pollen is removed, and pollen from another selected variety, similarly taken, is introduced to fertilize the pistil of the flower. This operation succeeds only if it is performed exactly at the right time and in the right manner. If a success, it results in *just one kernel* which partakes of the character of both parents. This single grain is planted the following spring, and its growth watched with affectionate solicitude. Its yield is a new creation, and one which can be perpetuated.

It took years of such skilled and patient cross-fertilizing to perfect Alaskan barley, which is not only a splendid variety, with five-inch beardless heads, but is also the earliest maturing barley in the world.

"AND what of the farmer who harvests these northern crops?" I asked the doctor. "Isn't his life a continual fight against Old Man Winter?"

My companion laughed. "On the contrary," he said, "the Alaskan farmer has, perhaps, an easier time than any other farmer on the globe, once he is established. As yet there are no insect pests and no potato bugs in the country. Nor is the virgin ground naturally weedy. The Alaskan farmer, who, by the way, is generally a bachelor, prepares his ground as soon as the snow goes off. By the end of May he must have his grain in and his potatoes planted. The bachelor does not, as a rule, keep stock, so now he can leave his farm and with a serene mind go off to work in the mines, do road work, or put up salmon for himself or for the market.

"In August he comes home to harvest. By the end of September, his crops are disposed of, and he can again turn his attention to other matters. Some farmers in winter work in the mines, others do freighting, for which there is much demand. Some occupy themselves with the improvement of their homes—the making of furniture and the multitude of things that are always ready to be done on a pioneer place. Game, of course, is abundant in the fall, especially in the interior, where farming is most successful. Large herds of caribou trek through the country, and many farmers then hunt for the market."

Alaska, however, is now rapidly coming into what may be termed the family stage of agriculture. For Doctor Georgeson has not only been marvelously successful with his plant breeding but, through his experiments in stock-raising, he has evolved new types of cattle suited to the great climatic variations of the country.

DOCTOR GEORGESON'S whole life before coming to this country seems to have been a special preparation for his remarkable work. Born in Denmark, he made a study of Danish agriculture before coming to America. He was graduated from the Michigan State College of Agriculture and later granted its degree of Master of Science. He is an able writer, and for two years was assistant editor of the "Rural New Yorker." He became professor of agriculture and horticulture at the State College of Texas, until Japan heard of him. Then for several years the Imperial College of Agriculture in Tokio claimed him as head of agronomy.

On his return to the States he served as professor of agriculture at the Kansas State College, from which the Federal Government sent him as a special agent to Denmark to study dairying.

"No," said the doctor, in answer to a question I'd asked him, "I've never wanted to join any of the gold stampedes that have come and gone since I've been in Alaska. My job is to make things grow, and for me it's the finest job in the world."

We had climbed to the lawn before the Government House, that stands high on Castle Hill. On the circle where old Baranoff's cannon once roared defiance to the savages, now grows a hedge of ruby-tinted roses native to Japan. Against the side of the building, in the French fashion, were trained cherry trees laden with crimson fruit. Honeysuckle from China clambered over the doorway, and beside the steps nodded flamboyant dahlias from California. Beyond the quaint bulbous steeples of the Russian church below us lay the green acres the doctor has wrested from the wilderness.

"Alaska is the Scandinavia of America," Doctor Georgeson said. "Here, a hundred thousand square miles—not acres—of land lie fallow for agricultural purposes. Fifty thousand of these can be converted into tillable land capable of supplying food for at least three million persons.

"We Alaskans are but making a beginning in farming. It has not been possible for me to do all that I planned to do for this great land; but my heart is glad because I have been permitted to have at least a part in the important work of preparing for that time when Alaska's valleys will be peopled with millions of hardy, prosperous home-makers."

WHAT IS THE FORMULA for a successful personality? The answer is very simple: Be Yourself. However, few of us take time to be ourselves; we're always trying to be someone else. Next month, Bruce Barton, through the medium of illustrations drawn from real life, and in particular the extremely interesting lives of Roy Howard and Bob Scripps—joint owners of the Scripps-Howard chain of twenty-seven newspapers—shows the "Be Yourself" principle in action. This "Be Yourself" policy may be somewhat difficult to follow at times, but you may take the word of Bruce Barton that it is well worth the struggle.

Why you can't meet 1928 friction with 1923 oil

Today on improved highways you may average as much as 40 miles an hour. On the poorer roads of a few years ago, you averaged about 20.

A doubling of engine speed requires a trebling of engine power.

And today's congested traffic forces you to stop and accelerate twice as often.

To give added power and quicker acceleration, many of today's engines are built to make 1000 more revolutions per minute. This increases friction and friction makes heat.

The higher heat in today's engines sets up a more difficult lubricating problem. The oil standards of 1923 simply won't do for the conditions of 1928.

Constant improvements in Mobiloil quality have met new and more exacting demands for a lubricating margin of safety. Good as Mobiloil was in 1923, it is far better today.

That is why Mobiloil is almost always chosen for the world's most difficult lubricating jobs.

You are always sure in using

Burch Foraker Talks About Leadership

(*Continued from page 35*)

details of conduct which were to grow and become firmly rooted policies. He saved some money, and went to Ohio Wesleyan University for three months. His money exhausted, he returned to Hillsboro and found work in the post-office, where again he was in contact with all kinds of people. Finally he struck out for Cincinnati to get work in a bigger field.

For days he walked the streets of the Ohio city. Men were being laid off instead of being employed. He applied for fifty jobs, and got none, but presently he found himself in the offices of the Edison company, where men were being hired.

"What's your technical training?" he was asked.

He had had none.

"Then we can't hire you," said the other. "We want technically trained men, college men. We can get a thousand of the other kind within an hour."

"I quit looking for work and went home," said Mr. Foraker. "There I did some serious thinking. Without training I was one of a thousand, but with training I would be one *in* a thousand. I decided it would be a good idea to get some training."

A few weeks later he was enrolled in the engineering course at Cornell University. Vacation came. He studied on, taking a year of required shop work in two months. During the next semester, this time, saved from the shop work, enabled him to double in other studies. The holidays came, but he kept at his books. He was paying his own way, mostly out of savings, and he had to hurry, for his money was melting away. Another year passed in college, his second, and he had done the equivalent of three years of work. Then came that trip to New York, the elevated guard, and the job with the Bell Telephone Company.

"WHY did you quit college?" I asked him.

"College had served its purpose," he answered. "I didn't go to get a diploma, but to get training, enough training to enable me to get work. When I got work, college lost its attraction.

"However," he added, "I didn't stop studying. For two years after moving to New York I went to night law school. For a time I thought seriously of becoming a lawyer, and I studied law. Then, becoming more deeply interested in telephony, I made up my mind to stick to the telephone work.

"I believe in college, but not in too much of it. I think a lot of things taught in college could be learned outside while engaged in practical work. Most young men have more spare time than is good for them. If they leave college with a realization they still have much to learn, they'll employ that time to their advantage."

On the job he was moving along too. He became a draftsman in the company's first engineering department, and then went into plant work in the cable-splicing department. Looking about, he saw that it was a complicated thing, this telephone business. He was surrounded by a maze of highly technical jobs, each requiring specialized training. How could he possibly learn all of this work? He wanted to advance, to become a boss, a leader of the men about him. To qualify for a boss, should he undertake to learn all the jobs, or one?

The decision he made was important. About it was to grow the Foraker policy that has resulted in the training of hundreds of men, now executives in the Bell System.

"In seeking for the answer to what makes for leadership," said Mr. Foraker, "I decided to do the work at my hand, to master it absolutely, to forget every job but my own. I was with the cable-splicing department; I decided to make myself the best man in that work that I possibly could. I wanted it said that I *knew my job!*

"Since then I've done many different kinds of work. I have had men under me who knew much more about the task at hand than I did, their boss. Yet they've never questioned my right to be over them, nor resented it. I had mastered *my* job, and they knew it; therefore they credited me with ability to master others.

"AS I grew older and became experienced in handling men, I learned another thing: that it is just as easy to develop the habit of doing good work as it is to develop the habit of doing poor work. In fact, poor work may be the consequence of habit. And it may be the consequence of unconscious imitation.

"I remember once watching four bookkeepers at work. Presently one of them propped his elbow on the desk and rested his chin in hand. Within a half-hour, all of the men were working with elbows on desk, chin in hands.

"Poor work is contagious, and so are habits; and bad work and habits, for some reason, are more likely to be imitated than good work and good habits. I have seen one poor workman disrupt a force of twenty otherwise good men.

"A few months after I joined the cable-splicing department, I was placed in charge of a gang of eighteen. One day, coming back to the job after a brief absence, I found the whole gang gone. They were having a little celebration in a nearby saloon.

"'Oh, you've got to expect such things,' I was told. 'It is impossible to get cable splicers who aren't drinkers.'

"I wasn't so sure of that. I didn't see why, if temperate cable splicers were not to be had, one couldn't train temperate men into good cable splicers.

"Next day my gang was back at work as if nothing unusual had happened. I said nothing, but began to study the men. More than half of them were steady, reliable workers. The drinkers were in the minority. But when they drank, on duty, they dragged the whole gang with them.

"On the next Monday, as usual after a week-end, the drinkers didn't show up. Recognizing that this condition could not continue, I started at once to build a new gang of splicers from steady men. The old gang, finding their jobs filled, only laughed at the new turn of affairs and said I'd learn. They expected to be taken back.

"But while the new men were inexperienced they were young, reliable and eager to learn. I had picked them carefully. It wasn't very long until the whole gang was doing better work, and taking real pride in its steadiness. The new men became good workers because they had only good examples to follow; they developed good work habits at the outset and kept them.

"Take any man of reasonable ability, industry, and ambition; give him proper training and good example from his associates, and he will make good, barring accident."

THE steps by which Foraker rose in the New York Telephone Company were gradual ones. From a foreman over eighteen men, he became a superintendent of three hundred; from that, superintendent over two thousand, then seven thousand. He hadn't been with the company more than a few years before he began to be known as a trainer of workmen. Foraker-trained men were in demand. There was always a call coming East for such men.

"Any man who is hired and worth keeping is worth training," is one of the things Mr. Foraker told me. And he added, "As an individual you can't do your best work unless you know how to do it. As a boss, you can't do your best work unless your *men* know how to do it."

The story is told that one January night an executive of the telephone company stopped in amazement at the corner of Forty-second Street and Broadway. What he saw was a man in evening clothes emerging from a manhole in the street. The man proved to be Foraker. It was midnight and cold. On his way home from the theatre Foraker had stopped to see how a couple of his cable splicers, down in the manhole on an emergency job, were getting along. He had walked far out of his way and had "just dropped in on 'em to have a little chat." The point of the story is that this was a usual thing.

"He was the kind of boss in those days," one man told me, "who could bawl you out, and send you away not cussing him, but cussing yourself and prodding yourself to do better."

"He was the kind of boss," said another, "who was never too busy to go to bat for his men. If he had a good man—and he always had dozens of them—he was never satisfied until he got that man promoted. If there was a vacancy anywhere, there you'd find Foraker boosting one of his men to fill it."

And just as Foraker's first little gang of eighteen became known as one of the most efficient in New York City, so did Foraker's "big gang" of seven thousand become known as one of the most efficient in the country. Said E. S. Bloom, president of the Western Electric Company, which is the manufacturing unit of the Bell System: "It is my opinion, as a result of observation throughout the country, that there is hardly a telephone plant in the

"No sweet cloying after-taste"
". . . no cavities"

writes Mr. A. Harris of Brooklyn

Gentlemen:

In the years previous to 1911, I had been painstakingly regular in my visits to my dentist, who wondered why I had so many new small cavities, although I brushed my teeth regularly.

I changed dentists and the new practitioner described what a good tooth preserver should do. One day I came across an advertisement that described "PEBECO." It tallied with the desirable points named by my new dentist. I sent away for a sample tube. I remember now how I treasured that little tube of "PEBECO" that really was so different. No sloppy, rancid soap to nauseate me, no everlasting sweet cloying after-taste. It left a clean, refreshing sensation in my mouth.

Today after using "PEBECO" for 16 years I have not had a new cavity, no decay at the margins of my fillings and my teeth are not in need of sharp instruments for removing deposits. I am pleased by the pearly white rows when I look in the mirror. My gums are firm and healthy pink and do not bleed.

(Signed) A. HARRIS

© 1928, Lehn & Fink, Inc.

Its keen honest flavor is evidence of its usefulness to your teeth

Good teeth—a clean-tasting mouth . . .

TASTE the sharp, clean tang of Pebeco. The refreshing after-feeling! A mouth that feels so wholesome must be a healthy environment for your teeth and gums.

And it is. For the salty exhilarating taste of Pebeco is more than a flavoring. It is the clarion call of the main ingredient of Pebeco's formula—an important salt which summons the guardian mouth fluids to the protection of your teeth.

A famous physician worked out the formula for Pebeco to correct the scarcity of the mouth fluids which he found to be the almost universal cause of tooth decay.

Discover for yourself the fresh wide-awake feeling Pebeco gives your mouth in the morning. That pleasant sense of fitness lasts for hours. The bedtime brushing renews the well-being of your mouth for the night.

Made by Pebeco, Inc., a division of Lehn & Fink Products Company. Sole distributors, Lehn & Fink, Inc., Bloomfield, N. J. Distributed in Canada by Lehn & Fink (Canada) Limited.

United States to which you can go without seeing there a result of some of the work of Burch Foraker as it was done in the New York Telephone Company."

A snowstorm swept Long Island, disrupting telephone service there. Foraker and his men broke records in cleaning up the mess. Service was restored where Foraker was in command almost before some districts had started work.

"How did you do such a quick job?" Foraker was asked.

"By not asking first how to do it," he replied. "We began work on the spot, the first spot we came to. While doing that, we saw what next should be done. It's easy to see what must be done next if you are already doing something; but it's hard to see what to do first if you're doing nothing. We would have lost a day down there if we had tried to figure out in advance how the job should be done.

"That rule holds good anywhere," he explained. "A young man wonders what he should do in life. Let him tackle the first job in sight, and *then* look around! You wonder how you can improve yourself. Begin by improving the thing that you are doing at the moment! It is all right to plan ahead. Every person thinks best, and sees best, and plans best when the hands are busy."

We were talking of promotion and of the things that make for leadership. Mr. Foraker had just said that the surest way to promotion was to do well the task at hand, to learn it thoroughly.

"But isn't it well too," I asked, "to learn something of the job up ahead, so you won't be entirely unprepared for it?"

"If you really know the job you've got, you're prepared for anything within striking distance of it," he answered. "All work has a common denominator. The numerator is all that changes, which means you simply must master another part of the same unit. If you have learned how to master one part, you'll easily master the next in order."

He continued in his analysis of leadership:

"ONCE I was trying to tell a group of men how to be better foremen. I had talked for an hour when, suddenly, something prompted me to stop. The first of the men was a strapping big Hebrew, square, rough, and a driver. Next to him sat a little Italian, smooth, smiling, and excitable. By the Italian was a slow, plugging, easy-going chap who had six youngsters at home. The next man was quiet and sober of face; the next, jolly; and so it went down the line. No two men there were alike.

"I had been telling them how to be fair to their men. Now I asked myself: 'Have any two of these men the same conception of what is fair?' Would fairness to the big Hebrew be fairness to the Italian or vice versa? I doubted it. Yet each man, according to his conception, would be right! And here I, different from all of them, had been asking them to discard their own ideas on fairness and to accept mine. I had been advising them, not to be themselves but to imitate me.

"'Forget all that I've said,' I told them finally. 'The quicker you forget it the better. If you really want to become first-rate foremen you'll do it, and each man will do it in *his* way, not mine. All I can give you are three fundamentals: Be fair; be honest, and know your job! That's all!'

"The common denominator of work," Mr. Foraker added, "is made up of the old, old rules we all know but don't always put into practice. I've yet to hear of a poor foreman who made a good superintendent."

The war had just ended when Foraker became plant superintendent of the Bronx-Manhattan-Westchester District, which embraces the most important boroughs of New York City. The company had just started the installation of the new dial telephone, and was committed to this improvement. Entire central offices had to be changed over into the machine-switching equipment. Men, from the top of the organization to the bottom, had to be trained in entirely new methods.

A large part of this task fell on Foraker. He had scarcely got started in it when there came the tremendous boom in business that followed the war. Overnight, thousands demanded additional telephone service. New buildings, new businesses, demanded telephones at once. It was a crisis unprecedented in the company.

Most of us think, when we order a telephone, that it is a simple matter of putting an instrument into the house and hooking it up with existing wires. It usually is, because the telephone company has planned and built *two years ahead* purposely to take care of new subscribers to its service. There is the necessity of central offices, underground cables, overhead wire systems, switchboards, and what not, that all are connected up with our telephone. So, when new telephones are ordered by the thousands, it means new buildings, new lines, and expenditures of millions of dollars. The equivalent of a whole new city telephone plant had to be built in New York following the war.

Foraker had two thousand men. This force had to be increased to seventy-three hundred. The old men, as well as every new man he hired, had to be specially trained, for dial switching was a brand-new thing. The new men had to be taught highly technical work, and taught it in a fraction of the usual time for training. And, to cap it all, this great force of men had to be assembled in the face of a serious labor shortage.

Foraker got the men. He trained them. They went to school for him after working hours, on their own time, without additional pay. They did this, thousands of them, when they could have gone to other jobs at higher wages than Foraker could pay. And the only thing that brought the men to Foraker was his reputation as an employer. For a quarter of a century he had been "treating his men right." He had been treating the fellows right in the job line. Not always had they got a job from him, but they had "seen the boss himself," and had gone away saying kindly things of him.

THIS led to Foraker's promotion to general manager of the up-state district, with headquarters at Albany. This district included all of the New York company's territory outside of the New York City districts proper, and Long Island. At company headquarters in New York, somebody proposed that a dinner be given Foraker as a sort of testimonial.

"He helped me into my job," said the executive who, until Foraker's promotion to Albany, had been his superior. "About thirty of us will get together and give him the surprise of his life. We'll make it an intimate, personal tribute to Burch from some of the men whom he has helped."

But while this little group in headquarters was arranging its dinner, down in the splicing gang where Foraker had worked as a youngster, a second group likewise planned a dinner. It, too, was to be "intimate and personal"—a "surprise to the old boss."

And then in the ranks of the installation crew, somebody planned another dinner. The linemen, the testers, the supply yards gang, each in turn began to arrange a dinner, and as the news of Foraker's promotion went out, in its wake followed plans for many more dinners.

In the plant department of Foraker's old district in New York City were those seventy-three hundred men he had hired and trained. Somewhere a workman suggested: "We ought to chip in and make Mr. Foraker a present." Simultaneously, it seemed, a thousand other men had the same thought.

Subscription lists appeared—out on the road among the construction gangs, underground among the cable workers, inside where men worked at complicated switchboards, in offices. Grimy hands and clean hands, soft hands and calloused hands, kept adding names and yet more names.

AND then an executive, stumbling onto the truth, brought to an astonished headquarters the news: "There are twenty or more dinners being planned in Foraker's honor, most of them for the same night. The plant department is taking up a collection to buy him a present. And they're subscribing ten dollars apiece!"

It was true. Apart from the dinners, a fund that promised to be in excess of fifty thousand dollars was being raised by the men. They were talking of buying "the old boss" a mansion.

"The only way we could stop the thing," a company official told me, "was by an order from headquarters limiting each man's subscription to twenty-five cents."

The dinners had to be canceled, and what amounted to an official function was inaugurated. The president of the company was toastmaster. His executive staff and the highest officers of the telephone industry sat at his right and left, facing a huge banquet hall that was filled to the doors with the men who represented thousands unable to get in. One after another they paid their tribute to Burch Foraker—such men as Bancroft Gherardi, E. S. Bloom, J. S. McCulloh, and other leaders. The men, who would have given him a fortune if left to their own dictates, presented Mrs. Foraker with a solid silver dinner service. Nothing of the kind had ever happened before in the company's history.

Burch Foraker didn't stay long at Albany. He had been there as general manager only four months when a president was needed out in Michigan. Detroit demanded the Bell System's "best available man."

And Foraker was named as that man!

Milk—the Builder

Each of these foods has its own value. The comparison is only for "energy value" —the property which gives the body strength and power to carry on its activities.

FROM the moment baby's eyes open upon a strange world his demand is for food—food that will build a sturdy body and help him grow. Nature provides milk for his needs. In milk are found in right proportion all the many kinds of food required in the business of body-building. Throughout babyhood and youth the elements contained in milk are essential to sound growth.

As a general rule, milk should not be regarded as a beverage to be taken when thirsty, like water. It is a food and should be sipped (eaten) slowly. In milk are found a greater number of the materials required by the body than in any other one food.

Milk contains minerals from which the bones and teeth are made, elements which produce strong muscles—as well as vitamins to assist growth and to ward off disease. There is no part of the body which it does not nourish.

The boys and girls who have milk regularly all through childhood have a better foundation of health—more rugged bodies to carry them through life—than those who have little or no milk. They will have more reserve strength with which to fight illness.

A quart of milk a day, in some form, should be the rule for every child all through the growing period. A few children have a real or imagined aversion to milk. But even with them, the doctor may find that they can take it and enjoy it if served as cocoa or in soups, sauces, custards, puddings, or frozen desserts.

Encourage your boys and girls to appreciate milk. Make them understand that for most people it is the finest all-around food in the world. Tell them what it will do for their bodies. Children love games. Teach them the game of body-building. Protein "bricks" for strong muscles; lime "bricks" for bones and teeth; milk sugar "bricks" and fat "bricks" for energy and warmth. All these and other building materials in milk.

Not only is milk a builder—it is a repairer, as well. That is why it is important that adults also should have a regular supply—not so much as children—but a glass or two a day or the equivalent amount served with other foods. Milk is a great help to men and women who want to keep strong, vigorous and youthful. But remember that milk has so much food value that when added to the diet a smaller quantity of other foods may be sufficient.

To take milk regularly is the surest and easiest way of making certain that you give your body the variety of food materials it needs to keep you in good physical condition.

Give milk to the children and—take it yourself.

The Metropolitan Life Insurance Company wishes to emphasize the importance of getting clean milk and keeping it clean after it reaches the home. Much of the difficulty in bringing babies safely through their second summer comes from the dangers which lie in impure milk or milk improperly cared for—milk left uncovered or without sufficient ice-protection.

Find out whether or not the milk you buy comes from a dairy where every scientific precaution has been used to keep the milk free from contamination—from the time of milking to its delivery.

Many of the great dairies, realizing the difficulties of safeguarding every bottle of milk during the hours in transit, take no chances and pasteurize it. Many cities and towns demand that practically all milk must be pasteurized. In some cities special certificates of quality are issued upon convincing evidence of clean and safe handling and the testing of cattle for tuberculosis. Dairies which have such recognition are glad to show copies of dairy reports upon which their special certificates are issued.

If your milk supply is not pasteurized or certified, it is advisable that you pasteurize your milk at home. Complete and simple directions together with other valuable information will be found in our booklet, 88-A, "All About Milk". It will be mailed free upon request to the Booklet Department, Metropolitan Life Insurance Company, 1 Madison Avenue, New York City.

The Sting of the Wasp

(*Continued from page 21*)

"Not many people in America have," said Matthew Kelton, looking, not at the captain, but at Guy Oakley. "And that's fortunate too. I doubt if there are a dozen weapons of this particular sort in the entire country. They are the invention of a German and are, or rather were, made in Czechoslovakia. The police prohibited their manufacture after about a hundred had been placed on the market. They are tiny, single-shot pistols of .25 caliber, so small they can easily be carried in a vest pocket.

"The inventor, who had a macabre sense of humor, called his pistol 'the murderess,' because it was so convenient for homicidally inclined ladies to carry in a hand bag. It looks like a toy—but it was with such a toy that poor Cope was killed."

ABRUPTLY Matthew Kelton said to Oakley. "Do you own a Skomak pistol?"

The banker's jaw tightened. "I do."

"Where is it?"

"In the top drawer of my dresser."

"Loaded?"

"Yes; I keep it loaded."

"Did you have it to-night?"

"I did not."

"When did you last see it?"

"I don't remember—exactly. I got it from a New York importing firm several months ago. I practiced target shooting with it on several occasions. It was rather inaccurate at more than about twenty feet. I loaded it, and put it in a small drawer of my dresser, and have had no occasion to take it out since then."

"Then it should be there now."

"Yes."

"Loaded?"

"I'm certain of that."

"What about your other pistol?"

"That is an ordinary, five-shot automatic of a well-known American make. It is in the hip pocket of the gray suit hanging in my closet."

"Sergeant Lester," said Matthew Kelton, "will you please go up to Mr. Oakley's room and bring back both guns?"

"Yes, Mr. Kelton."

"Let's see, now," said Matthew Kelton, "was Cope armed?"

"No," said Police Captain Lamotte. "Here is a list of the contents of his pockets: A gold watch and chain to one end of which is attached a cigarette lighter. A leather wallet containing nothing but some visiting cards, and forty-two dollars in bills. A white silk handkerchief, with his initials, L. C., on it. A flat pigskin cigarette case, containing four cigarettes. A small paper bag, containing what appears to be raw beefsteak cut into cubes about the size of lumps of sugar—"

"Well, I'm dashed!" exclaimed Matthew Kelton, his eyes brightening. "There's some puzzle here. Let me look at this odd exhibit."

He peered into the paper bag.

"Now, why," he said, "should a well-to-do gentleman like Cope carry a bag of bits of meat in the pocket of his dinner coat?"

"You've got me there," said the police captain.

"Anything else in his pockets?"

"No. Wait a bit. Sergeant Lester did pick up something that must have fallen from Cope's pocket. Here it is."

He handed a small object to Matthew Kelton. It was a black pearl stud, set in platinum.

Quickly Kelton bent over and stared at the body.

"It's not Cope's," he announced. "His studs are plain gold, and they are all in place. He wheeled 'round to Guy Oakley, and thrust the black pearl stud under his eyes.

"Is this yours?" Kelton shot at him.

The banker looked at it with wide eyes. "Yes. That's mine."

"How do you explain its presence here?"

"I can't."

Sergeant Lester came hurrying up.

"Here are the two pistols, Mr. Kelton," he said.

Swiftly Matthew Kelton snapped the safety catch off the automatic, and looked into the magazine. It was full. Then he took the small Skomak pistol, opened it, examined the chamber. The brass butt of a cartridge could be seen. He shook the cartridge out into his hand, and whistled. It had been fired.

Guy Oakley cried wildly, "I tell you it was loaded when last I saw it!"

"It isn't loaded now," said Matthew Kelton grimly. . . . "Great Scott, what is that?"

FROM the woods came a cry—a long-drawn, moaning, eerie sound. They all started.

Then Evan Turner laughed.

"It's an owl—one of those big horned fellows. The woods around here are full of them this time of year. What a racket he is kicking up! Some night animal, perhaps a lynx, has got hold of him, I suppose."

The owl uttered a series of agonized cries. They stopped, abruptly.

"Another tragedy," muttered Turner.

Matthew Kelton said nothing. He was standing, silent, and his face wore a look of the utmost concentration.

"Imagination," he said.

"What?"

"Nothing. Sergeant Lester?"

"Yes, sir?"

"You made a careful examination of the ground around Cope's body?"

"Every inch of it, within a radius of ten yards or more," the sergeant answered.

"And found nothing?"

"Only that stud."

"How tall, Doctor Ussher, do you think Cope is?"

"Well over six feet."

Matthew Kelton called Police Captain Lamotte to one side.

"Captain," he said, "as a favor to me, I'm going to ask you not to place Mr. Oakley under arrest until to-morrow. Keep him confined to his house, and watch the house. But don't arrest him."

"You don't mean he isn't guilty?" demanded the policeman. "Why, there's enough evidence against him to swing a couple of men!"

"Granted. If he is guilty, he'll be just as guilty to-morrow as he is to-night. If you don't hear from me by five to-morrow afternoon, arrest him."

"It's taking a chance," the police captain said.

"I'll answer for him," said Matthew Kelton.

"Well," said Captain Lamotte, "you've helped me out a lot of times, and you've never let me down yet. I'll do what you want. But—look here—you've got some theory. What is it?"

Matthew Kelton smiled. "I wouldn't call it a theory," he said. "It's a flight of fancy, a wild, wild speculation. If I told you, you'd think I'd been hitting the hop pipe. Wait till to-morrow!"

He turned to the others.

"I'm going home now," Matthew Kelton said, "and finish my cryptogram. It's a corker."

"Can you hold out any hope?" asked Evan Turner.

"Only a shadow, Evan, I'm afraid. Come to my house to-morrow morning at ten. You'll find me out in my apiary, thinking. The presence of bees always helps me think. Good night."

EVAN TURNER found Matthew Kelton in the apiary in the garden of his house next morning, sitting on a stool, watching the bees.

"Morning, Evan," said Kelton. "Bees are most interesting people. Spiders, too. I find them a great help in some of my problems. Sometimes, when I have a problem in human conduct, I reduce it to terms of bees or spiders. In the insect world you'll often find the little fellows acting very much as their larger relations, men, act.

"Take certain lady spiders, for example. Invariably, they eat their husbands. The poor husbands appear to know what fate is in store for them if they go a-courting; but love conquers all, and the gallant little Romeo goes to his rendezvous, and presently serves as a breakfast for his Juliet.

"I watched such a performance last spring, and it suggested a line, by following which, I was able to clear up the bizarre case of Mrs. Marlton and her three poisoned husbands. Now the irrational, but rather human conduct of a certain species of wasp—"

"Matthew," interrupted Evan Turner, nervously, "it's after ten. Let's discuss the ways of wasps some other time. Oakley's life is at stake."

"As I was saying," went on Matthew Kelton calmly, "the conduct of a wasp I witnessed just before you arrived gave me a hint which may be the means of saving Oakley from the gallows."

"What do you mean?"

"I'm not going to tell you, Evan," answered Matthew Kelton, with a smile, "I'm going to try to show you. There's a very strong chance I'm entirely wrong. I

Unspoken Tributes

EVER SINCE GIRLHOOD

to the charm of her lustrous teeth

Miss Maryland Lee, when a tiny girl twenty years ago, began keeping her teeth clean with Colgate's. The large picture above shows Miss Lee's flashing teeth today.

AND now the clear, white teeth that lend her face its radiance are the envy of her friends.

"After all, I have done just what anyone else can do," Miss Lee tells us. "Every six months I have gone to my dentist for examination, and I have made it a rule of my life to brush my teeth vigorously twice each day with Colgate's—the dental cream that cleanses."

In this country, and in foreign countries the world over, you will find thousands and thousands of men and women like Miss Lee. Because they began using Colgate's ten, fifteen, even twenty years ago, their teeth are exceptionally sound and beautiful today.

There is nothing mysterious about these enviable results. These people did nothing that you cannot easily do yourself. They visited their dentists for periodic inspections. And they used Colgate's Ribbon Dental Cream.

In such a vital matter as the care of your teeth, could there be any safer guide than the actual experiences of thousands of people like yourself?

Also, wouldn't it be an immense satisfaction to know that the dentifrice you were using was the one which dentists recommend most frequently?

So, for lovely teeth . . . for teeth that make your smile the asset that it should be . . . ask your druggist today for Colgate's.

CLEAN

Years ago we set out to make the best dentifrice possible. We interviewed leading dental authorities. They told us that the one thing a dentifrice should do is to clean teeth. We then produced Ribbon Dental Cream—designing it to do that one thing superlatively well. It is not medicated, because all experiments in the meantime have sustained the original principle that cleansing is the only thing a dentifrice can do.

Colgate & Co., Dept. 201-H, 595 Fifth Ave., N. Y. FREE

MEN FEEL

the difference Instantly

When beards are softened Small-Bubble Way

Many men do this! Read advertisements like this . . . then buy Colgate's

Now whiskers come off smooth and quick. No razor-pull . . sting . . or smart. Try this scientific beard-softening method at our expense. See coupon below.

A STUBBORN beard. A good razor. Just a half-inch of this "small-bubble" shaving cream . . . and any man can learn the secret of a quick, smooth shave in three minutes.

The reason? It's very simple. Just a new and different method of beard-softening.

Small Bubbles did it

No other shaving cream is like Colgate's. It is, we believe, the ultimate attainment in the science of beard-softening. A shaving cream based on the now proven principle that water, and not soap, is the real beard-softener.

Thus Colgate lather is designed to absorb more water . . . to drench your beard with moisture at the whisker base, where the razor work is done. That's the principle, men. Now here's what it does for you:

1. The soap in the lather breaks up the oil film that covers each hair . . . floats it quickly away.

2. Then billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Thus your whiskers come off clean and smooth. No razor-pull. No stinging and smarting.

Ordinary Lather

Photomicrograph of lather of an ordinary shaving cream surrounding single hair. Large dark spots are air—white areas are water. Note how the large bubbles hold air instead of water against the beard.

Colgate Lather

Photomicrograph prepared under identical conditions shows fine, closely knit texture of Colgate's Rapid-Shave Cream lather. Note how the small bubbles hold water instead of air close against the beard.

FREE OFFER, *MEN!* Colgate & Co., *Dept. 501 H*, 595 Fifth Ave., New York

Please send me FREE sample of Colgate's Rapid-Shave Cream. Also sample of Colgate's "After-Shave."

have gone about the matter in a quite illogical way. I have started with a fantastic theory. Now I must look for hard, concrete facts to back it up. I think I'll take my friend the wasp along with me, for good luck."

Matthew Kelton picked up a specimen card to which was pinned a large wasp. He put it in his pocket.

"Let's be on our way, Evan," he said.

"Where?"

"To Lewis Cope's house."

"What for?"

"Facts," said Matthew Kelton. "We need them."

"Cope lived in a small house on the edge of Briarly Forest," Evan Turner said. "For the last three or four years he was a recluse; practically, a hermit."

"Solitude," observed Matthew Kelton, as they started away in his car, "is dangerous for men with brooding minds."

HE SAID nothing more until they found the house of Lewis Cope, a plain stone box of a place at the end of a lane. Not near any other human habitation.

"Hardly a cheerful place," said Kelton, getting out of his car.

"What do you expect to find here, Matthew?" questioned Evan Turner.

"I'd not be astonished and, indeed, I'd be rather pleased," answered Matthew Kelton, "if I were to find a mouse trap."

The house was deserted. The front door was locked, but the lock soon succumbed to Matthew Kelton's skeleton key, and the two men entered.

The house was simply furnished, and for a man Cope had been a fairly neat housekeeper.

"Let's see what he read," said Kelton, glancing about the living-room. "A man is what he reads, you know."

He shook his head as he looked at the small bookcase. Lewis Cope's library consisted of an old set of the works of Poe, and a fairly new encyclopedia of ornithology in four volumes.

"Queer combination," said Matthew Kelton. "Significant, too. It's a bad sign, Evan, when a man lives all alone, and hasn't a large library."

He wandered out toward the kitchen. A faint, squeaking sound was heard, coming from a small pantry. Matthew Kelton smiled. He pushed open the door, and pointed. There in a corner was a large, old-fashioned mouse trap, of the wire maze type, and it held three live and frightened prisoners. Matthew Kelton set them free and they scampered away.

"So far, so good," he remarked. "Now, for a hasty look at the woodshed, and we're finished here."

He stopped in the kitchen long enough to rummage about in an odds-and-ends drawer. He pounced on something there, took it out, put it in his pocket. The mystified Turner saw that it was nothing more exciting than a small ball of light but strong twine.

Lewis Cope had devoted some of his solitude to sawing wood. It was arranged in neat piles in the shed.

"Nothing here," said Turner.

"No?"

"I don't see a thing but some wood, an ax, a saw, a chopping block, a few rakes and hoes, and an old parrot cage."

Matthew Kelton, humming to himself, was gazing at the cage.

Announcing

THE NEW FRANKLIN

AIRMAN LIMITED

introducing a wholly new vogue of

Luxurious Fast Travel

FRANKLIN has stolen a march on the entire motor world! The Airman Limited inaugurates an era of luxurious interiors which have been no more than hinted at by the built-to-order motor cars exhibited in recent American and European Custom Salons.

To a long-established supremacy in motor performance and riding comfort—to a beauty of body lines already copied by half the motor world—Franklin now adds undisputed leadership in *interior* style and luxury. No listing of the many new features can give an adequate picture of the Airman Limited.

The car must be seen and driven—then you will know the meaning of LUXURIOUS FAST TRAVEL. No single automotive development of recent years holds such significance. We predict that no other manufacturer will be able to duplicate these interiors *for three years*—if ever. Franklin alone has the facilities for this important step—the one motor car builder who has never sacrificed quality to price or profit. . . . . For a quarter century the Franklin has been built specifically for comfortable and long-sustained high speed. In these new models, the increased motor compression achieves still greater responsiveness. And a new perfection of the famous spring suspension brings riding comfort surpassing all previous standards of this renowned Franklin feature. Throughout the car, quality has been added to quality—performance to performance.

The *complete enjoyment* of a motor car, as now afforded by the Airman Limited, establishes an entirely new conception of values, which must inevitably benefit every automobile owner.

This new precaution helps guard thousands from common maladies

HOW many men and women there are who linger on the borderland of perfect health—who suffer from various minor discomforts!

Some of them, it is now believed, can be helped by taking a new, simple precaution. Thousands of men and women are already using it to aid in protecting themselves against several common maladies. They are profiting by a remarkable discovery about Japan green tea.

A health-giving property that is entirely absent from most of the foods we eat, has been recently found by scientists in our familiar Japan green tea.

Countless people, scientists now believe, are suffering from minor ailments, merely because their daily meals do not give them enough of this all-important element —Vitamin C.

"Observations during the World War," writes one of the country's foremost scientists, "and my recollection of specific cases, all combine to suggest that *much of the so-called rheumatism which afflicts such a large part of our people* is due, at least in large part, to the use of diet too poor in Vitamin C. The symptoms are a *sallow, muddy complexion, loss of energy, fleeting pains in the limbs, usually mistaken for rheumatism.*"

In the leaves of simple Japan green tea, scientists have found a rich store of the precious Vitamin C

Entirely lacking in most foods

Only a small number of foods aside from Japan green tea—spinach and a few fruits and vegetables—contain this food element.

That is why so many men and women are delighted with this new revelation of science—the richness in Vitamin C of that old favorite drink, Japan green tea.

For that "tired feeling," for sallow skin, for so-called "rheumatic" pains, they are doing this simple thing: drinking Japan green tea regularly at lunch, at supper, in the afternoon. Start this health-building habit yourself. Take advantage of the rich supply of precious Vitamin C, in fragrant cups of Japan green tea. In a few weeks you will probably feel and look more vigorous—more joyously alive. Whenever you drink tea, be sure it is *Japan green tea.* Grocers have it in several grades, at different prices under well known brand names. American-Japanese Tea Committee, 782 Wrigley Building, Chicago.

"What do you make of it?" he asked the lawyer.

"I deduce," said Turner, with mock seriousness, "that at one time Cope, in common with many other people who live alone, kept a pet parrot. I further deduce that at some time the bird died or escaped, so he put the cage out here."

"Anything else?"

"I am unable, with the data at hand, to determine the age, sex, or name of the parrot," said Turner.

"Look at the condition of the cage," said Matthew Kelton. "Look at those small red stains. Go on, deduce some more."

Evan Turner surveyed the cage more closely.

"Offhand," he said, "I'd say that Polly met a violent death, and within the past two days. Possibly she said something Cope didn't like, and in a fit of temper he wrung her neck."

All Matthew Kelton said was: "The face of a man, even in death, tells you things about him. Now, I didn't think Cope looked like a man given to uncontrolled outbursts of emotion. He seemed to me to be of the type which has strong, hot passions, but a cold brain which guides them. Come, we must be going."

"Where now?"

"I have an engagement with some friends of mine," said Matthew Kelton, "at the main gate to Oakley's estate."

AS THE car drew near the house of Guy Oakley, Evan Turner saw a dozen figures in khaki sitting on the wall near the gate. They sprang to attention as Matthew Kelton stopped his car.

"Boy Scouts," said Evan Turner.

"Fox Troop," said Matthew Kelton. "I'm their patron saint."

He got out of the car, and the Scouts gathered about him. Turner saw him talking to them, gesturing, and saw them listening with respectful attention. Then the Scouts trotted away into the woods which bordered the Oakley estate.

Matthew Kelton and the lawyer made their way to the spot beside the main drive where Cope's body had been found.

"If my reasoning is sound," Matthew Kelton said, "and I have rare good luck, we'll know something very soon now. While we're waiting, perhaps you'll let me say a few more words about wasps."

"I'm completely at sea, Matthew," said Evan Turner. "I haven't the least idea what you're getting at. Wasps, mouse traps, empty bird cages, Boy Scouts—now wasps again."

"I'm sane, or almost so," said Matthew Kelton, with a chuckle. "You see, Evan, the scheme of human existence is made up of a myriad of small, trifling things, each unimportant, perhaps, but all necessary to make the complete pattern. We'll start with the wasp."

He took the dead insect out of his pocket.

"This misguided creature strayed into my apiary to-day," he said, "and as I did not want him there, I cornered him, and took him in my hand to eject him. He flew into a rage and stung me. I was wearing gloves, fortunately. Presently, he died; but I did not kill him. He belongs to that species which can sting but once, and then dies as the result of stinging.

"Now, he knew this. Insects have curi-

What is due the public

An Advertisement of the
American Telephone and Telegraph Company

THE Bell System recognizes the public requirement for a constantly extending and improving telephone service. Last year 4 million telephones were either put in or moved. The number of local calls not completed on the first attempt was reduced by 5 per cent. The average time for handling toll and long distance calls was reduced from 2 minutes to 1½ minutes.

During the last 5 years the Bell System spent $1,800,000,000 on additions, and improvements of its plant.

There is equally a public requirement for safety of principal and earnings of the stock of the American Telephone and Telegraph Company — the parent company of the Bell System. Since its incorporation in 1885 it has never missed paying a regular dividend to its stockholders, who now number more than 420,000.

The very nature of the telephone business necessitates a single interconnected system. The American Telephone and Telegraph Company accepts its responsibility for a nation-wide telephone service as a public trust. It is fundamental in the policy of the company that all earnings after regular dividends and a surplus for financial security be used to give more and better service to the public.

They'll both neglect it ... *unless*

These men of yours may think it a little feminine to bother about their hair . . . men usually *do* think so until hair begins to thin, or dandruff appears.

But there is one tactful way of starting them on the road to good hair-habits now—have on hand, for constant use, one of the three Packer shampoos: Packer's Tar Soap, Packer's Pine Tar Shampoo, or Packer's Olive Oil Shampoo.

Regular Packer Shampoos are the safest, surest road we know to healthy hair—and we have been studying the care of the hair for 55 years. Into these soaps go ingredients especially selected for their benefits to the scalp—bland glycerine, stimulating pine tar, imported olive oil. Each ingredient is the finest and purest of its kind.

Outdoor health for a sleepy scalp

Men usually prefer the tar soap with its clean tang of pine woods. The generous snow-white lather encourages them to massage well into the scalp the outdoor health of pure pine tar which is so helpful to dandruff. They like the waked-up feeling, the glow of health a Packer shampoo gives. And who wouldn't?

Quicker and easier

Let the children try one of the liquid shampoos. See how quickly they pile up billows of lather . . . how easily they rinse away every trace of soap. Notice how soft and silky and shining their hair becomes.

Even one shampoo with Packer's makes your hair more attractive. And regular Packer shampoos keep your hair healthy and bright and vital. Read the offer below and start your own and your family's hair off to healthier, better habits now.

Send for sample. Send 10c for sample of one of these three Packer Shampoos (specify which one) and our new 28-page book on hair health, the care of dry hair, oily hair, dandruff, etc. Address The Packer Mfg. Company, Inc., Dept. 6-H, Box 85, G. P. O., New York, N. Y.

ously developed instincts, as, for example, the husband spider, who knows in advance that if he makes love to a lady of his species he is sure to be eaten by her. This wasp, I feel sure, knew that to sting me meant death to him. But his hate was stronger than his sense. Some *men* are like that, Evan."

"What are you suggesting?"

"Samson pulled down the temple on his enemies, even though he had to crush himself in doing it. Love, my dear Evan, is strong. But there is nothing stronger in life than a good, deep-seated, robust hate. Now let's take a quick review of our case. Cope hated Oakley. Cope lived alone, and brooded. Cope had a hundred chances to shoot Oakley down in the past few years—and didn't do it.

"Why? Because Cope was both cruel and cunning. He wanted to punish Oakley; not merely kill him, but torture him. So the warped mind of Cope worked out a really brilliant scheme. Cope knew that he himself was doomed, that he would die from his disease within a year. It would be small satisfaction to murder Oakley, even if he could do it and escape detection, since Cope himself must soon follow his victim. So Cope decided that he would die, and die in such a way that Oakley would be convicted and hung for his murder—as diabolic a revenge as I ever heard of.

"COPE worked out his plan in minute and careful detail. He was the burglar who visited Oakley's house. He took the plate and jewelry for a blind. His real object was to get hold of Oakley's gun, and fire it, so that when it was found, there'd be an empty cartridge in it. Taking the black pearl stud was probably an inspiration. It would be just one more damning bit of evidence against Oakley when it was found near Cope's body.

"Then Cope picked an evening when he knew Oakley was home and alone. He may even have had the hope that Oakley would actually kill him. Oakley didn't; but Cope provoked him to shout threats and angry words, which the butler heard. Then Cope left the house when he heard the butler shaking the furnace, and shot himself a few yards from Oakley's door, with a pistol exactly like Oakley's.

"The case against Oakley was perfect. Any dumb district attorney, with such evidence, could hang Oakley. You felt that way yourself, Evan. I, myself, at first saw no chance for Oakley to clear himself. Cope had certainly put a noose around his hated enemy's neck. I only looked further into the case to please you—and because I was puzzled by a problem in psychology, namely: Was it possible for a careful, shrewd man like Oakley to commit so stupid and unplanned a crime."

"It's an interesting theory, Matthew," said the lawyer, despondently, "but it doesn't wash. It fits into Cope's character—but, one point you can't theorize away: What became of the pistol which killed Cope? Pistols do not vanish into thin air. No weapon was found near the body, as it surely would have been, if Cope had shot himself."

"That," said Matthew Kelton, "brings me to the most ingenious part of Cope's plan, a bit of real creative imagination, Evan. Do you remember the bag of bits of meat in his pocket?"

You're what I call a friend

OLD PIPE, we've pal'd around together for years. You've bucked me up when the other side was getting the breaks. And you've helped me celebrate when we were winning. In return, I've tried to give you a square deal, too. I've bought you the best tobacco I could get—Prince Albert.

You've never had to produce an alibi, Old Pipe, even when you were new and inexperienced. For Prince Albert has given me everything I want in a smoke. Fragrance . . . an aroma that never fails to thrill as I open the tidy red tin. Mildness . . . a genuine gentleness that is always kind and considerate.

Between the two of you, I am perfectly satisfied. I have traded experiment for experience. It's all settled. I don't even have to say "P. A.," except when I'm in a strange town. The man knows my brand. And he tells me that the P. A. fans are the great majority. We can understand that, *eh?*

This tin contains TWO full ounces of what every pipe needs.

PRINCE ALBERT

—no other tobacco is like it!

The lather's the thing—

MENNEN lather won't sharpen a dull razor, but it will soften the toughest, horniest beard that grows. And that's the most important part to any shave. For unless your beard is thoroughly and actually softened, the keenest razor is up against a stiff handicap. When the razor edge runs up against a partially soft beard it does one of two things. It either hurdles the hairs or hooks part way in, yanking and tugging painfully at the hair roots and nerves.

When your razor slides into Mennen lather it does just one thing. It shaves the beard off square, smooth and close at the skin surface without pulling or scraping. It's *dermutation* that does it—that special property in Mennen lather which completely softens the horny stiffening in every hair, while relaxing and smoothing out the tiny skin mounds at the base of the hair. No more nicking or scraping or rawness. No caustic to burn. No slapped, tight-drawn feeling when you're through. It takes only the addition of water—hard or soft, hot or cold—to put *dermutation* to work in the rich, heavy, moist bank of lather that rolls up under your brush without messy finger rubbing. What a difference *dermutation* makes! Five soothing emollients in Mennen lather cleanse and tone up the face, leaving it smooth and fit for hours to come. 50c a tube.

Also made Mentholized

There's a reviving coolness in a dash of menthol in your lather that's refreshing and luxurious. For those who revel in its brisk, tonic feel we now make Mennen Shaving Cream with and without menthol. To get the mentholized, ask your dealer for the Mennen tube with the red ball. Either tube—50c.

There's only one Mennen Talcum for Men!

It was the first Talcum for Men, made neutral tinted not to show. It's the only one they'll have, too. Tones down that after-shave glitter. 25c a tin. In stick form—50c.

"Yes."

"That was a clue. It caused me to hazard a fantastic guess—and I'm not sure yet I'm right. Yes—I am. Here comes one of my Boy Scouts on the run."

A bright-eyed boy came panting up, stopped, saluted.

"Well, Freddy?" said Matthew Kelton.

"Got it, sir," said the Scout.

"Take us there," directed Matthew Kelton, and he and the bewildered lawyer followed the Scout into the woods.

FIFTY yards in, the Scout stopped, and pointed. The eyes of the two men saw hanging from the lower branches of a pine tree the body of a giant horned owl, two feet tall, with talons the size of a man's hand. The owl had been killed, and partly devoured by some small nocturnal climbing animal. The bird had been unable to defend itself, because a piece of twine, tied about one of its legs, had become entangled in the branches.

"Climb up and carefully release the owl," said Matthew Kelton. The Scout shinned up the tree, and presently the bird fell at the feet of the men. A piece of twine about two feet long was attached to the foot of the dead owl, and at the other end of it was a small pistol.

"It's like Oakley's," cried Evan Turner.

"Exactly. It's a Skomak, a 'murderess'," said Matthew Kelton. "And, look, Evan. The cartridge has been fired. The bullet you have seen. It was the one which Cope fired into his own heart."

"But—how?"

Matthew Kelton held out the tiny weapon.

"See," he said, "it has a hair trigger. Goes off at a touch. Cope, who was very tall and had unusually long arms, as you may have noticed, held it at arm's length from his chest, and touched the trigger. The little pistol fell from his lifeless hand, and naturally the owl flew away, as Cope knew it would, with the pistol dangling from its foot."

Turner whistled.

"Cope," continued Matthew Kelton, "figured that the owl would head for the woods. There the pistol would be knocked off against a tree and be lost forever, or the owl would get entangled in a branch, and starve to death, or be killed, and in time the string would rot, and the pistol would drop down. Small chance of its ever being found in woods so little frequented."

"But how could Cope keep the owl quiet while he was shooting the pistol?"

"It must have been a tame owl," said Matthew Kelton. "Cope probably caught it when it was just out of the egg, and raised it for this very purpose. A methodical man, Cope. The owl was accustomed to him. He raised it on live mice. He kept it pacified last night by feeding it bits of meat. No doubt he tied it to a bush when he went in to interview Oakley."

Matthew Kelton sighed.

"Poor Cope!" he said. "Like the foolish wasp, he died for hate. I wonder if there will ever be a time when there is no hate in the world. Here, take the owl and the pistol, and go to the house and tell Oakley and the police the story. I'm going home to work on a new puzzle!"

WINNER OF HONORS at Aurora. C. E. Allen, jockey, receives the congratulations of the Misses Vera Maroz and Eva Strohm of Chicago. Whenever you see smiles like these there is but one explanation—Pepsodent.

MISS MURIEL WIES comes ashore from the Nancy Lee at Portsmouth. Hers is a smile seen often among social circles—its charm is partly due to Pepsodent—the scientific dentifrice that brightens teeth by removing dingy film.

Dazzling smiles are gained so easily

This special film-removing dentifrice is advised for twice-a-day use in cleansing teeth and combating the commoner tooth and gum disorders

MODERN dental research has thrown a new light on dull, "off-color" teeth and on many of the commoner tooth and gum disturbances. Both conditions now are largely charged to a stubborn film that forms on teeth. To a film ordinary brushing has failed to remove successfully.

For that reason, a new and essentially different way in tooth and gum care—the Special Film-Removing Dentifrice called Pepsodent—is being widely advised by dental authorities. *A tooth paste different* in formula and action from any other dentifrice. Dentists widely urge its use at least twice each day—*every day*.

By running your tongue across your teeth, you can feel that film—a slippery, viscous coating. Film clings to teeth and stays. It absorbs food and nicotine stains, and makes teeth look dull and clouded. It supplies a breeding place for the germs of decay. Film, also, is the basis of tartar. And tartar, with germs, is a cause of pyorrhea.

Pepsodent removes that film in gentle protection of the enamel, giving teeth thorough cleanliness and high lustre. It aids in firming tender gums in accordance with the latest scientific findings. It increases the alkalinity of saliva and thus combats acids of decay.

Teeth lighten as dull film coats go. Gums harden and take on healthy coral color. You note a marked difference in both teeth and gums. Please get a tube at your druggist—only a few cents—or write to nearest address below for free 10-day supply.

The Pepsodent Co., 1104 S. Wabash Ave., Chicago, Ill., U. S. A.; 191 George St., *Toronto* 2, Ont., Can.; 42 Southwark Bridge Rd., *London*, S. E. 1, Eng.; (Australia), Ltd., 72 Wentworth Ave., *Sydney*, N. S. W.

COMPARE *the tread under pressure in the picture below with the tread at the left.*

BENEATH *the plate glass is a Silvertown "in action"—here you see the tread as it would look in that fleeting instant when it rushes against the road.*

By this easy test

—you can see why Silvertowns are making new mileage records!

LOOK through the plate glass and see how the grooves can close up under pressure—easily, smoothly, without harmful tread distortion.

Then glance at the edges of the tread—the shoulders—and see how those heavy safety blocks come against the road with full, firm contact.

Perhaps this does not seem so important. But remember, what you see here happens close to 300 times a minute when you drive 30 miles an hour.

That is why the balloon tread, to be successful, must have a flexible center. It is the reason Goodrich Silvertowns have proved so remarkably free from uneven, choppy tread wear. They give your car comfort, safety, silent traction and smart appearance, combined with true economy.

A Roughneck's Religion

(*Continued from page 17*)

overtook them; and in their converting so many thousands to their sublime Faith.

But He chose a "scratch lot," from almost the dregs. This unpromising raw material, He fashioned at last into martyrs and saints. To me, this was one of His greatest miracles; and it shows me that the religion of Roughnecks, even then, was infinitely greater than was that of the Intellectuals.

Of Christ, Himself, most of us have the wrong physical idea. He is often pictured as thin and puny and with an almost womanish face, and ascetic features and weakly, dreamy eyes. Such a character could never have won the adoration of the Roughnecks. Let us look at some of the things He did—the physical things—and see what a mistaken idea we have had of him.

I lived for some time in Syria, as a very young man. In my youth, the back-country villages of Palestine were in most respects as they had been for thousands of years. I used to watch the carpenters of Nazareth at work in their primitive shops. They had no modern tools. Wood must be hewed or sawed or shaped as it was done in Christ's day. In other words, a carpenter must be a man of mighty physical strength and endurance in order to wield the cumbrous tools and lift the heavy timbers with which he worked. It was no trade for a weakling.

Again, I used to try to duplicate His daily journeys from place to place, as the Bible outlines their course to us. I was an athlete and well shod. Moreover, there were somewhat better roads and trails than in His day. Yet, strong and vigorous and young as I was, I could seldom equal His pedestrian records.

IT WAS these things, I believe, among others—this mighty strength and endurance and courage, coupled with the true Strong Man's tender gentleness toward the weak and afflicted, and His rare good-fellowship with those who mourned or who feasted and made merry—it was these things, I believe, which drew the Roughnecks to Him, and made them adore Him. The Roughnecks—yes, and the little children.

He preached for us Roughnecks—for the Common People who "heard him gladly"—for the minds which are more concerned with the core of a thought than in muffling it in shimmeringly complex verbiage.

The mighty body and the skilled endurance which had carried Christ through the close-packed homicidal mob at the cliff-edge above Nazareth could well have carried Him through the straggly little group of sacerdotal servants and petty officials who came upon Him, led by Judas, as He prayed by night in the Garden of Gethsemane. Such a veteran woodsman and mountaineer could readily have made His escape through the darkness of the Garden's olive-tree tangles. And it is what a mere *man* would have done.

He could have got away with ease, and

No need now to WAIT *for* Sunshine

Even on Cloudy Days you can get good, clear Snapshots with the Modern Kodak

HAVE you ever been all ready to click the shutter and then seen a cloud suddenly cover the sun? Do you have to wait when this happens, knowing that unless you have more light your picture won't come out the way you want it?

How many times do you discover your children, or friends, in poses that just cry for a snapshot, only to realize that it's too early in the morning, or too late in the afternoon, or that the weather's too dull and cloudy to permit a good result?

Much faster lenses now supplied

You no longer need put up with these annoying disappointments. Simply provide yourself with a Modern Kodak and notice how much more successful you become in getting good pictures.

The Modern Kodak contains many important improvements, but chief among them is the increased speed of the lens on models of moderate price. Now you are able to make excellent snapshots under light conditions that heretofore have spelled certain failure.

One instance is the lens of the $20 1A Pocket Kodak. To get that same lens in 1925 you would have had to buy a $40 camera, at least.

Simpler than ever—more convenient, too

We urge you to examine one of the new Kodaks and note its wonderful simplicity. Note how smoothly and easily you pull out the lens and how quickly you can set your focus.

Then look at the remarkable new Exposure Guide which you will find on many of the Modern Kodaks. Conveniently, below the lens, are specific instructions as to the correct speed and lens opening. Chances for error are greatly reduced and no time is lost in arriving at the correct exposure for the existing light conditions.

These improvements are due to constant study by Eastman scientists, whose efforts extend to all things photographic. They have made Kodak film—in the familiar yellow box—dependably uniform. It has speed and wide latitude. Which simply means that it reduces the danger of under- and over-exposure. *It gets the picture.*

The White Fireman made outside aid possible

LASHED into a fury by a forty-mile gale, a fire which started in a congested area threatened to destroy the entire city. Local fire forces were inadequate to control such a conflagration. Help was summoned. To the rescue came men and equipment from neighboring towns. The city was saved. Disaster was averted.

Only a short time before, the White Fireman had induced the municipal government to adopt standard couplings for hose and hydrants. Thus, it was he who made it possible for apparatus from other communities to aid in saving the imperiled city.

THE White Fireman symbolizes the Loss-Prevention Service supported by insurance companies. This service includes: Consultation on proposed structures, that they may be as fire-safe as possible. Inspection of property, with recommendations for the reduction of fire-hazards. Maintenance of the Underwriters' Laboratories for the testing of building materials, the practical trial of fire extinguishers and other protective equipment, the examination of electrical apparatus and materials. Various other kinds of technical assistance for the furtherance of property conservation. The North America Agent will tell you how to secure this valuable service.

He could have lived unmolested for years among the hills above Galilee; beyond the reach of Jerusalem's Roman and priestly influence; had He chosen to—revered and fed there by the lawless folk who loved Him. To me, nothing proves His godhead or His true strength more clearly than this refusal of His to make use of His physical prowess to evade the cup whose dregs He had resolved to drink for the sake of Mankind.

A Samson would have smashed his way to safety through the puny opposition. Christ was strong enough not to use His strength. That is another hold He has on us Roughnecks—His sublime courage in not seeking safety, when safety would have wrecked His divine mission.

Yes, I have just been talking of what perhaps I don't understand. But, to me, it is more real than anything which has happened since then. So forgive me if I have bored or shocked you in my effort to explain why Our Lord has ever been worshiped by the "common people"—by us Roughnecks.

THE Roughneck Roman emperor, Julian, strayed from Him to His adversaries. But, smitten unto death on the battlefield, Julian flung a handful of his own blood toward the lowering heavens, and gasped in final surrender:

"Thou hast conquered, O Galilean!"

Let me tell you another war tale of a Roughneck whose religion went into battle with him. This particular Roughneck chanced to be my great-grandfather, old Lieutenant Abram Terhune, of Washington's so-called "bodyguard," in the American Revolution. Here is the yarn. I think it illustrates much of what I am trying to picture in regard to a Roughneck's religion:

The Revolutionary forces battled back and forth across New Jersey, a half-armed and half-equipped and half-drilled little band, generaled by an inspired leader, and opposed to one of the finest armies on earth. In the course of those successive years of Jersey warfare the battle of Monmouth was fought. The time was late June of 1778. The weather was murderously hot.

At sunset, my young great-grandmother sat in the bay-window of her home, looking along the dusty yellow road for sign of her husband or of any passing straggler from the army who might give her some news of him. He had ridden forth on his little brown horse to join his command, days earlier; and no word had come from him.

All day long, the far-off rumble of artillery had come to the waiting wife's ears through the sickening heat and sun glare. Then, down the winding road, in the sunset, appeared a right strange spectacle:

A huge white horse plodded slowly along, his snowy hair blood-smeared and dusty. On his back rode a young giant, my great-grandsire—he who had ridden forth on a horse that was small and brown. The rider was reeling drunkenly in his saddle. His face was sick-white, except for blood that dribbled from a gash on his head

Across the saddle pommel in front of him lay dangling the body of a red-coated British cavalry captain, a saber wound through his throat.

(By the way, to the hour of his death, my

Then SHORTHAND: *[illegible]*

Now STENOTYPY

The efficient, modern, machine way

IMAGINE, if you can, any more nerve-wracking, back-breaking office labor than taking dictation by longhand!

With the introduction of shorthand, the labor was decidedly reduced.

Then the Stenotype was invented, by a shorthand expert, to do for shorthand what the typewriter did for longhand.

Instead of curves and loops and hooks made with a pencil—notes in plain alphabet type, produced by touching the sensitive keys of a fast little machine.

Above—Specimen Stenotype notes before transcription

Business is Asking for It

Business men want good Stenotype operators because the Stenotype means letters that say exactly what they said; because today's mail goes out today.

Good Jobs—Good Pay for Competent Stenotypists

Employers write us asking where they can get good Stenotypists. The demand for competent Stenotype operators is far greater than the supply.

Young people trained in this fast, accurate machine way of taking dictation are going to get the good jobs—with important executives, where they are in touch with the real opportunities.

With the Stenotype, you have entire self-confidence and poise, no matter how fast the dictation. You are under no nerve strain, and aren't fatigued.

Moreover, you prove your efficiency in your first job—and go ahead to better and better positions.

Before you start on that first job, that may determine life success or failure, find out how Stenotypy can open *unusual opportunities* for you in many business fields. Stenotype classes start soon in 200 leading business schools. Mail the coupon TODAY.

"Hello, Dick—glad to see you! I see you've had the old bus repainted —and Kellys all around, too! That's fine."

"I can thank you for the Kelly-Springfields, Bob. I always thought they were as much out of my reach as that estate in there, until you told me they didn't cost any more than the ones I was using."

great-grandfather never could remember how he chanced to be mounted on that big white British cavalry horse, nor how the slain British captain happened to be dangling athwart his saddle bow like a shot animal, for his own head wound and a touch of sunstroke had made him delirious.)

Guided by some subconscious homing instinct, he was riding back to his wife, bearing with him this grisly trophy of his day's work on the battlefield. As the huge horse and huge rider came into view, the swaying and lurching man was chanting crazily at the top of his lungs the fierce old Covenanter war-hymn:

"The Lord of Hosts, my Captain He!
Jehovah is my guide!
And shall I flee from two or three
If He be at my side?"

Drunkenly delirious and stricken almost unto death, yet he was singing the hymn whose words and spirit he and his fellow Roughnecks of Washington's army had carried into battle that day. For, like the Scottish Covenanters of old, these men were as mighty in hymn and in prayer as on the field. Such a combination is terrifically hard to conquer; whether in war or in peace.

In soft years of ease, our soft manners and softer religion, or no visible religion at all, seem to suffice the world at large. But in times of stress, it is the Roughneck and it is his simple and stark Faith which comes to the front and saves the day. A hundred times, throughout history, it has been so. Always must it be so.

It Isn't the Principle; It's the Money That Counts

(*Continued from page 63*)

now and then I think it might be a good idea to feel a pinch or two for old New England.

Mrs. Phillips has a theory that financial obligations help to swell a man's savings. It sounds cuckoo; but in my case it has worked. It is her idea that the more bills I have coming in, the more money I will have to earn. She plays the system on her knowledge that I am no demon for work, and that, reacting to expenses like a true Connecticutite, I will never be spurred to such energetic endeavors as when I face a bill for a new electric piano or something equally trivial.

She is always buying things. A few years ago she informed me that she had opened charge accounts in all the larger New York department stores. This gave me heart flutterings for weeks. Nobody in my family had ever had any charge accounts, and I had been taught that when deferred payments entered the doorway the savings account flew out of the window.

"It's a serious mistake," I argued. "It is a well-known fact that, human nature being what it is, anybody will make purchases on a charge account that would never be made if they had to be paid for at the moment. This will just run us into debt. It is gross—"

"Don't worry," was her answer. "We

"Noise is...on every Employer's Payroll" *Roger Babson*

The Mellon National Bank —Pittsburgh, acoustically treated by Johns-Manville.

Babson's Reports No. B-300 of February 28, 1928, says—

"*Reduce Industrial Noise.* The increasing seriousness of industrial noise as a drag on efficiency, presents a problem to which most clients have paid little attention. Both in the factory and in the office the increasing volume and intensity of sound has reached a point where it ceases to be merely a nuisance and becomes a definite economic liability. As a result, efficiency has been reduced and production slowed up. Wherever office-quieting treatments have been installed there has been a decided improvement in efficiency. Wherever brains are active, noise costs money.

"*We urge clients to examine the acoustic conditions in the various rooms of their office and plants. Noise is today on every employer's payroll. Much of it can and should be removed.*"

We can take noise off your payroll..

Just as science has learned to deal with the invisible in so many forms it has mastered *NOISE*. The course of sound waves in any room, regardless of its size or shape, with study becomes clear to Johns-Manville Acoustical Engineers.

Years of study and experience have won for us a position as leading technicians in the whole matter of sound control, a subject otherwise almost completely neglected.

And our engineers not only know how and where the unseen sound waves travel, but they have devised a marvelous substance low in cost, simple to install—yet which soaks up office noise as a blotter absorbs ink. No longer is it necessary to tolerate noise which interferes with efficiency or comfort.

Johns-Manville Acoustical Treatment fulfills the requirements of an ideal sound-absorbing finish. 1. It is an excellent light reflector. 2. It can be washed or painted without affecting the sound-absorbing qualities of the material. 3. It is the *most efficient* sound-absorbing material on the market today, consequently the *cheapest per sound-absorbing unit.* 4. It is fire-resisting.

In a great number of important buildings, Johns-Manville Acoustical Treatment applied to ceilings, or walls and ceiling, has made unusable offices pleasant places in which to work, has stifled the nerve-racking noises of hospitals, or corrected entirely an echoing auditorium.

We have been consulted on Auditorium Acoustics for years

The Johns-Manville Acoustical Division offers a free service to architects planning auditoriums. Architects of practically every large church, theatre or auditorium built in this country for years have consulted us. This service aims to aid in the designing of acoustically correct auditoriums regardless of whether any Johns-Manville materials are required.

Challenge on Card Accepted by Smoker

Returns tobacco can enclosure. Instead of making "kick" he gives "boost"

As you open the can of a certain brand of tobacco, you have often noticed a little slip with some such message as:

"Edgeworth is as nearly perfect as tobacco can be made. You will oblige us by writing us and returning this card should you find any irregularity in this box."

Recently, the following letter was received. It starts off like a kick, but—well, read it for yourself:

Westwood, N. J.
January 4, 1928

Larus & Bro. Co.
Richmond, Va.
Gentlemen:
I have just bought a half-pound tin of your "Edgeworth," and notice your card inviting any complaints regarding irregularity in this box.

I have been a frequent user of your perfect tobacco, usually buying a pound at a time, and have never found any defect so far. It is the best tobacco, in my humble opinion, for the price.

Think you ought to alter the name of "Edgeworth" to "All Round Worth," for it is very uniform in quality.

Yours very truly,
Harry Thurnall

If you have never seen one of these little Edgeworth slips, the chances are you have still to try this tobacco. Should that be so, let us send you free samples. Your name and address sent to Larus & Brother Company, 3 S. 21st Street, Richmond, Va., will bring you samples of both Edgeworth Ready-Rubbed and Edgeworth Plug Slice.

Try Edgeworth, and then should you want to *buy* it, you will find it everywhere in different sizes—from the small tin you can carry to the big pound humidor that looks so handsome on your smoking stand, and various others in between. Each size comes in Edgeworth Ready-Rubbed or Edgeworth Plug Slice whichever you prefer.

And you will always find Edgeworth the same, whenever, wherever you buy it, because its good quality never changes.

On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 254.1 meters. Frequency 1180 kilocycles

have specified a certain sum to be put aside each week, haven't we?"

"We have."

"Well, these charge accounts may increase your expenses; but they'll also increase your earnings."

"How do you make that out?"

"You know how I make that out, dearie."

And I did. She regards debts as accelerators. Those charge accounts bring in a hamper full of bills every month, and all she has to do is to rattle them to make me abandon a program of golf, bass fishing, and lofty lofting to do some real work and earn some more money.

A few weeks ago I was hanging around the house thinking dreamily of a vacation, when Mrs. Phillips returned from the shopping center and announced that she had purchased a $1,000 rug. The news jarred me right out of a fit of pronounced lethargy, and I quit thinking about the vacation and did $2,000 worth of writing at once.

"See," said the wife a little later, when the checks came in. "You made one hundred per cent on that rug!"

How can I beat that kind of reasoning?

Last season we talked about trading in the old car and getting a new one. Mrs. Phillips objected. "We ought to keep this machine another season. It is in good shape. Let's not be foolish. And don't go around looking at the new models."

I decided she was right.

A few weeks later I came home and found her musing over a high-priced-automobile booklet. I grew suspicious at once.

"I think you ought to get one of these," she said.

"But only a short time ago you urged me not to."

"Yes; but it's so good-looking."

To tell the truth—I was susceptible. I had always wanted that particular car. For some years it had replaced Charlie Waterhouse's bearskin coat, team of bays, and front-lawn fountain in my suppressed desires. I bought one.

"Isn't it splendid!" said Mrs. Phillips, when we took our first ride in it. "Now you'll have to get busy and do some extra work. It *is* an extravagance, you know!"

That new car kept me so intensely at the business of increasing my income that I burned out two typewriter ribbons in ten days.

Mrs. Phillips knows her "onions." I could truthfully sign a testimonial saying, "All the loafing I have *not* been able to do, I owe to you."

SAVING money, however, is no great credit to anybody these days. They're making the modern banks so warm and attractive it takes a strong man to pass them. It used to require strength to get into a bank; today it takes strength not to.

The old-time bank was a bleak, dismal place, thoroughly uninviting, from its narrow doorways to its narrower board of directors. There was a musty atmosphere in it. It resembled a combination of morgue, prison, and cellar, retaining the worst features of each. The president was just about the coldest person in the city, and when you reached him you knew you had penetrated the point marked "Farthest North."

The other officials were usually pale, hostile-looking gents who never registered any of the lukewarm emotions, and who seemed to think that anything like a look of affability would result in a speedy closing of the bank by the state inspectors.

They were a frosty lot, and it always struck me that they lived in constant fear lest some warm-blooded man would get near enough to raise their temperatures.

I always had an idea there was good skating, even in July, in the private office of the president of the first bank I ever put money into. That bank could have increased its depositors by distributing mittens at the door.

You never knew what it really was to be snubbed until you went into the bank of yesterday to open an account. You were expected to have a letter of introduction and notes from three character witnesses. And then you had to be looked up to determine whether you were the type of person the bank cared to take money from.

TO-DAY all this is changed. The banks are among our most attractive buildings inside and out. The interiors are almost as charming as the interiors of the classy motion-picture palaces. Some of them even rival the latest restaurants in appointments.

Newspaper advertisements invite you to drop in and chat with the president or come and sit in a director's lap. Closed-in offices are being done away with, and the officials sit at desks out in the open where anybody can see them. They are mostly young men of attractive personalities.

I go to a bank these days whenever I feel the need of warm personal contact and the atmosphere of brotherly love. Even the doorman treats me like a long-lost relative.

Frequently I visit my favorite bank, and confer with the president on a $500,000 loan. I don't want it and couldn't get it, but he makes me feel that I almost could. I leave him with the conviction that if he had it personally he would give it to me.

Thrift, due to this widespread propaganda, is on the rise. Every Saturday finds a decline in the number of people who think Frugality is the name of a parlor car. There is less and less belittling of economy. Even the village spendthrift keeps some kind of bank balance.

I have saved more money than I ever expected to. It isn't anything to gloat over. It wasn't even a difficult trick, and I got far too many "assists" to take the credit, if any. There isn't the kick in my bank balance to-day that there was in that original one hundred dollars.

The first hundred dollars were the hardest.

However, I shall probably have to go on earning and spending . . . and saving. My inclination is to go fishing, but the outlook is not so good. Mrs. Phillips is becoming interested in antiques, bronzes, and colored glassware.

"Remember that time when you said I ought to save $100,000?" I remarked pensively the other day.

"Did I say $100,000?" asked the wife.

"You did."

"You must have misunderstood me. I'm sure I said $1,000,000."

The story of

White Coal

From melting snows, lakes and springs high up in the mountains comes a swelling flow . . . faster and faster until, at the brink of a rocky cataract, the waters pitch and plunge wildly to the depths below.

Here the fury of the maddened stream is brought in leash; its force harnessed to the giant wheels of dynamos whose revolutions create vast stores of electrical energy—"white coal."

The "white coal" that comes from the mountain streams carries Milwaukee trains for 660 miles across four mountain ranges—smoothly, swiftly, silently. No soot—no smoke—no cinders. Travel in the open observation cars of the new Olympian is a novel and pleasant experience. Forty per cent of all the electrified railway mileage in the United States is included in The Milwaukee Road's transcontinental line.

Available for industry, as well as transportation, "white coal" is an important factor in the development of The Milwaukee Road's West.

For your copy of booklet or detailed information on any subject concerning this railroad, address The Milwaukee Road, Room 884A, Union Station, Chicago

How to Be a Good Husband Though a Poor One

(Continued from page 41)

nor anything at all, save just me—less than nothing you might say. I do not mean to say we have ever starved, you know, though I can vividly remember the first chicken dinner we had after our marriage. We had been eating round steak for so long that I was beginning to moo. We had been wishing we could afford a chicken, but it just seemed impossible. Ione was crossing the railroad tracks on her way to the grocery store one day, when along came a chicken trying to outrun a fast freight. The chicken lost the race. Fortunately, we knew no neighbor who owned Barred Rocks, so Ione simply wrapped it up in her apron, and next day we ate chicken and noodles instead of round steak.

But eating is not all of married life, though some husbands appear to think so. A neighbor once told Ione she had a husband like that. She said she used to glance through our window of an evening, and wonder what we found so interesting to talk about after being married so long.

Normally I'm not a very sociable creature. I can come home tired from work and sit for an hour or two before bedtime, and merely enjoy my own company and silence. Most any man can—after he is married. Well, that is no way to make a woman happy. When we were first married, I used to sit down after supper with the evening paper. Ione would finish up the dishes and come in. She did not ask me for part of the paper, but pretty soon she would ask me what had happened during the day, and to save me I could remember nothing at all except that I went to work and arrived back home.

I WENT to considerable trouble to change all that. I never was a barber for conversation, even when I was courting Ione. I am about as loquacious as a clam. In fact, try as I would, I simply could remember nothing interesting to talk about when I got home at night. It appeared to me that I must do something, so I hit upon the plan of carrying a card in my pocket; and whenever I met with anything which might lead to conversation, I jotted it down. For instance, by night the card might read: "accident, monkey, Mrs. Jones, load of hay," which, being interpreted, meant that I had seen or heard of an accident, had seen a monkey, and Mrs. Jones had inquired after Ione, and that I had passed a load of hay.

Just a word, don't you see, to call to mind what had occurred which might prove of interest to her. Take that load of hay, for instance. A load of fresh-cut clover, and the smell of it will call to my mind fifty-six distinct memories, and if I mention it to Ione she will remember how she used to wish on a load of hay or a white horse, when she was a kid. So one thing leads to another until a whole evening passes pleasantly.

Conversation does not consist chiefly of big talk, unless there is company and we wish to appear dignified. It is made up mostly of little things, for life is a rather commonplace affair with us.

I also worked this card business on lodge stories, and sermons and lectures and other entertainments which came my way, for Ione could not always accompany me. People who sat around me used to watch me curiously. I presume they thought I was a reporter or some freak professor. So I have not always remained at home with Ione when she could not go out with me. I don't think she wanted me to do that; but she would like me to bring something more worth-while than stale tobacco smoke when I return.

I NEVER let Ione know I used this card system. I used to sneak it out of my pocket and glance at it surreptitiously. I did not want her to know how dumb I was. Of course I knew her days were often long and tiresome, and I ought to strive to make her happier; but that was not the idea: I wanted to make her think I was smarter than I am.

I like to read out loud. I used to do that a great deal before the children came along, and Ione did not seem to mind it. We read books from the library and magazine stories, and many happy evenings slipped by that way. Occasionally we played checkers or dominoes, though Ione despises games. This was her concession to me, you see, and I presume she has conceded much more to me than I have any idea of. That is the point I wish to bring out, exactly—that I do not want Ione to believe I have been put to any trouble to keep myself sold to her. I want her to think it is just natural.

Since the children came along they have pretty nearly filled our time, with their lessons, their games, and their reading. Both Edyrl and Lyril love to read aloud to their mother, and Ione gets a liberal literary education that way, all the way from Grimm's Fairy Tales to Paradise Lost.

My girls frequently ask me in the evening what I am going to do. Not that they are concerned so much about my time; they merely want to read to Ione, and they know that if I am at home and not busy at some work, the reading is all off. Ione and I have the habit of discussing what happened while I was on my job of driving a truck, and we comment on what we read in the newspaper. You know, I never cared much for that old saying that a man should not bother his wife with his troubles, and she should bear her own petty annoyances alone. That does not seem to me to be the way a going business should work. If I had a partner, and the business was going on the rocks, or was sort of getting my goat, I know I should be pretty likely to tell him about it, so that together we might make the business go a little smoother.

When I come home, and Ione is all tired out with the children and the neighbors and everything, as all wives get sometimes, if we just talk things over and get another angle on affairs, it's great to hear Ione say: "Why, things don't look as black, now I've told you about them, as they have been looking all day!"

I got a letter from a relative telling me she and her husband had been living apart for a year and were seeking a divorce. They had children and everything to make them happy. They were simply incompatible, whatever that is. I wrote each of these incompatible creatures a letter offering them advice, which is the only thing a poor man can give away and not expect to need himself some day. What I said was this:

It always takes two people to misunderstand, two people to make a fight, two people to make a divorce suit. I want to recall to your memory that you entered into a solemn, sacred covenant when you married to make your companion happy with you—not apart from you. If you failed to keep yourself sold to your companion, it is that you merely did not want to make the effort to resell yourself when you failed. If you were first learning to drive an automobile, you would consider the intricacies and idiosyncrasies of the machine, and learn just how far to hold the spark open and when to give it gas, and how much to give it. You would learn that; but you refuse to learn how to handle your companion. You have simply failed to keep yourself sold to each other."

Love has become a rather misused term lately. Now, I like to qualify the word "love" with the word "respect." A respectful love is a love which will consider the desire and wishes of the person loved, and will strive to find what that desire and that wish is. Respectful love is never a love mixed up with an appetite, as mine was that time I ate all of Ione's candy. It will not break down through the years, but becomes more steadfast, like the love represented by the old man helping put a frail woman on the platform of a train: "Now, good-by, Mama," he said as they turned toward each other before the train started. "Have a good visit. I'll get along all right and be waiting here for you next week when you come back." A love represented by years of travel up and down the same road, sometimes smooth, and sometimes rough, but always cementing that love until it shines most gloriously at the end of the journey.

ONE thing that I had to learn right away was to respect the different views from mine which Ione held on many subjects. Her environment, her training, and the influences which had touched her life and modified her viewpoint were different from those which molded my own. There are some things upon which we radically differ, but that is no reason why we must make ourselves unhappy by stressing them.

She is entitled to the same respectful attitude toward her convictions which I exact toward mine. I do not believe Ione really wants me to be forever agreeing with her, forever trotting around like a little dog, doing her bidding and striving to please her.

I heard a man say that he and his wife had never in all their married life had one single cross word. I believe him, too, for he is the dearest big old fellow you ever saw. But we are not all so fortunate, and

"Choosing a cigarette is all a matter of taste, don't you think?"

"Sure, it's a matter of taste . . . that's why Chesterfield is so popular!"

LIGGETT & MYERS TOBACCO CO.

Can any cigarette do more?

Chesterfield cigarettes are mild . . . not strong or harsh. Chesterfield cigarettes satisfy . . . that is, they appease the smoke-taste. They are not insipid or tasteless.

The tobaccos in Chesterfield cigarettes are blended and cross-blended in a different way from other cigarettes and *the blend can't be copied!*

They are MILD . . . and yet . . . they SATISFY. Can you expect any cigarette to do more?

Soft, summer sunshine. Deep, cool shadows. Luncheon kit overflowing with Heinz good things. Sweet, mixed pickles, crisp and spicy. Sandwiches of creamy peanut butter. Beans baked in real ovens. Plump stuffed olives. Sandwiches filled with a tempting, pickle-y Heinz spread. So very many wonderful things, what good flavor shall we try first?

flavor

There are so many, many delicious Heinz *picnic-y* things to eat that half the task of organizing a picnic is done when you call up your grocer and give him your order.

Heinz Peanut Butter, for sandwiches. Made by a special process with no oil on top. A moist and creamy blend full of the flavor of fine Spanish and Virginia nuts . . . *Heinz Sandwich Relish*, piquant with chopped olives and sweet gherkins . . . Mild, yellow *Heinz Mustard* that gives just the right zest to tongue or cheese sandwiches. *Heinz Olives*, we grow in Spain and stuffed with spiced red pimentos . . . Crisp, spicy *Heinz Pickles* and *Sweet Gherkins* . . . *Heinz Apple Butter*, with the tang of the sound, ripe apples of which it's made.

And, of course, Heinz famous *Oven-Baked* Beans, with the real oven-baked flavor, good hot or cold.

For 59 years Heinz has been helping to make picnics a success. And *your* picnic will be all the merrier if you take along some of the good things to eat that Heinz makes · *H.J. HEINZ CO., PITTSBURGH*

HEINZ GOOD THINGS FOR PICNICS

Digitized by Google
Original from UNIVERSITY OF IOWA

I am not at all certain we should be. A man does an injustice to his wife if he is always considerate and peaceable. If he is tied to her apron strings like I am—and that is a good place to be tethered—she will want him to tug a little now and then, so that she will know he is there. A woman likes to manage things—and she is happiest of all when she is managing a husband.

Now, if that husband never gets a grouch on now and then, and never gives her a chance to manage him, he is stealing some of the happiness which should be hers. He ought to give her a chance to do her stuff. Yes, and he is losing a lot of happiness himself, for if he is like me he enjoys being managed.

There are a lot of things I do not care to do, and will growl about if I have to do them. I do not like to window-shop. It is no pleasure for me to drag along the street on Saturday night and gaze ecstatically at all the things I can never hope to buy. I'd rather sit at home any time. But I permit myself to be led around, growling like an old dog all the way. I do this so Ione can see she is managing me. I admit that is pretty deep stuff. It's called psychology, or something.

I don't like to get down on all fours and crawl around with a stack of pins in my mouth, fitting the length of Ione's skirt, but I do it. I will not buy groceries or shop around town except under the stiffest protest.

THERE is a heap of difference in bossing and in managing. The man who thinks he is bossing his wife generally has another think coming. Women have been schooled for ages in getting around a man by devious methods, where they have not voluntarily been accorded the equality of thought and action which should be theirs. She's shrewd enough to manage him and let him think he's managing her. Marriage is a partnership affair between Ione and me, and though I might attempt to manage her, as she does me, I would not attempt to boss her.

Take that time when the women were first bobbing their hair. The neighbor women wanted to know if I was going to permit Ione to bob her hair. Well, I never thought it was my place to do any permitting around here. Ione and I discussed that bob proposition, just as we have discussed whether I should grow whiskers to cover up a weak chin.

WE HAVE, at times, discussed whether it would not be a fine thing for Ione to work. She never did work before she got me; but she could get a job clerking, or as telephone operator, or something which does not require long training to learn, and perhaps she would be happier doing it. Ione does love her home, though. She likes to shove the furniture about so I do not know where the dickens I'm going to sit of an evening. She likes to make her own draperies, and she likes to cook. Maybe I am just kidding myself on what she likes, but that is the way it seems to me.

It would be no novelty for a married woman to work, even though she does not have to. A lot of them do, and are happier and healthier than they would be at home doing the drudgery of housework. Work is merely a diversion meant to make folks happy, and women, as well as men, should choose that work which they can enjoy most.

Of course Ione has been unable to work outside the home on account of Edyrl and Lyril. Oh, she could have; but we decided we would rather sacrifice a little more personal pleasure and profit and have them raised in a real home by a real mother. But now that the children are getting so large that they will not need her as much as they did, pretty soon she will be saying: "I believe I'll get me a job."

I do not imagine I am going to like that, for I have a foolish pride about "letting" Ione work. A lot of women do not work down-town because their husbands believe it would hurt their standing in the community if their wives worked, even though they would be happier and better off in some outside employment.

When the time comes that Ione wants to work and have a little money of her own, I'm going to try to swallow my foolish pride, let the neighbors talk, and tell her to go to it. Then she will be a business partner of mine, just as now she is a home-making partner. And if she wants to spend her money on the girls and me, as she will, I'm going to try to get her viewpoint and perhaps sell myself to her all over again by taking it and getting a new suit of clothes and a watch with her money.

I'll certainly have to keep myself sold then in competition with other men. I do not mean that the way it sounds. I mean that Ione will naturally compare me with other men she meets, and I must be on my toes, even in my old clothes and small job. I've got to stay sold.

Now I have very frankly and intimately told you how I have tried to make myself a good husband with the handicap of being broke all the time, how I have rendered service on the original sale and tried to make the old machine stick. And it has been worth the effort, for in trying to achieve happiness for Ione I have had a lot of satisfaction in knowing that I have at least improved on the original article of sale—meaning me. I've sort of mellowed down with the years. As the old woman said to the young bride who had just had her first misunderstanding: "Just keep steady for a few years, and he'll mellow down. They all do."

THE other day, when I first decided to write this article, I thought I would record Ione's exact words, so you would not think I am spoofing when I repeat that I am keeping myself sold to her. I will admit I did pick a propitious day, when there was a little flour left in the bin and I had praised her biscuits, and we had scraped up the price of a show out of her chicken money. I slipped my arm about her and said:

"Ione, honey, after all these twenty years would you marry me again, knowing you would have everything to do all over just as you have done?"

And she said, just what I knew she would say, "Oh, I don't know whether I would or not. There might be others." And that's why I love her.

Under the Sidewalks of New York

(*Continued from page 57*)

telephone wires run along one side of the street and the lighting wires and power cables along the other side, in separate conduits. They are approached, repaired and extended by means of separate manholes.

The energy transmitted underground in New York is estimated to be three times that generated by all the electric plants on both sides of Niagara Falls—hundreds of thousands of horse power. Perhaps I can best show you what that means by a little experience I had recently:

In company with an engineer representing one of the great New York electric light companies, I was walking down Broadway when we paused at a cross-town street, our attention drawn to a trench in which three men were pulling from the earth long spaghetti-like tubes of rubber. Stretching as it came out, slowly it contracted in length and expanded in diameter. There it lay, coiled like a snake, yards upon yards of it, in all about a hundred feet.

"What's that?" I asked.

"That," returned the engineer, "is an invention that has saved millions of dollars." And he went on to tell me the surprising story of monolithic conduits—a device which is responsible for a great part of the electric light and power conveniences in New York to-day.

"On Manhattan Island," he said, "the problem of carrying high-voltage cables in properly protected conduits over, under, and around the numerous obstructions beneath the streets had for a long time been acute. Inventive geniuses the country over had been seeking some economical method of pouring concrete or monolithic ducts for electric cable without the use of iron pipe as a mold. To be sure, underground electric conductors had been encased in iron pipes since the very earliest days of Edison's electric light system. Pipes had been used as a mold for pouring the concrete. But the iron remained in the conduit, having become encased in the concrete.

"Not many years ago, when the Hell Gate Power Station, the world-famous generating plant on the East River, was being built, it was found that seventy-four miles of conduits were required for cables in this one building. Had it all been poured by the use of iron pipe, the practice then in vogue, the cost would have been prohibitive. It was then that Thomas E. Murray, vice president of the New York Edison Company, began experimenting with an eighteen-inch section of pure para rubber, which he used as a mold. He discovered that rubber of a certain composition, after being encased in concrete, could be withdrawn, leaving a tunnel the exact shape of the rubber.

After You Try This Amazing

NEW WAY to SHAVE

365 Keen Shaves With One Blade

SLICK, velvety shaves forever and no more razor blades to buy! That's what you can expect from KRISS-KROSS, the amazing blade *rejuvenator!* Makes new blades out of old a surprising way—week after week, month after month. Gives them a sharpness they seldom possess even when *brand new!* No wonder experts pronounce it one of the greatest inventions ever patented!

KRISS-KROSS renews all kinds of blades (except Durham). Employs famous diagonal stroke of master barber. Eight "lucky leather grooves" do the trick in 11 seconds. Automatic, decreasing pressure. Nickel jig notifies you when blade is ready with *keenest cutting edge steel can take!*

Special OFFER Now!

Right now, to introduce KRISS-KROSS stropper which is *never* sold in stores, I am giving with it (FREE) a unique new kind of razor. Really 3 razors in one! Gives a *sliding* instead of *pulling* stroke. Reduces beard resistance 45%. Send for details of special offer today. No obligation. Just mail the coupon now.

AGENTS!

Make big money with KRISS-KROSS—$5 to $14 an hour and more. Many average $300 to $500 a month. Spare time workers often take in $6-$12 profit an evening. As soon as shavers see KRISS-KROSS in action, they *want* it! Generous commissions and profits. Get details today. Check bottom of coupon and mail today.

"Watch closely now as this next tube is withdrawn from the concrete! See how it stretches, and then assumes the exact size and shape in which it was used as a mold! The tunnel it leaves behind is smooth and of even diameter, and it follows the course of the rubber over and under obstructions, and around corners, up and down steep hills. Later, there will be pulled through some of these tunnels a three-inch cable, which will carry electric energy at 132,000 volts, or about twice the pressure of the most powerful underground electrical current now in use commercially anywhere in the world.

"Already more than 13,000,000 feet of electrical cable have been laid and protected by this method."

"THE amount of wire under the streets for telephone, telegraph, and lighting must be tremendous," I observed.

"Wire is being added to the telephone system in Manhattan at the rate of 20,000 miles a month," was the response. "Think of it! In all our American cities, we take it for granted that water, sewage, and gas shall go by underground channels. But the use of electricity for lighting, for power, for telephones, began but a half-century ago. At first the wires were overhead. Within the span of a generation there were but ten thousand telephones in New York. To-day, the city has in the neighborhood of 1,500,000, and twice that number of wires are under the streets, their total mileage amounting to millions and millions.

"It is not an uncommon thing to find cables centering twenty-four feet below the street level. At that point, thousands upon thousands of wires may be 'fanned out' to instruments near by. This underground power distribution point is in a manhole—and some of these manholes are three stories deep, big enough on each floor to accommodate a parlor, bedroom, and bath!

"Take an exceptional instance: Some time ago the telephone company was preparing to house eight central offices in a new building west of Seventh Avenue in Thirty-sixth Street, to serve customers in the vicinity of Times Square and the Pennsylvania Terminal. Now, along Seventh Avenue there is a subway line. This was the main obstruction to the collection of cables required for the telephone service. So, two huge shafts were sunk on either side of Seventh Avenue, down into bedrock, twenty-five feet below the tracks of the subway, fifty feet under the surface of the street. Sappers, with picks, shovels, and dynamite, worked beneath the subway trains laden with passengers, and eventually cleared a U-shaped passage a hundred and fifty feet long, eight feet wide, and eight feet high.

"More than a third of a million separate telephone wires now lie in this tunnel. They are clustered in cables a little less than three inches in diameter, each leaden sheath containing one thousand two hundred pairs of wires. If the wire under these two blocks of Thirty-sixth Street between Sixth and Eighth avenues were coiled about the globe, the earth would wear a copper belt of six hundred and forty gleaming strands. Sixteen million miles of telephone wire under these two blocks! Imagine then the wire network under the streets of all Manhattan!"

As yet, we have hardly begun to complete this picture of underground New York. Among other things, we have not considered the pneumatic subway, the gas mains, and sewers.

Three feet below the surface of Manhattan is a subway of an entirely different sort from the one with which most of us are familiar. Eight inches in diameter and fifty-four miles long, it is an iron pipe that connects the old general post office at City Hall with Wall Street and the Hudson Terminal, and with the new post office on the west side. Also, it links these points with postal stations at the Grand Central Terminal and with stations in upper Manhattan, connecting twenty-seven stations.

Fleeting messengers are ceaselessly traveling back and forth in this iron pipe subway at a speed of thirty miles an hour between the hours of four A. M. and 11:15 P. M. These messengers, three thousand in number, are dispatched from the various stations at intervals of ten seconds. Eleven power stations operate the air compressors which keep these messengers—steel carriers twenty-four inches long and eight inches in diameter—on their way.

Owned and operated by a private corporation, the New York Mail and Newspaper Transportation Company, the pneumatic subway is used by telegraph companies for dispatching messages and by news agencies for delivering copy to newspapers. But mainly they are used by Uncle Sam for moving the untold bulk of New York's first-class mail. Daily, some six million letters—approximately seventy tons—fly through the tube from one postal station to another, hastening delivery, and decreasing by hundreds of thousands of miles the distance that Uncle Sam's delivery trucks would otherwise have to travel through the streets.

Nearly every apartment and dwelling in Manhattan has its gas supply for lighting or cooking, or both. More than half a million families live in this one borough, though it is not the most populous borough in New York City.

As for sewers, those of Manhattan are neither long nor large in comparison with those of some other big cities, owing to the fact that the elongated shape of the island makes it a simple matter to reach water.

Now you may be wondering whether, with all these complicated structures under the streets, accidents do not occur. The answer is "occasionally, but not often." In the main these denizens of the underworld are well behaved.

It is against the law to drain gasolene into a sewer; but now and then a careless housewife or some garage employee overlooks the fact. When the vapor of gasolene is mixed with air in the ratio of two per cent of gas and the balance air, you have the explosive force which makes your automobile go. This same mixture occurring in a sewer and set off by an electric spark or a match (a gang of thirty or forty men are continually at work in Manhattan's sewers) results in an explosion.

ONE word more, and that about *tunnels*. The transit subway systems are but a beginning of the artificial caverns in Manhattan. As you doubtless know, the Hudson-Manhattan Railway Company operates its electric trains under the Hudson connecting Manhattan with Jersey City

Ask your *ownly* face

USE BARBASOL ON ONE SIDE—ANY SHAVING SOAP ON THE OTHER

and let your face decide

Make this 3-day test

Apply any shaving soap in the usual way—hot water, brush, rub-in, hot towels, more soap, more brush, more lathering, all the fuss and muss that Soap & Co. call for —*but only on one-half of your face.*

Now wet down *the other side* with hot water or cold. Then spread on a film of creamy, cooling Barbasol. No brush. No lathering. No rub-in. Only this:

1—*Wash the face {and leave it wet}*
2—*Spread on Barbasol {but don't rub in}*
3—*Shave!*

Do this three shaving days. And then—

Just listen to your face

"Always use Barbasol on me! I never felt those whiskers slipping off. No soapy 'alki' burn or after-sting or smart. I feel all fresh and cool and soft, with the natural oils left right in the skin, because Barbasol is 100% beard softener: no air bubbles. Barbasol shaves last longer!"

Do it now. Before you go on vacation. Barbasol saves space and worry—no brush, no mug to pack around.

Try Barbasol Skin Freshener, too. After-shaving, after bathing, any time.

Big handsome bottle of Barbasol Skin Freshener, 65c. Big he-man tube of Barbasol, 35c and 65c. At all druggists.

THE BARBASOL COMPANY, Indianapolis, Indiana

Barbasol

For Modern Shaving

WISE MOTORISTS *use this sturdy gauge regularly*

VETERAN motorists know it pays to test their tires regularly—pays in increased tire mileage, lower tire costs. And they always use the dependable Schrader Gauge—built to withstand rough usage and still give reliable service.

Buy a Schrader Gauge today. Use it at least once a week. We suggest Friday as "tire-testing day," because most tires do their hardest work over the week end.

Schrader products are sold by more than 100,000 dealers throughout the world.

A. SCHRADER'S SON, Inc.
BROOKLYN
Chicago Toronto London

and Hoboken; and the Pennsylvania Railroad has tunnels under the Hudson, and also operates twin tubes under Manhattan Island and beneath the East River for its Long Island commuters. But the most wonderful tunnel in New York, or in the whole world for that matter, was opened to traffic in November, 1927—the twin-tube Holland tunnel for vehicular traffic between Manhattan and Jersey City.

Fifteen million automobiles and motor trucks annually will dive beneath the streets of Manhattan and Jersey City to enter this tunnel, and speed from shore to shore in six minutes. No more must they stand in line at the ferries. Twenty-nine feet six inches in diameter, a mile and three quarters in length, this tunnel required seven years to build and cost $48,000,000, appropriated jointly by the states of New York and New Jersey.

London has its Blackwall and Rotherhithe tunnels, Glasgow its three-tube harbor tunnel and Hamburg its twin-tube Elbe tunnel. But none of these is as long as the Holland tunnel, and in none were the engineers concerned with the crucial problem of ventilation due to the endless stream of motor vehicles discharging smoke and the deadly carbon monoxide.

Some day, when taking in the sights of New York, either in your own car or in a bus, you will doubtless ride through this famous tunnel. So I am going to tell you here how it comes about that you can do so in safety—how the engineers made this tunnel possible by solving in an unprecedented way the all-important problem of keeping the tunnel free of carbon monoxide.

THIS gas, which is similar to coal gas, and is actually the chief constituent of the gas burned in kitchen ranges, is *not* a poison. It is deadly because it asphyxiates. When it is breathed, hemoglobin, the red coloring matter of blood, absorbs it more rapidly than it can oxygen, and thus the blood is unable to perform its functions.

Now, the exhaust of your automobile may contain as little as one half of one per cent or as much as fourteen per cent of this deadly substance. On the open road, this is of little account, but in a tunnel it would be a constant menace to life. So the first step that had to be taken was to determine how much carbon monoxide a human being could breathe with safety, and this puzzle was answered after a long series of curious experiments at Yale University under the direction of Professor Yandell Henderson.

Professor Henderson built a gas-tight chamber half the size of a small bathroom. Yale students entered this chamber and breathed air containing proportions of carbon monoxide. Through an aperture in the wall of the chamber, each student thrust out a hand, and, as the contaminated air within produced its result, his blood was tested for its carbon monoxide content.

In addition, tests were made in a brick chamber thirty feet square. One of the old Fords was jacked up and operated under all sorts of carburetor conditions. In succession, twenty men sat in the driver's seat, breathed air containing a known proportion of the deadly gas, and suffered to the point of acute headache and nausea in the process.

Thus, it was determined that passengers and traffic policemen in the Holland tunnel *cannot safely breathe more than four parts of carbon monoxide in ten thousand parts of air.* (Incidentally, this discovery is a warning to us all not to run the engine of an automobile in a garage with the doors closed!)

TO KEEP the air in the tunnel free of carbon monoxide within the limits that scientific research had set, a ventilating system of an unusual sort had to be devised. An artificial draft was necessary, of course. Had ordinary blowers of the kind used in some factories been installed, it would have been necessary to keep a gale of seventy-two miles an hour sweeping through the tunnel in order to keep carbon monoxide down to the prescribed level. Such a man-made gale, does, in fact, do the work, but it is a gale so tamed and controlled that in passing through you are scarcely aware of it.

Beneath the roadway of the tunnel the seventy-two-mile-an-hour storm rages in a long concrete duct. From this duct branches lead to an "expansion box" along the curb of the roadway. Here the storm expends its fury, and out of grilled openings it emerges with a speed resembling that of a zephyr.

At each end of the tunnel there are ventilating shafts—two on the New York side and two on the New Jersey side. These shafts have been designated as "storm factories," for here are produced the gales that clear the tunnel atmosphere. Eighty-four fans, forty-two blowers, and forty-two exhausters are required to create the storms—and six thousand horse-power to run these mechanisms! But not all are in operation at one time. Some are held in reserve for an emergency. If an accident should cripple one fan, another can be switched on to take its place.

In addition, what is known as an "electrical brain" keeps watch over each ventilating motor, atmospheric conditions in the tunnel, and over all traffic lamps. This device is on top of the administration building on the New York side. A switchboard twenty feet long and seven and a half high, it is in the shape of an arc. Within this arc stands a man who watches the signal lights flashing messages of danger or of safety. There are lamps to tell what each of the eighty-four fans is doing—whether it has stopped or is running properly, too fast or too slow. Other lights report that the traffic signals are working properly. Still others indicate that the air in the tunnel is good, with carbon monoxide not more than two or three parts in ten thousand.

"This switchboard brain," observed an engineer the other day, "gives us arbitrary power over atmospheric conditions in the tunnel and over the three thousand and eight hundred vehicles that pass through it every hour. The man who stands in that arc has only to stretch out his hand and move a control switch to start or stop a fan or change its speed, or to warn the hundreds of drivers in the tunnel to stop their engines. Every policeman in the tunnel might drop dead at his post; but this directing brain would still show exactly what is going on in the tunnel from minute to minute, and what action to take to avert danger."

Service that thousands admire

STREETS and highways are crowded with people who will see and remember your Harley-Davidson Package Truck.

It's good advertising—attracts favorable attention everywhere it goes. It's distinctive—and obviously efficient.

No other delivery vehicle approaches the Package Truck for handiness and safe control in traffic, and easy parking.

It carries a full quarter-ton of merchandise at a cost of *less than 3c per mile,* including repairs, insurance, depreciation, and all upkeep items.

The Package Truck is increasing sales volume and cutting delivery and service costs in forty-eight different lines of business.

Enemy Allies

(*Continued from page 47*)

of the forest, he had taken to day hunting during hours when he was sure his kind were asleep.

Taller, lanker, and fiercer he had become, sleeping little and hunting longer, harder, and farther in the grim struggle for existence, the insatiable wants of the four whelps pressing upon him night and day. Little success attended his hunting, and often the father would satisfy his gnawing hunger by grinding the bones and tendons of a kill after his litter had stripped the carcass of meat.

He knew no freedom from worry or hunger these days, and it seemed, indeed, that he had given hostages to death at the outset. But through it all he was able to hold his own, and a modicum over. His mangled leg had knit, and though he still ran with a limp, his speed was almost what it had been. He had proven it twice in his chance encounters with Mart Brenner, and once when the Table Mountain pack had winded him as he returned home from a belated hunt.

He had had to put up a running fight clear to the mouth of his den that night, and he was badly slashed from tail to ears by their ripping fangs. But in the den mouth he had turned and dared them to come on, with a steady snoring snarl. Bone-thin and lame though he was, he was more than a match for any two of them, and the pack knew it well.

One day would come a time of vengeance. Each one of his stalwart litter bid fair to match his own strength and prowess, and a time would soon come when they would run together as a compact little pack of five—wolves whose like would not be known in all New Brunswick. And toward that day the father wolf bided his time with a cold and far-seeing craft.

And now fate or nature or whatever power it is in the wilderness that tests the fibers of the worthy through adversity, saw fit to put him through the further initiation into the wiles of men.

UNKNOWN to Mart Brenner, the big wolf had followed him many a day on his trap rounds, and had watched from different vantage points as he set his snares and deadfalls, studying the man's attempts at camouflage and later investigating the sets, sometimes finding some dead creature imprisoned there. So it was that he had already become familiar with the menacing smell of iron.

Later, he had learned also the danger as well as the impotency of Brenner's gun, the black, loud-barking stick the man ever carried with him, and which he knew could inflict mysterious death at a distance. He learned soon that the gun was harmless when merely dangling in Brenner's hand, that only when he saw the man looking along its length could the gun spout fire. Likewise, the gun was useless at night, as were the woodsman's eyes.

The longer Brenner kept to the trail of the peg-leg wolf, the more evidence he got of the gaunt beast's cunning. The three traps near the den entrance had been quickly smelled out, and a new entrance put to use. After four weeks of fruitless trying, Brenner began to let the one-pointed hunt die down for the time being, for he was losing too much time along his regular trap lines.

And then came the bitter month of January with its still cold and actual famine, and with it a fresh tribulation for every dweller on Table Mountain, in particular for the harassed father wolf. It came in the form of a squat, shambling beast about three and a half feet in length, that looked like a cross between an undersized bear and an overgrown badger. This newcomer was an enemy more to be dreaded than man, by the lesser of the wild folk, crueler and more crafty than the fiercest panther, whose fang and claw was against every other forest dweller, man included.

It was an old male wolverine, driven southward by the cold and famine of this unprecedented winter in search of better hunting grounds. He had crossed Table Mountain in the midst of a driving snow storm, and, like the peg-leg wolf, had been led to seek sanctuary in the thicket-choked bottom of Mart Brenner's valley. And there he decided to tarry.

AS EVERYONE knows, wherever a wolverine makes his habitat things unsavory are likely to happen. It was on a ghostly gray day of threatened storm that the peg-leg wolf first crossed the old carcajou's trail. And though he had never before encountered a wolverine at first hand, the rank, weasel-like taint that came up to him from the snow bared his fangs and plastered his ears against his skull in instinctive rage and defiance.

Instinct seemed to whisper to him even then what lay ahead for him—not another test this time, but the key ordeal before which he must prove the right of himself and his family to live and thrive—or succumb—according to the mettle that was in him.

Here was an animal that could best a bear and outfight either wolf or lynx. Furthermore, the hatred between the wolf and the wolverine is instinctive and age-old, the eternal feud between the guardian and the marauder. For the wolverine springs from the weasel strain, while the wolf is the direct forefather of the dog.

The long, lobbing canter of the peg-leg wolf had stopped on the instant, while the stiff hair rose along his hackles as he peered about into the silent frosted thickets for a sight of the stranger. Like Mart Brenner, the big wolf had come by now to look upon the spruce valley as his hunting ground, annexed by three months' residence therein, and he was ready to defend it with life itself against all comers.

To the wandering and surly-tempered carcajou, however, it was no more than a detail in a range that might cover all of three hundred miles before spring, for, immune as the great weasel was to the cold, he could make his home wherever he chanced to be, even sleeping at times in the crotch of an ice-sheathed forest tree.

For a week thereafter the peg-leg wolf hunted warily, with an eye out constantly

ATWATER KENT RADIO

Enter the newer convenience of electric radio

Wherever you have a lamp socket, there's the place for the Atwater Kent A. C. electric set.

Its compactness, its modern simplicity, its harmonious coloring, its finish like tapestry of long ago, make it a charming companion in any room—agreeable in any decorative scheme.

Most families with only one set prefer theirs in the living room. It conforms with the spirit of comfort and comradeship that distinguishes such rooms. A very small table holds it—at the arm of a favorite chair, perhaps; or close by a couch where it is so easy to change the music at will by touching the FULL-VISION Dial.

Often the Atwater Kent A.C. set is tucked away in a bookshelf; it is so small it displaces only a few books; you turn to it as you would to a well-loved volume. A window ledge is a good place, a chimney corner another.

Rest it on that taboret at the turn of the stairs, whence its pleasant voice can be heard through the whole house, if you wish, or reduced to intimate music for your ear alone.

Many homes have their upstairs sets, as well. In thinking of *your* electric radio don't forget the night table by the bedside.

Atwater Kent engineering takes all the unwieldiness out of radio. Atwater Kent workmanship gives it reliability. Atwater Kent modern

quality production gives it moderate price. Many families, needing more than one set, have been surprised to find that they could get two Atwater Kent electric sets for the sum they expected to pay for one.

Through a free home demonstration you may determine just where this set would best fit into your own scheme—and how you would like its performance. A telephone call to the nearest Atwater Kent dealer will give you the opportunity.

GLOVER'S scientific standards assure positive efficacy and safety

THROUGH technical research, and in conformity with the latest findings of veterinary science, Glover's have developed new medicines and revisions in formulas. Thus dog medicines bearing the Glover's label now set even higher standards of perfection.

For more than half a century this company has pioneered in the study and treatment of dog ailments. We are sharing with the U. S. Government Drug Laws the responsibility of protecting the public against fraudulent medicines. In the Glover's standard lies your assurance that you are treating your dog with the best medicines that science can devise and technical skill compound.

DISTEMPER

There are no specific drugs for its treatment or prevention. We offer separate medicines which are scientifically recognized as being indicated for EACH of the SYMPTOMS OF DISTEMPER—the only method for treating this disease approved by both the Veterinary Profession and the Government. A special explanatory pamphlet on Distemper will be mailed you upon request.

Our Veterinarian will personally advise you in any matter concerning sanitation—and the health, care and feeding of your dog. In writing be sure to give full particulars concerning the dog's age, breed, sex, symptoms, etc., etc.

for a sight of the sinister form of the wolverine. But throughout that time he was rewarded by no glimpse of his rival.

To Mart Brenner also the wolverine came as a specific enemy. He knew carcajous from several unsavory experiences, and with his first sight of the imprint of the beast's flat, hairy soles mingling insolently with his own tracks along the trap line, he knew that as long as this beast hunted the region his catch of fur would be scarce worth the effort.

AUTOMATICALLY, his feud against the big gray wolf at the head of the valley became negligible, and he began pitting his craft against the more dangerous marauder. It remained, however, for the peg-leg wolf alone to meet and best this ancient enemy of his kind, by sheer nerve and the prowess of his fighting fangs.

Their meeting was staged in a strange way: During that first week the wolverine had spent his days and nights in hatching mischief after the manner of his kind. He had systematically sprung Brenner's traps, eaten his bait and defiled or destroyed his catch of fur, with all the ingenuity for such pastimes that makes his clan more thoroughly hated by woodsmen than any other living beast.

At the end of that time, Brenner went forth one morning to find that his storage shed had been broken into in the night. With a strength and patience that seemed not of earth, the carcajou had gnawed his way through the heavy plank door and rifled the place of all food except that which had come in cans. The meal and flour, which had not been to the robber's liking, he had defiled.

Standing amid the débris, Brenner swore an oath of vengeance, and that day, with the aid of a dog borrowed from a settler down the valley, he tracked the enemy to his cunningly concealed den amid the blow-downs. But the wolverine, as if guided by some uncanny instinct, was not at home. No wolverine is ever at home when wanted.

This one was away on a special lethal business on which he had been engaged for a day and a night. And as a light snow had fallen, Brenner was left hopelessly at fault once more. With the half-mystical imagination of the simple outdoor man, the woodsman was beginning to suspect that the grim powers of the wilderness itself had consorted to thwart his trapping and drive him out of the spruce valley.

At the time, less than half a mile from the spot, the old wolverine was engaged in a crafty hunt, after the peculiar manner of his kind. Slow and lumbering as a bear in movement, the carcajou is yet one of the most successful hunters of the wilderness, succeeding by craft and a deathless persistence where the swiftest killers fail.

Clambering up into a dark gnarled spruce which overhung a natural deer trail, the canny beast had flattened himself out on a limb to wait. For thirteen full hours he had lain there, watching the sun out of one sky and the moon out of another, with a patience unequaled by any other hunting beast.

Few though the deer were in this lean winter, sooner or later one must pass along the trail, and though it be days he would continue to wait. His flattened body seemed as lifeless as the limb against which his soot-brown coat was blended.

Paddle along this summer with thousands of boys just like yourself, who are having the time of their lives earning cash commissions and such dandy prizes as camping and baseball equipment, bicycles, radios, and many other prizes any boy would be proud to own.

These fellows are Crowell Junior Salesmen who spend a small part of their spare time delivering to regular customers three of the best known magazines in America. They had no experience to start. We taught them how to get their customers and furnished all their supplies.

You can join this happy group of boys by placing your name and address on the coupon and mailing it to-day. You will then receive full information on how easily you can paddle your own canoe through the coming months, winning money and prizes.

Mr. Jim Thayer, Dept. A-10
The Crowell Publishing Co.,
Springfield, Ohio

Dear Mr. Thayer: I am anxious to start along the road to money and prizes.

Digitized by Google Original from UNIVERSITY OF IOWA

About this time, the peg-leg wolf, which, unknown to Brenner, had been keeping tab on his movements up the valley, heard the sound of a faint, far crackle, like flames running through dry brush. His lambent yellow eyes suddenly took fire, his ears cocked to a peak, and he swung off his rock and melted into the thickets, noiseless as a puff of drifting wood smoke in his prime mid-winter coat.

That sound, so tenuous that it had escaped the ears of Mart Brenner entirely, he had interpreted as a deer breaking through undergrowth, and the matter seemed worthy of investigation.

He had not gone fifty yards when he sighted the deer himself, a lone, packwary buck—one of the veterans that had lingered on in spite of the menace of the gray Table Mountain pack. With a long effortless bound the animal cleared a rampart of brush and was off in full flight, with the gray wolf streaking silently behind him.

Straight around the mountainside the buck ran, following the open trails, where the snow was still not deep enough to slow his speed, forgetting all guile in his panic to increase his lead of less than a hundred yards.

Given this beginning, Fate, as if chuckling grimly at the dénouement in store, saw fit to lead the chase along the game trail where the grim watcher in the tree lay in wait.

As the sounds of the chase reached him, the crouching carcajou on the spruce bough gathered himself together by imperceptible degrees. His powerful legs contracted and his yellowed saber-like claws took stealthy purchase in the rough bark; his little eyes took fire till they stood forth like live coals in the fierce black mask of his face. Three minutes later the buck bounded into view, panicky now beyond all caution.

Just as he passed beneath the outstretched limb, the wolverine, shedding his long immobility as one would throw off a false face, projected himself like a bullet through the air with all the swift, deadly surety of his weasel cousins. As the buck swerved in an instinctive leap, the squat beast struck, and in the same instant four sets of claws clamped deep into the deer's quivering sides.

THE buck, uttering an almost human cry, plunged off the trail and headed down the mountainside at suicidal speed, swerving and pitching against trees in a frenzy to shake his fearsome rider off. But the carcajou, cruel victor of many such death rides, clung as if his claws were barbed. His long weasel neck thrust forward, his heavy-boned jaws, the most powerful for their size on the North American continent, gaped like an alligator's, sank into the buck's arching neck, and locked. Within a minute, the quarry, in the very middle of a bound, pitched forward, dead before he touched the ground.

With a harsh churring snarl, the killer bounded free, then fell to feeding upon the still quivering carcass. But a brief instant only did he sate his hunger. For down the wind there came a fierce, shuddering cry that made him flatten where he crouched, facing the back trail.

The big peg-leg wolf had just come into view of the fleeing buck, and was rapidly

See what this does to "YELLOW MASK"

Marvelous Ingredient embodied in New Dental Cream removes that Yellowish Tinge from Pretty Teeth and Works Quick Miracle of Whiteness . . . Just Try It!

NOW even the most yellowish teeth can be swiftly whitened to the soft beauty of polished pearl!

Without harm to the most delicate enamel. Without the use of grit or coarse materials.

A valuable ingredient embodied in a smooth, creamy dentifrice works this miracle of whiteness. An ingredient that dental science has sought for years to incorporate in a tooth paste because of its magic whitening powers. A white, silky powder technically known as "Tri-Calcium Phosphate." Used by the foremost dentists for the specific purpose of removing stubbornly clinging stains from the teeth and imparting a high, lustrous finish.

"Best teeth whitener I have ever seen or used"

"In twenty years of dentistry, I have never seen a dentifrice that could so whiten the teeth as Orphos does. It certainly does clean them. It can be used three or four times a day without harm.
A. E. T.——, D.D.S.
A prominent Eastern dentist

Embodied in ORPHOS TOOTH PASTE this remarkable "Tri-Calcium Phosphate" banishes that hateful yellowness much as an eraser wipes out pencil smudges. Even the first brushing is a revelation. The result is simply dazzling. And each succeeding brushing intensifies the glorious whiteness brought to light. And how teeth do glisten! Just like newly manicured nails.

"Yellow Mask" is so unbecoming.

If present (look now and see!) ask for ORPHOS tomorrow at your favorite drug or department store.

Whiten it must, and will . . . just read the guarantee below.

Whitens.. *or costs you nothing*

ORPHOS won't fail. If by a single chance it should, after 20 days' usage, return unused portion of tube to druggist and your money will be returned.

Always popular—Welch's with cracked ice or ginger ale or sparkling water.

For the Porch Party

Part of the pleasure of serving Welch's Grape Juice is the knowledge that it's so healthful as well as so refreshing.

Just like the fresh fruit, Welch's supplies mineral salts, fruit nourishment, and vitamines that help to keep your body in order. For it is the rich pure juice of fresh Concord grapes.

Only the very finest Concord grapes in each year's vintage are pressed for Welch's. That is why it tastes so much better than any other grape juice, whether you drink it straight, blended or diluted.

It's a fine fruit juice for children, and, luckily, they like it as well as grown ups. Recipes, including the always-popular Welch Punch, are printed on every label.

Free—Ideas for Summer Drinks. Mail a postcard to The Welch Grape Juice Co., Westfield, N. Y., A-85. In Canada, St. Catharines, Ontario.

WELCH'S

Once you've tasted Welch's no other grape juice will do

cutting down the intervening space to death range when he was amazed to see his expected quarry struck down before his very eyes. Miraculously, the squat dark form of his rival appeared before him at the same instant, not in pursuit of the deer but riding its back like a fiery-eyed demon.

Instantly there welled up in the big wolf the most terrible rage he had ever known, the fury of every wild hunter at the theft of his meat—the most unforgivable crime in all the wilderness. The buck, which had represented food enough to last his hungry family a week, had been snatched almost out from under his claws, and with a fierce, deep-chested bay of challenge, the big gray wolf hurled himself forward to the attack.

The situation forced its own drastic conclusion. Crouched on the carcass of his victim, the fresh blood like a madness in his nostrils, the wolverine's eyes glowed with opalescent fire, and from his throat issued the enraged squall that is the battle-cry of his breed. Smaller than the wolf, and charged thus unexpectedly, it would have seemed that the carcajou would have been quickly vanquished; on the contrary, it was the peg-leg wolf who found himself at a woeful disadvantage within the first minute of the fight.

IT WAS his misfortune never to have learned the fiendish fighting tactics of this traditional foe of his clan. Furious beyond all prudence, he had leapt straight for the wolverine's throat, with the terrible sidewise slash of his kind. Crouching low on three legs, the carcajou had countered it with a full-armed blow that had all the deadly speed of one of the great cats.

It caught the attacker in mid-leap; the jaws of both found purchase, and the wolf, muddled at the unexpected maneuver, made a mistake that cost him dear—he hung on when he should have let go, not knowing that there is no greater master of in-fighting in all the wild than the wolverine.

Desperately his long, punishing fangs cut in and in, seeking the life arteries in his adversary's furred neck. But nature having prepared the wolverine for just such emergencies, the little beast simply turned loosely within his skin—which was incredibly heavy, and loose as an overcoat—at the same time securing a traplike hold with his own jaws at the base of the wolf's neck.

Incredulous at the power and tenacity of this demon beast, the gaunt wolf raised himself full seven feet in air on his hind legs, with the intention of falling with all his weight on his uncanny antagonist.

But the maneuver only enhanced the advantage of the carcajou, which wrapped his flattened body around the neck and shoulders of his larger foe, his four sets of saber-like claws locking. And there he clung like some giant leech, while his traplike jaws sank ever deeper and closer to the throat-hold that marks the end of every attack of the weasel kind.

As he met the relentless glare of those green-lit eyes that looked into his, the peg-leg wolf knew that death alone could loose that grip.

The footholds of the fighters torn loose by their struggles, the pair went slithering and bouncing for twenty yards down the snowy mountainside, to bring up against the trunk of a fallen tree. For the next three minutes all that could be distinguished of the battle was a spinning, snarling catherine-wheel of gray-brown fur and snow.

The peg-leg wolf was a fighter to the tips of his toes, but the carcajou had maintained his advantage, and was now plainly bent on settling the matter in one clinch with his bone-crushing jaws.

THE gray peg-leg was no normal wolf, else his death would have been sealed, for few indeed are the wolves who have lived through a pitched battle with a wolverine, the Devil of the North. But that greater length and strength of limb and jaw that had made the big gray a menace to the pack leader, plus the superb fury that only a protecting parent knows, were something with which not even the wolverine could reckon.

With his breath beginning to come in rattling gasps from the relentless pressure of the other's jaws, the gaunt wolf fell back on his last desperate resource. Unreckoning of the frightful wounds inflicted, he put forth the limit of his strength, and literally tore himself free of the fettering teeth and claws of his foe.

For a space of moments then—moments blessed and life-giving to the overtaxed wolf—the two stood clear, each choking, gasping and dripping with blood. Then, as at a signal, they sprang in again for the final clash.

Both struck simultaneously, and this time each secured an equal vantage. Locked jowl to throat they went down once more. Again the carcajou's steel and leather body whipped snakelike off the ground to twine about the other's head and neck; but even as his yellowed jaws sank in for their deadly purpose, the longer, sharper teeth of the wolf cut into his jugular, exacting the death penalty.

For a full minute thereafter the big wolf continued to shake and maul the limp body of his foe with dog-like savagery, not realizing that the battle was actually over, for the reason that the traplike jaws of the wolverine still retained their locked hold on his neck, obeying even in death the last command of that indomitable will.

Freed at last of the ill-omened weight, the victor stood upright for a space above the mangled remains, panting and trembling in the reaction from his terrible strain. Slowly the immutable peace and silence of the snow and cold settled once more over the winter woods, and it brought also a similar peace to the harassed mind of the father wolf.

A weight of dread and apprehension, long carried, seemed definitely lifted—the worry for the safety of his little family, and their right to live and flourish in the spruce valley. For he knew he had met and conquered the most dreaded foe the forest had to offer.

THEN, as if a sixth sense had warned him of an alien presence—for there had been no slightest sound—the yellow-green eyes of the wolf swung 'round to take in the figure of Mart Brenner, who stood looking down from an open glade two hundred feet above him.

Attracted by the sounds of the nearby chase as he was turning homeward, the old woodsman had been led to investigate,

Digitized by Google
Original from UNIVERSITY OF IOWA

and coming upon the fresh and well-known tracks of the big peg-leg wolf that lived at the head of the valley, he had followed on, hoping for a chance shot at the beast. A bit later when the sounds of a fierce battle reached him from ahead, he had redoubled his pace, his hunter's instinct on the *qui vive*, his light belt gun ready in his hand.

He had arrived breathless on the scene just in time to witness the greatest fight he had ever been favored to watch. Often he had wondered what would happen if a timber wolf and a wolverine met in battle; now nature had favored him with a first-hand view of a tableau that perhaps no other living hunter had ever witnessed.

Thrilled at the big wolf's prowess, his blood tingling with battle fire, Brenner watched the struggle through to its bloody close. A lucky chance had set his two enemies in the valley at each other's throats. The worst now lay dead, at the end of his evil career. The other stood before him, within easy grace of his gun. Truly, fortune was favoring him this day.

Grim-lipped, the old hunter raised his rifle to pay off his initial score against the wolf. Then, finger curved about the trigger, he paused.

For in the unwavering gaze of the wounded animal in that super-moment, there was not the faintest flicker of fear—though well he must have known that the man sought his death. Nor did he make a move to escape. He had touched in the past ten minutes the superb heights of valor—and, feeling it, the man watching him along the barrel of his leveled rifle, could not fire.

When finally, the spell broken, the big wolf turned and slipped silently away amid the trees, Brenner simply watched him go—and was glad!

Storms

(*Continued from page 33*)

burning. He sniffs the rainy, cool air. "She's going to put the blower on," he says in his hearty way, as if he doesn't care, even though Boreas jerks off the lid of his whole box of tricks.

I like to see the big racks of wood that are to hold in check the shock-troops of winter's advance; and in dim cellars to see piles of apples glowing, and gleaming rows of jarred fruits.

Because of the nature of my life through a long period of years, storms called me forth. Instead of seeking shelter, I had to see that the stock had it; and to this day, because of the strange primal exhilaration in it, I'd much rather be in a storm than out of it.

I've seen interesting behavior of wild life when storms were at their height. During a very heavy snowfall, while walking noiselessly up a mountain pathway, I once saw a big red fox, on the lee side of a tangle of wild grapes, raking away the snow sedulously, making a bed. I saw him crawl in and snuggle down serenely. On another day I followed the track of a buck through a storm, and found him standing on bare ground under the dense and dark canopy of a huge hemlock.

In the midst of a three-day West Indian cyclone, I saw my old horse walk out of his

Many Able Men *Waste Years*

before they learn this simple lesson

IN a very old book named Joel, after the man who wrote it, you will find this line—"The Years that the Locust hath Eaten."

A solemn sounding line it is, full of sad significance.

The years when there were no crops, because they were destroyed by the enemies of crops. The years when men worked and made no progress; when the end of the year found them a little poorer than its beginning, because a part of their little span of life was gone and had produced no increase.

* * *

In almost every life there are fruitless years; but the tragedies occur when, year after year, men go along feeding their lives to the locust of indecision, or the locust of laziness, or the locust of too great concentration on a petty task.

In every week of every year the Alexander Hamilton Institute is brought into contact with such tragedies.

"I wish I had acted earlier"

"My experience with the Alexander Hamilton Institute leaves me only with the regret that I did not make contact with it at an earlier time," says one man.

"If I had enrolled with you a year or two ago, I should be better able to handle my daily problems," another says.

Many able men waste years before they learn this simple lesson—before they learn that success today is impossible without training and that the time to get that training is not next month or next year but *right now*.

The punishment of wasted years

This happened just the other day: A man wrote asking that someone call on him who could give him information as to just how the Alexander Hamilton Institute has helped more than 358,000 men to greater success.

The representative found a man past fifty years of age, occupying a modest position in a great corporation. He sat down to explain the Institute's plan and method. And as he talked, naming one and another who now occupy high positions, he looked across at the gray-haired man, who was plainly disturbed by emotion.

The representative of the Institute turned away his eyes; he knew what that man was thinking. His thoughts were turned back over the fields of wasted opportunity; he was plagued by the thought of the years that the locust hath eaten.

Today you may start forward with 358,000 others

You can hardly call this an advertisement about the Alexander Hamilton Institute. The facts about its Modern Business Course and Service have been printed so many times that few men need to have them repeated.

The average man could say them almost by heart. He knows that the Institute is *the* institution that specializes in taking men who know only one department of business, and rounding them out into fitness for high executive tasks.

He knows that 358,000 men are proof of its

strength and standing; he knows that business and educational authority of the highest standing is represented in the Advisory Council of the Alexander Hamilton Institute.

Advisory Council

The Advisory Council consists of: GENERAL T. COLEMAN DUPONT, the well known business executive; PERCY H. JOHNSTON, President of the great Chemical National Bank of New York; DEXTER S. KIMBALL, Dean of the College of Engineering, Cornell University; JOHN HAYS HAMMOND, the eminent consulting engineer; FREDERICK H. HURDMAN, Certified Public Accountant and business advisor; JEREMIAH W. JENKS, the internationally known statistician and economist.

This advertisement is directed to the man who knows all this, and knowing it, has let the weeks and months and years slip by—years that might have meant so much to him, and now are gone and beyond recalling; years that the locust hath eaten.

"Forging Ahead in Business"

To such men—and to all men of earnest purpose who seek to avoid these wasted years—the Alexander Hamilton Institute comes now, asking for only one moment of firm decision—one moment in which to take the first step that can begin to turn ordinary years into great years of progress.

A book has been published for you, entitled "Forging Ahead in Business."

It is not a book for drifters; but to men who are asking themselves: "Where am I going to be five years from now?" it is offered freely and gladly without the slightest charge.

Today your copy of "Forging Ahead in Business" is waiting. Send for it now.

THE REASON
For adding Copper to Steel is to give Longer Service

Steel alloyed with copper gives maximum rust-resistance, and assures longer life and satisfaction when used for Black and Galvanized Sheets and Roofing Tin Plates. Insist upon genuine

KEYSTONE
Rust-resisting Copper Alloy
Steel Sheets
for Better Sheet Metal Work

APOLLO-KEYSTONE Galvanized Sheets possess all the excellent qualities of our well known Apollo brand, but with the added feature of a KEYSTONE rust-resisting copper steel base. These sheets last longest in service.

APOLLO-KEYSTONE Copper Steel Sheets are the highest quality sheets manufactured for roofing and siding, gutters, spouting, ventilators, and building construction purposes. Keystone Copper Steel also excels for tanks, flumes, culverts, and all similar uses. Look for the KEYSTONE.

For tin roofs for residences and public buildings, use Keystone Copper Steel Roofing Tin Plates; clean, fireproof, durable and satisfactory.

This Company is the oldest and largest manufacturer of a complete line of Black and Galvanized Sheets, Full Finished Sheets, Automobile Sheets, and Special Sheets for all known uses; also Tin and Terne Plates adapted to every requirement. Sold by leading metal merchants. Write for copy of booklet "Anti-Corrosive Metal," which contains information of particular interest to you.

comfortable stable, take a stance in the open with his back to the storm and with his head and tail down, and there remain for hours. He had, I'm sure, heard the stable give some alarming crackings, and perhaps had felt it give some sick heavings, and he made up his mind that he would be safer in the storm than under perilous shelter.

WHEN I was a boy between eight and fourteen years of age, I had to ride seven miles to school every day on horseback; and, as was natural, I encountered all kinds of weather. I used to love the balmy spring days, almost breathless with opening beauty, when the bees were buried in the jasmine-bloom and the little wild glades were carpeted with violets. I loved also the misty days, when all the woods were strange and ominous; when wild creatures, thinking dusk had come, were unwary; when from the glistening needles of the pines the moisture slipped in gleaming drops; when the faint rainy wind moving in the tall pines made music like that of soft violins far away.

But, after all, what thrilled me most was a storm. How many a time, a mile or more from home, a tempest would roll up behind me. My horse understood our problem as well as I did; indeed, the degree of his eagerness to get home often made me aware of a storm's coming. At such a time, I used to hold in Redbird deliberately, until I felt that the business was going to be a real race. Then I would give him his head, and away we'd gallop madly, flash through little streams, sweep along pine-scented stretches of road, the world darkening over us; and instead of opening the gate I used to let Redbird run for a low place in the fence, over which he would sail in delighted excitement.

Then up the avenue he would thunder fleetly, his mane and tail flying. Straight to the front door he would rush, stop suddenly, turn his head to look at the storm, his neck arched proudly and defiantly, snort with the disdain of a victor, his eyes wide, his thin nostrils dilated and quivering. Who has not had the same tingling thrill over beating a storm home?

As a color to rest the eye, green is delightful; but when it tinges a cloud beware. One afternoon I was fly-fishing in a lonely mountain meadow and had been so engrossed in the sport that I had not noticed, until the wild old fields suddenly darkened, that a storm was upon me. The hills surrounding the meadow are not high, but they lend a sense of protection; yet the moment I saw the emerald lights in the cloud, and the red fringes, I knew that the hills would not help me. Because of the danger from lightning, I have always disliked taking shelter under a tree during a storm.

Looking quickly about for some kind of cover, I saw, a hundred yards downstream, a massive sycamore that some previous storm had laid prostrate. Some of its roots still had a good hold in the damp soil, and about half the top of the tree, flat on the ground, was in new leaf. In a few moments I was on a tiny pebbly strand that edged the stream under the fallen tree. I jumped a rabbit from a heap of dead leaves there and startled two phœbe birds that had begun to build. Indeed, I felt as if I had entered a new and private world, under that fallen lord of the meadow. Crouched there, close to the earth, I could almost feel the green, luxurious silence of the grass. Storms often drive us into places which otherwise we should never visit, affording us an opportunity to see much that we should else completely miss.

Meanwhile, the storm rushed on apace. From the fateful color of the cloud, the whole landscape took on an eerie tinge, a strange lurid glow of green and saffron suffusing the gentle stream, the wild flowers in the peaceful meadow, the dark rock-pines on the slopes of the hills. Here indeed were beauty and mystery, terror and the unknown fast approaching.

Great, scattered, thumping drops of rain pounded the earth. The wind began to snort like a frightened horse, and again would moan gustily close to the ground, and then would whistle fiercely, then grieve softly through the limbs of the sycamore and through the little bending alders. From my homely but serene shelter I had a full view of that green-bosomed storm, the full force of which struck the hill crests to the north of me, about a half-mile away.

The tempest cloud, like some vast galleon of the sky crowding her gorgeous canvas mightily, bore down on the doomed hill. Thunder shook the earth. Lightning, enigmatically swift as the tongue of a serpent, darted earthward its fiery flashes. The whole sky seemed winged with red lightning and tempestuous rage. Sublimely the storm smote the wooded crest.

With the rising of this storm, I felt my feelings rise; the human spirit rushes with the wind, wildly fathoms the blank unknown, as does the lightning, drives with the slanting rain. And all this is for the reason that a storm, in terms of the human spirit, is a challenge, and God made us ready to meet challenges, giving us power to oppose whatever seems to menace us.

I REMEMBER going one October day into an immense lonely field of broom sedge across which a faint wind out of the pine forest was drifting. The wreck of an old stake-and-rider fence shambled through the waste field; and on this I sat, supposedly watching for wild life, but in reality "inviting my soul." It was early; the dew still gleamed in the fairy forests of the sedge. Over the world there rested that virginal beauty that apparels all things when the morning is still in her maidenhood. I do not recall that I ever saw nature more serene.

But this is a world in which change is a certainty. Within a brief half-hour, out of the far southwest the dusky funnel of a cyclone began to drive toward me with tattered and ominous funereal splendor. The bloodshot clouds converged fearsomely toward the tip of a huge green and purple vase. For all the peace that environed me, a shattering storm was coming.

It looked safer to stay in the field than to go into the forest, and there by the fence I stayed while this giant cloud came powerfully rolling on. The dark pines rocked, and wild music awoke in their crests. The gold of the broom sedge was tarnished by sick shadows. In a few moments the stormful vanguard was upon me—wrathful wind, hail, torrents of rain, darkness. Certain great pines went down with sloshing crashes. I could hear a fearsome snarl of wind off to the northward, where the funnel of the storm was passing.

UNIVERSITY OF IOWA

Hemmed in by the gale, I thought of Emerson's clairvoyant phrase: "the tumultuous privacy of storm."

In less than a half-hour, peace and sunshine had been restored. The broom grass was humbly bowed in misty gold. Birds, coming out of hiding, seemed to hasten to express in song the joy of deliverance. The sun flared splendidly on the wet forest, setting millions of dripping pine needles glinting. Beauty, order, and peace were restored. And in my heart was rejoicing over the wonder and majesty of it all.

I remember going up a mountain path one day when I met a mountaineer with an ax in his hand. We were so high that there were few large trees above us; only rocks, a sparse growth of craggy and gnarled bushes and stunted trees, and the immensity of the blue sky above. As we were going the same way I walked with him, and eventually asked him what he was going to cut.

"I need a piece of timber to fix my timber wagon," he said. "You know that does the heaviest and most rackingest kind of work, and the tree that grows on the top, where the storms hit it hardest, is the tree that has the toughest wood. If ever you want to get a piece of timber to stand all the jolts and strains, cut it from a place where all its life it has been obleeged to stand the same kind of roughness. A tree that ain't shielded," he said, "is the last one to fall. It has stood so much in the way of storms, little by little, that when the big gale comes, it can weather it."

The mountaineer had hold of the same truth that Tennyson expressed when he said that the knights used to choose their lance shafts from trees "storm-strengthened on a windy site."

A storm compels a man to seek shelter, to try out his anchors, and it appears to me that storms develop the fine spiritual fiber of faith.

But storms also afford us the opportunity to shelter others. In a stormless existence, how should we develop our sympathies? It is not strength alone that we gain by struggling against the adversities of life but a certain enlargement of heart that is worth all the physical strength in the world.

THE mighty Linville Gorge, in the mountains of North Carolina, is a majestic and mystical place. The deepest wooded gorge in America, through it roars the Linville River, at normal times little more than a mountain trout stream, warbling along among the rocks lining the bottom of the cavernous gulch. It would seem an easy thing for a man to traverse this gorge, but it is said that only two persons have ever been daring enough to do so. One was a woman.

The length of the defile proper is about twelve miles; its sides are almost sheer. What constitutes the peril is the fearful rapidity with which the gorge fills. At one moment there may be a purling rivulet, searching out a channel among the west rocks; within a half-hour, a wild-crested flood will be ramping grandly down the narrow defile, storming thunderously through the drowned gulch, roaring resistlessly seaward. There are jewels to be found in the Linville Gorge, and beautiful Indian relics. But its nature is such that a storm, even of moderate violence, will render it a most perilous place.

1—*Tufted Pro-phy-lac-tic.* Most dental arches are full-formed and require this type of brush.

2—*Oval Pro-phy-lac-tic.* Scientifically designed for the small, more sharply oval arch.

3—*Masso Pro-phy-lac-tic.* For dental arch that has tender gums. Massages as it cleans.

Why let chance choose your tooth brush?

Ten seconds with your mirror tells you exactly which of these three new Pro-phy-lac-tics you should use

YOU no longer need guess about the brush you use twice daily. Here are three different tooth brushes . . . all new . . . each scientifically designed to suit a specific dental arch.

You can decide instantly, accurately, what brush you should use. Just glance into your mirror.

If you see a face full-formed, your dental arch (teeth and gums), too, is full-formed. For you the right brush is the Tufted Pro-phy-lac-tic. A smaller face and mouth indicate a small oval arch. Then the Oval Pro-phy-lac-tic is the brush to use.

Unless . . . your smile shows teeth and gums that need special attention. To bring back sparkling health, you should use the special, dual-action brush—the Masso Pro-phy-lac-tic. This brush massages as it cleans. It fits both large and small arches. It has been approved by leading dentists and periodontists.

Today, and a month from now

Choose the right brush. Use the right brush. After a few weeks, look into your mirror again. Whiter teeth, sparkling, bright . . . gums firm, vigorous, healthy—these are priceless rewards for the extra care the right Pro-phy-lac-tic assures you.

Pro-phy-lac-tic Brush Company, Florence, Mass.
Pro-phy-lac-tic Brush Co. (Canada), Limited, Montreal

Full-formed face shows large dental arch

Dental arches (teeth and gums) differ. Each requires a different type of tooth brush to win gloriously white teeth, coral-firm gums. Read above how easy it is to let your mirror tell your type, to know exactly what kind of brush it is best for you to use.

Small face indicates small oval dental arch

Pro-phy-lac-tic Tooth Brushes

different in shape and size . . . alike in quality

No Wonder *Men Are Proud of Wives Like Her!*

"Clever, brilliant, gifted," say her friends. "A wife in a thousand," says her husband. But she writes: "A Fading Wall Flower has been transformed by your inspiring book."

And This Book is now FREE to All Women!

HERE is the book that has brought new joy and happiness to hundreds of women. Within its 32 pages is described a new easy way to keep abreast of the times; a hobby that will add beauty to your home, that can bring you $10 to $25 a week for your spare time. No canvassing or tedious drudgery. We show you everything.

No Special Ability Needed

You need no special ability to become a successful member of the Fireside Guild. If you love color; if you like the deft touches of decoration that make a home so "livable;" if you like to "make things"—you have all the natural talent that is needed to quickly master all the delightful secrets of Applied Arts by the famous new simplified "3-Step Method."

Your Success Assured

Right at home, under the direction of M. Gabriel Andre Petit and his staff, you quickly gain skill in the decoration of lovely silk scarves, batik tapestries, block printed draperies, colorful book shelves, wall plaques of gesso and polychrome, tallies, bridge prizes, and a hundred and one new articles that will bring you big profits and add distinction to your home. Here indeed is a hobby that will gain the admiration of all who know you, that will set you apart as the "one wife in a thousand!"

Send Coupon for Book

It will bring you the entire fascinating story of the Fireside Guild. Simply fill in and mail coupon, enclosing 2c stamp for postage. Book will come by return mail. No obligation.

FIRESIDE INDUSTRIES
Dept. 60-K, Adrian, Michigan

Once I saw happen the thing which explorers of this splendid defile dread. I was on a pinnacle of rock overlooking the gorge when, far to the west, I saw the magnificent gloomy pageant of a thunderstorm. I watched the sublimity of it—like some dark, disastrous blossom of the sky, growing, bursting into lurid bloom, fading away.

That storm never came near me. Yet within two hours I saw its effect. It had been in the Linville watershed. The first intimation I had of what was coming was a deepening of the roar of the waters far below me. Watching, fascinated, I saw the gleaming friendly stream turn suddenly turgid, white-maned. Thunder was now in its stride. Little waterfalls became tall cataracts. Rocks and bushes in the gorge vanished. Under my very eyes the stream was transformed. Now it was a lordly river, gulping the sheer canyon walls, storming in wild splendor down the magnificent gorge. . . .

I thought: Here was a storm that never came near me. Yet the flood it started would drown me. It made me think of the deeds of others, reaching far, affecting the lives of many. It looks to me as if someone, somewhere, has to sustain the shock of every human deed. A virtue practiced may make some utter stranger strong; a vice in me may be disastrous, not only to those I love but to people I shall never see or know.

I REMEMBER an experience I had with a storm in a forest of yellow pine. I had gone only three of the ten miles I was supposed to travel, when the lurid clouds that had been piling up ominously in the west all that sultry July afternoon began to roll obliteratingly over the forest. The lightning was savage and almost incessant. The thunder was so nearly continuous that it sounded like the surf of some prodigious ocean, breaking on some vast and fabulous shore. The little Kentucky thoroughbred mare that I was driving, from being naturally nervous, turned fidgety, then flighty, then frantic. It was all I could do to hold her. We were driving into the oncoming storm.

Soon even the green-and-yellow light, that had been effulgent in the hushed greenwood, vanished, and the double darkness of night and of storm shut us in. With a roar, came the rain, the trees meanwhile tossing their limbs like despairing arms. A white bolt shot flaringly down, burnt a great pine, and buried itself in the earth not ten feet from my horse's head. Poor Kitty was too human to stand that. She rushed madly off the road. The two shafts of the buggy met two pines standing just at the proper distance apart. The traces parted. I let go the reins, and the mare vanished into the storm. There was I, sitting alone, taking the fury of the elements as they came.

I wondered about my good but temperamental mare; I thought of the broken traces, the strained shafts, the seven dank miles home through the lonely wood. I was so wet that I felt amphibious. But quite suddenly, out of the very black eye of the storm, a rift was torn. It was just a little rent, a blue-and-white handkerchief up there in the roaring dark heavens. And, by chance, in that serene space, the evening star shone. Solitary, celestial, in dewy-silver solitude it shone. And it was shining for me, stormbound as I was.

And it seemed to say: "All tempests are transient; I am eternal. The darkness and the rain and the blind and savage wind; the lightning and the crashing thunder; the blotting clouds, the after-mist; all these come and go. A little while, and the storm will be over. See in me the hope of eternal life and light. All storms are transient; all grief and tears, all disappointment and distress. Darkness soon passes away. Truth and love abide. After the storm, all shall be beauty and peace once more."

IT IS many years since I had that experience with the lonely star appearing amid the storm; but its message does not grow old. No message can which is really for the heart. Granted that storms leave scars, they are what old seams and sword cuts are to soldiers. Symbolic are they of encounter and resistance. And always, because of the analogy from nature, we have a right to believe—and to be comforted by that belief—that Eternal Light can, by mortal storms, be obscured only for a little while. Cardinal Newman must have had such a thought in mind when he so beautifully wrote:

So long Thy power has blest me, sure it still
Will lead me on
O'er moor and fen, o'er crag and torrent, till
The night is gone;
And with the morn those angel faces smile,
Which I have loved long since, and lost a while.

There's always something masterful and mighty about a storm; even the quiet snowstorm has about it an aboriginal, resistless power. If its strength is not tumultuous, it is at least insistent. And whatever strength there is manifested calls forth in us the same kind of virtue to meet it. We are closer kin to the elemental forces than we know. We are blood-sisters and blood-brothers to the winds and the tides, the snow and the rain. Does the gale rise? So do our spirits. Does the snow whisper driftingly down through the needles of the pines and the hemlocks? So do our spirits float whitely with the snowflakes, as innocent and as peaceful as they.

The storms that sway the huge pendent world; the great primal forces of nature—these are not for our destruction. These are but lordly magnets drawing from the depths of our being similar virtue of spiritual vigor. As the persuading sun irresistibly compels the vitality of the buried seed to awake, so the storm rouses in us obscured and latent virtues.

WITH children, who are always, it seems, blessedly close to wholesome and natural and authentic racial instincts, the coming of a storm always means excitement. Even a little child will sense the approach of a tempest, and in its own way will rise to meet the occasion. Here is a three-year-old girl in a city apartment over which, for days, a bronze-misty sky has hung torridly. It is now after sundown. A storm is coming.

She sees it, and though she only half comprehends it, it fills her with the need for urgent preparation. She begins to run here and there, chatting excitedly, laughing, starting to do a number of things and finishing nothing. With an eager tenseness she tingles. Suddenly the wind comes. Doors bang. Windows rattle. The little

Digitized by Google
Original from UNIVERSITY OF IOWA

child slings chairs against the doors, runs to the windows, shouts with glee, and in every way manifests the human excited reaction to these magnificent shows of nature that are staged for our uplift, enjoyment, and awakening of heart and mind.

Watching this naïve behavior of a child, one can see portrayed the whole cycle of human emotions about a storm. She had first sensed the thing coming; then she became excited, then charmed; then she began to wonder what it all was for. All of us wonder. . . . Perhaps, after a while, we shall learn that apparent triumph and disaster are only impostors. What makes an event important is its effect on the human soul. Death, presumably the supreme disaster, the final storm, cannot, I think, affect the virtuous soul adversely.

Without storms there would be a certain lassitude of existence that would be monotonous in the extreme. I love storms for the changes that they bring. As Henry Van Dyke beautifully says, "the wind of sorrow will often fan the flames of love into warmth and brightness once again." I love storms for the beauty that follows them; the sense of danger passed; the sense of God prevailing after all. Sometimes, at sunset, after a rain, an angelic evening arrives to the earth; and throbbing stars blaze softly on the dewy, silent fields, and night folds tenderly the misty river, the jeweled wood, the purple herdsgrass. The peace after a storm makes the heart rejoice that the danger has been survived; we feel a closer comradeship with those who have shared the peril with us; we feel as if a refuge and a rest had been earned.

The Thing in Nature That Thrills Me Most

Prize Contest Announcement

WHAT is it? Thunderstorms, rainstorms, sunrise, sunset, an Indian summer evening, mountains, lakes, a woodsy lane! Add as many more things to the list as you like, and then take your choice. Tell us why a particular manifestation appeals to you most. Just what does it do to you? Does it make you wish to challenge the universe? Does it give you peace? Does it make you feel closer to God?

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes August 20th. Winning letters will appear in the November issue.

Address "Nature" Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

Lysol Disinfectant

REG. U. S. PAT. OFF.

"Now I know . . . !"

She did not know what was the matter . . . she was not ill . . . but something was wrong. The old energy was gone. Her married life seemed to have become a failure. Was it her fault? She asked a doctor to examine her. He told her what was wrong.

Most fastidious women today practice sane habits of living and feminine hygiene to safeguard their health and vitality and youthfulness. But a great many actually injure themselves by following unsound advice or using the wrong disinfectant. In this vital matter you must have the *facts.*

The makers of "Lysol" Disinfectant will send you free a booklet called "The Scientific Side of Health and Youth." It contains the rules for practicing feminine hygiene which every woman should know. Send the coupon now.

But while waiting for the booklet to arrive, take no more dangerous chances. "Lysol" Disinfectant has, for nearly forty years, been the standard disinfectant with physicians and hospitals when germs *must* be killed. Buy a bottle of "Lysol" Disinfectant today at the nearest drugstore. Complete directions come with every bottle.

© Lehn & Fink, Inc., '28

"Lysol" Disinfectant is sold at retail *only* in the *brown* bottle packed in the *yellow* carton.

Made by Lysol, Incorporated, *a division of* Lehn & Fink Products Company. *Sole distributors* Lehn & Fink, Inc., Bloomfield, N. J. In Canada, Lysol (Canada) Limited. Distributed by Lehn & Fink (Canada) Ltd.

The Chanins of Broadway

(Continued from page 23)

would look through a little hole in one end of the thing and make commanding signals to his assistants.

"To me," laughed Chanin, "he was a sort of god. I couldn't imagine what he saw through that little hole. I had a vague notion that he beheld the whole world! And I would have given *anything* if I too could look through that hole and see what he saw.

"One day I went home, called my first 'business conference,' and told my father and mother that I had decided to become an engineer. That announcement wouldn't create much of a stir in an American family; but to my own parents it sounded so ridiculous that they declared I was dreaming.

"Apparently, anybody that looks further and reaches further than most folks do, is either 'dreaming' or 'crazy.'

"'Don't be foolish!' my father said to me. 'To become an engineer, you'd have to go to college—and they won't let you do that in Russia because you weren't born here.'

"'That's all right,' I told him. 'I'll manage somehow.'

"WELL," he went on, "we stayed in Russia about eight years. In those days, you remember, the revolutionists were secretly working against the Czar's Government. They used to get hold of the boys and girls and teach them radicalism. They got hold of me! And suddenly my father discovered that he almost had a thirteen-year-old revolutionist in the family.

"Meanwhile, he had been unsuccessful in business over there and most of his ten thousand dollars had melted away. When he found that I was mixed up with doings that might lead me to exile or death, he decided to come back to a country where he could make a living, and I would probably go *on* living. So, in 1906, when I was fourteen years old, we returned to Brooklyn.

"Father soon began to get small contracts; and for several years I worked for him, doing plastering, papering, painting, and so on. After I'd had a little experience he put me in charge of jobs. I was 'the boss' over twenty or thirty men, all of them two or three times as old as I was.

"In school I had done particularly well in mathematics. I really *loved* geometry: the exactness of it, the way you had to prove, and *could* prove, every step in a problem.

"Most boys rebel against studying geometry. But it was the foundation for all that I have accomplished in the past ten years.

"Although I was doing a man's work for my father, he paid me only a dollar a week. That was all right. He needed my help, and I felt that I owed it to him.

"Too many children nowadays seem to think their parents owe them something. They even claim that the *world* owes them a living. My idea was—and still is—that I must earn what I get.

"I hadn't given up my plan of becoming an engineer, but I had neither the time nor the money to go to college. So when I was seventeen years old I began taking the night course at Cooper Institute. I worked all day and went to school in the evening.

"By the next year, my father could manage without my help, so I entered day school at the Institute and earned money by tutoring at night. That summer I got a job, at seventy-five dollars a month, on the subway construction.

"I won three scholarships at Cooper Institute, was president of my class both years, and was elected by the students to represent them with the faculty."

"How do you explain all this?" I interrupted.

"Well," he said thoughtfully, "I was putting all my thought and energy into one thing—the work I was doing at school! I didn't waste time and strength in other ways: dancing and sports and just playing around.

"I wanted to learn all there was to be known about engineering. I used to get books out of the library, histories of industry going back hundreds of years. I wanted to understand how and why conditions had become what they are to day.

"It was like another kind of geometry. It's not enough to say that a certain angle is equal to the sum of two other angles. You should be able to *prove* that it is, and to know why.

"So, in industry, it isn't enough to say: 'Here is a certain condition.' I wanted to be able to prove that the condition really existed, and how it came about.

"JUST before I was graduated from the Institute, I competed for an annual prize given by a Pennsylvania engineering association. Each year a problem in construction was sent to all the technical schools. Any member of the senior classes could compete for the prizes and honorable mentions. The year before I was graduated a Cooper Institute student had received the eighth honorable mention, a fact of which we were very proud because our school was hardly to be compared with the great colleges.

"The problem submitted to my class called for the design and specifications for a bridge. Of course I entered the competition! I never missed a chance to measure myself in any kind of test.

"The result of this one wasn't known for some time; and meanwhile, having graduated, I went back to the subway job, making drawings in the office of the engineers in charge.

"I had been there a month or two when one day the head of Cooper Institute sent for me. To my amazement, he actually put his arms around me and almost kissed me.

"Then he explained that I had won second prize in the competition. The first award had gone to a student at the Massachusetts Institute of Technology, the leading technical school in the country. I believe my old professor was prouder of my success than I was myself.

"Soon after I went to work on the subway job my pay was raised to one hundred and fifty dollars a month. A year or so later I was sent to Philadelphia. A subway was to be built there and four men were transferred from our office to assist in making the engineer's drawings.

"While I was there, I roomed with some young medical students. I always had been interested in hygiene, and here was an opportunity for me to learn about it. I asked them hundreds of questions. Often I went with them to their evening lectures.

"Meanwhile, the United States had entered the war. I applied for a commission as an engineer and was sent to Camp Wadsworth. Somehow it was discovered that I knew a bit about physiology; so I was put to work with the medical examining board taking measurements of incoming recruits. They used to call me 'the chest engineer.'

"Before long, however, I got a very different sort of berth. I was sent to Cleveland, where I probably was kept under close observation for a couple of weeks. Then I was summoned by the officer in charge and told that I was to be given one of the greatest of all possible opportunities to serve my country.

"He didn't explain what it was. But before daylight the next morning, I was taken by motor car to a village, perhaps twenty-five miles away, turned over to an armed guard, and led into a big barbed-wire enclosure.

"Later, I found that I was at a post where poison gas was to be made. Every man that entered that enclosure was to stay there until the war ended—unless he died before that time came!

"We were forbidden to discuss the work we were doing. The letters we wrote, and those we received, were read and censored. We could not set foot outside the enclosure.

"My job there was to put up the necessary buildings, for the plant was just being started. I had to design and construct the living quarters, laboratories, foundations, and supports for huge retorts. And the one overwhelming demand on me was for speed! Safety and speed.

"It was a stiff job. But the Government doesn't owe me anything for the work I did there! What I learned has been worth thousands of dollars to me since then.

"BEFORE going there, I never had put up a building of any sort. I knew theories; I'd had some experience, with my father, in details. I knew materials. I had studied them just because I was interested in them. Wood and steel and concrete: I hadn't missed a chance to learn about them. And as 'boss' over my father's workmen I had gained some experience in handling men.

"But as an actual builder I was nothing but a green boy. Yet I could handle the job, because I had been getting ready for it all my life.

"The big new thing it taught me was to have *confidence* in the knowledge I possessed. That, and also how to get *speed* out of myself and others.

"When the Armistice came, we were

ready to produce the most deadly gas that had ever been invented; and in quantities sufficient to wipe out an army. Fortunately, it did not have to be used.

"Meanwhile, my brother Henry had gone to France and had been seriously injured in action. At first he was reported killed. A younger brother had died in the flu epidemic in November. For these reasons I was anxious to get back to my parents, so I asked for my discharge.

"I reached home in December, 1918, when I was just twenty-six years old. The next thing was to make a new start in life—and I was determined that it *should* be a new one.

"I could have got a job like the ones I'd had before the war. In fact, the major at the poison-gas plant sent me a telegram offering me a position with a steel firm at a salary of fifty-two hundred dollars a year; which looked pretty big to me! It was almost three times as much as I'd ever earned before.

"But I didn't want to sit in an office and draw plans to carry out other people's ideas. I was sure I could have ideas of my own. I wanted to do things myself; and to do them in my own way.

"For months I just walked around and watched what was going on. I tried to size up conditions: to find out what the world needed that I could supply.

"It didn't take long for me to realize that there was a tremendous shortage of houses. People seem to think," he went on, "that I've had phenomenal luck. But that particular opportunity, for example, was staring everybody in the face. The housing situation was being discussed all over the country.

"A good many men were acting on it. Right there in Bensonhurst, builders were putting up houses and selling them at a good profit. The chance was there for me, too; but with a capital of only about two hundred dollars—which was every cent I had—what could I accomplish?

"For several months I just watched, and studied things. I used to go into the new houses which were being shown to home-seekers, and listen to the comments; especially to what the women would say. In this way I found out what they liked and what they didn't like.

"FINALLY, in the spring of 1919, I went to a retired builder whom I had known through my father. This man owned a good deal of vacant land in Bensonhurst, and I persuaded him to sell me two adjoining lots and to accept a down payment of only $100 on them! That sounds ridiculous, for ordinarily he would have demanded at least $1,000 down.

"I wanted to put up two houses which would cost $10,000 apiece. It seemed a crazy idea, for I had only $100 left to do it with. But I knew it was not crazy, so I tried to borrow enough money to make a start.

"I was engaged then to the girl who is now my wife. She had enough faith in me to lend me $300—all her savings. And I had enough faith in myself to accept it. Some of my friends added small loans; so that altogether I scraped up about $1,000 in this way.

"Then I tackled the bankers and other business men. I didn't deceive them. I put all my cards on the table.

"'You'll get your money back,' I said. 'Perhaps not this year or next. But I promise that you shall have it; for, even if I fail in this enterprise I can earn the money in other ways.'

"In order to prove that I could, I would show them the telegram offering me a fifty-two-hundred-dollar salary. I almost wore out the paper on which that telegram was written by showing it to the men I tried to borrow from," he laughed. "Thanks to it, I collected more than the amount it offered me.

"When it came to building the houses, I adopted the creed which I have clung to ever since: Give people something different, something better, and something *more* than they have a right to expect.

"A great many other builders were turning out cheap and shoddy houses. They sold them, because people had to have a roof over their heads. But I didn't do this. I bought my materials carefully. Although I was not an architect I drew my own plans. I bossed the construction. And I added pleasing and unusual details, which cost extra money to be sure but which were so attractive to buyers that my two houses were sold, for $13,000 apiece, before they were completed.

"With my $6,000 profit, and the proof that I was not so crazy as I had seemed, I was able to go on building. I bought the rest of the lots on that block and started more houses; all different and all better than other contractors were selling at the same price.

"I did not own the property facing my lots. You might think it was no concern of mine what kind of houses were put up across the street. But I wanted my customers to have, not only nice houses to live in but also nice ones to look at! So I drew plans and *gave* them, without any charge, to the other contractors.

"I'M TRYING to show you that what people call my 'luck' was not due to chance. It was simply the result of using an opportunity honestly, sensibly, and with understanding of what people want.

"My brother Henry, who was an accountant, had taken a government position in Washington after he came out of the hospital. As my building projects expanded, I needed help; so I sent for him. He took care of the office work—although we didn't have an office! We had only a desk in a little paint store which my father had opened.

"Within about two years, we built and sold more than twenty houses in Bensonhurst. All this time I kept watch of conditions. We, and other contractors, had been supplying homes to people who had made money during the war. But as time went on I realized that this particular demand had been met. It is as necessary to know when to *stop* doing a certain thing, as to know when to *begin* doing it.

"'Bensonhurst has all the houses it needs,' I said to my brother. 'We must go to another field.'

"After studying conditions, I found that the salaried class had not been taken care of. These people could not afford to buy houses. They had to live in rented flats. So we selected a site and put up an apartment house to accommodate sixteen families. Before we had it finished it was rented to capacity. We followed this with a forty-tenant house; and that, too, was immediately filled.

"Up to this time, we had built and sold. But now, with the post-war deflation going on, we couldn't sell our new apartment houses to advantage; and as they were heavily mortgaged it wasn't easy for us to carry them.

"Meanwhile, a very common thing had happened: You will always find a good many people who simply copy what other men do. They see that money is being made in a certain kind of enterprise, so they trail after the leaders. And they keep on with the same enterprise after the leaders have dropped it.

"Contractors who hadn't known when to stop had gone on building homes for which there was now no demand! One Brooklyn firm found itself with a lot of empty houses which it couldn't sell. It had laid the foundations for a good many more; but construction on these had stopped when the slump came. This firm tried to sell its empty houses to us.

"AFTER studying the situation, I said to my brother: 'Here's what I think will happen: The contractors can't afford to hold on to those houses indefinitely. They'll have to sell them at a loss. People will come along and buy for fifteen thousand dollars a house which, in ordinary times, would cost them twenty thousand.

"'These are two-family houses. The purchaser of one of them will get a bargain to begin with. Then he will rent half of it—and the rent will pay all his own expense. He will tell his friends and relatives about his good luck. They will buy houses there for themselves. And the first thing you know all the empty houses will be full, and there will be a demand for more.'

"Believing that my judgment was sound, we took the vacant lots with their foundations in an exchange for our apartment houses. Once more, people thought we were crazy. They said we had been badly taken in. But things turned out just as I had figured, and we sold every one of the lots, making a good profit.

"People drive through that section now," he laughed, "and point out the houses as 'Chanin's oranges.' Because, as they say, we took a bunch of lemons and turned them into oranges.

"All this time, we were living in Bensonhurst. I kept watching and studying things, and finally I came to another decision:

"'Several hundred houses have been built here,' I said to my brother, 'and a lot of new people have come here to live. All these people have to *buy* things. We've given them homes. Now let's give them the shops they need.'

"We bought property on the street which we figured should be the logical business thoroughfare; and there we erected stores, a garage, a public market and so on. We made money out of that enterprise; but there was nothing more for us to do in Bensonhurst.

"We now had an office in Brooklyn; and from my own experience I knew that the office buildings there were old-fashioned and the rents were high. In other words, here was a definite need. So we determined to put up an office building.

"As usual, the bankers to whom we applied for financial backing were all from Missouri and wanted to be 'shown.' That, of course, was perfectly right. But when

Don't let your gums 'sleep' their health away!

TO remain in health the gums, like all living tissue, need work and exercise. Nature planned that they should receive stimulation from the chewing of coarse food, to encourage a free circulation of rich, fresh blood through their walls.

But we have thwarted that plan of Nature's! For we demand only soft, rich foods—delicately prepared—daintily served. Our gums are robbed of activity—they lack the invigorating friction they need. Year after year they lead an artificial life of ease—year after year, they "sleep" their health away!

Small wonder that gums soften, weaken and lose their tone—that "pink tooth brush" appears, with its unmistakable warning of more serious troubles to come.

How Ipana and massage build firm healthy gums

Fortunately the dental profession offers a simple, effective remedy for this difficulty. They tell us to massage our gums, gently, either with the finger-tips, or with the brush while brushing the teeth.

And thousands of dentists ask their patients to use Ipana Tooth Paste for both massage and ordinary brushing. For Ipana is specifically compounded to stimulate the gums while it cleans the teeth. It contains ziratol, an antiseptic and hemostatic of known efficacy in the toning of weak, undernourished tissue.

The coupon, of course, will bring you a ten-day trial—enough to acquaint you with Ipana's cleaning power and its delightful flavor. But the better plan is to start at once with a full-sized tube from the druggist. Use it for one month. That is a fairer test of Ipana's power to improve the health of your gums.

IPANA TOOTH PASTE

BRISTOL-MYERS CO., Dept. J88,

they declared that tenants wouldn't move into our building, I knew they were not right on *that* point.

"'Tell me *why* they won't move!' I said. 'Scores of Brooklyn men are occupying small, dark offices and paying a high rent. If they can get air and sunshine, with modern improvements, and for two thirds of what they are paying now, is there any sensible reason why they won't take it?'

"I remember one man on whom my arguments had no effect. I had him call his stenographer and have her take down a statement of what I predicted would happen. I told him to keep it in his desk for one year, to reread it then, and to see whether my prediction had been fulfilled.

"As a matter of fact, I went back to him in less than eight months, had him read over that statement—and he admitted that every word of it had come true.

"When I was trying to get the money, however, I was passed on from one office to another without success, until I finally found one man who had faith in my judgment; and with the backing of his firm we put up the Chanin Building in Brooklyn.

"To the bankers, I had given an estimate of the income I was willing to *guarantee* the building would bring in. But when completed it was rented at a total figure almost twice as high as the one I had named.

"Nevertheless, when I started our next project, some people again insisted that I was 'crazy.' We bought the best business site in Brooklyn, paid $850,000 for it, and began to erect a $5,000,000 office building. Before it was completed we sold it, at a big profit, to another firm.

"Since that time, the usual thing has happened: Too many office buildings have been put up in Brooklyn and there is an oversupply. We knew *when to stop*.

"We next began to study conditions in New York. We found that the wholesale fur dealers were concentrated in a certain section, but in shabby and inadequate quarters. We put up a fine modern structure, the Fur Center Building. It was an immediate success, because it supplied a definite need.

"'That takes care of the fur business!' I said. 'Now we must find something else.'

"I ALWAYS had loved the theatre. When I was a student at Cooper Institute that was my one diversion. But I was so poor then that all I could afford was an occasional fifty-cent seat in the top gallery. To reach this 'nigger heaven,' as it was called, I had to go in at a separate door. I wasn't allowed to use the main entrance, and this always humiliated me.

"In looking over the New York field I discovered that there wasn't a 'dark' theatre in the city. I mean that every one of them was open and making money for the owner. So I determined to build a theatre.

"This was in 1925, three years ago. Since then, we have built eight theatres; seven of them for ourselves, although we have sold three of these. The eighth was the Roxy, the largest and most elaborately equipped theatre in the world.

"Here was a new and wonderful opportunity. Not merely to make money; but also, in my own way, to touch the realm of art. Just because I am a business man you mustn't think that I don't care about beauty. Even in those first two houses which I built in Bensonhurt I tried to do more than a mere mechanical job. I've put the same spirit into everything I've undertaken.

"And I've tried, also, to do another thing; I have tried to think about the *human beings* for whom I build. In my theatres, for instance, we use chairs which we designed; wider and more comfortable ones than those formerly used. We gave more space between the rows; introduced new methods of improving the acoustic properties, gave the actors better dressing-rooms; designed entrance foyers which were revolutionary in their saving of valuable space.

"And, believe me," he laughed, "I didn't forget my old grievance about the separate doors to the galleries! I did away with the whole business—gallery and all. At my theatres, the girl from the 'five-and ten' and the richest aristocrat in town enter by the same door.

"My theory is that people go to the theatre to be happy and to forget their troubles and worries. They can't do this if they are physically uncomfortable or mentally irritated. So I try to make them at ease, both in mind and body.

"HOWEVER, we couldn't go on building theatres indefinitely. We had to find another direction where some definite need existed; and we found it in rather a curious way:

"One day my brother and I, who are still living in Brooklyn, were compelled by business to stay very late at our New York office, so we thought we'd better spend the night at a hotel. We called up six of the biggest hotels in town—and not a room was to be had! That was interesting in more ways than one. I began to study the situation; and as a result we built the Hotel Lincoln, with 1,400 rooms and 1,400 baths. With the three theatres which we built next door to the hotel, the whole thing is a $12,000,000 enterprise.

"But you must understand that there is more, for me, than just money in doing all this. There is, for one thing, the interest of trying to express ideas! Especially my own ideas.

"For example, while we were planning the interior decoration of the Lincoln I happened to be riding along Madison Avenue early one bright Sunday morning. The street was practically deserted; and I suddenly saw on the wide pavement the shadow-silhouettes of the towering buildings, with their 'set-back' upper stories.

"Stopping the car, I got out and stood there looking at this extraordinary picture, a sort of symbol of New York. And the idea came to me that we would make our new hotel an expression of the city itself. Why go on repeating the old forms? The Louis XV drawing-rooms, Jacobean libraries, Italian dining-rooms, and all that sort of thing. Why not translate our own period into art?

"That's what we have tried to do in the Lincoln. It has been tremendously interesting to build, not only with steel and bricks and mortar but with ideas as well.

"We are doing that in the 56-story office building which we are erecting near the Grand Central Station. And we shall do it in the hotel which we are going to

Digitized by Google Original from UNIVERSITY OF IOWA

build near by. With its 6,700 rooms it will be the largest hotel in the world."

"Quite a contrast," I said, "to the two little houses with which you began less than ten years ago."

"Yes," he agreed; "we have gone a long way since then.

"I'll tell you," he went on after a moment's hesitation, "who has helped me along the road. In a sort of way, I've been in partnership with Abraham Lincoln! That's why we named our hotel after him.

"From the time I was a boy, Lincoln has been my ideal of a man. And among the many wonderful things he said, there were two which I have repeated to myself over and over again.

"The first was: 'I say: "*Try! One who never tries never succeeds.*"'

"And the second was: '*A promise made must be kept.*'

"I don't know," he smiled, "whether people ever called Lincoln 'crazy.' I imagine they did, because they called him a good many uncomplimentary things. But if a man's 'craziness' is backed up by courage, common sense, and the confidence that is based on knowledge, he can afford to laugh at his critics—then and later."

IF YOU WANT TO KNOW HOW to use the gentle art of diplomacy in everyday life, read the interview, next month, with Henry P. Fletcher. Mr. Fletcher, who at present is our Ambassador to Italy, has spent over twenty-five years in the diplomatic service. No one can spend twenty-five successful years in the diplomatic service without learning a whole lot about getting on with all sorts and conditions of men. For the benefit of the readers of this magazine, the Ambassador has boiled down to six basic principles all that he knows and has learned about the art of getting on with people. As the measure of our achievement is also the measure of our ability to get along with people this article is going to be of immense value to those who read it.

Strawberries Don't Grow on Poison Ivy Vines

(*Continued from page 29*)

in that little safe 'thout any delay, and 'thout pryin' it open. Because what's in that safe, if anythin', is the proppity of Mrs. Freddie Norton, and become so on her marriage. . . . Accordin' to the desire of Old Man Haddy, deceased."

"I don't know as it's all clear yet."

"W-al, the idee is kind of like this: Old Man Haddy, he had a fit of remorse or suthin' or other when this here daughter was born after him havin' six sons in a row. So he fixed up this here safe that was to be hern when she growed up, and was to be kep' around and give to her on the day she married. That's the main idee."

"It don't sound much like a Haddy," said Johnny.

Things you want to do but can't—

Your feet won't let you

ONE of the richest gifts is the ability to get the most out of life—to enjoy long walks or hikes; golf or play tennis for a whole afternoon, or dance to your heart's content.

Such recreations keep you young, mentally keen and physically fit.

If you can't indulge in such pleasures because your feet won't let you—or, if your feet punish you severely every time you try it—you can easily and quickly rid yourself of that serious handicap.

Millions have done it by this method. It will make your feet young again. Puts new life, strength and endurance in them. *Gives you complete comfort from the moment you start using it.*

It is Dr. Scholl's Foot Balm.

You will be able to engage in your favorite pastime, or stand, work or walk for hours without a murmur from your feet.

Even after a day or evening of hard use of your feet, when they ache or pain unbearably, you can get quick and grateful relief. In a few moments your distress will be gone. You can then resume active use of your feet hours longer with perfect comfort.

Dr. Scholl's Foot Balm, a creamy emollient, is delightfully soothing, cooling and healing. It stimulates the skin...opens the pores...removes impurities...tones up the muscles and tissues.

It instantly stops burning sensations...quickly relieves all aches and pains...quiets corns, callouses and bunions...dispels foot odors.

You will never be without Dr. Scholl's Foot Balm once you try it. At all drug, shoe and dept. stores—35c per jar.

For generous free sample, mail coupon below.

Dr Scholl's Foot Balm

Made in the Laboratories of THE SCHOLL MFG. CO., World's Largest Manufacturers of Arch Supports, Foot Comfort Appliances and Foot Remedies.

Easy to apply, quickly absorbed by the pores. An indispensable toilet accessory for every foot-suffering man and woman.

FREE SAMPLE COUPON

CHAMPION has always pioneered

FOR MORE than 16 years Champion has led in spark plug development and that is why today it is accepted as the better spark plug and outsells throughout the world two to one.

Today, more than ever before, Champion leadership stands unchallenged.

For Champion is of two-piece, compression-tight construction, with a new solid copper gasket seal.

Its insulator is of *sillimanite*, a rare mineral of which Champion controls the only known source of supply. This insulator is specially heat treated to withstand the greater compressions and higher temperatures of the modern engine. It is practically unbreakable and greatly resists carbon formation.

A fixed spark-gap under all driving conditions is assured by the special analysis electrodes, which greatly resist pitting and burning.

For these reasons you can buy dependable Champions with every assurance of better engine operation and greater car satisfaction, as do two-thirds of motorists the world over.

CHAMPION Spark Plugs

TOLEDO O

"Haddys," said Scattergood, "is like other folks in one way—you can't never tell what one of 'em might do. You won't go so fur's to say a Haddy wouldn't do what I said?"

"No."

"Neither'll them Six Big Men."

"But they won't give up the safe.'

"To be sure they won't."

"Why are you so sure?"

"Because," said Scattergood, "to the best of my knowledge and belief, they hain't got no safe."

"Look here, Scattergood, what are you getting me into?"

"Nothin'," said Scattergood, "that'll smirch the shinin' honor of a member of the legislature of the nation. . . . Now you run along and write that letter, Johnny, and make it real sharp and demandin'. . . . G'-by. And when you git time come back, and we'll talk about how to run the Govament. G'-by, Johnny."

Scattergood waited. A couple of days later a noncommittal message arrived through the devious channels made use of by the Haddys, which said in effect, "What in tunket is this about a safe?" To this no response was made, and Half Acre was allowed to whet the edge of its curiosity. Evidently it arose to fever heat, for a second message came from the village of outcasts demanding an interview, and a promise of safe conduct to Coldriver and return.

"Tell 'em," said Scattergood to Johnny Bones, "that there ain't nothin' to talk over; but they kin come if they want to, and not be interfered with."

So the Haddys came—the Six Big Men—swaggering and scowling, swinging down the street belligerently two by two, and expressing in every movement of their splendid bodies their contempt for ordinary folks who were not of their breed. They mounted the stairs to Johnny's office and thundered on the door.

"Come in," Johnny said quietly, and they entered in single file until they filled the small room to bulging.

"What's this," demanded the spokesman, "about a safe?"

"Have you found it?" countered Johnny.

"We hain't sayin'. We come to find out, not to *give* out."

"Then you know nothing about it? Your father didn't tell you?"

"It's us doin' the askin'," glowered Haddy.

"You have a sister," said Johnny, and each Haddy scowled. The spokesman swore vindictively for all of them.

"THE story goes," said Johnny, "that when she was born your father was in funds. . . . That," said Johnny negligently, "was about the time of the little difficulty up Centerville way, twenty years ago. I seem to remember the bank there was robbed; but nobody was ever caught."

"Huh!" snarled Haddy.

"Well, it seems that your father, having had six boys, was kind of pleased to have a daughter, that's how the story's told. And it seems he fixed up a safe; nobody knows what he put into it—but he fixed it up and hid it away to be given to the girl when she came of age or married. Now, taking that in connection with the Centerville affair, one naturally draws conclusions. . . . And I'm retained to find that safe and turn it over to its rightful owner."

"The' was fifteen-twenty thousand took out of that bank," Haddy said with a leer, "so I've heard tell."

"Something like that."

"And if this here safe's found, what's in it belongs to *her?*"

"It does," said Johnny.

"If she kin git it," said Haddy.

"Exactly," said Johnny. "But surely you wouldn't rob your own sister."

"Huh," said Haddy, and glanced significantly from brother to brother. The other five grinned back at him meaningly. . . . And then the door opened and Scattergood Baines came in. He paused, as though astonished. "Didn't know ye had comp'ny, Johnny," he said.

"Come right in. You know the Haddy brothers. Mr. Baines, boys."

"How be ye?" Scattergood said affably, smiling placidly at these men who had promised to do him a grievous harm in return for his share in the elopement of their sister. "W-al, I'll come back another time."

"No, go ahead. What can I do for you?"

"YOU know that thing you was askin' about—that you said you thought might be stored away in the bank some-'eres."

"Yes."

"W-al, the boys found it, I calc'late. Stuck away behind a lot of rubbage in that old vault in the cellar. Jest come onto it a few minutes ago."

"Ah," said Johnny, and turned to the Haddys. "Well, I guess I won't have to bother you boys any more."

"But mebbe we'll have to bother you," said Haddy. "What's this here that's been found?"

"I don't see any harm in telling you. You'll be glad to know, perhaps. It's that little safe."

"I don't believe it," said Haddy.

"Jest the same, it's there," said Scattergood.

"You got to prove it," said Haddy.

"Why?"

"Because this here's suthin' that concerns the fam'ly, and we got a right to know. It's been put there by our dad, hain't it, and meant for this gal?"

"To be sure."

"W-al, we want to *see* it!"

Johnny looked at Scattergood, who pursed his lips and squinted his eyes. "I dunno," said he, "as we could see our way clear to lettin' six Haddys into our vault to once. Suthin' unpleasant might happen. But I calc'late we could take care of *one* Haddy. . . . Yes, sir, if you hanker to see it, one of ye kin come along with me."

"I'll go," said the spokesman. "You boys stay right here."

Scattergood and Haddy walked across the square to the bank and down into the basement, where, in the middle of an old and musty vault, used now for the storage of records, stood a tiny, grimy, dusty safe of ancient manufacture.

"There she be," said Scattergood.

"Open it up," said Haddy.

"Hain't got the authority, and hain't got the combination if we had."

"What you calc'late to do with it?"

"Mr. Bones intends to turn it over to your sister."

Digitized by Google
Original from UNIVERSITY OF IOWA

"Huh," said Mr. Haddy venomously. "Come on back."

Once in Johnny's office, he faced his brothers. "It's there," he said. "You figger to give it to *her?*" This to Johnny.

"Certainly."

"Lemme git this clear. It was put there for a sister of ourn—a daughter of the old man?"

"Yes."

"But, supposin' she dies, eh? Supposin' the' wa'n't no sister now—who'd it go to?"

"To you boys, of course."

The Haddys gathered in a growling knot, and scraps of savage conversation came to the ears of Scattergood and Johnny: "Nothin' to hang onto us . . . Centerville Bank . . . the Old Man . . . b'longs to us . . . cheated out of what's ourn. . . ."

Suddenly Haddy turned, ponderous and scowling and dangerous. "Ye kin give it to us."

"It is the property of your sister, and shall go to her," Johnny said with determination.

Haddy laughed. "But we hain't got no sister!"

"I could think up that story," said Johnny. "You'll have to do better."

"I kin prove it," said Haddy.

"You're wasting my time," said Johnny.

"Now, listen, you, or you'll be wishin' ye had. This here gal hain't no Haddy. She hain't no relative whatever. She's jest a gal."

"She's been your sister for twenty years. It's a little late to disown her."

"OUR sister died when she was along about six months old," said Haddy. "Or mebbe less. The Old Man, he'd been doin' time, and he come out, and after a while this here baby was born. But she was spindlin', and she up and died one night. . . . And the Old Man he rode off some'eres on a hoss, and next day he was back with a baby—and this here's her."

"Nonsense!"

"I tell ye, it's so. . . . The Old Man, he was sent to the penitentiary for suthin' he never done—"

"Naturally," said Johnny.

"And he made up his mind he'd git even with that there jedge. But he wa'n't no fool. He didn't say nothin' about it, like some does. So he was locked up, and when he come out he didn't do nothin', but bided his time. . . . He waited nigh onto two year . . . so as folks wouldn't connect up his gittin' out and what happened. . . . And then, when this here baby up and died, he seen his chance—and we buried her 'thout nobody knowin'—and brung up the one he fetched back with him—which was the baby of this here jedge that wronged him. So you see clear the Old Man didn't intend this safe for the baby of the man he hated. No, siree; he meant it fer his own baby, and she up and died."

"Funny he didn't get it back then," Johnny said ironically.

"Proba'ly meant to. But the Old Man, he run into hard luck. Got himself shot, and you know it. . . . So you kin jest hand over that safe!"

"No, indeed," said Johnny. "In the first place, I don't believe you; and if I did, I'd have to have proof."

"What 'ud be proof?"

"Well," said Johnny, "if you boys

COLLEGE GIRLS, *typical of the younger set of today, say that baldness and dandruff make men unattractive. Are you missing out with the women you know because they can say this about you?*

"Men who are bald or have dandruff don't attract us"

HOLYOKE Seniors say

"NATURALLY we find men with thick, well-kept hair far more attractive than those who are bald," Mount Holyoke Seniors recently told us.

And dandruff, all college women agree, is simply intolerable.

Do the women you know believe—as these women do—that men's own carelessness causes dandruff and thinning hair?

IT'S ALREADY *very noticeable, this good-looking young chap's receding hair. But five years from today, when the recession has become actual baldness, how much older than his age he'll look! Begin your Pinaud treatment today. Practise it faithfully, three minutes a day every day. Check and destroy dandruff. Keep your hair thick, vigorous, young-looking, through the years*

They are right. If you haven't given your hair faithful care *daily* you cannot expect your scalp to be clean, your hair healthy.

But kept up regularly, *3 minutes a day every day* this famous treatment produces amazing results.

EVERY MORNING moisten scalp generously with Pinaud's Eau de Quinine. Then with fingers pressed down firmly, *move scalp vigorously in every direction, working tonic thoroughly* into every inch of scalp. Move scalp—not fingers. Brush your hair while moist. It will stay just the way you want it.

Dashing Pinaud's Eau de Quinine over the scalp kills dandruff. *Working it into the scalp thoroughly every day* keeps the hair thick and strong.

Get Pinaud's Eau de Quinine at any drug or department store today.

FREE: ***generous sample bottle of the*** famous Pinaud's Eau de Quinine. Write today to Pinaud Inc., Dept. A-1, 220 East 21st Street, New York.

Look for Pinaud's signature on every Bottle

know this to be true, and would tell the facts under oath, that would be some proof; but not enough. When this child was stolen—if she was stolen—she must have had clothes on, and maybe ornaments—possibly marks of some sort her parents would remember, if they're alive."

"They be!"

"And there are other proofs, such as time—the coincidence of the disappearance, and the appearance of this child in Half Acre—and other things of the sort that lawyers could determine by search. . . . But the first proofs would have to come from you—the clothes and things."

"We got 'em," said Haddy. "The Old Man allus figgered he might make some use of 'em; and the' was another thing we kin swear to. When this here baby come, she'd been hurt in the hand. Right hand it was—and the' was splints onto it on account of a finger bein' busted. . . . Ol' Doc 'll remember that, because he tended it."

"If," said Johnny, "all this is true, fetch the clothes and trinkets."

"Ham, you 'n' Joe 'n' Hefty go 'n' git 'em. The rest of us 'll stop here 'n' make them affidavits. I don't calc'late to leave town 'thout that safe comin' along with me."

"Very well," said Johnny, "now the facts. Give them to me, and I'll have them typewritten in affidavit form so you can swear to them. The whole story. By the way, who were her parents?"

"Do we git that safe?"

"If you can prove what you say, you get it."

"We kin: The jedge was Amassa Woolworth."

"Who is now chief justice of the state?"

"That's him."

Johnny looked his astonishment at Scattergood, who merely nodded his head in confirmation. "It had to be," he said.

"Eh?" snarled Haddy.

"Nothin'," said Scattergood.

BY THE time the long affidavits were prepared and sworn to, the three brothers returned with a bundle, which contained a baby's clothes and shoes and hat; a dress made by some loving and skillful hand, embroidered, and on each little sleeve, within a design of silken thread, the name Inez. And a bracelet with bangles, such as were in the mode for babies at the time, and a locket of gold, inside which was the picture of a dog and a cat.

"I guess we'll have to admit your story," said Johnny. "All this looks like proof."

"Do we git the safe?"

Johnny looked inquiringly to Scattergood, who nodded. "Come 'n' git it," he said.

Presently the six Haddys, elated, jubilant, were riding out of Coldriver with a small iron box swung between them; and Scattergood looked after them with elevated eyebrows.

"Johnny," he said, when he came again to the senator's office, "I calc'late we better git ready fer trouble."

"Why?"

"W-al, when them boys come to look into that safe, and don't find nothin' in it but rusty washers, they're goin' to be some disapp'inted and vindictive."

"Eh?"

"To be sure. Johnny, you didn't think that there safe was gen-u-*ine*, did ye? . . . Um. . . . We got to git ready to meet the jedge and his missis. They're a-drivin' down. Be here this afternoon. I sent fer 'em. . . . To be sure."

"Wasn't that taking a chance?"

"Oh, I didn't tell 'em what fer. Jest asked 'em down. But I knowed. I've knowed fer a week; but I couldn't prove it. The' wa'n't no other girl baby disappeared about that time—and I found where Jedge Woolworth sentenced a Haddy to prison."

"Yes," said Johnny; "but how did you get a hint of it first? Where did you get the notion this girl wasn't a Haddy?"

"It come first," Scattergood said, "when we got to talkin' so much about strawberries not growin' on p'ison ivy vines. I got to mullin' that over, and it didn't seem likely to me, when I come to think it over. . . . And then there was her hair and eyes. Blue eyes and kind of red hair. So I run down the fact that Old Man Haddy had black hair and eyes, and so did his wife. . . . That kind of settled it. I never seen black-haired parents havin' red-headed daughters. Mebbe it kin be done, but I doubt it. . . . And so I started out to find who'd lost a baby."

"Yes, but the safe—"

"Oh, I jest made b'lieve I was a Haddy, and figgered out what kind of a scheme would fool me. They wouldn't never of told willin'—or been threatened into it. So I jest kind of tricked 'em. The's allus suthin' kind of fascinatin' about a shut safe. They jest had to know what was inside."

THAT afternoon Coldriver shook as with an earthquake. Judge Woolworth and his wife arrived; they went to Scattergood's farm; they saw, and were convinced—and even Mrs. Woolworth, fragile though she was, did not suffer from the shock of joy. And then the news leaked out—that Freddie Norton's wife was a Woolworth.

Scattergood himself carried the information to Lawyer Norton.

"Be the Nortons too proud to take up with a Woolworth?" he asked when he was through.

"You got no idea what a load this takes off my mind," said Norton. "What's bred in the bone . . ."

"Yeah; but ye might 'a' seen the breedin' by lookin'—like I done. You 'n' Mrs. Norton'll be proud to have this gal fer a daughter now—but ye could have been jest as proud before. It hain't no other gal; it's the same i-dentical one, so fur's I kin see."

"Yes," said Norton slowly, and then he smiled. "But there ain't many of us can see as far as you do, Scattergood."

"That's because most of you's got too much pride, or too much anger, or too much money, or too much suthin' or other to try. The's jest one way to see clear, near's I kin manage to find out, and that's allus to hope what you're a-goin' to see is what you want to see. The feller that's allus afraid he s goin' to see suthin' miserable if he looks, hain't goin' to do much lookin'. . . .Um.

"If I was you, Norton, I calc'late I'd git my wife and kind of have a welcome home fer that daughter-in-law of yourn. Like ye should 'a' done in the first place."

Where Jim Pratt Found the Highroad to Happiness

(*Continued from page 30*)

graduate, but he did attend high school in New Britain for a year. Fascinated as he has been by the blacksmith shop in boyhood, he had by now lost the "feel" and sense of its glamour. Too many Pratts had followed that line. He got a place as bookkeeper in a bone factory where they made crochet hooks, and later in an ivory factory.

There was a spell when Jim wanted to be an engineer in the navy. At the age of twenty, he went to Annapolis to take a three-months course preparatory for entrance examinations. He didn't make it.

Back in Essex, he returned to the ivory factory, assembling and finishing piano keyboards. In 1887, having been in the factory five years, he married; and he was there for three years after he married.

THUS, he had been more than eight years in factory work when an old, old friend, a man past seventy, came to him one day with tears streaming down his face. This was "Uncle Fred."

"Why, what's the matter, Uncle?" asked Jim Pratt.

Uncle Fred was sobbing. "Jim," he said, "they say I'm too old to work. They're sending me home to die!"

And Jim Pratt found himself trying to make Uncle Fred see the silver lining; but there wasn't much brightness in the lining for Uncle Fred.

That night, feeling that he could see what might happen to him when he got old, Jim Pratt talked things over with his wife. "I don't like this idea of having somebody else in a position to step in and tell me when I've got to quit work," he remarked.

"Nor I, Jim," was the response.

"What would you say to my getting a job with Father? I'll learn blacksmithing. I'd have to start as an apprentice."

Years before, Jim's father had been in the habit of saying, "Well, Jim, you know best what you want to do; but I got a notion you might want to go into blacksmithing some day."

The morning after that talk with his wife, Jim went down to the shop to propose the matter. A quizzical look came into his father's eyes. He shook his head. "Nothing in it for you, Jim," he said. "I couldn't pay anything like what you're making at the factory."

"But I'm not learning anything! There's no future in it!"

Seeing that Jim was in earnest, the elder Pratt laid aside the joint he was welding, and they sat down to talk it over on a box beside a great pile of old horse shoes. As a result of that talk, Jim Pratt went to work as his father's apprentice at a dollar and a quarter a day. A year later, he was making a dollar and a half. As long as he worked for his father he never drew more than two a day; but he made something on the side, bringing his income up to twenty a week, by taking parties on duck hunting and fishing trips.

"Cool, Fresh, Clean Underwear!"

SOUNDS inviting, doesn't it? And if you'll insist on the "B.V.D." label, you'll not only have yours scientifically cool, but it will repeatedly withstand even very severe treatment in laundering.

No lukewarm suds-rinsing to "protect the fabric"; but *thorough*, germ-destroying, dirt-chasing laundering, that brings it back to you *hygienically* fresh and clean!

Both extraordinary coolness and extraordinary wear are scientifically built into "B.V.D.," from the weaving and treating of our own nainsook, to the completion of the last lock-stitched seam.

That's why its *economy* is as definite as its famed fit and comfort.

INSIST on this Red Woven Label.

.....

Along in 1900, in his late thirties, Jim felt that he ought to get out in the world and look around. "When you work in one spot," he remarked, "you learn what one man can teach. I had got to thinking that there was a lot to know, and that I might do better somewhere else."

So, presently, he went down to Sharon, Pennsylvania, where he got a job blacksmithing in a big steel plant. Here he learned the operation of steam hammers, and got a hundred different slants on his trade. Learning something from everybody and glad that he had come, still he wasn't satisfied. After nine months at Sharon, he went to Youngstown, Ohio, where again he worked at his trade, and stayed a year. Once Jim had got settled down where he was going to stay, his wife was coming to join him.

In 1904, after a try in Kansas City, Jim landed in Cleveland, Ohio, and that was where he found himself.

"All this time," he remarked, "I hadn't been able to get my head on a pillow at night without seeing Father at work in the old shop, and this old river, the Connecticut, flowing by with its deep blue water. I was homesick. I threw up my job. I got some bait, a pole, hooks and a line and went down to the Cleveland water front. All day long I sat looking at the water and thinking things over. I didn't catch a thing, but had a wonderful time."

So Jim Pratt, having found where home was, returned to Essex. And right here some young, active, ambitious young fellow may speak up to say, "Well, that just shows Jim Pratt didn't have it in him! He didn't want to get on, and do all the things I'd like to!"

Such may be the case, but there is something that Jim Pratt *did* have: the good sense and honesty, the wit and wisdom to recognize that the sphere for him was the smaller world where he had been brought up. For, after all, happiness is a question of finding one's *niche*, whether it is in the great world where cares are many and the struggle precarious, or in some smaller world where cares may be fewer and human relationships all the more precious.

ON THE day of his return, Jim dropped in at the smithy and found his father at work at the forge. He paused in the doorway.

On the anvil the older Pratt was hammering a wagon tire; he put it back in the fire. As he stood there, slowly pumping the old leather bellows, father and son shook hands.

"So you're to hum again, Jim," said the elder Pratt. "I been thinking it was about time." That quizzical look came into his father's eyes. "Calculate to go to work pretty soon? There's a horse needs shoeing."

That same day Jim took down from its nail the same old worn leather apron he had left behind—the same apron—the same wages—the same job!

A couple of days later, the elder Pratt did get 'round to comment a little more loquaciously on the return of the Prodigal. The burden of his remarks was that the Pratts were "home bodies," and you couldn't knock it out of them. "All the Pratts was that way," he remarked. "S'pose you find 'em traveling a pretty fast clip out there? Eh, Jim? Be they goin' anywhere? Tell me that."

Digitized by Google
Original from UNIVERSITY OF IOWA

Now, ship ironing had pretty well played out years previously. The Pratt smithy had become a regular country shop, limited practically to horse and cattle shoeing and wagon repairing. Presently, in 1905-6, automobiles came in. By 1910, even horse-shoeing in Essex was pretty much a thing of the past. That was the year Jim bought the shop from his father and simultaneously began to wonder how he could smarten up the trade.

One evening about this time he went to visit a friend, the proprietor of a famous inn near Essex, the Chaffee House. In a big old-fashioned fireplace, the inn-keeper had some chunks of railroad irons for andirons. As the blacksmith of the place and a friend to boot, Jim didn't hesitate to say what he thought of them. "Make me some, Jim," said the proprietor of the inn.

"They were the first pair of andirons I ever made," observed Jim Pratt. "Folks seemed to like them pretty well. Seeing them at the Chaffee House, they came around and wanted more like them. I didn't like to repeat; so I made every pair different. For one pair, I remember, I used an anchor pattern of my own design."

THAT was the beginning of a new era for the village smithy. People were buying old neglected places in the vicinity. They opened up the fireplaces and wanted hand-made andirons and fenders, and old-fashioned hardware, H and L and butter-fly hinges for doors and cupboards, pine-tree latches, and others of curious and original design, such as can be seen in the Morgan-Nutting collection of Dutch and English Colonial hardware, in Hartford. From that day to this, Jim Pratt has had more than he can do in the business of re-producing antique hardware. At times he has kept two helpers going and always one.

"No," he remarked, "I haven't been pushing the trade any. I don't want it to grow so big it would keep my nose on the grindstone. I just want to be comfortably busy. As for money, I've got more than I really need now.

"No, siree, I've never been sorry I took up and stuck to blacksmithing as a life work and came back to Essex to see it through. Nobody I know of has ever got more out of life than I have; I don't envy a soul, not even Lindbergh, and he's getting a lot out of life too.

"Happiness! Well, there's one or two things I know about that. It doesn't take much money for a man to be happy. It's something else. And happiness isn't something you miss to-day and pick up to-morrow by accident or by looking for it. It's what's going on inside you all the time.

"Why, if I was worth a million dollars I'd be up there in my shop making iron work, because I like it. If you can find something to do that you like and a place to do it in where folks know and like you, and you know and like them, and you all get along together and everybody feels he is somebody, that's going a long way toward what I think makes for happiness."

It is because of what Jim Pratt said from this point on that I have told all that went before. Listen a moment longer to what he has to say of the Highroad to Happiness:

"Happiness is having a contented spirit. To be sure, a man wants sense enough to look after his health, for his spiritual con-

1000 Hotel Positions Open!

Hotels, Restaurants, Clubs, Apartments, Institutions, Schools, Colleges, Hospitals, etc., Everywhere, Need Trained Men and Women. Over 70,000 High-class Positions Paying $2,500 to $10,000 a Year Are Open Each Year in the Hotels of the United States. Nearly One and Three-quarter Billions of Dollars' Worth of New Hotels, Clubs, Restaurants and Institutions Built This Year Will Need Over 200,000 Trained Men and Women.

I Absolutely Contract to Teach You

In my home-study course on hotel work what the leading experts know about the business—men earning from $5,000 to $50,000 a year—and at any time there are over 1,000 hotel positions open in this industry.

I Put My Students in Touch with Positions

One Drop

Stops most painful corn in 3 seconds

HERE is a new and totally different way to treat a corn or a callus. One drop stops all pain. You wear tight shoes, walk, dance, in comfort, instantly and at once. Acts like a local anæsthetic; really amazing.

Then soon the corn shrivels and loosens. You peel it off with your fingers, like dead skin. No more dangerous paring.

Works alike on any corn or callus, no matter where it is, how old or how painful. Ask your druggist for "Gets-It." You will be delighted.

"GETS-IT" *World's Fastest Way*

Turn Your Kitchen Into A Candy Shop

MAKE big money from the very beginning. Candy costs 15c lb. to make—sells for 60c! E. R. Foxton sells 200 lbs. weekly—Mrs. J. A. Wilcinsin sells almost 1,100 chocolate bars each week at 5 & 10c—YOU CAN DO AS WELL! Successful manufacturer teaches secrets of candy making in your spare time and shows how to quickly sell your candy at a big profit! Practically no capital required. We furnish tools. Write for fascinating FREE book.

dition depends a good deal on the condition of his body; and he needs a sense of humor. Try to see the silver lining instead of the shadows. I've seen some dark clouds on the horizon in my time, and I've seen the squalls come too. It doesn't take much of a weather prophet to tell you that if it's raining to-day, it's bound to clear up later on. If you keep that in mind it helps a lot.

"As we get along in life we learn to be satisfied with simple things. Almost anybody, if he really tries, can be satisfied with just about what he's got. You don't have to roll high, as the saying is, to have a good time. You only *think* that's a good time. Nine chances out of ten you'll come to look back on those days when you were wanting to fly so high, and wonder how you could have thought that it meant anything to you at all.

"As I said the other day at the club when this subject of getting the most out of life came up, if I were going to make over the Lord's Prayer—understand, I don't say it needs making over, I'd put it like this:

"Lord, give me neither poverty nor riches;
Don't let me be afraid the other fellow'll cheat me,
But make me afraid I might cheat him.
Let the Golden Rule be my religion.
And whatever else I do, so help me God,
As long as there's a man I can call a friend,
I'll inscribe his good points on the tablets of memory,
And write his faults on the sand.

"Friends? They're not so hard to get; they're easier still to keep. If you have difficulty making friends it's likely due to self-consciousness; and self-consciousness is due to a kind of selfishness—egotism. Making and keeping friends is just about the simplest thing in the world, if you can follow the prescription:

"A trifling kindness here and there
Is but a simple, small affair,
Yet if your life has sown this free,
Wide shall your happy harvest be.

"Forget yourself once in a while, twice in a while, if you can. Don't try to rake in everything to yourself. *Give a little.* Give a little service. Push something that's good in the direction of the other fellow once in a while. *Friendship is giving.* Practice it enough, and you'll find a lot of good things wished on you in return."

NOW, part of this conversation took place in front of a blazing fireplace in the Dauntless Club of Essex—one of the best known sportsmen's clubs in Connecticut—and, in passing, I may observe that the logs of this fire rested on a pair of Jim Pratt's anchor andirons.

"We have forty-five members in this club," he went on. "As you can see, anybody who makes this his club home has to be satisfied with simple things; and we *are*, all of us—all but one or two.

"Don't misunderstand me. There's a lot of money in this club, several millionaires. I don't mind telling you—as I've told him lots of times—that the richest man among us is the most discontented of us. He's one who can't take his pleasure simply. He loves dollars. Lying in the shade of an awning on a boat deck, he doesn't sense the sky, nor the deep blue water, nor the miracle of that gull sailing, soaring, at rest on still pinions. He's thinking of those dollars. Like as not, when all's well and everybody's at peace, thinking of anything but the troubles of to-morrow, he wants to set the engine throbbing, push on, go somewhere—race about. He's got more than most folks could scrape together in a dozen lifetimes, but he's a discontented man.

"Dollars don't make *every* man unhappy! There's another millionaire in this club who is as plain, simple, happy, and contented as anybody.

"Simple pleasures? Well, I'll tell you what they're like: In the summer time we make a lot of boating trips. Usually we take moving pictures of our sports. During the winter, once a month, we warm up the club and have a party; and the star attraction of this party is showing the movies we took of ourselves in the good old summer time.

"Then, when the shad season comes on, we have what we call 'the forty days' feast.' There's a way of taking all the bones out of a shad and fixing it up so that, once it's roasted right, on a plank in front of that fire, all there is to it is straightaway eating. These shad don't last for forty days by a good deal. Still, after the third or fourth day, nobody's what you would call discontented for shad.

"I always was interested in cooking. It's a pleasure for me to get up a meal and have it just right, and see the other fellows get on the outside of it. During the winter time, I get a chance at that about once a month, and I look forward to it. It's my chance to give a little."

ON THE wall of the Dauntless Club, beyond the fireplace, near the door that goes into the kitchen, is a picture which shows Jim Pratt in his peaked leather cap and leather apron at work at the anvil in his blacksmith shop. In the same frame alongside that picture is an inscription, a toast given at a dinner in Jim Pratt's honor by members of the Dauntless Club:

Here's *to* you, Jim Pratt,
Guide, philosopher, and friend,
In whom all Delights
Of Humanity blend;
Here's hoping the sparks
From your forge, as they fly,
May find bright response
In the gleam of your eye!
May the sturdy, warm blaze
Of each fire you start
Blend true with its mate
In the depths of your heart;
May whatever you do,
Commonplace or sublime,
Strike an echoing blow
On the anvil of time.
Let others have wealth—
You have no need of that—
God made a whole man
When He made you, Jim Pratt!

"That's just something the boys got up when they didn't have anything better to do," observed Jim Pratt over my shoulder. "If you want to read something worthwhile, listen to this."

What he held in his hand was a frayed and ragged postal card with a printed quotation. As he began to read, I realized that it was a paragraph from Robert Louis Stevenson's Christmas Sermon:

To be honest, to be kind—to earn a little and to spend a little less, to make upon the whole a family happier for his presence, to renounce when that shall be necessary and not be embittered, to keep a few friends but these without

Original from UNIVERSITY OF IOWA

capitulation—above all, on the same grim condition to keep friends with himself—here is a task for all that a man has of fortitude and delicacy.

"The man who wrote that knew as much as anybody needs to know," he went on, "about what's necessary to keep one happy and contented. He's got it stripped right down to the bone, with nothing superfluous. Still, I've sometimes thought that if I'd been writing it, I would have ended it just a little different. 'Fortitude and delicacy'? He hit it right; but I'd just like to hitch on this thought, too: 'And when you find yourself making a go of *this* task you'll know what happiness is. You won't need to look around for signboards, because you're already on the right track.'"

"THE HIGHROAD TO HAPPINESS"—that is the road each one of us is eager to find, and to travel. Many have found it, for there are many approaches to it. Some find it through religion, some through nature, some through work. Jim Pratt found it by coming back home, and making a blacksmith of himself. It helps you in your quest for The Road to read how others found it. That's why The American Magazine seeks out extraordinary men and women and presents to you their intimate stories. From time to time there will be interviews with and articles by other men and women who, like Jim Pratt, have found The Highroad to Happiness, and who, like him, are willing to tell you where they found it.

Shipmates

(*Continued from page 61*)

'Twas then Maimua taught my heart how much a glance can say.
With trembling steps to me she came. "Farewell," she would have cried,
But ere the word her lips could frame in half-formed sounds it died:
But ere her lips the word could frame in half-formed sounds it died."

Ned Marshall sang well. Helen Truxton matched the spirit of his singing with the artistry of her playing, and overhead, on the poop, the soft step of the officer of the watch halted at the open skylight. Sam Truxton's door, shut once, softly opened again, and was placed on the hook. The first flooding light of the rising moon, only a day past full, poured in through the transom ports as the ship rolled easily.

Between the stanzas of the song there was the briefest of pauses, when neither voice nor piano broke the hush, and in the pause something fell softly upon the ivory keys. Ned, watching her narrowly as he sang, saw what fell.

"Helen! You're crying!"

"I'm not! Sing. Go on. Sing the last stanza," she whispered back, and shook off his solicitous hand from her shoulder.

He still regarded her keenly, but obeyed.

"My willing arms embraced the maid, my heart with rapture beat.
But while she wept the more she said, 'Would we had never met!'
But while she wept the more she said, 'Would we had never met!'"

In every Colt Revolver perfect alignment of the barrel with each cylinder chamber is proven with accurately ground "range" gauges in the hands of Colt's most trusted craftsmen.

From **Pride** *of* **Craftsmanship** *to* ***Pride*** *of* ***Ownership***

EACH of the thousand-and-one operations in the production of a COLT Revolver or Automatic Pistol is accomplished with an affectionate craftsmanship that neither knows nor seeks an easy road to perfection.

In the manufacture of Colt fire arms nothing is left to chance. Not content with steels of flawless quality, forgings of unbelievable exactness and machines of micrometer precision, all COLT parts are gauged, finished, fitted and inspected by hand. Before a COLT firearm is finally targeted it must pass successfully nearly two hundred critical inspections by unhurried craftsmen who realize their obligation to you.

Every act performed in the COLT Armories is a step toward that ideal of quality, durability, reliability and accuracy which has made your COLT a "special job" for you.

If you would like to start or join a local Revolver Club, send us your name. Women, too, may enroll. We want you to have our Catalog No. 35. Ask for it.

The suspensory for daily wear

LEARN HOW TO WRITE SHORT STORIES

RECENTLY an American writer was paid $1800 for a single short story. By learning to tell the stories of her dreams this woman has found her way to fame and fortune. You can learn to write, too. A new practical course of instruction will give you the training right in your own home during your spare time. Endorsed by eminent writers, including the late *Jack London*. **Write Today** for new booklet, "The Art of Story Writing." No obligation—booklet is free. Also special course in English. Write Today—NOW! **HOOSIER INSTITUTE, Short Story Dept., Dept. 1068, Ft. Wayne, Indiana.**

Music Lessons UNDER MASTER TEACHERS At Home

A Complete Conservatory Course By Mail With accredited school. Wonderful home study music lessons under great American and European teachers. Endorsed by Paderewski. Master teachers guide and coach you. Lessons a marvel of simplicity and completeness.

Any Instrument Write telling us course you are interested in—Piano, Harmony, Voice, Public School Music, Violin, Cornet, Mandolin, Guitar, Banjo, or Reed Organ—and we will send our *Free Catalog* with details of course you want. Send *now*.

UNIVERSITY EXTENSION CONSERVATORY
423 Siegel-Myers Bldg., Chicago, Illinois

There was no pause at the end of the song. Helen rose from the piano bench, laughing a little unsteadily, and got a scarf from her room.

"Take me up and let's see if we can find that sail in this blazing moonlight," she said, and took his arm.

IT WAS sunrise before the ship ahead could be clearly made out. The "Centaur" had gained fast during the night.

"It's the 'Tara' all right, miss," the mate told Helen. She was up at dawn to look. In a moment, after assuring herself of the truth, she was in her father's room, shaking him. Laughing at his grunting expostulation, she ran across and knocked on the skipper's door.

"Come up! It's the 'Tara!' Haven't you got some more sails to set? Do come up, Ned! Will you signal her?"

"I'll send Jim your love, if you like," Marshall replied through the fanlight as he dressed.

"Oh, bother! I want you to signal him that we'll report him all well in Boston," she cried, and darted off again to the poop.

There was no doubt that the "Tara" was no match for the "Centaur" in light breezes. The morning had brought more wind; but still the sea was smooth, the "Centaur" could carry her stunsails. By mid-forenoon the ships were within speaking distance; and strings of bunting fluttered at their halliards up to noon.

"Now tell him good-by, and get a move on!" grunted Truxton.

The ships drew apart. The "Centaur" forged ahead in the light airs, keeping a hairline course, while the heavier "Tara," scarcely moving, steered like a dray.

By night the "Tara" was out of sight astern. The "Centaur" stole ahead with a pleasant, drowsy, soothing swing of cloudy canvas and murmur of running ripples; while Truxton went early to bed and Helen played soft music for Ned Marshall to sing to.

TWO things became very obvious as the fine light weather persisted: Truxton was not pleased at the splendid showing the "Centaur" was making. Rather, it might be put, he was displeased at the "Tara's" poor performance. And he grew more irascible day by day. The other thing was that a subtle restraint crept into the relation between Helen and Marshall.

The breeze shifted to the southward, and gained weight. Ned hung on to his stunsails as long as he could carry them and lay his course. Even when he had to brace up his yards in order to make any southing at all, he swung stunsails on one side until they caught aback in a hard puff and blew away, sticks and all. After the raffle was cleared away and, such as might be, saved, the "Centaur" settled down to a course of hard driving, with her yards on the backs, and a tumbling cataract of hissing brine in her lee waterways.

"This surely will settle the 'Tara's' chances," Helen cried. She was at the wheel, clad in glistening oilskins, her wind-whipped hair escaping from under her sou'-wester, all wild and damp. She was the embodiment of life: thrill personified. Her cheeks were stung to scarlet, and her eyes danced joyously.

Ned Marshall stood beside the wheel grating, watching his ship. The "Centaur" had reeled off fifteen knots in the previous hour, and the wind blew stronger now. But there was a limit beyond which the "Centaur" could not improve; beyond which she must shorten sail, or so bury her bows as to make her stagger and lose speed.

Marshall knew she was at that limit, yet he hated to take in sail. He kept the regular helmsman at hand; but not yet had it been necessary to give help to the girl; she handled the storming clipper with graceful ease.

"I'd think you'd be a bit more elated!" she cried again, rather petulantly, for Ned had not replied.

"I believe the 'Tara' will have to do better than she has ever done to beat us now," he said. "I wish your father didn't take it so seriously, though. No fun in beating Jim if it's going to make the old gentleman mad at him. He can't help it."

"Oh, I've no patience with you! It's every man for himself in a contest, isn't it? Let the best man win!"

SOON the royals and flying jib had to come in. By midnight the "Centaur" staggered along under topsails and inner jib with only the foot of the spanker hauled out. So hard pressed was she that Marshall eased her off a bit more to the westward; and by morning she reeled forward in a smother of spray mist, thunder at her bows, and a roaring of wind all about her.

There was no longer a smiling sun in the sky. All was gray and bleak scud and broken sea. Great cresting combers rose up out of the south, full sweeping from the Antarctic barrens. They carried weight and bitter chill. They lifted their hoary heads high above the bulwarks, roaring as they curled over; bursting into thundering fury as they fell aboard to fill the maindeck rail high.

Old Sam Truxton remained on deck for an hour, until he saw Marshall strip his ship to the barest spread of sail; then took himself off to read in the snug warmth of his bunk.

Helen stayed on the screaming poop, gripping the rail with desperate hands, breathing in the storm with deep inhalations, as much a part of the picture as the ship herself. She remained in the weather corner, where Marshall placed her behind a canvas dodger, watching him from time to time.

The "Centaur" labored. But she was handled as she had to be, and no man could do more than Marshall was doing. It was just that tender quality in the "Centaur" which gave the "Tara" the advantage in blowy weather. Bigger, more powerful, the "Tara" would be thundering along in that strong gale under twice the sail Marshall was able to carry.

Toward an evening which threatened to merge into a fiercer night, seas poured over the rails almost incessantly. The men came aft.

"Fo'c'sle's washed out, sir!" they shouted.

"Secure the doors, then stand by aft here," he told them.

A seething mass hurtled over the weather side, high as the lower mastheads. The men scrambled up the ladders. The sea broke. It burst upon the poop itself, and the ship rolled down perilously.

THE LAW TRAINED MAN

Let Calvert School come to you

CALVERT SCHOOL, since its foundation 31 years ago, has successfully taught thousands of children in their own homes in every part of the world. Calvert Home Instruction Courses provide expert schooling from Kindergarten to High School under the supervision of specialists in child education. Each pupil's work is individually guided by a Calvert teacher in Baltimore.

An Ohio mother writes: "While living in the country, my little daughter had the Calvert course with such success that at eleven she is a freshman in High School, and finds the work very easy."

With Calvert Home Instruction your child can go as fast or as slow as he is able.

V. M. Hillyer, A.B., Harvard, author of "Child Training," "A Child's History of the World," etc., is Head Master.

CALVERT SCHOOL

108 Tuscany Road, Baltimore, Md.

Marshall heard a little cry from the weather corner, turned, and caught Helen, forced from her hold and flung athwart the deck into his arms.

He had need of all his sea balance to withstand the rushing weight of her. He clasped her tightly to him; and she held him as closely. The sea almost swept them from their feet. Her head lay on his breast. Then she raised her face and her eyes looked full into his for one brief instant.

"Let me help you below," he said, catching his breath sharply as he met her gaze. She made no protest. She breathed unsteadily, as if frightened; but she kept her eyes downcast as she let him guide her down the stairs and through the saloon.

"Shall I send the steward?" he wanted to know.

"No, thanks. I'm quite all right. Startled, that's all!"

THE gale lasted two days more. On the day when it promised to moderate, a sail crept into sight astern. The mate detected it among the mad sea crests, as he watched the heaving of the log. Under full topsails, topgallants, and courses she was. The glasses showed that. A big, powerful ship, certainly.

"Think it's the 'Tara,' sir?" the mate asked of Marshall.

"Small doubt of it," said Ned. "We can't hold her in this sort of weather. It's moderating, though. Needn't worry."

Old Truxton came up. Helen stood and gazed at the growing speck.

"Here comes Glamis!" old Sam chuckled, whacking Marshall on the back. It was the first time in a week he had smiled. "Helen, what did I tell you, hey?"

"Can't you set more sail, Ned?" she countered. Her face was flushed with eagerness. It darkened to deeper red as she used his name again. Her father glanced sharply at her. "I don't care," she cried. "I do want the 'Centaur' to beat the 'Tara.' I'm on this ship, not that, and I don't want to see anything pass us!"

"I hope you'll be more loyal to Glamis when you're his wife," grunted Truxton. The girl bit her lips, saying no more.

In the early morning the "Tara" foamed up alongside, fluttered sarcastic things with flags, and went lurching away ahead, leaving a boiling wake like a steamboat's, carrying her heavy press of sail with tremendous capability. Truxton was genial. Helen was chagrined. Ned Marshall smiled, and promised nothing; but he watched his barometer and seemed satisfied.

When the "Centaur" was at last full clothed in sun-shot canvas again, the "Tara" had passed out of sight, ahead two full days.

Once more the breezes softened until they favored the "Centaur." Nights were warm and drowsy. There was no moon until the small hours before dawn; but the skies were ablaze with great stars that seemed to hang close to the gently swaying mastheads. There had been no music in the saloon for many days. Helen liked the stars, and the languorous romance of the velvety nights.

Subtly, imperceptibly, she and Marshall formed the habit of climbing up to the lifeboat gallows and spending quiet hours there. And one evening Ned gave

Writing

a source of income that many people neglect

MANY people who *should* be writing never even try it because they just can't picture themselves making "big money." They are so awe-struck by the fabulous stories about millionaire authors that they overlook the fact that $25, $50 and $100 or more can often be earned for material that takes little time to write—stories, articles on home or business management, sports, travels, recipes, etc.—things that can be easily and naturally written, in spare time.

Mr. Ferd L. Garcia, 215 East 73rd St., New York City, is but one of many men and women trained by the Newspaper Institute of America to make their gift for writing pay prompt dividends. He writes:

"I would like to say I won first prize in the 'biggest news of the week' contest sponsored by the 'World' for high school students. I was gratified to tell Sifton of the Sunday department that I owe much to the training furnished by your good selves. Good luck to you, and thanks!"

Another of our student-members who tried is Mrs. Emma C. Bellis, 251 Stockton Street, Hightstown, N. J.:

"Your course inspired me to use my mind. I just sent in a few brief articles on the home to several women's publications and farm papers. To my surprise, they went over very well. I've been asked for more. It's fun. It brings me a little side money. And, besides, it is a real beginning, isn't it?"

You, too, can learn to write! How? By WRITING!

The Newspaper Institute of America offers an intimate course in practical writing—a course as free from academic "isms" and "ologies" as a newspaper office—a course as *modern* as the latest edition of this morning's paper.

Week by week, you receive actual assignments—just as if you were right at work on a great metropolitan daily. Your writing is *individually* corrected and constructively criticized. A group of men with 182 years of newspaper experience behind them are responsible for this instruction. Under such sympathetic guidance, you will find that (instead of vainly trying to copy some one else's writing tricks) you are rapidly developing your own distinctive, self-flavored style. You are learning to write by writing—acquiring the same experience to which nearly all well-known writers of short-stories, novels, magazine articles, etc., attribute their success.

How you start

To insure prospective student-members against wasting their time and money, we have prepared a unique Writing Aptitude Test. This tells you whether you possess the fundamental qualities necessary to successful writing—acute observation, dramatic instinct, creative imagination, etc. You'll enjoy this test. Newspaper Institute of America, 25 West 45th St., New York.

George Wanted Money-I Pay Him --Plenty

LOUIS GEORGE
Illinois

$10.000 a year is what I paid Louis George, Illinois, for the last three years. This year he says he is going to earn $20,000.—And before he accepted our offer he was earning only $35 a week.

ANY MAN CAN GET This Money From Me

I paid L.D. Payne, Iowa, $4,500 for his first 200 days with me—he is still averaging from $500 to $650 a month. Putnam of a small Michigan town averages $600 every month. Many others averaging from $6,500 to $10,000 a year in this big pay field—the FIELD OF FIRE PREVENTION.

way to his feelings. She had said something about the future, and her voice had sounded not quite happy. Before he could restrain the urge, Ned caught her shoulders and kissed her—as fair a brotherly-seeming kiss as could be, for all the passion behind it. He could no more have helped it than he could help the stars seeing.

Her response frightened him. Her arms were around his neck, holding him fiercely, and her lips, refusing to release his after that hasty brotherly kiss, were pressed there in a caress which set his heart beating to suffocation. Desperately he freed himself. She sank back against the lifeboat, her eyes averted.

"I'm sorry, Helen," he whispered. "I forgot myself. Shall we go down?"

PASSIONATELY came her answer. She raised her head and looked straight into his eyes, her own all dusky, with stars behind the dusk. Her voice was dusky too; but there was nothing equivocal in her words. She caught his hand, and held it in both her own.

"Go down? Ned, can't you see? Oh, I know what you'll say! You're thinking me shameless because of Jim. I'm not. I'm not! I never loved him. I never realized what love was. Father wanted me to marry him, and I was willing. I didn't know. I thought it would please Father, and I like Jim. But, oh, Ned, can't you see? I can't go on with it! I know what love means now. I—I—Won't you help me at all? Can't you see? Oh, you are as cold as the stars!"

She snatched away her hand as he spoke in a cold, forced voice which miserably failed to hide the emotion he tried to smother behind it.

"Jim is my dearest friend, Helen. Whatever my feelings are, they'll never be permitted to work harm to Jim. You must forgive me for giving way to them a moment ago. I was a cad to take advantage. Did you ever hear what Jim did for me, years ago? Off the Horn in a July blizzard?

"When I fell from the topsail yard into an ice-strewn sea, with snow so thick it was impossible to see the ship when I came to the surface, Jim dived over after me. The captain would not have put about for me. He was right, too. It was almost certain disaster to head back into the ice in the blinding snow. And just for a boy. But he was bound to risk it when Jim went too. The men shouted that he must. That's what they thought of Jim.

"But it was two hours before we were picked up. Two hours of bitterness, when Jim wrapped me up in his own clothes and supported me on an ice cake, while he kept us moving toward where we heard the sounds of the ship, shouting until his voice froze in his throat.

"Rheumatic fever he had when they hauled us aboard. Nearly died. I nearly died too; but I would have died out there on the ice if it had not been for Jim's great unselfish heart. I'd be sorry to hurt him, Helen. So would you."

"I would hurt him if I went on with a marriage without love. I didn't see that before. I do now. And while you are so thoughtful for him, Ned, haven't you a thought for me?"

"My heavens, girl, I've thought of nothing else for years! Night and day I think of you. I hoped— But this can do none of us any good, Helen. Let me help you down."

"I can get down myself," she said dully, and slid over the gallows edge and dropped lightly to the deck.

As the days went placidly by, old Truxton grew irritable again. Helen kept to herself, spending much time in her room. Ned filled in much time getting his light sails repaired and set; until his ship was clothed to the dogvanes again, and moving with ghostly swiftness over a smooth blue sea with a breeze that scarcely ruffled the surface.

On the day when Marshall expected to check his chronometers by a sight of Cargados Islets, the wind had fallen lighter than ever. It was no intention of Ned to bring his ship in sight of the Islets when the passage commenced; but the adverse winds had driven him to the westward, and a sight of Albatross Island, or a cast of the lead on the bank, or both, would fix his position and give him a new departure.

Truxton's idea of safe navigation, carried forward from his own seafaring days, was to give all land a wide berth until in the latitude of his landfall. Bringing a ship into close proximity with such a mess of reefs and shoals as the Cargados Islets was not his notion of discretion.

He muttered something of the sort in Ned's hearing; but Ned only smiled, and took the opportunity of showing the old man again what a witch the ship was in light airs.

"The 'Tara' wouldn't handle like this, sir," Ned hinted.

"Glamis has too much sense to bring his ship along on this course, anyway!" the old fellow growled. "He's likely well to the east and south, carrying a breeze, satisfied to make land on the Cape coast."

Ned let the old fellow growl. The "Tara" had carried her sail better than the "Centaur," but Ned Marshall knew quite well that in the matter of keeping to windward his own ship was at least the equal of the other. And since the wind had fallen light, he had rather more than a bare hope of seeing the "Tara's" royals again before long.

THAT hope was realized. The leadsman got a sounding on the edge of the bank just before sunset. And the lookout sent aloft to look for the land reported the sail.

"Can you make her out?" shouted the mate on watch.

"No, sir. It's a full-rigged ship, though, and she's becalmed."

"How does she bear?" Ned asked, a trifle anxiously, noticing the direction in which the lookout was peering.

The man pointed with an arm, and Ned took a bearing by compass. Then he went to the chart. He had marked off the place of the sounding, and it had agreed very well with his reckoning. In the morning, he was confident of seeing the islands, and unless the wind sprang up he had little fear of coming upon them in the dark.

But that ship ahead, whatever she was, had drifted into a bad place if she could not make a steerageway in the light airs that persisted. And if she proved to be the "Tara," undoubtedly she could not be handled. Old Truxton came into the

chart-room and looked at the chart too.

"There's a strong westerly set of current hereabouts, ain't there?" he grunted. Ned nodded.

"And, likely as not, the s'utheasterly Trades'll be coming any time now?" Ned nodded again.

"Don't bother to tell me you're master of this ship, Cap'n Marshall. I know I'm only the owner. But I'd like to know if you mean to follow that ship among these reefs."

"I'm not following her, Mr. Truxton. I'm holding my course. But I believe that's the 'Tara."

"You can bet your voyage's pay it ain't. And though I ain't giving orders—being only the owner and a passenger—I'd like mighty well to see you haul your wind while you've got steerageway, and get to Tophet out o' here!"

"I want to sight the land to check my time," said Ned shortly, and the old fellow went below, growling.

Through the night Ned kept the deck. There had been some fluffy clouds down in the southern sky at sunset, and they meant wind, sooner or later. Toward morning he took the glasses aloft and waited for the first shafts of light. When they came, he looked for the ship ahead, discerned her clearly, and slid to the deck down a backstay, looking troubled.

"IT'S the 'Tara,' becalmed, and drifting fast toward broken water," he told the mate quietly. "She doesn't seem to be steering at all. Plenty of wind beyond the islets, too."

Helen and her father were both in the chart house, drinking their morning coffee. The old fellow slapped down his cup and came out.

"Don't tell me that's the 'Tara'!" he began; then saw the ship herself, clearly outlined in the growing light. "What are you holding on for?" he snapped at Ned.

"I was going to haul off to the westward; but if that's the 'Tara' she's likely to get into trouble. I'll take a look. This ship can be handled in less wind than this. She can't."

In an hour the "Centaur" had crept close enough to the other ship for her people to see that Jim Glamis had got his command into a bad place. Old Truxton paced back and forth, his lips moving soundlessly, his eyes squinting fiercely at the "Tara." There was broken water all along to leeward of the "Tara." Some of it was furiously breaking. Far ahead was the speck of land Ned needed to sight to check his chronometers; and it was on the proper bearing. Old Truxton knew that. He watched for a few moments, then could contain himself no longer.

"That dumb fool's cast my ship away!" he yelled. "She'll be in the breakers in half an hour!"

He broke off, and walked to and from the rail. Helen stood at the end of the monkey-bridge, looking on, white-faced and cloudy-eyed.

"I'm through with him!" Truxton started again fiercely. "No lunatic is going to handle my ships after me. Nor make a fool of my girl, either! He's lost me a ship, and he's lost himself more than a job, by gracious. The ship's insured; but his job ain't! And my daughter ain't marrying no out-o'-work sailor!"

Helen flashed a glance at Ned, and a

How Does Your
English
Impress Others?

You are sized up every day by the words you use; how you use them, your spelling, grammar, pronunciation.

Others think you are lacking in culture if you say "between you and I" instead of "between you and me;" if you use "who" for "whom" and "shall" for "will;" if you say "hosPITable" when you mean "HOSpitable," or if you make similar mistakes. Fairly or unfairly, you are judged by your English.

At last there is a way to improve your English quickly and surely. Sherwin Cody has perfected a remarkable device, which will quickly find and correct the mistakes you unconsciously make.

Already over 50,000 individuals in every walk of life have used this invention. It is so remarkably successful, because it concentrates on the formation of correct habits. There is no hard study. Only fifteen minutes a day are required, over a short period, and the instruction is guaranteed to improve your English to your satisfaction, or it costs you nothing.

Free Book on English

A new book, "How to Speak and Write Masterly English," explains Mr. Cody's surprisingly easy method. Get a copy free and learn how to stop making embarrassing errors. Merely mail the coupon or a postal card. SHERWIN CODY SCHOOL OF ENGLISH, 98 Searle Building, Rochester, N. Y.

tinge of color came into her cheeks. He stood there rigid as his own mainmast, and the set lips might have warned even Sam Truxton that here was a shipmaster who would command his own ship. But Truxton came back after another brief walk, and now he was red-faced and excited.

"You don't need to think you're called on to pull any hero stuff, Cap'n Marshall! Sea's calm. Land's there. Let him look after his people himself." Ned made no sign. He gave no order to change the course, and the old fellow broke forth further: "Get your ship out o' here before you're in the same pickle. I know who to give my new ship to. It ain't that condemned idiot. No, sir!"

Helen stepped nearer. Her eyes were fastened on Ned now. But he made no motion to obey her father's suggestion, even after such a hint.

"I DON'T believe Jim Glamis ever got his ship into that mess with his eyes open, Mr. Truxton," Ned said quietly. "There's something wrong, and I'm going to see."

"Mr. Hurd!" shouted the owner, "take charge of this ship! D'ye hear? What are you standing there for? Take charge of the ship! Marshall, you're fired!"

The mate grinned awkwardly. Ned paid no heed outwardly, but said, in the same quiet voice with which he had answered Truxton:

"Mr. Hurd, if Mr. Truxton interferes with the ship's business, confine him to his room. Tell the bos'un to clear away a boat and rouse up some lines. There may be a job of towing."

The moment Ned had uttered his decision he was a changed man. He met Helen's eye with a smile. He ignored his owner entirely, giving all his attention to his ship. She needed attention. Now the broken water extended all along her port hand. But she sailed, and steered, true, making scarcely any leeway, while ahead the "Tara" rolled on the resurge of the breakers, her canvas swinging emptily; creeping, creeping toward the rock fangs waiting to rend her.

Just what could be done Ned did not at the moment know definitely. But he knew he could depend upon his ship as long as she moved ahead; and there was always the promise of wind in those fleecy Trade clouds in the south. Slowly the "Centaur" crept forward, until she was abreast of the "Tara;" and then it was plain that all was not well aboard Jim Glamis's ship, for Jim was not to be seen.

"Lower away the boat, Mr. Hurd, and carry over a line. Find out what's wrong, and let me know at once. I'll keep the ship moving, so you must get a hustle on with the line. The 'Tara' can't anchor; the water's too bold until it almost breaks on the reef. Hurry, please!"

Sam Truxton and Helen were interested now. As long as Glamis was all right, neither had patience with him for bringing his heavy ship there; but if he wasn't in sight on deck, he must be ill, or hurt, for he would never leave the deck with his ship in such a predicament. But, though old Truxton sidled nearer to Ned Marshall, pride forbade him to speak.

The boat came back, bringing the end of a towline. The "Centaur" had never come to a stop. She moved ahead, dragging at the dead inertia of the "Tara." Towing had to be started even before the mate made his report. Not a moment could be spared. The "Tara" sagged to leeward, until she was at the edge of broken water.

The mate turned from making fast the line, and Helen and her father drew near to hear what he had found aboard the "Tara." Ned's gaze was fastened upon the sea head, under those fleecy trade-wind clouds. There, beyond the reefs, the sea sparkled and leaped to a breeze. If he could only hang on! He refused to look astern. All his concentration was upon the business of making his own ship go to her limit. And, ghost though she was in faint airs, he could feel the stagger and lurch of her to that deadly drag of the "Tara."

"Pretty bad over there, sir," said the mate, jerking a thumb toward the "Tara." "Bad water, I reckon, started it. More than half the hands down with fever. Captain Glamis is in his berth, delirious. Mate's dead. Second mate and carpenter went down this morning. Trying to get her into the islands; but there's not enough men to swing yards, even if there was a breeze. She's nearer the reefs than she looks, too. Think we can hang on to her, sir?"

"Hang on?" echoed Ned. "Of course we shall hang on!"

Helen was gazing across the sea at the "Tara," where so much of drama was unfolding. Death, pestilence, and hazard of shipwreck all in the compass of one little ship; and in the midst of it the man she was to marry. She shivered.

"Ned, please have me put on board the 'Tara.' Perhaps I can do something useful there."

Ned Marshall frowned. His eyes were still on those poppling seas, under those trade-wind clouds. He still refused to glance astern. He silently prayed the Fates might bring that breeze before he felt the jar and halt of a stranded ship behind him. He knew somebody ought to go over to the fever-stricken ship; he had no men to spare while towing; but he rebelled against the thought of letting Helen enter that pesthouse.

"Put us both aboard, Captain Marshall," Sam Truxton said gruffly. "Won't be a chance once the breeze strikes down—if it does. I know something about fevers at sea, my lad, if I know nothing else. Come on, Helen, get your medicine chest and tumble into the boat."

"Then hurry! Here comes the breeze!" shouted Marshall. "Into the boat, a couple of hands. Get a move on, Mr. Truxton! Keep her a good full, helmsman. Lift the head sheets a bit, Mr. Hurd. Bos'un, watch the tow line when the strain comes."

SO Ned Marshall hid the pain and the joy that filled him, by bawling orders with a bullying roar. He was going to get Jim Glamis out of a mess. Helen was going over to nurse him, and old Truxton was going to take hold of the fever. None better fitted for that than Sam Truxton. Everybody knew how Sam once landed a ship's company in a stricken port and wiped out a plague of dysentery by good old windjammer methods.

It was all going to be right. Helen and

Jim would be very happy; they would find out how much each meant to the other, there at the sick-bed. They would sail away, honeymooning, in the fine new ship, as fair and fine a couple as ever stretched topgallants for the port of happiness.

It was best. Anything that would rob Jim of one moment of happiness was evil to Ned Marshall. His own pain? How about good old Jim's agony that night on the frozen sea?

"Check in the yards all 'round, Mr. Hurd. The wind's freezing," shouted Ned briskly.

The "Centaur" forged ahead, gaining speed, and making her tow line twang, dragging the "Tara" clear of danger until she felt the breeze in her own sails. Old Truxton's rusty deep-sea roar might be heard across the water, encouraging the feeble crew to trim the "Tara's" yards.

Not until then did Ned permit himself to look at the "Tara." But when both ships were clear of danger, he hove the "Centaur" to, and sent Hurd over to take command of the "Tara," to sail her into the little port of the islands, so that her crew might recover.

When the "Tara" filled away, the boat came dancing over the sea, bringing back to the "Centaur" Jim Glamis, just out of his delirium, a thoughtful Helen, and a rather subdued old man. Helen went directly below with the men, who bore Glamis to a spare berth. Sam Truxton had something on his mind. As soon as his daughter disappeared, he unburdened himself:

"MARSHALL, you've been thinking I'm a darned old fool. You needn't bother to look apologetic. You were right. If I hadn't gone in to see Glamis crazy with fever I'd have been buried at the proper time in the full belief that Sam Truxton was pretty much of a little tin god.

"You haven't got any idea what that man's been thinking, Marshall. Why, he was thinking all the time that he had to marry my girl to get my new ship! Helen heard it, too. Raving he was, but raving the truth. Babbled about another girl, Lucy somebody. Couldn't have Lucy, because I'd fire him if he didn't marry my Helen and sail my new ship. What d'ye think of that? D'ye know, if Helen didn't seem almost as if she didn't care much, I'd fire Glamis the minute he came out of the hospital!"

"You can't do that, sir," said Ned Marshall slowly. "If only to prove you're not the sort of man he raved about, you must give him the new ship."

Helen came on deck, her eyes softly moist. She went to Marshall and, right before her parent's widened eyes, kissed him.

"Ned, I'm happy," she said. "Jim doesn't want me. He's been grieving about a sweetheart at home, and about losing the new ship. Won't you help me persuade Father to let him—"

"I'd rather keep my own old ship anyhow," smiled Ned, regarding the old gentleman a bit uncertainly.

"Seems to me as if there's a smart lot I don't know," Truxton jerked out. Helen had drawn Ned's arm about her, and was looking shyly at her father. "Arrange it to suit yourselves, you two. It's time I retired from business!"

✣ ✣ ✣ ✣ ✣

"Which Man Shall I Promote?"

WILL your employer think of you when the next good position is open? Will he say, *"There's a man who is training himself to handle bigger work,"* or will he pass you by as just an ordinary routine worker?

Do not try to fool yourself. Your employer is watching you more closely than you may think. He's constantly checking up on your work, your abilities, your ideals, your aspirations. Stored away in the back of his mind or filed away in black and white, are his impressions of the kind of man you *are* and the kind of man you *want to be.*

He's willing and anxious to pay you more money the minute you prove that you are worth more money. But he can't take chances. When he promotes a man, he wants to be sure he will make good.

Decide now—*today*—that you are going to be ready when your chance comes. Choose the position you want in the work you like best—then train for it. You can do it in spare time in your own home through the International Correspondence Schools.

Write today for an interesting descriptive booklet which tells the full story. It won't cost you a penny, but it may be the means of changing your entire life.

What I Can't Understand About a (Woman) (Man)

FIRST PRIZE

Why Can't She *Say* What She *Means?*

THE greatest mystery to me is why a woman will not answer a question directly. A man will say "Yes," or "No," but a woman will begin, "Well—" and add a combination of words which leave your mind as satisfied as it was before she answered.

I ask my wife, "Will you need some money to-day?"

"Well," she will say, "I need a few groceries and I should have a new hat."

I state, "You will need some money, then."

"Well, I haven't much left."

"How much do you think?" I try again.

"Oh, whatever you want to give me. Whatever you can spare."

It is not only in money matters. Even when I asked my wife *the* question, she answered, "If you are sure I am the one for you and you are the one for me," leaving all the responsibility on me.

I find it hard to get a definite answer in anything.

"Shall we go to see 'The Crowd'?" I ask.

"I've heard it's a good picture."

"What time shall we go," I ask at another time.

"Well, we don't want to go too early."

Sometimes she asks me to bring the meat for dinner.

"What kind?" I try to find.

"Oh, anything good. Something you like."

Not only my wife. All women do the same. Even my very efficient secretary, who has had years of business training and experience, seldom gives a direct answer.

Why do they give you words which leave you to work out your own answer? Why don't they say "Yes" or "No," so a fellow can know? Because if you don't guess right and take what means "Yes" for "No," or otherwise, they are hurt.

It takes a clever man to reply to a question without answering it; but a woman will do it every time. O. G. C.

SECOND PRIZE

Why Can't *He* Say What He *Means?*

THE trait in men that is most exasperating to me is their stubborn reluctance to tell what I most want to hear. They seem to delight in answering my eager questions in monosyllables, making it necessary to beg and plead for details they could have no possible reason for withholding.

One evening as I was reading alone in the library, I heard constant pounding outside, and wondered what my husband was doing. When he came in an hour later I asked what he had been pounding at all evening. His answer was short and pointed: "Nails." When he saw my look of disgust and impatience, he smiled and added, "And I hit them, too!"

He was not meaning to be unkind or sarcastic or ill-natured, I am sure; he has simply formed a habit of wanting to be pumped for information. And *why?* Wouldn't it have been much easier to have answered at once that he had been working on a potato-cutter to be used the next day?

On another occasion, he made the remark: "I think I'll drive down and talk to McCune this morning." Knowing that the man he mentioned lived at quite a distance, and wondering if I might not go along, I innocently asked, "What do you want to talk to McCune about?"

You may be sure I was gratified to receive the following answer: "Oh! Just whatever McCune wants to talk about."

A man reading this letter will probably chuckle to himself as he thinks I am betraying one of the very characteristics he deplores in women: inquisitive curiosity. But I am very sure my husband would not want me to lack interest in his work and plans, and how could I show my interest if I did not occasionally ask questions relative to those plans? O. H. N.

THIRD PRIZE

Lord Save Us from Our Apologetic Wives!

WHY do women always have an air of apology for their men-folks, and treat them in public as though they were misbehaving children? They tell them to straighten their neckties. They brush imaginary dust off their clothes.

"Tom is *such* a mess!" they say.

They laugh at the jokes of other men, however imbecile; but when their own husbands try to be funny they freeze up like an Arctic winter. If the attempt does succeed, they smile tolerantly, as if to say:

"Tom *means* well. It was very nice of you all to laugh at that feeble joke of his."

From the lips of another man a woman will believe the most fantastic yarn. But if her husband seeks to entertain a gathering with an account of something about which he hasn't previously told her, she will burst forth with an incredulous, "Tom!"

Or if, by exaggerating a bit, he tries to make a good story out of something that happened to both of them, she will promptly expose him. If he tries to talk intelligently about literature, art, or science, she will give him a look that no man in the room can mistake.

"What on earth do *you* know about such things?"

Hardly a wife sits down at a bridge table with her husband without explaining that he's positively the worst player in the country. A wife delights in giving people an exaggerated account of some slightly foolish thing her husband has recently done.

Why do they do it? H. S. B.

The Shore Road

(*Continued from page 67*)

disliked strange beds and all hotels, and had been born without any desire for adventure. But she stifled all that, and went.

It was while she was away that Joan became outrageous. The word was not hers but Audrey's. Audrey said that there was no other word for what Joan lavishly described as being happy as heaven. The outrageousness and the happiness both came from marrying a man called Mark Foster who worked on the same newspaper that Joan did.

She explained to Gordon over the telephone that they couldn't afford a wedding; but that they had been very conscientiously married by a minister who had rubbed in the fact that it was serious. Gordon didn't like the affair at all. He knew how Audrey would take it.

But there was a tone in Joan's voice which kept Gordon from saying what he thought. It disturbed his best judgment. In spite of himself he found a certain warmth in his voice as he wished her happiness. And after he had hung up the receiver, he sat for a few moments staring at the telephone, thoughts mixing in his head, and a bridal memory of Audrey coming to the top. He laid it away again. Audrey was going to be very much disturbed.

She was disturbed, and more than that. To her prompt question as to who the man was, Gordon could only write in answer that he was a young newspaper man whom Joan wanted to marry. There seemed to be little more to say, but in any case his second letter crossed Audrey's return. He met her at the station, and noticed that she was very effective but very thin.

AMONG the Italian antiques that evening, they went over the matter of Joan's misdemeanor, and Gordon was amazed at his wife's bitterness.

"It's the end for her," said Audrey. "Thrown herself away on a nobody!"

Gordon's fundamental justice protested.

"We've not seen him, Audrey."

"I don't have to see him. I know what to expect. Ardor and disorder."

It was singularly correct. The Fosters had taken a little apartment, which was swallowed up in a sea of other apartments. Audrey's mouth tightened as she hunted for her sister's new name in the mêlée of names on the hall list. Joan's husband opened the door, and seemed to be quite unaware that he should be full of apology. Both he and Joan were rather proud of themselves and the apartment.

There were a good many books about, plenty of ash trays, and a rather obtrusive typewriter. The furniture strung itself through many times and many manners, and was arranged more for comfort than effect. It was clear that the Fosters lived to suit themselves. But they were far from isolated. The telephone rang half a dozen times, and Joan or her husband carried on friendly conversations and made engagements or refused them.

Toward the end of the evening a young insurance man and a girl illustrator came in together. Everybody was very much

Pictures that satisfy —*or a new film free!*

SUCH is the spirit and the letter of the Ansco Guarantee—packed with every roll of Ansco Speedex Film. It means that the film which comes in the red-and-yellow box is all that a film can possibly be. Nothing short of the finest could make such an offer—

"If the results from this film do not suit you, no matter whose fault it is . . . we will send you postpaid a new roll free of charge, together with suggestions of real help to you in obtaining fine results with your camera."

And don't worry too much about the weather. Speedex has latitude enough to get good pictures even when conditions are far from ideal. Remember the Guarantee; buy Speedex.

There's a size for every roll-film camera, no matter what the make.

Agfa Ansco Corporation, Binghamton, New York.

SHINING • CLEAR

ALL THIS MONEY
in one month
from Short Stories

"Actual cash sales for work done in January amounted to $1643! I have received $730 from my February submissions, with four novelettes not yet heard from," reports Lieutenant Arthur J. Burks, successful Palmer student.

There is no reason why you, too, cannot write stories that sell. If you have imagination—the urge to write—the Palmer Institute Course in writing can back your ambition and initiative and help you produce the kind of stories that magazines want right now.

"The Palmer Course would have saved me years of labor," writes Jim Tully, author of "Jarnegan," "The Circus Parade," and stories appearing in Vanity Fair, Liberty and American Mercury. Palmer training strengthens and enriches your writing ability. Many professional writers have also been helped by Palmer training. If you want to write stories that pay dividends, use coupon.

at home except Audrey, for even Gordon rapidly became assimilated. But Audrey, watching her sister's glowing face, felt nothing but bitterness. It was so stupid. If Joan had used her head and met the right people and married as she should, it might have meant everything to them both.

"Doesn't this apartment remind you of anything, Audrey?" asked Joan, sitting down by her sister and seeming to try, out of her own high spirits, to force a moment of intimacy. But Audrey was obdurate. She looked about her.

"Nothing, fortunately," she answered coldly, and Joan flushed and a second's quick hostility came into her eyes. It slipped away. Joan had never been able to bear a grudge. But, none the less, it had been there.

PERHAPS because it had been there it made her less anxious to see Audrey than she had ever been; and Audrey was too hurt and humiliated to care. She made an effort to write her sister off, as she had written off many an old acquaintance or relative who hadn't been able to make the grade. But Audrey was always generous, even with people who disappointed her. She often sent Easter lilies and Christmas candy to those whom she denied intimacy, and with something of the same manner she did what she could for Joan.

Before Joan's baby was born the next fall, Audrey was continually offering her the use of a car with a chauffeur, and she asked the Fosters out for week-ends occasionally. They came only once; and on that one visit Mark Foster showed, as Audrey said, every sign that he had no breeding.

She admitted that he was good-tempered and certainly in love with Joan; but any man who left a trail of newspapers all over the house and would sit around in a bathing suit and bathrobe for hours at a time was more used to Coney Island than a Shore Road ménage. Something of her feeling must have showed through her careful restraint. The Fosters did not come again.

But during that second summer, in spite of her disappointment in her sister, Audrey found compensations. The slow social pulse of the Shore Road seemed to beat a little faster, as she occasionally felt it. When Elsa Lyons turned over her entire house and gardens for a festival for the benefit of the fund for crippled children, and the committee asked Audrey if the party could overflow on her grounds and piazzas, she was only too glad to permit it. She even opened her house.

There were a great many necessary arrangements and committees meeting about and, once in a while, seeing those gay younger matrons about Joan's age, Audrey had a heartsick moment to think from all this. But Joan was in the hospital when the festival came off, being introduced to her son.

The Shore Road liked Audrey's house. And its denizens, using the house, had grace enough to be pleasant to Audrey, although they did not offer her the keys to the inner circle. Always Audrey could sense the difference in the way people talked to her and the way they talked to each other. They admitted her taste and admired her belongings and thanked her for what she did, and then it was all over.

That vivid intimacy which she could see flashing between the others, the swift gossip of all kinds, of things she did not know about, did not include her. She did not resent it. Perhaps it was a thing of slow growth. And yet, as the invitations to the public affairs for charity and the big club affairs continued to be her own only social food, she wondered sometimes if she would ever be able to fit herself into the key group.

It was, she was surer than ever, only a matter of qualifying, of becoming like the rest. Her manner became even more studied, more watchful, and her house continued in perfection and loneliness.

In the early fall Gordon suggested that she go away again, and promised to join her in any place she chose. Audrey knew how easily all the people about her took travel and how much a part of their life it seemed to be. She set her teeth, and began to decide where to go.

It was Gordon who suggested that they offer the house to Joan and her husband while Audrey and he were away. Audrey was a little reluctant: but she finally acquiesced, and it annoyed her to have Mark Foster refuse it. They had gone into town to see the Fosters, who were still living in the flat, claiming many advantages of sunshine and outer windows for it.

Mark was rather stiff in refusing, and more unyielding than Audrey had ever seen him.

"Goodness, no!" said Joan, getting her cue quickly; "I couldn't possibly take care of your house, Audrey. The baby's fearfully messy, you know, and I'm a rotten housekeeper."

Gordon said a surprising and irrelevant thing:

"I don't see what that matters. The house was built to be lived in. Do what you please with it."

Audrey felt that was going altogether too far. It didn't matter, because very fortunately Mark persisted in refusal. They would stay in town. He was, she told her husband later, really very boorish about the whole thing. But that undoubtedly came from having no background at all. Audrey had her moments of comparative charity.

"IT'S just as well that they didn't take you up on it, Gordon," she told her husband later. "We're really just feeling our way and getting on a little. They would have probably filled the house up with those friends of theirs. Did you know that the Rangers asked us to come over there to tea on Sunday afternoon?"

"Did they? I've been playing golf with Ranger lately."

"Yes?" A little smile of triumph circled Audrey's mouth.

"Nice of them, wasn't it?"

Not even between themselves did the Peels admit a vulgar enthusiasm over the invitation. But Audrey found herself waiting for Sunday in the way that years ago she had anticipated a birthday party, half fearing it, half wanting it to hurry.

They had never been in the Rangers' house. It was set back in a large estate, and was one of the earliest houses which had been built along the Shore Road. From time to time, things had been added to it: a new garden, a wall, an extra wing.

Digitized by Google
Original from
UNIVERSITY OF IOWA

The whole building was of clapboards and natural stone, and it rambled about a wide central hall which went straight through from back to front of the house.

The hall seemed to be a general meeting place. As the Peels entered, people were stopping there to greet each other, and laugh and talk as if they were well used both to the place and to one another. Everyone was smoking and at ease.

The Peels felt a little out of it before the great Mrs. Ranger came up to them. She was a fat, comfortable lady and she had a manner of warm hospitality in her own house, quite different from her negligible courtesy at formal parties.

"I'm a poor hostess, Mrs. Peel," she smiled; "but I was defending myself from my strong-minded friends. They're out there abusing my zinnias. I have excellent zinnias. Judge Crouch is jealous of them. That's why he cries them down. Come and tell me what you think."

And she led the way straight through the hall, past a big old-fashioned desk strewn with papers, which Mrs. Ranger commented on as something she was always falling over but couldn't bear to part with, "because it's so easy to read the mail there." Four small, clumsy puppies tumbled over the doorstep.

"Aren't they darlings!" exclaimed Mrs. Ranger.

AUDREY knew very little about zinnias and couldn't contribute to the animated botanical discussion being carried on by the financial and social potentates, who were abusing one another's judgments. She marked down mentally that zinnias were a thing to learn about. Also, dogs.

There was more like that. It was very puzzling. The lavish tea, which was apparently a regular Sunday custom, was set out on a long table in the dining-room. People helped themselves, and then sought out their friends, which left Audrey and Gordon again by themselves, until Mrs. Ranger came to their rescue.

"You come sit by me, my dear," she said to Audrey, "and let your husband find some less pretty woman. This bench is nice. I always eat where I can see the lake, if I can. It's a habit of mine."

"I'm getting that habit," Audrey remarked, a little shyly.

"It's a good one. I always say, what's the use of traveling about looking for different climates when you get every climate in the world right here—summer, a touch of storm, nasty weather, ice, snow. Well, I'm sort of a fanatic myself. But then I hate travel." She patted Audrey's knee. "Always did. Get sick to my stomach. Never take a train unless a relative dies and I have to go to the funeral. Even then, it has to be a dear relative!"

She helped herself lavishly to mayonnaise which a man-servant was passing.

"I'm the only person left in captivity who takes this," she said; "but I don't mind being plump. I think it's beginning to add variety to any circle. I have no vanities, and I'm confident my husband will always be good to me. So I enjoy my mayonnaise. I suppose you won't have any?"

Audrey shook her head. Her mind was fumbling about, as if it saw in sight some key it had missed and was stopping to pick it up.

We overeat— take no exercise— crouch all day over a desk

—and then complain of constipation

WE ARE far too inclined to neglect the warning signs Nature is constantly giving us. Take one of the most common, for instance—bad breath. When we experience it, we are annoyed. We wonder vaguely what could have caused it. Then we realize that we must hurry to catch the train to the office or to make that appointment with the hairdresser. So we "kill" the bad breath with some disinfectant and quickly dismiss the matter.

We are evading the issue—covering up an effect and overlooking the cause. For, so often, bad breath is caused by poisons in the system which have been taken up by the blood and are being eliminated through the lungs—one of Nature's efforts to overcome intestinal toxicity—one of her danger signals.

The cause? We all know it. An overworked digestive system, a "tired digestion," constipation. . . .

The answer? We know that too! A more balanced diet, plenty of water, fresh air. And (at least countless thousands have found it of invaluable assistance) Eno's Effervescent Saline Laxative—regularly.

For sixty years this delightful, sparkling laxative has been used the world over. Perhaps you already know of its pleasant taste and gentle, thorough action. Eno never leaves you "all dragged out." It simply flushes and cleanses the whole intestinal tract and speeds up normal action. It does not gripe you nor disturb the day's routine.

Try Eno for a week—every morning or evening. You can take it regularly without fearing that it will form undesirable habits. And you'll give it a constant place on your bathroom shelf once you experience the keen, clear-eyed health possible to those free from intestinal toxins.

At all druggists at 75c and $1.25 a bottle. Prepared by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

Eno — health precaution—will cost you less than 3c a day.

When you get up, simply take a glass of water and add a generous teaspoonful of Eno. Taking this sparkling, delightful saline regularly will help to keep you fit and eager throughout the hardest day.

For a business headache, nothing is better than a glass of Eno. You can get it at the better soda fountains everywhere.

Special Schools

A special technical school with concise but comprehensive course in Electrical Engineering designed to be completed in **ONE COLLEGE YEAR.** Non-essentials eliminated. Thorough knowledge of underlying principles emphasized. Theory and practice are closely interwoven in class-room and laboratory.

ELECTRICAL ENGINEERING

The course is designed for earnest, ambitious young men of limited time and means. Curriculum includes mathematics, mechanical drawing and intensive shop work. Students construct motors, install wiring, test electrical machines. Graduates are qualified to enter the electrical field at once.

Bliss men hold responsible positions throughout the world. Thoroughly equipped fireproof dormitories, dining hall, laboratories and shops. **Prepare for your profession in the most interesting city in the world.** School established 1893. Catalog on request. Address

BLISS ELECTRICAL SCHOOL, 228 Takoma Avenue Washington, D. C.

Degrees Granted by Authority of the State of INDIANA

ENGINEERING DEGREE *in* 2 *Years!*

No entrance exams required. And if you haven't a high-school diploma we'll give you the essential subjects.

LOW TUITION —small living expense

Rooms in private homes $2.00 to $3.00 a week. Meals $3.50 to $5.00 a week. Tuition about half the average. Employment service for graduates, free. No extra fees except for chemistry laboratory materials. Wonderful bunch of students. Terms start Sept., Jan., March, June.

Electrical
Civil
Mechanical
Chemical
Administrative

If you want to be a graduate ENGINEER and earn $50 to $150 a week, come to TRI-STATE College. We are interested in helping men who may be short of money and time, but are strong in the desire to improve themselves. Time cut to 96 weeks by eliminating frills and concentrating on Science, Mathematics, Drafting, Laboratory and field-work.

B. S. (Bachelor of Science) degree in Engineering conferred by State authority.

Write for Catalog

Write today for free catalog containing complete information on 2 year Engineering Courses. Be sure to state course you are interested in—Civil, Electrical, Mechanical or Administrative. This catalog tells you the whole story. Write for it now.

TRI-STATE COLLEGE, Box E-C103, Angola, Ind.

CHIROPODY

AN UNCROWDED FIELD

Make $5,000 to $15,000 a year in dignified profession. Doctors of Surgical Chiropody needed everywhere. Best known College in America gives you full course, prepares you for practice in 2 years. Largest foot clinic in the world. Faculty of leading physicians, chiropodists. Finest equipment. 15th year. *Study in Chicago.* Varied interests of city life—opportunities all around. Earn while you learn. Write for catalog. No obligation. Dept. 1002.

Illinois College of Chiropody, 1327 N. Clark St., Chicago

AMERICAN ACADEMY OF DRAMATIC ARTS

Founded 1884 by Franklin H. Sargent

For 44 Years the Leading Institution for Dramatic and Expressional Training

Prepares for

Acting *Teaching* *Directing*

Develops Poise and Personality

Fall Term begins October 26th

Extension Dramatic Courses in co-operation with COLUMBIA UNIVERSITY

"Excuse me," said Mrs. Ranger, getting up and putting her plate on a little cherry table that matched nothing in the room, and probably nothing in the world. "I see a recreant nephew of mine coming in. He's been married about a year and he has a delightful wife, to say nothing of a child. He's been neglecting me lately; but you know how these young people like to be by themselves. And I believe in it thoroughly. Let them worry over the gas bill, I say to my husband. He adores this boy, though he doesn't show it. I say to him, leave them alone. Mark married the girl he wanted, and he showed excellent taste."

SHE went off heavily and, turning to watch her progress, Audrey felt herself suddenly shocked beyond her own control. There, quite near her, smiling at everyone in a perfectly friendly way, was Joan, and Mark was beside her.

Audrey's first thought was automatic distress at the dress Joan wore. Then she saw that it didn't matter, and that the significant and important thing was the way Joan fitted into the group on the instant. It was Gordon Joan saw first, and she grinned at him.

"Hello, brother-in-law. Where's Audrey?"

Mark was a gentleman, in spite of his tendency to wear a bathing suit and bathrobe, and his scattering habits, and faint income. He and Joan had a clear understanding about Audrey, and he was not one to rub things in by so much as a glance. He left the Peels to Joan, in whose competence he trusted.

"I didn't know you knew the Rangers," said Audrey, as her sister came to where she still sat. "I didn't know that Mark—"

"You didn't give me a chance to tell you at first," explained Joan; "and after that Mark didn't want me to. We didn't see that it mattered, really, Audrey."

"But he's a nephew—"

"Sure he is. He was brought up out here. But he's on his own now, you bet," added Joan proudly.

"What?" asked Mrs. Ranger, coming up. "You know my niece, Mrs. Peel?"

"Audrey's my only, beloved sister," said Joan, linking their arms, and went on generously: "We've been so busy with my yelling child, we haven't had time to get out much, even to see her."

"Dear me, isn't this nice! And how's your lovely baby? Here, dear, sit right down here with your sister, and I'll have Watkins get you something to eat. I suppose Mark is out there taking all the food, as usual. He never did have any manners."

The two sisters looked at each other, and then Audrey, whose sense of humor may, after all, have only been overlaid and not dead, laughed.

"You win," she said; "I've been an utter fool. But, just the same, your clothes are terrible. For heaven's sake, keep your feet under you!"

No one rubbed anything in. Not Joan. Not Mark. Least of all Gordon, who had the most expansive and comfortable evening of years, and for the first time felt thoroughly at home on the Shore Road. But after they were home that night he looked around a trifle critically at the perfect appointments of his charming house, so faithful to Italy.

Music Schools

Bush Conservatory
CHICAGO

Faculty of 125. The Largest and Most Distinguished American School Offering Courses in

OPERA EXPRESSION SCHOOL MUSIC — **MUSIC** — DRAMATIC ART DANCING CLASS PIANO INSTRUCTION

Accredited courses leading to Certificate, Diploma and Degrees.

Scholarships—Symphony Orchestra

Only conservatory in Chicago maintaining extensive dormitories for women and men students

Fall term begins Sept. 10th. Dormitory reservations now. For illustrated catalog describing this great institution and its many advantages, address

A. M. SCHWENKER, Secretary, 839 North Dearborn St., CHICAGO

"That's a nice house of the Rangers'. I suppose after a few years ours will be more like that. After it's been lived in a little longer."

It was a question, and Audrey answered yes.

"And I like those people. They're so easy. They kind of stretch themselves—you know what I mean, darling. They do as they please. That's the idea. Joan, by the way, has always had that trick. That little minx put it over on us properly, didn't she? But I guess he's proud, that kid she married. Have to make it up to them, won't we?"

He was on his way down-stairs when she saw him an hour later. Audrey was ready for bed.

"By the way, have you decided where you're going?" asked Gordon. "Are you still talking about the Riviera?"

Audrey sighed comfortably.

"I'm not going anywhere," she said. "I get car-sick, or seasick, and why should I go? I like my house and I'm going to live in it. I hate travel."

Gordon looked at her in astonishment.

"Well," he said at length, "any more changes?"

"Only one more tonight: Bring me up a glass of milk and a piece of cake when you come up-stairs. I've been hungry for ten years!"

Becoming a Father at 60 is a Liberal Education

(*Continued from page 48*)

way out of many troubles. I don't know whether all children have humor; most of those I see look pretty serious. And I'm not sure whether Pete brought his into the world with him or attained it afterward. The first time he laughed he gave me a shock. He was a tiny baby, and had never seemed to see me till one day, as I was bending over his cot, he looked up; his eyes fixed on my face, opened wide as if in recognition, and he laughed. This could not have been courtesy; it must have been a sublime sense of the ridiculous.

IT'S a discovery, that a child can be taught not to cry but to laugh when he hurts himself. Hard enough to believe, it is easy to understand why this convenient knowledge is new. No loving mother with a house to keep, and no beloved father with a career to carve out, has had or would have time to sit by a baby's cradle and watch the development of Man as I watched the evolution of Pete. They might not be there, as I was, when he first bumped his head, hard, and discovered that there is such a thing as pain in the world. If his or any other natural mother had been in my place, she probably would have picked him up and suggested alarm when her baby's head cracked and his eyes filled with tears. Fortunately, Pete's mother was busy; only his devoted father saw his look of surprise, disillusionment, consternation, and suffering. I saw his tears too, but I thought I saw an inquiry in those brimming eyes. It seemed to me that this young stranger to our world and our customs was asking me, as one having authority, what you do when something like the wall of the universe falls in and crushes your skull. Anyway, I answered him: I laughed.

I laughed in Pete's face as he had laughed at mine, out loud, heartily and long, and he—well, he couldn't quite manage a laugh, but he did not cry and he did try to do the proper thing; he smiled and, at last, he chuckled. After that, for a year or two—till some conventional intruder taught him otherwise, Pete did not cry when he was hurt. He would laugh, or try to laugh. Outsiders used to be amazed to see him fall, or bang his head and knees and then, with tears in his eyes, laugh.

Another circumstance contributed to this wonder. Pete was born on the Italian Riviera and lived his first two winters in big, old, open villas in complicated, terraced gardens. He had no nurse; his mother was busy, and I used to take my forenoons off to work. He was left four or five hours a day to shift for himself, with only the servants to "keep half an eye on him." One morning I heard him sliding into my study, which was at the top of the three-story house; he must have crept up two flights of Italian marble stairs, and I was shocked. But there he was at my door, smiling with triumph. Curious to see how he managed it, I invited him to follow me down-stairs again. He did. I kept just ahead of him, for he wouldn't let me help him. He crept all the way down, step by stair, slowly, carefully. His sure-footed caution was a revelation to me, but not to the small fat Italian cook who was standing waiting for us in the hall below. She was smiling, and I remonstrated with her: "You should not let Pietro climb up there."

"Why not?" she answered. "He wanted to, and I have watched him. He is cautious."

"Yes," I said, "and how in the world did he learn such caution? Look at him: he hangs on to the upper stair till he feels secure on the lower."

"Humph!" she laughed. "He has learned that by falling down the stairs and off the terraces many, many times, just like our babies."

"I've never heard him crash or cry."

"Cry!" she echoed. "The signorino does not cry. He's an Italian." And she picked him up and carried him off with her down into the town to do the marketing.

There, where he mixed with his fellow Italians, he made friends, and learned—cheerfulness and politeness, as I discovered the first time I carried him down-town. Happening to go out by the service entrance to the garden, I took the narrow, rough-paved *salita*, an alley used by servants, delivery men, and peasants with their donkeys. Pete knew everyone we met, and they knew Pete. He greeted them with a Fascista salute and his own smile, and they responded with theirs.

THE third winter of Pete's life we spent in France, in the country near Tours—and there again his ready courtesy picked up some French manners from the servants and peasants. The first we knew of it was when, one evening, he very politely took his mother's hand and formally kissed it. After that he greeted all women that way, and—I don't know why—humble men, preferably working-men in their working smocks. He brought this form to America.

He practiced it with effect upon the women on the boat, and the day we were leaving a New York hotel for a train West, he saluted thus a man. He shook hands with the proprietor, the clerk, the baggage and the elevator men and, turning, spied a plasterer who was drawing back as if conscious of the dust on his clothes and hands. Pete walked solemnly up to this man and kissed his hand.

I like Pete's universality, his equality. So many friends of mine suffer from an inferiority complex, and cover it with what looks unpleasantly like conceit that I want this young man to grow up to be sure of himself, so sure that he can forget his defense. I have taught him, therefore, that he can do things which at first seem impossible. When he comes to me for aid, I help him only to do it himself, and when he succeeds, I say, "That's great!"

THE theory I am working out is that if a child can acquire a superiority complex before he is old enough to be a prig he will achieve self-confidence and save his (inborn?) belief that he is "as good as anybody." It is the superiority of parents, teachers, and older children that humbles the child, I think, and makes him shy, weak and, fighting for his self-respect, offensively self-assertive. I let Pete win most of our battles. I let him catch me wrong and himself right every day. It hurts my pride, but it builds up his.

My guide to all intercourse with Pete is myself and my recollection of myself as a child. He has brought back vividly to me that part of my life. This is what I meant when I said in the beginning that an old father becomes a grandfather and a child again. True, I am writing my autobiography; that requires recollection, but I think that my strong wish to understand my children forces my memory more than the need of stuff to write. Anyway, I do remember; and what I recall is a key to Pete. His young mother, like mine, could not understand why her child revolted when she suddenly announced that it was bedtime. I can, as my father could. I look up from my reading, as I can still see him do, and I observe instantly that Pete is absorbed in some business as important as anything his mother or I ever did. I slip down, join him in his labors, help him finish up the job, and then say to him:

"Now, then, what's next?"

He knows the program. He hates to say it, but, eying me and seeing that I know that he knows what's next, he answers reluctantly, softly:

"Sleep. First, clean teeth, then go to bed, then Peter Rabbit, then—then sleep."

And off we go. This follows the routine: this is in accordance with law; this way gives a fellow time, and respects his dignity. His mother's is the impulsive, executive way, and he resents it. He can describe it too. One day after he had been through an earthquake with a group of

He had to fight himself so hard...

he didn't put it over

YES, he was his own worst enemy. His appearance was against him and he knew it. Oh why had he neglected the bath that morning, the shave, the change of linen? Under the other fellow's gaze it was hard to forget that cheap feeling.

There's self-respect in soap and water. The clean-cut chap can look any man in the face and tell him the facts—for when you're clean, your appearance fights *for* you.

There's self-respect in SOAP & WATER

grown-ups one of them asked him what it was like. Reflecting a moment, he said:

"Earthquake like Mama."

His mother, wondering, asked, "Now, what in the world does he mean by that?" I told her how my mother, irritated by the noise I used to make playing I was Napoleon directing a great battle, would thump my skull sharply with her thimble. Astonished by my indignation, she would ask my father why I so resented such a slight rap. And I remember, with appreciation even now, that he could explain it was not the rap, but the humiliation of the Emperor before his troops, that hurt. He understood. She didn't; she thought I wasn't really a general, only a little boy.

I used to rake the country when I was a boy for grown-ups I could tell stories to. There were such, and I judged men and women by their capacity to—romance. The best believer I knew was a bridge-tender, a marvelous man who had to walk the half-mile of trestle over the American River after every train, to put out the smoldering fires started in the dry ties by coal dropped from the locomotives. He came to me first as a shout when I was swimming in the swift river below the bridge.

"Hey, there, kid," he called down. "Don't go in there. That current'll sweep you clear to San Francisco."

I was like Pete; I didn't take orders; not from anybody. I looked up at the man, jumped into the river, swam across and back, while he watched me. He beckoned to me, and when I had dressed I climbed up the ladder, to him and—he taught me how to teach Pete caution without fear. He said that no man would do what I had just done. A boy might not realize, but any experienced swimmer would see at a glance that the currents in the river were treacherous. What was I doing across there, anyhow? I sized him up and decided to tell him the truth: I was a trapper setting traps for beavers.

NOW I knew, and I knew he knew, that there were no beavers in that river. It was a test for a grown-up, and he stood it. He pointed out some better places for catching beavers on this side of the river than any I had on the other side; with reasons, technical, trapper's reasons. But the real reason why I knew he was all right on beaver trapping and everything else was that he could walk that open trestle, without a middle plank, stepping from one tie to the next, fast, and nary a trip. How did he do it? He showed me.

"First you do it slowly—like that; one step at a time," and we did it together. My, but he was slow. We did it, as he said, as no ordinary boy could do it. Only men—real men—trappers, hunters, scouts—only tried and true plainsmen could be so patient as we were, he and I, walking, tie by tie, that trestle. We did it up and down till he was as tired as I was. Then we sat down outside his cabin and became acquainted. He trusted me; as I did him.

So he saw he could talk to me and that's how I learned that he wasn't really a bridge-tender, but a gold miner, who—when he wasn't walking the track, when he sat all by himself outside his cabin, and thought—prospected the foothills we could see in the distance. That's what he came West to do when he was, unjustly, run out of his home town in Missouri, and he did it. Sometimes he struck it rich, and went home and "blew" his fortune, just to show them that he wasn't such a failure as they thought. What did it matter about the money? There was plenty more gold up there in that hole in that hill. He stood up and showed me the hill, the very hill, almost the exact spot where his claim was. He trusted me all right; and he could. I would never give him away. I never did give it away, that claim; not to this very day. His secret was, and it is, safe with me. Great man, that bridge-tender. In some ways he was greater than my father, as I soon afterward found out.

I don't want Pete ever to say anything like that about me. It's all very well to have your only child think you are wonderful; but it's awful and, I hear, awfully common, to have the boy discover some day that you are not infallible. That's why I tell Pete his ball has gone where it didn't go and not where he saw it go, so that now, early, we can look for it and find, now, early, that sometimes Pete is right and, sometimes, his father is wrong.

I TOLD my father about the bridge-tender, and how he could run—not walk; but actually run on that trestle—faster than a train. My father was pretty good; for a grown-up he was wonderful. He could follow you pretty far, but he balked at that "faster than a train." He gave me a talking-to for telling what he called "whoppers" like that, and he brought up "beavers in the American River"! I was so ashamed that I went and reported it all to the bridge-tender. He thought it over. We both did. We both sat there on the bridge and thought and felt about it till, as usual, the bridge-tender had an idea:

"You ask your father to tell you the next time he is to take a train across this trestle, and you tell him to stand on the rear platform, and then you tell me."

It was some time, but my father did finally tell me he was going that way and would do what I asked. I rushed out, warned the bridge-tender and he climbed down off the trestle, disappeared in the brush, and came back with the most beautiful cantaloupe. He didn't say anything. We just waited till the train was coming and, when the engine hove up and passed the bridge-tender, he held up the melon to the engineer and shouted, "Easy does it." The train slowed till, when the last car passed, it was going very, very slow. My father was on the back platform, as he promised. The bridge-tender jumped out on the track and ran—he ran as fast as I ever said he could on those ties—he ran faster than I ever thought he could—and he caught up with the car, and he handed my father the melon. And my father, he took the melon and he took off his hat to the bridge-tender. And then he turned and saluted me, a special salute.

"Now," said the bridge-tender, when he came back, "now I wish I knew where we could get a beaver to show him in one of our traps."

That's what I remember when Pete asks me not to see something wrong that he has done. "Don't look," he begs, and I pick him up and say, "Of course I won't look. Pete wouldn't do anything like that. Not now any more."

"No," he chimes in. "Not now. Pete's not a baby any more. Pete's a big boy."

When his mother looks and sees, he runs to her and tells her it's all over. She need not make a fuss. "Pete talked that to Papa and Papa didn't look." Wherefore, it did not occur. She thinks that is lying, the beginnings of the vice of deception. My mother thought so too; even my father, as I say, could not go with me all the way, as I can with Pete.

It isn't lying. There's no deception about it. It's front. He knows he knows I know, and I know he knows I know. When we "lie" together that way, he and I, we are merely "saving face," which the bridge-tender and the Chinese, the oldest and wisest grown-ups in the world, know, as well as every child, is important, very important. It is dignity and honor and courtesy.

Three years of Pete has been a fascinating course of daily enlightenment for me. He is bringing me up to date. Of course I have worked hard and steadily under his tutelage; I have given my mind to it, as (I repeat) no busy young mother or father can or will. I have studied as industriously as I ever studied anything in my life; only more humorously, less ambitiously. It has paid me well. I have learned respect for the oncoming generations. That's what Pete and my experience in unlearning have drilled into me. And Youth feels that in me.

IT CAME out recently in an address I delivered at a girls' school. The audience was from twelve to eighteen years of age, and, with Pete, aged three, in mind, I talked straight. I cut out the anecdotes I had been putting in to entertain the adults I had been talking to; otherwise, I gave the same lecture—which is not conventional and obvious. It is an elaboration of the thesis that we don't know enough yet to stop war, cure poverty, govern others, educate our children, or to explain either the stars, the atom, or ourselves. Those girls took it, an hour long, without fidgeting, and in their essays the next day reported my points better than any newspaper ever did. They misunderstood nothing. They "got" me. They said they liked it all because, first, I had shown them that there was plenty for them to do when they grew up; and, second, because I addressed them with respect.

They "got" what Pete gets, what Pete gives me, a deep faith in the (intellectual) courtesy and a high hope in the inborn capability of our successors—Youth. I wish I had had time and the chance to learn this as a young father.

ZANE GREY, Melville Davisson Post, Clarence Budington Kelland, Katherine Newlin Burt, Hugh Fullerton and Eleanor Hallowell Abbott—distinguished authors, all of them, and all of them are at top form in the stories you will read next month. "Sunset Pass," by Zane Grey, is a serial; Mr. Post comes back with his great character, Colonel Braxton, the gallant Virginia lawyer; Kelland has written for you another Scattergood story, while the others offer characters you have not met before, but in stories you will long remember!

Laundry washing costs less

HAVE you ever figured what it actually costs to launder your clothes in your home? . . . one woman recently found she actually saved 21c with her two fretful days of tiresome toil ❦ Cost experts, however, say the modern laundry *saves a woman from $1 to $2.10* on the average bundle . . . but really what difference does it make, whether 21c or $1 gained or lost? Can you really afford to slave in the wet of home-washing for even 21c a day? Millions of other home-managers have found that laundry-washed clothes are cleaner, sweeter, longer-wearing ❦ To them wash-day is over before it has begun ❦ They have gained a whole day each week . . . a seventh of a lifetime free for living and enjoyment ❦ And they have saved money, too ❦ Why not join them this week?

The LAUNDRY *does it best*

ABOVE—The modern laundry water extractor dries clothes by whirling without injury to fiber or thread. LEFT—Modern laundry washing formulas are evolved by skilled scientists with prescription-like exactness.

Keeping Faith with American Women

THE modern laundries which stand as sponsors for this series of informative advertisements belong to a great group of progressive institutions. Not only is this group endeavoring to tell you the illuminating facts about modern laundry service, but each modern laundry is earnestly striving to keep its methods on a level with the high standards and ideals reflected in these advertisements.

© 1928 M. A. C.

Modern laundries offer a variety of services to suit every family need. All-ironed work, partially-ironed work, and work which returns clothes damp for ironing, are but a few of the many *individualized* services available at laundries today. Phone a modern laundry now—let them help you decide which service is best suited to your needs.

THE FAMILY'S PROBLEMS

Would This Woman Be Justified in Having a Maid?

MOST of the people who write in to The Family's Problems seem to have hit upon some miraculous way of settling all of life's vexing questions. Particularly such as have to do with the spending of the family's money. I am ashamed to confess that I am offering no solution for anything. I come with a plea for help.

With me, the question is—to have a maid, or not to have one. My husband is assistant cashier in the second largest bank in our town. He earns sixty-five dollars a week. Cut and trim as we will, we can manage to save only twenty or twenty-two dollars a week. This sum covers our building and loan stock, our insurance, and provides an emergency fund out of which we must pay for such unplanned luxuries as a case of tonsillitis, or a new baby.

We have three small children; the eldest, a boy, is seven and goes to school, so he is out from underfoot most of the day. The little girls are five and two respectively. A competent maid costs eight dollars a week in our community; and of course her food probably brings the total up to ten or twelve dollars a week.

Now, ten or eleven dollars a week is a lot of money to Frank and me. Put out at interest, it would amount to several hundred dollars a year. Kept up during Frank's period of greatest earning capacity, it would insure a college education for the children and comparative ease in our old age. It would also mean that the pretty new home for which we long so much would be a certainty in four or five years more.

ON THE other hand, a maid would mean freedom from backbreaking drudgery, and my youth back, for me. It would mean time in which to play with my husband and my children. Time in which to care for my roughened skin and broken finger nails. Precious hours in which to read, take up my music again, and renew old friendships.

At thirty, I am already getting old, I'll honestly admit. I feel old when I have time to feel at all. The housework and the children occupy my thoughts asleep or awake. I haven't read anything but the headlines on the front page of our daily paper in what seems years. This reading is done usually while I am taking in the milk in the morning. When I glance through a magazine I do it while I am getting the baby to sleep. Or I prop the magazine open on my sewing table while I do the family mending.

Not only this, but I am too worn out with the daily struggle to keep things clean and mended and neat, and to talk to my husband when he comes home at night. If I can get some sort of meal on the table I feel that I am doing well. We long ago gave up trying to entertain. Frank has stopped bringing his friends home to a pot-luck meal. He has learned, poor boy, that there isn't likely to be much luck in the pot at our home. Certainly not the sort you like to parade before your guests.

The girls, too, no longer bother about asking me to their luncheon and bridge parties, or even to the missionary society. They know I can't get away from the children. Frank and I don't even pretend to go to church any more. As soon as I get the two elder children off to Sunday-school, I plunge into the preparation of the Sunday dinner, thankful that I have Frank to look after the baby that one day.

The sad part of it is, I really love the beauty of an ordered life. I would like to look fresh and sweet for my husband when he comes home at night. I would enjoy having my friends in occasionally. I want time for candle light and flowers on the table. I don't enjoy being a has-been or a dowd. It makes me sick to realize that I am not keeping up. I am already dreading the day when my children will be ashamed of their mother, because she is drab and ugly and old before her time.

DON'T anybody tell me to try budgeting my time as a solution to my problem. I have tried that. The only trouble is that babies don't wake up in the night, or have measles and whooping cough according to a schedule. And don't anybody suggest that I make my husband help with the work. Frank works hard at the bank. I'm not going to make a housewife out of him after banking hours. He makes a fair salary for a young fellow of his age. It's his job to get on in a business way—to earn more next year than he earns now. It's my job to spend what he earns to the best possible advantage in running the family for which we are jointly accountable.

And that brings us back to the question with which we started: Should I or should I not, have a maid?

I have noticed that wives who have maids, whether they can afford them or not, and thus keep themselves young and attractive, seem to make a hit with their husbands, and other men as well. Sometimes I get awfully riled when Frank tells me about seeing one of my old friends down-town, "looking as fresh as a daisy; and she has five children, you know."

I have to bite my tongue to keep from adding, "Yes, and she has a cook and a nurse, too." But I never do. What would be the use? Frank gives me everything he can. He would give me the world with a fence around it, if he could. It's just a question of whether we shall save for our old age and the children's future, or spend practically everything we make, and have our good times while we are young. If we did the latter, perhaps at least we could store up a lot of happy memories for our old age. And maybe happy memories are just as important as life insurance.

It is a perplexing question.

Frankly, I don't know the answer.

The Importance of being Yourself

With some illustrations drawn from active lives particularly the lives of ROY HOWARD and BOB SCRIPPS

By

BRUCE BARTON

ONE Sunday in the summer of 1920, there was served a typical Sunday dinner, chicken and ice cream, in a typical American Home—front porch, shiny oak woodwork, gas logs—at Marion, Ohio. Nothing in the meal or its surroundings indicated that the handsome man at the head of the table was about to become President of the most powerful country in the world. The talk was not about public problems or politics.

All the afternoon, visitors came to the front door: sometimes a delegation, more often only a young farmer and his wife wanting their children to shake hands with the next President of the United States.

All politicians pretend to be pleased when they meet voters; all have the automatic smile; all make a fuss over babies. But Harding's interest seemed really genuine, as though he felt a kindly sense of obligation toward anyone who cared enough about him to drive over to say "How-de-do." For hours he shook hands, and gave out photographs, and told stories, and laughed—a friendly man whom it was impossible not to like.

The next week found me in rooms at the Adams House in Boston where Governor Coolidge lived, and smoked Pittsburgh stogies, and managed to save money out of his governor's pay. He asked about Harding. I said I had never seen a man who seemed to have a more genuine liking for people.

"Yes," the Governor answered dryly, "I think he would like even school-children, though he had to shake hands with as many of them as I have."

No visitors came to pay their respects. There was no greeting of wives or kissing of babies; but the talk had a very direct bearing on the problems which would be facing the country in the next four years. As I went away I thought: "In all the world were there ever two men more different!"

Suppose they had set out deliberately to shape their personalities into a statesman-like mold. Suppose Harding had said: "I am too genial and easy-going. I must forget my hand-shaking and my laughter, and develop the appearance of profound thought." Suppose Coolidge had said: "A nature as reserved as mine can never succeed in public life. I must get out of my shell more, smile sweetly at the constituents, chuck the babies under the chin, and pretend to be a good mixer." They would have made themselves ridiculous. Each was wise enough to go on after his own fashion, doing his own stuff—being himself. And—absolutely different as they were—they came up together to the highest two offices in the land.

WHAT is the formula for a successful personality? There is none. Sit in the gallery of the United States Senate and look down on the men below. Here are nearly a hundred Americans, each of whom has somehow managed to impress himself upon the imagination of a state. What conclusions can one draw from watching them? What are the traits of appearance, manner, and personality that bring political success? I defy anyone to examine those hundred specimens and draw any conclusions at all. Every type of male is represented: fat short men, tall thin men; men with splendid heads of hair, bald-headed men; men with smiling eyes and genial manner; men who look introspective and bilious. No two are alike; yet all have arrived.

Or, take examples out of industry. Gerard Swope, president of the General Electric Company, and Alfred Sloan, president of General Motors Corporation, were classmates at Boston Tech. They are unalike, not only in manner but in method. Swope is direct and incisive; Sloan's decisions grow out of conferences. Swope gets up early every morning, rain or shine, and rides horseback; Sloan takes no exercise. Swope attends conventions, and finds it easy to be at home in any sort of crowd; left to his own desires, Sloan would probably be known to few outside the group of his own associates. Close observers of the two men recognize that each has exhaustive knowledge of every department of his business—plus courage, absolute fairness, and intellectual honesty. These are fundamentals. Judging them merely from the outside, there would seem to be little in common; yet each has risen to the top of a world-wide organization, and has the unquestioning loyalty of thousands.

All of this is by way of introducing two young men who are about as unlike as two mortals could possibly be, yet are partners in the fullest sense of the word. Their names are Robert Scripps and Roy Howard. Let us go back some years ago and see where these two came from and just

Robert Paine Scripps—"Young Bob"—is president of the Scripps-Howard Newspapers. Like his famous father, the late E. W. Scripps, he is a great journalistic power, but is rarely in the public eye

how they happen to be where they are.

There was a tall, big-boned boy in Illinois who hated farm work and felt resentment against the whole social order. He saw that workers endured hardships and suffering for very little money, while the rich endured nothing and were highly rewarded, and he determined to raise his voice on behalf of those who had no spokesman. Accordingly, he persuaded his brother, who was publishing a successful newspaper in Michigan, to lend him ten thousand dollars. With this, and his health and faith in himself, he went to Cleveland and founded the "Penny Press." As the Cleveland "Press" this newspaper still survives, having the largest circulation in the state and forming the solid corner stone of the present Scripps-Howard structure.

E. W. SCRIPPS, the founder, employed young men, made them his partners, and gave them few instructions other than to get the news, tell the truth, and take the side of the under dog. Under no circumstances was any individual to receive consideration in the columns because of his social position or wealth. The paper prospered, and presently Scripps was able to afford a good home, a buggy and a high-stepping horse. One afternoon he was arrested on Euclid Avenue for reckless driving. The opposition newspaper gave the incident plenty of display, which did not surprise Scripps. What did surprise him was to find his arrest chronicled under a big headline on the front page of his own sheet.

He had red hair, and each individual hair was bristling when he strode next morning into the office of the "Penny Press." He demanded in words that were both picturesque and emphatic what individual was responsible for playing up his arrest.

"I am the man," said the editor, Bob Paine.

The next remarks of Mr. Scripps occupied several minutes and consisted principally of words which the postal regulations do not permit us to print.

Paine waited until the storm subsided, and then made his reply:

"My instructions from the owner of this paper are to champion the cause of the common people. We are here to protect them against those who abuse wealth and power. You are wealthy and powerful. You choose to drive down Euclid Avenue at a reckless pace, endangering the lives of our readers. You can fire me if you choose; that's your privilege. But, as long as I am editor, any time that you infringe upon the rights of the people you are going to find your name in the headlines on the front page."

Scripps swallowed hard, turned on his heel, and walked out. No further reference was ever made to the incident. But the policy of the "Press" had been tested and proved.

THIS was about 1880. In the next thirty years Scripps established a score of newspapers after the model of the "Press." The method was the same in each instance: He would select two live young men, rent quarters on a back street or in a basement, buy a second-hand printing press and a six-months supply of paper, and let the two sink or swim. If they survived, they were partners in the enterprise and had established their own fortunes, as well as added to his. If they sank, why, that was that.

One man was business manager, the other editor; but, contrary to the rule in most newspaper offices, the editor was supreme. He dictated not only what went into the news columns but what went into the advertising columns as well. No advertiser could influence the editorial policy. The papers were for the reader, first, last, and all the time.

Scripps wrote little himself. He worked with his young men, played with them,

praised them, abused them, and, little by little, molded them into a hard-hitting, fearless organization, loving a good battle and ready to fight at the drop of a hat. Because the papers were honest and served a constituency that had been unserved before, they prospered.

When he died on his yacht in 1926, leaving instructions that his body should be consigned to the sea, his fortune was said to be the largest ever amassed by any man entirely out of newspapers. He had few outside investments. He wanted no stocks or bonds that might at some time influence his judgment or cramp his style. What his papers earned in excess of his expenses he invested in new papers; and he gave instructions in his will that a proportion of the profits must always go into enlarging the chain.

Of his three sons, only Bob, the youngest, survives him. The father's ideas on education were as individual as his ideas about publishing. Bob was never sent to school. He had tutors, but E. W., an omnivorous reader, believed that the best training comes from the education that one gets for himself. So Bob read everything, and still does. But information without the capacity for making decisions is useless, said the father. Accordingly, he loaded Bob with responsibility from the time he was able to walk alone, putting him in complete control of the two-thousand-acre ranch at Miramar, California, when he was fifteen years old.

IT WAS no merely formal appointment. On the day Bob took charge, the old man quietly engineered an insurrection. The entire working force struck for higher wages, and Bob was left alone to settle the strike. From that hour, his education consisted fifty per cent in reading and fifty per cent in troubles—the father adding both books and problems as fast as the young man could carry them. At twenty Bob went to work on one of the papers, and a few years thereafter was tossed into editorial control.

But Bob Scripps made his own place. From a reporter's desk, he worked his way through every department of the business. He had poked into outlandish corners of the world to get the first-hand knowledge that a man ought to have if he is to influence the thinking of others. He likes a fight. When he and Roy Howard decided to go into Denver, it was not only because they thought there was a chance to build a profitable paper there but also because they knew they would have the fight of their lives. And Bob believes the organization can keep growing only when there is fighting somewhere along the line.

PHOTOGRAPH BY NICKOLAS MURRAY

Roy Howard, partner of Robert Scripps, is chairman of the board of the Scripps-Howard Newspapers. He is one of the most dynamic, colorful, and restless figures in American newspaper life

DRAWING BY FRANKLIN BOOTH

Like his father, he is physically big—six feet two inches tall, and broad in proportion. Like his father also, he has a genuine distaste for public appearances of any sort. E. W. directed his powerful organs of publicity from the privacy of a half-million-dollar yacht. Bob inherited the yacht, along with the rest of the estate, but has never used it. He lives in simple fashion on a farm in Connecticut, raising various crops, but principally five children. When you meet him you have the impression of a slow-moving, rather shy man, who never speaks unless he is sought out and spoken to. But if you edge away from the party and follow him into the corner where he has retreated, you discover a mind that has information and a point of view on almost everything. No important book or magazine, either here or abroad, escapes him.

ROY HOWARD is the nervous system of the outfit; Bob, in the quiet study in his farmhouse, reads and digests, thinks and plans. It satisfies him that Roy should have the limelight; but the men on the papers know how large a part he plays in the development of policies and ideas. At their last annual conference they adopted a resolution (*Continued on page 112*)

The Mysterious S. S. VAN DINE *creator of* Philo Vance *confesses*

"I Used *to be a* Highbrow *but* Look *at* Me Now"

Illustrated by HERBERT M. STOOPS

HONEYED optimists tell us that even dire afflictions have their advantages. Being of a cynical—or at least a skeptical—nature, I have always been inclined to doubt the truth of this cheering remark. But not so long ago I had what the old-time camp-meeters called an "experience." And herewith I submit my testimonial as to how a three-year nervous prostration made me a rich man.

S. S. Van Dine is not my real name. It is the *nom de plume* under which I write my detective-mystery stories. Van Dyne was an old family name; and I changed the *y* to *i*, and chose two initials that I thought would be easily remembered. (What the "S. S." stands for I haven't the foggiest notion; and I have maintained a stout and discreet silence on the subject whenever asked to explain.) My own name, which is much longer, is of English and not Dutch origin, and has for fifteen years been identified with books and literary activities of an entirely different nature from those now associated with S. S. Van Dine.

I am thirty-nine years old—oh, well, call it forty, since my birthday falls next month. My friends say I don't look it. My enemies say I've lost track of at least a half-dozen anniversaries. I wear a Van Dyke which, I admit, has begun to go gray in spots; but a clear conscience—or a non-functioning one—has kept the wrinkles from my face; and as yet I show no signs of baldness. I have written since the age of four, when a poem of mine was printed in my home paper. It was terrible, even for a four-year-old. I wrote a full-length novel at nine, and illustrated it myself. Luckily, it was never published—it was worse than the poem.

At school I learned easily, probably because I liked to study and got a genuine thrill from acquiring knowledge. I attended seven different colleges here and abroad, and took only the courses that interested me. I had various ambitions during those academic years. I thought at one time I was destined to be a painter; and studied art in Munich and Paris. I also had a yearning to be an orchestra conductor, and devoted years to music, even going so far as to memorize the scores of various symphonies and other orchestral works.

Markham

Philo Vance, the man who solved the "Benson," "Canary," and "Greene" murder cases, and who next month will tackle the strangest mystery of them all

But I could never escape the thrill of holding a pencil poised over a sheet of blank paper; and my first love, my only true love in fact—literature—wooed me back to her each time my ambition strayed to other fields. I went to Harvard for my post-graduate work, and fell under the benevolent and stimulating influence of C. T. Copeland (dear old Copey!); and from that time on—it has been twenty years now—I have devoted myself to writing.

For six years I worked at journalism. I think I've done everything there is to do editorially on a newspaper but write society notes. For a period of two years I averaged five columns of copy a day, including Sundays. I liked the work and regarded it as necessary training for the career I had decided on. I studied incessantly, the classics mostly—Greek, Latin, German, French and English; and was always waiting round for the editor to give me assignments. The more assignments I received and the harder they were, the better I liked it. I was in finishing school, as it were; and I realized at an early age that art is long and life is all too short.

I was a member of the staff of the Los Angeles "Times" in 1910 when the McNamara boys decided to dynamite it; and I escaped annihilation by a bare ten minutes. Harvey Elder, whose desk was next to mine, was instantly killed in that terrible explosion and holocaust, as were many others of my comrades. On that fateful night I had a splitting headache and went home early—only ten minutes before the bombs exploded. The episode is another curious instance of an illness bringing me luck.

MY NERVOUS breakdown, to which I have referred, came early in 1923. For years I had been working under tremendous pressure. I had been the editor of several magazines. I had carried monthly articles on painting, literature, drama, and music in several other publications. And, in addition to all these routine labors, I had written nine books on a variety of cultural subjects.

At the time of the outbreak of the World War I was living in Paris, writing fourteen hours a day. I crossed to London—my former home—and continued my literary labors. I finished two books there. But the terrific strain of war conditions and the psychological effect of those hideous days sapped my energy and undermined my health. I came back to America on the last western trip made by the "Lusitania," and went to a sanitarium for two months. I then re-

Heath

Twenty Rules for Detective Stories

THE detective story is a game, says Mr. Van Dine, and there are rules that govern the play. He discovered these rules when, during a long illness, his only recreation was the reading and analyzing of detective literature. He probably has read more detective novels and made a closer study of them than any other man alive. Out of the richness of this experience he set down the twenty laws that will enable you to read detective stories with greater understanding and with keener enjoyment. These rules you will find at the end of the accompanying article.

The three main characters in solving "The Bishop Murder Case," which begins next month

sumed my writing, locking myself away from the world, and completed two more books—one a history of painting, the other a treatise on applied esthetics.

One morning, early in 1923, I jumped out of bed and my knees gave way under me. I had reached the end of my tether. The lucky affliction was upon me! I had nervous prostration. For over two years, until the middle of 1925, I was confined to bed; and for six months after I had been allowed to get up I was too weak to work or study. I had lost fifty-five pounds, which is a good deal for a man who normally weighs only one hundred and sixty.

During those three stricken years I was on the lap of the gods—but not for a spanking, apparently! My pagan deities were planning some very pleasant things for me. At the time, however, I didn't know it. I was utterly discouraged and despondent. I was content to face the Great Adventure, and was thoroughly convinced that I'd never recover. I was bitter against the world and resentful of my fate, with the result that I was a recalcitrant patient. I refused to go to a sanitarium. I objected to everything that was done for me. I became sarcastic to the nurse—poor, patient girl—and in every way possible made myself a nuisance. I didn't want to get well.

Any other doctor than the one I had would have let me have my way on the question of dying; and I couldn't have blamed him. But my medico, Dr. Jacob Munter Lobsenz, was also an old friend; and to his great skill as a physician he added the love of friendship and the understanding of a fine, generous nature. He battled tirelessly with me, both spiritually and pathologically, for three years. And—here I am!

And now comes the birth of S. S. Van Dine. During my (*Continued on page 118*)

Colonel Braxton *hears*

And upon their testimony he stakes

Mr. Harris was carrying Cruger to the sofa as the officer came in the door

IT WAS a famous trial. Persons still living in Virginia will remember it. There was in it very nearly every dramatic incident. The prisoner in the court-room held the woman beside him silent. He had said he would stand up and confess if she said a word. They were from an elevated class, involved in an emotional tragedy.

These complications made the case unequaled.

The prosecuting attorney was uncertain. Was the man on trial for his life the criminal agent, or was the woman, in fact, guilty of the murder? How far the whole truth was known to Colonel Braxton, who defended the case, is not certain. But it is certain that he could not put the woman—beside him at his table—on the stand.

There was another feature that will not be forgotten. A thing that illustrates the profound strategy of this criminal lawyer in a desperate case:

He staked his client's life on a single fact.

He disregarded everything else.

He isolated that fact. He made it the one dominating issue, upon which the whole trial turned, as on a hinge.

The mystery of that fact too, or, rather, the proof of it, upon which he depended, he did not reveal. He stated it.

But he stated it in a Delphic manner, and it remained a mystery while the State put in its evidence. This very detail proclaims the ingenuity of the man. For this mystery reserved by the defense diverted the jury from the testimony of the State.

THE case was on trial in the circuit court.

The prosecuting attorney had made his dramatic opening statement to the jury. He had presented it in detail, and with a covert innuendo that united the evidence he could legally offer with the common knowledge and the common impression about the whole affair. And he did it with skill, for there seemed, when he had finished, no adequate defense.

The court-room was crowded to the doors. There was not a

his case. A story by

MELVILLE DAVISSON POST

foot of space for another spectator. The whole county had come in, for there had been no great moving drama like this trial for a hundred years, in this portion of Virginia.

There was a breathless tension in the whole audience when Colonel Braxton stood up to reply.

What manner of defense could he present? everyone said.

The experts about the court-room knew the dilemma that he was in. The man only had been indicted for this murder and put to trial for it. The girl had been studiously left out. The prosecuting attorney had seen to that. He did not purpose to take a girl before a Virginia jury, when he had a man to offer.

And he knew that Colonel Braxton could not bring her in.

He knew, also, that the prisoner, Fairfield Harris, would not involve her to clear himself. He would go to the gallows with his mouth closed. It was clear to the experts, as it was clear to the prosecutor, that Colonel Braxton would not put the prisoner on the stand—neither the girl nor the client he represented.

What defense, then, could he make?

They waited for the disclosure; the prosecutor confident in

Digitized by Google
Original from
UNIVERSITY OF IOWA

his security, and every other man leaning forward in his seat.

The girl sat beside young Harris at Colonel Braxton's table. She could not be denied that right.

Harris might exclude her from the jeopardies of the law by his appalling threat. But he could not exclude her from the court-room. He had exhausted every device to keep her out. But it did not avail. She had brought him into this tragic affair, and she would go with him to its end. Neither young Harris nor Colonel Braxton could move her from that high resolve. And, to say the truth, Colonel Braxton had not urged it. He had looked at her vaguely, as though his mind were in another place and indicated his submission with a gesture.

She was a lovely human creature.

There is something in old blood that gives a distinguished beauty and a high resistant courage that appears nowhere in any common strain. It cannot be produced by blends. It does not appear by accident. It is inherent in this purity of stock.

I have seen few equals for Julia Monroe among the beauties of a later world. And yet I cannot catalogue the details of her. It was something beyond the eye that made up this beauty. Certain words are beyond definition: charm, distinction are such words.

I HAVE tried to write down here a detailed description of her. But it is futile and inadequate, and I have stricken the whole thing out.

She was neither embarrassed nor in fear in this court-room on this afternoon. She was motionless, with a high face, a face that in its elevated composure did not change. But it was the spirit behind the face that gave the high distinction. One could see how she had gone to sacrifice, at the call of a decaying family for material rehabilitation . . . with a high face, like Jephthah's daughter.

Colonel Braxton made a slight bow to the judge and to the jury, as to a company of friends. He looked vaguely about him for a moment, like one awakened out of sleep; and then he spoke.

"Your Honor," he said, "all that I shall require for the defense is now in custody of the clerk of this circuit court."

He indicated Mr. Dabney Mason, with a gesture.

There was a lower bench in this court-room, directly below that for the judge, with an extended railing that made a table. The clerk sat here, his docket opened before him and his quill pens laid out neatly beside it, his inks—the black for entries and the red for ruling lines—in their tall stone jugs as they came imported into Virginia from the foreign trade. And beyond them, conspicuous to the eye, were his yellow gloves and his Bond Street stick, for he was fastidious in his dress, and maintained each detail with punctilious discrimination.

There was a moment of almost suspended breath until Colonel Braxton should go on.

But he did not go on.

His heavy eyelids drooped, as though the sleep out of which he had been awakened had returned, and he sat down.

The whole court-room was astonished.

And the one whose amazement exceeded that of any other was this circuit clerk. He looked up at Colonel Braxton in a sort of wonder. There was no evidence relating to this trial in his possession. No weapon, no implement, no paper had been lodged with him.

How could Colonel Braxton be depending for the defense on anything committed to his custody?

But he was accustomed to the vagaries of this eccentric lawyer; to the strange indirections to which he sometimes resorted in a desperate case; to his smoke screens; to his subtle maneuvers.

He was the one man on this whole circuit of Virginia who opened and conducted the great game for himself. He could not be catalogued. What he would do could not, by the light of stock defenses, be foreseen.

The clerk said nothing. But his amazement was in his face. The whole court could see that he was no less puzzled than themselves. There was no need that he should make a verbal protest.

Neither did the judge reply.

He was equally astonished with the others. But the defense, in these criminal cases, was wholly a matter for the counsel in them. His concern was only that it should be legal, and presented as the rules of evidence required.

But the prosecuting attorney, sitting at his table, beyond that of Colonel Braxton, turned.

"Mr. Dabney Mason," he said, "what evidence relating to this case has been lodged with you?"

There was concern in the pronouncement of the words. Was there a confession written out and signed, a letter, some document of import?

The clerk looked up at the man.

"No evidence," he said. Then he smiled, including with a gesture the articles laid out before him: the stick, the yellow gloves, the pens, the inks, the docket. "Unless, sir, these articles can be so considered."

The attorney laughed. The defense was merely a gesture then, to cover its inevitable collapse, and he could not resist a comment.

"Well, Colonel," he said, "I thought you would have some big surprise for us."

Colonel Braxton took the unlighted cigar out of his mouth. But he did not look up. His head, as from weariness, drooped. But his voice when he spoke reached clearly to the doors.

"Alfred," he said, "you are like Naaman in the Book of Kings, always looking for a great thing. . . . Let us dip ourselves, rather, seven times in Jordan, and leave the cure to the prophet!"

It was now the audience, packed into the court-room, that laughed, a suppressed ripple that ran lightly over it. The neat counter pleased them. It was from the one book they knew. The Bible in this portion of Virginia was read and its chapters got by heart. A knowledge of it was of more use to the public advocate than the Grattans, or the Commentaries of Mr. Blackstone.

It was a deadly weapon in the hand of a skilled duelist, and here, in this instance, pinned the prosecuting attorney neatly to the wall.

He got up, then, in a determined manner, and went about the introduction of his evidence. He knew what folly it was to cross wits with this eccentric lawyer; but every now and then, when he seemed to have the whip-hand, he would try it. And always he caught an arrow at some unprotected point. But there was one gain in it: it sent him, more determined, about his case.

The facts of the case can be briefly stated:

DUNCAN CRUGER had been killed on the very night of his marriage. Two persons only were present at the time: the prisoner, Fairfield Harris, and the girl who sat here beside him. They had been lovers from the cradle and intended, by every evidence, for each other. But the Monroe family was financially in its decay. It hung by sufferance only, on the very brink of a collapse.

Young Harris had his way to make. The hope for any material rehabilitation of this descending family was in a marriage of the daughter Julia with Duncan Cruger. He had a great estate. He lived in his big house alone, and for the girl would clear the ancestral lands and reëstablish the house in its ancient splendor. And so, like Jephthah's daughter, she had gone to this material sacrifice.

Her family lived at some distance in the country.

The wedding was at noon of a rain-swept November day.

She and Cruger had driven in to his house here in the little Southern city. Night had fallen when they arrived. They were hardly in the house when the girl ran out and across the street to the neighboring house in which young Harris lived with his mother.

As it happened, Mrs. Harris was not at home, and Fairfield Harris, meeting the girl at the door, had at once gone back with her into the Cruger house. Cruger's voice, loud and angry, was heard after that, as though he were in some desperate quarrel. Then there was a shot. One of the police force on the street had gone in. He found Cruger dead.

The explanation had been brief.

Harris said that Cruger was drunk, and that the girl, in fear, had run across to his mother. He had gone at once with her back to Cruger's house. The action had angered Cruger in his drunken state, and, in his fury he was threatening to kill both Harris and the girl, when there came a knocking at the door at the far end of the drawing-room.

Cruger had gone to this door, opened it and stepped out, closing it behind him. A moment later there was the sound of a shot; and Cruger rushed in and across the drawing-room. He fell as he approached them.

This was the meager defense that Harris made when the police entered.

He had added no word to it.

He had gone to Colonel Braxton, who came with the police and the prosecuting attorney to examine the house and take

Digitized by Google Original from UNIVERSITY OF IOWA

Mrs. Cruger rushed out of the front door and across the street to the Harris house

such steps as were necessary to preserve evidential signs. He had added nothing to this statement, even after the Grand Jury had returned its indictment against him. And it was now apparent that in the court-room he would add nothing to that statement.

Colonel Braxton would not put him on the witness stand.

It was the rule of law that one charged with a crime need not testify in his own behalf, and no inference of guilt could be drawn from that refusal. What one charged with a crime said at the time and at the scene of a murder could be introduced as testimony by the State against him, but the prisoner could not be called to explain or amplify it, nor to (*Continued on page 145*)

GRAHAM McNAMEE'S *next article will recount for you his extraordinary adventures in broadcasting great political events*

One-Night Stands *on the* AIR

By Graham McNamee

I HAVE just heard of a queer kind of radio broadcast they have been having in France—a kissing contest. The idea seems to be to award the prize to the contestant who can kiss the loudest, the kissers presenting their wares over the radio. I don't know how this thrilling competition ended, but I suppose the champion kisser of France will be visiting America next and touring the country in a combination lecture and osculatory barnstorming trip.

Over here our problem over the radio is not to see who can kiss the loudest or to find the champion osculator. With us the radio kiss is an engineering problem—how to make a radio kiss sound like a real kiss. It's not that we care anything about radio kisses. It's only a part of the very serious problem we have of making a lot of things sound the way they should. And all this is a part of a branch of the radio art which is just beginning to emerge into public attention—the radio play.

Every new form of communication that comes along has got to develop its own literature. A man cannot make a speech over the radio the way he does under ordinary circumstances. The most successful orator may not by any means prove to be even a good radio speaker. And now radio is struggling, painfully, patiently, and very earnestly with the radio play.

And here is a chance for the budding dramatists of the future who have the dramatic sense and plenty of imagination.

It is not so long ago that the movies were doing the same thing. The films were in use for some time before anyone thought of utilizing them to produce a play. At first they merely portrayed actual events—fights, travel scenes, celebrities, and so on. Then came those crude comedies lasting about five minutes, and then slowly and after much blundering and experimenting we got the present elaborate development of the film drama. That took years. And the movies haven't finished the job by any means. It is only in the past five years that they have begun to find their way in the matter of titles.

WELL, now we are going through all this in radio. At first radio merely broadcast simple music recitals and addresses. Then it got to reporting great news events. A few plays were attempted but they were just ordinary stage plays relayed on to the radio audience like a symphony concert might be. But now we are working on the true radio play. When I say we are trying, no one must suppose that this is a simple, timid, and slight experiment. The National Broadcasting Company now produces more plays than any dozen big producers on Broadway—about four new ones a week. And this does not include many others which are produced under what are called sponsored programs. For instance, up to the time the programs were suspended for the summer, The American Magazine produced one every two weeks in the form of a dramatization of one of its fiction stories. Others do the same thing.

Perhaps the most ambitious attempts at the radio play are the Great Moments of History and then Bible Dramas, broadcast each week by the National Broadcasting Company as part of its sustaining program.

Now the reader will not have to be told how different are the conditions under which the radio dramatist, actor, and producer work. First of all, the ordinary drama appeals to the eye and ear. The radio drama appeals entirely to the ear as the movie drama appeals entirely to

Digitized by Google
Original from UNIVERSITY OF IOWA

the eye. When you shut off a man's sight, therefore, and deal entirely with his ear, you have a tremendous obstacle to overcome. There can be no scenery, no lights, no costumes. Even the characters, which we can see on the stage as old or young, beautiful or hideous, we must get through our imagination over the air. All that important part of acting which depends on gesture, facial expression, postures, movement is lost. The voice must do the whole job alone on one end and the ear on the other. And so we have had to work out wholly new forms.

As to the action of the play itself, the voice is not enough. It is necessary to produce the illusion of action, of scenes, of the change of scene, and the various effects which accompany the action. And these effects have been worked out with infinite patience and after many failures.

Those who listen to radio plays note the frequent use of music. That is a very interesting and gratifying fact to me, because my own profession before I became a radio announcer was and still is, principally music. It is significant how artists turn constantly to music to assist in expressing emotions which seem to elude the other arts—call upon music to assist the other arts in reaching the hearts and imaginations of their audiences. See to what immense expense the moving pictures go in employing great orchestras and organs to supplement the pictures. Now every great film drama has its accompanying musical score. Music seems to express more powerfully than any other art the elemental emotions of man. On the stage of a theatre, if an actor is portraying some sorrowful scene, you will have the lights lowered and even the most appropriate colored lights used, perhaps the dim glow of a hearth; you will have maybe the costumes of poverty and the make-up of the artist to assist the actor. The actor's voice will give you much of the sentiment, but it will be aided by a dozen other forms which radio cannot use. Hence, radio turns to music.

We get another use out of it than as a means of expressing the mood of the scenes. The scenes of a radio play are always quite short. The action must be swift. Hence there is a frequent changing of scenes. On the stage this is all quite simple. The curtain drops, the scenes are shifted, and the curtain goes up again. In the radio play music must be the curtain. For instance, let us suppose the action is taking place on a field in Judea. The following scene is to be the interior of the temple. Now as the scene upon the Judean field comes to a close the last sentences spoken will tell the audience where the next scene is to be. Let us say a prophet is speaking. He pronounces the last lines of the scene. He says:

"Farewell! Our business here is done. Let us assemble at once *in the great hall of the temple.*"

As he speaks these words the music rises, takes possession of the action for a brief moment, then suddenly fades away and in another instant you hear the actors again. A new scene is on and you know they are in the temple. The music has acted as a curtain.

And now to revert to what I said at the outset about all the sounds that must be reproduced in the course of a play. For instance, characters are constantly entering and leaving the scenes. On the stage you see a man go out of a door. You do not have to be told that. In a radio play you cannot be told that either. But the character lets you know in his talk that he is going to leave the room, and then you hear a door slam. You know he is gone. This seems simple enough. But what a time we had reproducing the slamming of the door! At first, very naturally we had a door hinged in a frame close by the microphone and we just slammed that door. But the sound that came over the radio seemed more like an explosion. Well, we did all sorts of things to reproduce the sound of a closing door. We tried slapping sticks together. We tried stamping on the floor. We tried all sorts of concussive sounds. Finally we hit on the right one. We lift the cover of a piano and let it come down lightly and this sounds over the radio exactly like the slamming of a door.

We frequently have to imitate the sound of a pump. As usual our first thought, of course, was to get a pump and work that. But this sounded like nothing at all over the radio. Again we experimented with all sorts of things until finally we succeeded in getting the proper effect with a folding chair. By working that up and down we get a sound which is quickly recognized over the air as action of a pump. To make rain we use an ordinary letter-filing box with some buckshot in it. Shaken slowly, this gives off a sound like rain. Shaken rapidly it sounds like surf. The first time we needed a gunshot, quite naturally, we fired off a gun. To the listener-in it sounded as if the station had blown up. Now we use a bamboo cane and strike it against a leather pillow. This makes a good imitation of rapid musket fire, but it is not such a good single gunshot. We haven't found the best way for that yet.

Of course we use the best Broadway actors. And, after all, these do best. But they have to unlearn a great deal. An actor has to learn how to use his voice in a theatre so that it reaches all parts of the house. As a rule, no matter how much talent a man has he does not succeed in this at first. He attempts to talk loud, and this gives his voice an unnatural sound and also forces him to strain the muscles of his face and throat so that everyone sees he is talking loud. After a while he learns how to talk loud without seeming to do so. Then he always thinks about the back row—he talks to the back row of the theatre. Now when he comes before the mike he still thinks of the back row. But there are no back rows in radio. Everybody is on the front row. They are actually in the little room with the speaker. He has only to use his voice in a natural way directly in front of the mike and he will be heard all over. The mike is the ear of the audience and it does not do to shout into a person's ear.

At present we seem to get the most success out of the (*Continued on page 142*)

GEORGE W. GRAY *describes the vastest known flow of water on the earth*

DRAWN BY GEORGE H. SAMUELS

The Great Blue

ON a blizzardy day in February I boarded a steamer southward bound. The New York harbor was afloat with broken ice as we nosed out past incoming liners frosted and sea-battered, past creaking schooners with stiff rigging, and channel buoys festooned with icicles. A stinging wind lashed out of the northeast, and its powdery sleet drove all but the hardiest indoors. In a few hours we were over the horizon—not a ship in sight—alone in the bleak immensity of green ocean and gray gusty sky.

"After tomorrow, no more overcoats!" hailed a ship's officer. This to a shivering group that had bundled up for a few turns around deck before bedtime. "Inside of twenty-four hours, we'll be in blue water."

"What has the color of the water to do with the temper of the weather?" inquired a man who was on his first sea voyage.

The mariner eyed his inquisitor solemnly, and answered: "You just wait and watch, and you'll see." It is the presence of microscopic creatures and plants that makes the oceans green. The natural color of sea water is blue.

Next morning, winter still ruled. The ocean seemed greener, if anything, than the offshore waters we had plowed the afternoon before. The wind was blustery. I watched a ship's officer lower a thermometer into the sea. When he brought it up a few minutes later, it registered forty-one degrees. The air was much colder.

Shortly before sundown a faint haze appeared to the east, and as we drew near we saw that it lay like a halo over a blue sea. The dividing line between green and blue in the ocean was as sharply marked as the contrasting tints on a map, and I watched the ship push its way into the blue. The thermometer, again dropped over the side, showed a temperature of seventy-five degrees—but no one needed the instrument to know that summer climate had suddenly supplanted winter in our neighborhood of the Atlantic. There was a different "feel" to the air. It was moist and balmy; gradually the warmth percolated all over the ship; overcoats were discarded. We awoke next morning in a smooth sunlit sea to watch clumsy porpoises frisking in our foaming track and the delicate silvery flying fish that skimmed the indigo waters.

"No current is more powerful than the Gulf Stream," explained the informative officer. "We are crossing it now to get out of its drag, which would set us back seventy or eighty miles a day. Coming north we keep in the axis of the stream, to have the aid of its strong upward current."

We crossed the Gulf Stream opposite North Carolina, but we did not get out of its zone of influence. The climate remained temperate, balmy, and warm, though the ship's daily radio bulletins were full of news of the cool weather prevailing to our north on sea, and northwest and west on land. The never-flagging current from the south brought the breath and flavor of the tropics in its blue water.

It is the vastest known flow of water on the earth. A government hydrographer who spent two years studying the Gulf Stream at its starting place in the straits between Cuba and the Florida keys, found that the volume of water pouring through is ninety thousand million tons an hour.

FROM the Straits of Florida it flows due north, soon swerves to the northeast, joins the general North Atlantic drift, and touches Europe. Tropical berries, beans from Jamaica, seaweed from the Caribbean Sea, and fragments of driftwood from Mexico and Central America have frequently been picked up on the shores of northern Europe. Indeed, it has been said that these signs of land hastened the explorations of the early navigators.

The warm salt waters of the Gulf Stream have been identified as far up as Cape North, the northerly tip of Scandinavia. The presence of diatoms and microscopic life makes such identification possible. From Cape Florida to Cape North is 5,200 miles.

Contrasted with this oceanic river, the great land streams become mere brooks. If all the rivers of the United States were combined they would make but a small beginning for the Gulf Stream. Five hundred Amazons would not equal its flow, Father Mississippi would need to be multiplied three thousand times, or the lordly Hudson ten thousand times, to rival this blue river of the sea. But the Gulf Stream hides its might beneath the surface of the sea, and mariners sailed its waters for centuries before they realized its influence upon navigation and climate.

Five hundred Amazon Rivers all in one would not equal the Gulf Stream in volume

River in the Sea

When Benjamin Franklin was in London in 1769, the British post-office authorities asked him to explain why their mail packets to America were being beaten by the common merchant ships almost every month. The packets sailed from Falmouth, the traders from London, which is several hundred miles farther east. By all rules of common sense the packets ought to have made the passage days ahead of the more heavily laden merchant ships, yet the latter sometimes beat them by a fortnight. The authorities had been petitioned to change the sailing route, when the eminent Doctor Franklin arrived from America and they put this puzzle up to him.

FRANKLIN did not know the answer, but there was in London a Nantucket whaling captain whom Franklin consulted.

"Mebbe," said he, "the merchantmen know the stream and keep out of it."

"What stream?" asked Franklin.

"The stream from the south," explained the Nantucket man. "We whalers are well acquainted with that stream, because whales are not met in it. In our pursuit of whales we run along the side or cross it to change our side. And in crossing we have frequently met and spoken with those packets that were in the middle of the stream. We have told them they were stemming a current which was against them to the value of three miles an hour, and advised them to cross it, but they were too wise to be counseled by simple American fishermen. When the winds are light they are frequently carried back by the current more than they are forward by the wind, and even if the wind be good the subtraction of some seventy miles a day from their course is of some importance."

Franklin procured a chart of the North Atlantic and asked the whaler to mark the course of this current. Franklin named it "the Gulf Stream" and the General Post-office included it in a new chart of the ocean. Even today, when steam has largely supplanted sail, low-powered ships generally follow the southern route, and travel 4,000 miles between England and New York rather than take the northern route of 3,000 miles and stem the Gulf Stream.

EVEN more profound than the effect upon navigation is the influence upon climate. Northern Europe would be a frozen waste were it not for the warmth brought to its lands by the waters and winds of the Gulf Stream. The British Isles are on the same parallels of latitude as Labrador, but Labrador is washed by a current from out of the Arctic, and in winter Labrador and the even more southerly Newfoundland are locked in ice, whereas no port of the British Isles is ever ice-bound.

England's "green and pleasant land" could not long remain so were it not for the constant temperature and the continual circulation of this hot-water heating system of the North Atlantic. It has been computed that if the Gulf Stream should lose ten degrees of its average temperature, ice-age conditions would soon return to the British Isles and northern Europe.

What produces and regulates this tremendous flow of waters?

That question can best be answered at the Hydrographic Office of the Navy in Washington. Here the monthly pilot charts of oceans are compiled and published for distribution to navigators all over the world. Necessarily these charts must embody the latest information of winds and currents, and in consequence the Hydrographic Office has become an international clearing house for news of the Gulf Stream and other oceanic rivers. Through the courtesy of Captain C. S. Kempff, U. S. N., hydrographer, I was permitted to spend some time in the Hydrographic Office. This article is the result of that visit.

"Don't think of the Gulf Stream as an isolated phenomenon," cautioned a nautical engineer. "It is part of the circulation of waters which embraces the world. Cold water from the Arctic pours down past Greenland into the North Atlantic, as the warm water of the Gulf pours northward. In the South Atlantic, the Brazil Current flows down the coast of South America and gradually curves eastward toward the shores of Africa. Cold counter currents sweep up from the Antarctic to compensate for this interchange of warm waters.

"The same general system of circulation prevails in the Indian Ocean and in the Pacific. The principal stream in the North Pacific is the Japanese Current, which originates in the warm equatorial waters surrounding the Philippines, courses north-

Digitized by Google
Original from UNIVERSITY OF IOWA

ward past Japan in much the same way that the Gulf Stream skirts our coast, curves to the east, and washes the shores of southern Alaska, western Canada, and western United States. It is this warm stream that keeps Sitka, Alaska, ice-free, when opposite ports in Kamchatka are frozen solid. Vancouver, Seattle, and San Francisco get much of their climate from the Japanese Current.

"WIND is the predominant factor in producing the Gulf Stream, though there are other contributing causes," continued the nautical engineer. "Some of the early observers believed that there were passageways under the continents, and explained the currents as part of a great movement of waters under land and over seas. Others argued that the streaming of waters from the tropics resulted from the piling up of the ocean at the equator by the drawing effect of the sun's heat. It was taught in the seventeenth century that there was a mountain of sea water at the equator which produced the currents. These notions have gone the way of other fantastic guesses, but it is true that the sun's heat does have an effect upon the flow of currents—directly by expanding and evaporating the waters and thus changing their density, and indirectly by generating winds which drive the water into motion.

"Another explanation of the Gulf Stream has been reasoned from the fact that the water of the tropics is more salty than the water of the colder zones. This, it has been said, causes the blue salty water to flow northward and the green water southward, in the effort to equalize their density.

"Other investigators point out that the natural effect of the rotation of the earth on its axis from west to east is to give the waters of the sea an impulse toward the right, and they have thought that this motion produces the Gulf Stream and other ocean currents. The great ocean streams in the Northern Hemisphere move in the same direction as the hands of the clock, whereas those in the Southern Hemisphere move anti-clockwise. This is as they should move if influenced by the rotation of the earth.

"We believe that differences in temperatures, differences in salinity, differences in atmospheric pressure, and the rotation of the earth all have an effect upon ocean currents, but the principal cause is the wind. This idea is by no means modern. Benjamin Franklin adopted it as his explanation. Later observers claimed that the force of the trade winds heaped up water in the Gulf of Mexico to such an extent that it was an elevated sea several feet higher than the Atlantic Ocean."

Recent measurements made by the Coast and Geodetic Survey show that the differences in elevation between the Gulf and the Atlantic are in inches rather than in feet. It was found that the Gulf waters at Galveston are mean sea level and the Atlantic waters at St. Augustine, Florida, are about nine inches lower. As the surveyors proceeded up the Atlantic coast, this difference gradually diminished, and at Boston sea level was found to be four tenths of an inch higher than at Galveston. This would seem to indicate that the highest sea levels are in northern waters, and that after the Gulf Stream reaches about opposite northern Florida it actually runs uphill.

PHOTOGRAPH BY KEYSTONE VIEW CO., INC.

Waterspouts, which are mostly vapor and spray, are common in the Gulf Stream

LOOK at the map—or, better still, a globe—and notice how landlocked is the North Atlantic Ocean. Just below the equator the hump of South America thrusts far out toward the blunter hump of Africa. In the region of the sea between these humps the trade winds blow practically continously, and generally toward the northwest. The waters thus driven westward strike the angular northeast coast of South America, which serves as the side of a great funnel to shunt them into the Caribbean Sea south of the West Indies. The Caribbean leads through the Yucatan Channel into the Gulf of Mexico, and through this channel most of the westward-hurrying waters stream into the Gulf. Some escape northward outside the West Indies to form what is called the Bahama or Antilles Current.

THE Gulf of Mexico is fenced in by Florida and Yucatan, with the space between these two arms partly blocked by the island of Cuba. As the waters enter the Gulf by the Yucatan Channel south of Cuba, only one way of escape is left—the Florida Straits, north of Cuba. Some of these wind-driven waters swirl around the Gulf in a circular movement, some cut across it diagonally, others flow directly around the west tip of Cuba, but all eventually reach the Florida Straits with a strong head back of them, and the resulting flow into the Atlantic is the Gulf Stream.

The Florida Straits—where the Gulf Stream may be said to be molded—are 90 miles wide and about 350 fathoms (2,100 feet) deep. After the turn around the keys has been made, about opposite Miami, the depth suddenly increases to approximately 550 fathoms (3,300 feet) and the Gulf Stream falls over this natural dam into the ocean.

Thus the Gulf Stream is not only a mighty river but also one of the greatest waterfalls, with a drop of over 1,000 feet. Niagara Falls has as its greatest drop 167 feet.

The stream seems to be accelerated by this submarine waterfall, for whereas it moves at an hourly velocity of from two to two and one-half knots (nautical miles) in the straits it quickly increases to as much as four knots opposite Miami. The velocity is not constant, for the flow is affected by seasonal changes, winds, and lunar attraction, but the sudden impetus in speed after passing the dam is quite noticeable. A little farther up the coast the Bahama Current joins the stream.

The swiftest flow of the Gulf Stream is but a few miles west of its center and this line of greatest velocity is called the axis. Opposite Miami it is about 15 miles offshore; opposite Cape Canaveral, 45 miles; Jacksonville, 90 miles; Savannah, 95 miles; Charleston, 90 miles; Cape Lookout, North Carolina, 50 miles; Cape Hatteras, 35 miles. The reason for these variations is that the stream has a tendency to avoid any depths shallower than one hundred fathoms. The shores of northern Florida, Georgia, and South Carolina slope gradually out to the one-hundred-fathom depth, but off North Carolina the slope is (*Continued on page 160*)

One of the earliest maps of the Gulf Stream, drawn by Benjamin Franklin in 1770

When in doubt about your troubles

Go Tell 'em *to the* Trees

Says CHARLES A. DAVID

IF YOU have the money, you can buy life insurance, fire insurance, cyclone insurance, accident insurance, and goodness only knows how many other kinds. But, no matter how much money you have, you *can't* buy trouble insurance. Yet you have it in your power to lessen or add to your worries simply by the way you treat them. For

A trouble's a ton, or your trouble's an ounce,
Or your trouble is what you make it.
And it isn't the fact that you are hurt that counts,
But only how did you take it?

It makes no difference whether your worries have to do with body or soul, whether they are real or imaginary, I know of no better way of getting plumb away from them than to beg, borrow, or steal an ax, and go out in the woods, with only yourself for company, and cut down a tree! Not a sapling, but a man's size tree, the felling of which will leave you out of breath and wet with honest sweat.

As the chips fly, as your circulation speeds up, and as the oxygen gets into your lungs, your troubles will seem hardly worth bothering about: life's tangles will unravel, and problems will almost solve themselves. Indeed, by the time you stop for breath, your viewpoint will have shifted, and you will see things from a different and a brighter angle. I have tried it out more than once, and I know that it will work.

If you live too far away from trees that can be cut, chopping a load of stove wood in the back lot will answer; only you lack the proper setting, and a call to the telephone may break the magic spell.

At one time, my business affairs got into a snarl, and the tangle seemed hopeless. For a while it looked as if things were headed for the rocks. The trouble was, I could not keep my expenses in hailing distance of my income. There was no room in my little store for customers when the bill collectors came. There was not a spot on my cuffs where I had not figured, and there was not a clean sheet of paper in the house. Everything was covered with calculations that did not get me anywhere.

EVERYTHING looked mighty black. I got so I could not sleep nights for worry. If I did drop off for a few minutes, I dreamed that creditors weighing from five to ten tons were sitting on my chest—rows and rows of them!

One day after a restless night, I became desperate and felt that I just had to get out somewhere. So I went outdoors, kicked a chicken or two out of the way, and started for the country and the friendly woods. Passing through the lot, I stumbled over an ax. More to get it out of the way than anything else, I shouldered it and took it along.

It was early spring. As I turned into a

© FRANCES AND MARY ALLEN

patch of timber a few miles from town, my gait slowed down to a reasonable pace, and for the first time I began to notice things.

The buds on the young hickories were almost ready to burst, and the maples on the edge of a swamp were blushing at their forwardness. Under the pines, the wood violets were giving a touch of blue sky to the brown earth, and over the flat tops of the dogwoods, Nature had spread her laundry in the sun.

All around green, growing things were pushing up to the light, and the new grass was like velvet underfoot. On a dead limb a redheaded woodpecker was doing a drum solo for his women-folks. From a nearby thicket a cardinal was calling "chero-chero-chero," and from a brush pile a wren was doing its level best to split its throat. Everything seemed bright and happy except me.

I was at outs with the universe and not even on friendly terms with myself. To tell the truth, I had an impulse to haul off and hit something.

Just then, my eye fell on a hickory, tall, straight, and tapering. The bark looked inviting, so I swung the ax and brought it down in a slanting stroke. The blade sank deep in the sappy wood, and it was no time before the ground for six feet around was white with chips. As it dawned on me that I had found something I could conquer, I began to feel better, and to realize that I was not such a down-and-outer after all. Presently the tree shivered, as all trees do before falling. Then it came down with a crash. I now lopped off the branches of the tree, and cut the tree into convenient lengths for hauling, in case anyone should ever care to use it. By this time my head was clearer; things did not seem so badly balled-up, and I wondered why I was in such a funk anyhow. Why, the world actually seemed to be a fine old place, with things running along as usual.

Flinging myself on the grass I gazed up into the blue. As I gazed, one of my old friends—a turkey buzzard—appeared from nowhere, and began circling around in that effortless flight of his. He didn't even move a feather, but he was careful to keep in front of a white cloud which made an effective background for him.

I knew that buzzard was hungry, and that he had not an idea where his next meal was coming from. But there he was, calm and unhurried, and, as far as I know, contented. And I thought, "What is the sense in taking-on so, when I am so much better off than that buzzard?"

I at least knew that supper would be waiting for me when I got home, and that I would have a comfortable bed to sleep in. After a good rest on the grass, I got up refreshed in mind and body, and with the firm conviction that I was not the weakling and failure that I had imagined myself to be. The result was I was able to tackle things just as they came.

In fact, I was not the same person who a short while before had kicked chickens out of his way, and was about ready to give up and quit. My pettish mood had vanished, I was no longer seeing things through distorted glasses. Indeed, I walked home feeling every inch a conquering hero!

IN MY new frame of mind, it did not take me long to work out a plan that started things moving in the right direction. And all this marvelous change came about by getting away from myself, and closer to the sympathetic heart of Nature—which is just another way of getting closer to God.

Of course you cannot always cut wood when you get in the dumps; it would not be safe for the bystanders: But there are other ways of forgetting yourself, and, incidentally, your cares and worries.

I know of a woman—and she must be seventy if she is a day—who was left alone in the world by the death of her husband. She had few friends, and even less money. To add to her troubles, her doctor told her she had but a short time to live. Instead of retiring to an easy chair and gloomy (*Continued on page 167*)

EDWIN MARKHAM'S
Three Glimpses of God

By M. K. WISEHART

BACK in 1872, a young man of twenty, tall, long-legged, loose-jointed, with a great shock of wild-tossing hair, and two saddle bags filled with books, arrived on horseback in a remote mountain settlement of San Luis Obispo County, California. Greeted by the cattlemen and farmers, who, in an embarrassed, shamefaced way, confessed that they had no schoolhouse ready, he laughed and joked with them, and put them at their ease in a way that was beyond his years. For this young man was full of zeal, good faith, high spirits; and he had a buoyant confidence in his mission. He had come to take his first teacher's position, following his graduation from the State Teachers' College at San José.

Delighted he was that there were waiting for him nine pupils, the children of these same mountain-folk. "That being the case," said he, "we don't need a schoolhouse, but a citadel of learning! Lend me an ax and the help of some good right arms, and we'll have one in no time!"

Forthwith, there was a building bee, and sufficient saplings were cut down. Pointed at the end like stakes and driven into the ground, they made a palisade enclosure around a huge oak tree whose foliage was so dense that no ordinary rain could penetrate. Within this shelter, were set up nine rough board tables for the pupils, and one for the teacher. Here the young man proceeded to teach the three R's, and much beside.

He was filled with an inalienable passion for beauty, what he called "truth." Already, from his experience, he knew that the nobler enthusiasms, the riches of life, spring from a solid grounding of elementary knowledge. So, with the enthusiasm of a zealot, he preached and coached the R's; but always there was in his mind something besides. Among these nine pupils, ranging in age from ten to twenty-four, there might be one whose soul he could set on fire!

Somewhat of a poet himself, he took time for and spent eloquence in reading verses to his pupils—Whittier, Byron, Tennyson, Bryant, Tom Moore; the same ambrosial fodder on which, at an earlier age, he himself had fed.

What the effect of this ambrosia may have been upon the nine mountain pupils cannot be recorded here, for, after a year, the teacher-poet, having furrowed the soil and sown his wheat, went on his way.

In due course, when he was close to fifty, fame, world-wide acclaim was to come to him—for the name of this teacher-poet was Edwin Markham. He was to become the author of many noble verses. With three of these poems we shall deal intimately in the course of this narrative; for about their creation was something mysteriously inspiring.

One of the poems is the world-famous "The Man With the Hoe." In America its lines have become household words. Translated into thirty-seven languages, it has been printed and reprinted at least twelve thousand times.

The second is his famous Lincoln Ode—"Lincoln, the Man of the People," which is now to be found in four fifths of the readers in American public schools. This, too, has been widely quoted and translated into many languages. Dr. Henry Van Dyke has called it the greatest poem that was ever written on the Martyr President.

And the third is a poem of only four lines, a perfect little gem of a quatrain.

RECENTLY, at his home on Staten Island, I was talking with this poet. At seventy-six, with a great hoar-frosted head, he has a face that is like the Scroll of Time, etched with the record of many and varied events; an eloquence of undiminished vigor, and a soundness of ripened wisdom that is like heart of oak.

To him, I made the remark that, for me, these three poems were his great inspirations; something that *must* have come to him from on high. "*Were* they inspired?" I asked. Although, in answering that question, he told me at length how each had come to him, I shall postpone that part of the narrative till later, and tell you first something of himself.

TO UNDERSTAND Edwin Markham we need to start at the beginning and follow his career all through. And this beginning goes back before ever the poet was born; to 1847, when Frémont had made a report to Congress on the possibilities of settling the Northwest—a report that was to be a new Odyssey for the pioneers who had already left the East far behind.

In White Pigeon, Michigan, there was at this time a hotel proprietor, Samuel Markham. A silent, serious man, religious and energetic, with a wife who had the robust courage to lead an army in battle. They were among the first to be quickened by Frémont's vision of the great Northwest. Selling out their establishment and purchasing an ox team, they rumbled West on a lonely trek, with their first-born son, Henry. At Council Bluffs, they came upon a sort of pioneers' convention, whose purpose was the forming of well-organized trains for self-protection against the Indians. Of one of these trains, the pioneer from Michigan was made captain.

Eventually, the mother opened a store in Oregon City, where she traded her stock of calico and other articles with the Indians, while the father, off to the north, opened up a cattle range and prepared fields for wheat. Here, in Oregon City, the future poet was born, in 1852.

When Edwin was about five years old and able to scour the woods for hazel nuts and strawberries, his dauntless mother, still aglow with the pioneer spirit, and filled with a zest for self-supporting independence, left her husband to mind his cattle range and wheat, and with her children went to California, the first leg of the journey being by water to San Francisco. In the little Lagoon Valley, amid

Edwin Markham

EDWIN MARKHAM, famous author of "The Man With the Hoe," "Lincoln, the Man of the People," and many other celebrated poems, was born in Oregon long before the West was "settled up." He has been a farm worker, a blacksmith, a herder of cattle and sheep, and a school teacher. He knew the pain of poverty when he was young; he acquired wealth from his writing, and then lost his money after getting on in years. But now, at seventy-six, he is strong, undaunted, and asks nothing better than that his end be dramatic, and in a moment of spiritual exaltation!

The Advantages of Marrying an Older Man

By ELLA WINTER

WHEN I was twenty-one I became friends with a man more than thirty years older than myself. Our friendship continued for some years, easy, pleasant, productive, and evidently appropriate. Parents and friends approved of it. They could see what he and I put into and took out of it—a great deal of interest and understanding. But when, at twenty-five, I was considering marriage with my friend of fifty-seven, there was a protest:

"You're not thinking of him as a husband!"

I was. Why not?

"Why not!" came the startled answer. "Don't you know that youth should mate with youth?"

That was what I had heard too, and I am not saying that that is not sound. I am not of those who know what is right for all people. But I do know something now that I did not know before my five years of marriage—that there are some advantages in marrying an older man; that he brings to marriage many things no young man can give.

Most of the "youths" I knew who were offering themselves in marriage did not seem to fill my bill of requirements. I did not know exactly what I wanted, but I did feel that they did not have it. And, looking round among my young married friends, I saw few of them really happy or satisfied. They were, most of them, college mates of mine, who were planning, like myself, for a career, and their marriages had broken into their plans and their freedom.

I saw them either plunged into the concentrated domesticity of tiny flats, housekeeping, and babies, or else regretfully leaving these to hired labor while they worked down-town, away from their home all day and then half the night, at parties and dances and shows, to keep young husband "amused." Then they would wearily, drearily economize where they really could not afford economies, meanwhile promising themselves leisure, the fruit of a career, travel, when the babies should be out of the nursery, and George or Fred or Amos securely on the right side of promotion.

Under these discouraging circumstances, these young wives were trying simultaneously to adjust their still developing characters to the still unformed dispositions of their young husbands.

Now, to adapt one's self to the other partner is the hardest job in married life. And most people will tell you that it is impossible to make a man change his habits after forty. They therefore think it disastrous to marry him. Quite true—it is a superhuman job to change him. And so, why attempt it? Once you accept the inevitable fact that you have to accept him as he is, it is not so hard—but you are much less likely to accept it with a boy your own age than you are with an older man.

My father, who was a great smoker, several times brought his cigarette up to bed. My mother, whom his smoking irritated the whole twenty-nine years of their married life, because she thought it was bad for his health, put her foot down in the bedroom. "No," she said, and her tone was as firm as her foot; "I will have no smoking in my bedroom. You can keep the carpets in the other rooms, down-stairs, in a state of ash droppings, but my bedroom is *sacrosanct*." After that, though he several times surreptitiously tried to slink a cigarette in, on the whole I noticed no smoke odor up there. But it always irked my father. The grievance always smoldered with the cigarette he had to leave down-stairs.

Now, my husband is a greater smoker than my father was. The first time he brought a cigarette up to the bedroom, "No," I said, striking my mother's foot and attitude; "not in the bedroom." My husband turned around upon me.

"If you gave me the choice between smoking in the bedroom and a divorce," he said, "I should take the divorce."

THERE was no flourish, no bravado, and I reflected that a habit built up in forty years would probably not drop away, even for love. I did not mention the subject to him again. Then I decided to do the same with other details of habit. He did not strip his own bed, hang away his clothes, keep track of his unanswered letters, use ash trays for ashes. Instead of quarreling about all these details, I did them myself. It happens that I am more executive than he, anyhow. With a younger man, I should have tried to "reform" him, and we should have started every day with unpleasantness.

I remember a friend of mine who married when we were both still romantic adolescents. I asked her whether marriage was as rosy a paradise as we had pictured it. "Bill is marvelous," she replied; "only he will read at night when I want to go to sleep, and he never turns his pajama sleeves right way in. That irritates me every single morning, and we have a daily fight about it. I don't see why I should suffer just because his mother always spoiled him. I'll make him do it yet." When I stayed with my friend five years later I noticed, while we were making the beds in the morning, that she automatically turned her husband's pajama sleeves inside out.

Both of us being somewhat untidy—a source of unfailing mutual reproaches in intimate family life—we early worked out in our married life a scheme which took the sting out of every incipient friction: we invented the "son-of-a-gun," and every loss was credited to him.

"I can't find my stud," the storm started, and then; "some son-of-a-gun has taken my stud." The son-of-a-gun not being present, all the invective could safely be heaped on his head, and we could both appear at breakfast blameless, unblamed, and serene.

There are many "little tricks" in marriage. They are really only the common courtesies which unmarried people naturally show each other. But in the familiarity and intimacy of married life they are often overlooked. A woman likes to have her husband's love for her expressed, and expressed often. It is not enough merely to know it. And it is pleasant, when you have taken the trouble to have some nice surprise for him—a fresh bunch of flowers on his desk, a new picture, or rearrangement of his study—to have him express the pleasure and gratitude he feels. Lovers do it, and that is what makes lovers so in love with each other. It is the forgetting of these things that makes marriage seem dull, banal, disappointing, and humdrum after the excitement of an engagement.

A man who has had experience of marriage, or who has lived long enough to learn from the experience of others, is less likely to overlook these pleasantnesses. For years after our marriage my husband would write letters to his friends in America about me, about our pleasant life, our humorous domestic episodes on the Italian Riviera. These letters he always showed me, with the excuse that I should correct his typing errors. Love letters to me, they were really. Imagine the joy of getting three and four love letters a week when you have been married two, three, four years. Things I had been annoyed about in the household lost their sting when written of humorously to friends. Our life took on the quality of a serial novel, through these letters.

ONE of the best "tricks" an experienced man learns, is how to bear faults. Everyone has faults, but in the intimate contact of daily life together the faults of the person you are living with sometimes get peculiarly irritating. They cause many unpleasant recriminations among married couples.

"That is an old fault of yours," my husband said to me one day.

"Why, if it's old, haven't you mentioned it before?" I asked sharply, on the defensive.

"Because," he answered quietly, "I can see that, like others of your faults, this one is rooted in a virtue; and I don't like to disturb—roots."

And that attitude he has always taken toward my shortcomings, with the result that the sting is (*Continued on page 157*)

I Got Tired of Being a Fool

Life was about to sour on me because I was drinking too much, eating too much, worrying too much and getting nowhere except places that I did not care to go. But I discovered NINE MAGIC WORDS, and now Old Man Trouble is no longer a neighbor of mine!

By VASH YOUNG

Strange Rules for a Life Insurance Agent

"I never go into a business deal," says Mr. Young, "until I am sure that my happiness does not depend, even for the day, upon the outcome of the transaction. If I am working on a prospect—and especially where the insurance policy involved is large—I stop on the way to his office, search my mind and heart and make sure that I will not be depressed if the case goes against me. If I am not sure on that point, I will not see the prospect! For no business venture I might engage in is worth unhappy hours.

"Another rule in my procedure is this: always make it easy for a man to get rid of me! When I go into a prospect's office, I will not sit down until I have told him my mission. If he is interested, I'll stay; if not, he can let me go without any embarrassment to him or to me.

"These may be strange rules for a life insurance agent, but they haven't hurt me yet!"

I AM the most gullible man in the world. I believe all the good things that are said about life. I am happy. But it was not always so. A few years ago life was a pretty sour proposition for me. I was drinking too much, eating too much, worrying too much, fearing too many things, sleeping too little, and getting nowhere except places that I didn't want to go. The job that gave me a living was good enough, but there was something wrong inside of me. I was cheating myself out of the happiness that every man is entitled to, when suddenly it dawned upon me that happiness is not something to be bestowed upon us, but something to be achieved. Furthermore, it is a man's plain and simple *duty* to be happy.

I went into executive session with myself to think things through. I demanded to know what was wrong with me, and this is the story of what I discovered, and of how my discovery has worked.

For it has worked! My assets, financial, physical, and spiritual, show that this thing I got hold of was exactly the right thing for me. Nine everyday words worked a miracle in my life. In the old days when I fretted and fumed my time away, I was broke; now I am prosperous. In those days I had hot, unpleasant encounters with my fellow man; but not once within five years have I lost my temper, or had any unpleasant experience with anyone. I used to be subject to depression; now I am subject to elation, but not to depression. I was blind to the romance of life; now I see it and revel in it on all sides. I am irrevocably happy!

But first, a few vital statistic sort of facts about myself—a very few, for I am the least important item in this story. I was born and grew up in Salt Lake City, where my people had lived since my great-grandfather, a brother of Brigham Young, had come there to make his home. My parents were poor, and we were not a happy family. One of my most vivid recollections is of the "cry nights" at home—a little brother or sister would start crying; that would set another off, a third would join in, and finally all the younger members of the household would be wailing, while Mother, worn out with the work of the day, would cry also. When she gave in, it was my cue to light out across the fields to my grandmother's home to beg her to come over and cheer us up. She would come, always, and even if she did not cheer us up, she usually succeeded in quieting us down.

Schooling, for me, was a sketchy sort of experience, abandoned entirely before the fifth grade was passed because I had to go to work. Since then, my education has been acquired on the catch-as-catch-can method. (Which isn't such a bad method, if a man is eager to learn.)

MY FIRST adventures away from home were in Chicago, where I had wandered in search of a job, and where I found one as an advertising solicitor for a trade paper. Don't ask me how I found it, or why the man gave it to me. These are two of the unexplained mysteries of my career, the second being a much deeper mystery than the first! For I was green, absolutely and entirely green, when I struck that city. I bought a derby hat in July! And one night while watching a pyrotechnical display a water hose burst near me and I thought the shower a part of the show. The drenching did me no harm.

The first time I went out to solicit an advertisement I forgot the name of the paper I was working for.

From Chicago I came East, got on the advertising staff of "The Atlantic Monthly," and finally became Eastern manager for that publication. Now I am, of my own free will, a life insurance agent, and I am writing, on an average, of well over two million dollars' worth of insurance each year.

So much for the unimportant facts about me.

The important fact is that I have learned how to be happy. And now for the story:

Seven years ago I had many things to be thankful for, chief among them my wife and daughter. But I wasn't especially grateful in my attitude toward life. I suffered from an uncontrolled temper, from depression, from general disorganization of myself. I was earning enough

Original from UNIVERSITY OF IOWA

money to provide the physical comforts of life, but how poverty-stricken I was in spiritual comforts! It was my realization of this fact that caused me to hold that recurrent executive session with myself.

"What's the matter?" I asked myself. "Why can't I have dominion over myself?"

Dominion! That word stuck in my mind. I needed it; no man ever needed it more than I did. But how to acquire it? That was the rub. I thought and I thought; I analyzed and re-analyzed; I read, and I read some more.

"The Kingdom of Heaven is within you." Many times I had encountered that simple statement, and then one day I applied it to myself. "Jesus is talking to me!" I said. "He means that *my* Kingdom of Heaven is within *me!*"

OBVIOUSLY, that is what He means. He is speaking to each one of us, individually, but I hadn't had sense enough to see it. Now I saw it, and I decided to do something about it. I saw myself then as a sort of transformer, through which flowed the currents of life. But the transformer that was in me, or that was me, was subject to my dominion, and could be made to transform my experiences into happiness.

I made a list of the qualities that seemed to me as ever-enduring, the qualities upon which continuity of life depends, and without which life would long since have perished. That list included Love, Courage, Cheerfulness, Activity, Compassion, Friendliness, Generosity, Tolerance, Romance—the nine magic words that have made life, for me, a glorious adventure. Since these virtues were, to me, the basis of life, it must be that they in some way constituted that Kingdom of Heaven I was seeking.

Night after night I sat alone with that list and pondered it. What should I do about it? Finally the answer came: Reflect those words, those qualities, in my own life. They are all positive—none negative; they are dominant. They will give me dominion over the ills and annoyances of life, if I give them a chance. Thus my reasoning ran, and I came to the conclusion that my plain duty to God was to reflect these attributes which evidently He had blessed.

PHOTOGRAPH BY DORIS ULLMAN

Vash Young is one of the leading life insurance solicitors in the United States, writing well over two million dollars' worth of business a year; he once wrote, single-handed, a policy for more than a million dollars, and last year more than one hundred of his "victims," of their own free will, gave him a big testimonial dinner. Mr. Young is a native of Salt Lake City, but is now on the staff of the Equitable Life Assurance Society, in New York City

But first I must get rid of all the disastrous junk I was carrying around with me—fear, temper, depression—and the process of getting rid of those imaginary things, substituting for them the positive realities of God, makes the greatest romance I shall ever know.

IN THIS process of re-conditioning myself, I wanted to make a clean sweep, so I resigned my comfortable job. My wife and I danced a jig to celebrate this radical step—for she was on the great quest with me—and with only one hundred dollars between us and the bread line, we set out anew.

Did you ever force your way into the teeth of a storm, breasting the strong wind that is intent upon whirling you back? There is an exultation in such a conflict, and I felt that same exultation in my hunt for a new job, in my contact with life, as I had never before known it. I was up against it, all right, and I knew it, but I was thrilled with the romance of the thing. I was issuing a challenge to fear, and getting away with it, for I was not afraid!

My enthusiasm for the new life was so great that I decided to rid myself not only of fear, depression and temper, but of all other habits that seemed to me to be questionable. So, at "one swell whoop," I cut out liquor, coffee, tea, and tobacco. This was stern discipline, for a fact! There were days when every pore in my tongue had its (*Continued on page 169*)

ARCHIBALD RUTLEDGE, *in this fascinating, powerful article, says: "In matters of the heart, all distinctions are shams, so I enthusiastically acknowledge*

DRAWING BY THOMAS FOGARTY

MY ASSOCIATION with Prince Alston has been lifelong. He is the son of Martha, for forty years our plantation cook, and of Will, for a longer period our wood-bringer and fire-builder. Prince and I are of the same age. But his infancy, though he was supposed to be relatively unimportant, was far more dramatic than mine. Nature often seems to overlook with the most exasperating candor many of those very distinctions upon which we most fervently insist. One day, while I was sleeping in my carriage in the front yard, Prince was being plunged, in the back yard, into a huge caldron of hot pea soup. He thus early attained over me an ascendency in point of authentic interest; and, although I am supposed to be the master and he the man, perhaps he has maintained it to this very day. I owe him much. For forty-four years now our comradeship has lasted, and it is one of deep affection. For my part, I see no reason for the termination of it, either on this or on the other side of the grave.

Prince's affair in the caldron happened quite naturally. His mother reported to mine that the baby had a "spasm." Recognizing at once the child's desperate need, and knowing that an immediate plunge into warm water was the best first-aid remedy, my mother called for hot water. None was forthcoming; but Martha suggested that in the back yard peas were boiling. My mother, with little Prince in her arms, hurried down the back steps. Before her under a huge live oak was the momentous-looking caldron, just beginning to steam gently. Dipping in her finger to determine the temperature of the water, and finding it tepid, she laid the black baby among the steaming pea pods, holding him gently but firmly in place. Almost at once his crying stopped. Prince was saved; moreover, a certain glamour was shed over his infancy, and for years he went under the strange and distinctive appellation of "the Pea-Soup Baby."

Prince's inheritance is a good one; I mean his spiritual inheritance. His mother is possessed of a primeval faithfulness and affection, and his father of an almost heartbreaking humble loyalty. How can I ever forget what Will did in the matter of the trunk that held the precious trousseau?

We were to have with us on the plantation a bride and groom; and all arrangements were complete save that of transporting the bride's trunk. It had to come by boat from the city to the Carolina seacoast village, and thence brought by ox wagon to us, ten miles farther on. On this delicate errand of bringing the trunk from the village to the plantation I dispatched Will, with many injunctions. He was told that, whatever happened, the trunk was not to get wet. When many hours passed without his return, and when certain clouds began to spring leaks, I got on a horse and rode down the solitary forest highway to meet Will. By the time I had gone five miles the drizzle had become a downpour. I could hardly see thirty feet ahead of me. At length, quite suddenly, I came upon the wagon in the road. The oxen, with placid bowed heads, were taking the drenching. Neither Will nor the trunk was in sight. I felt sure that there must have been an accident.

But as I rode to the wagon, I saw a figure sprawled on its floor, the rain beating down mercilessly on it, and winter rain at that! It was Will. Under the wagon, resting on the dry sand, was the trunk, all decorated with white ribbons. It was dry. The negro had dragged it from the cart, rolled the vehicle back over it, and then had lain down over it to keep the rain off.

"You done say dis trunk ain't for wet," Will told me, almost in self-defense. There he was, miles from home, performing an obscure fealty. And his son Prince has always had that kind of spirit in him.

Through childhood and boyhood my Black Prince and I were inseparable companions in a thousand plantation escapades: we were thrown from the same woods' pony at the same time; we were together pursued by the same infuriated bull; nearly drowned in the same pond when our canoe upset; and in the matter of gleeful butting, the half-wild goat that we had captured made no distinction between us as victims for his sinister jesting. Whenever our frolics came to the attention of the elder generation, we were mutually reprimanded. My father repeatedly scolded us as one, especially on the occasion when we knotted together the tails of two semi-wild boars that were feeding at a trough, with their backs close to a convenient hole in the fence. And Henry Snyder, the negro foreman, a very superior person, for whom I early acquired a dreadful respect, used to be very severe with us—chiefly because we delighted in ruffling his oppressive dignity.

DRAWING BY THOMAS FOGARTY

OUR worst offense occurred on the day when, borrowing a set of deer horns from the frieze in the hall, and draping two deer skins over us after the manner in which the Seminoles camouflaged themselves while deer stalking, we burst into the barnyard, where scores of negroes were threshing rice, superintended by Henry. We charged the crowd with wild, weird shouts, scattering madly the gravest and most sedate of them, especially Henry, in whom, as the leader of his clan, a peculiarly high and sensitive kind of superstition had been developed. Henry's ability as a runner, jumper, and general escaper had never been publicly demon-

My Debt to PRINCE

DRAWING BY B. J. ROSENMEYER

strated before; but he showed on that day the power to lead, in rather magnificent style, a precipitous retreat. We paid dearly for our fun, for to make a man lose an assumed and cherished dignity is of all insults the most deadly.

BUT mischief did not occupy us wholly. We planted a little garden together; we had scores of curious pets, such as alligators, raccoons, fawns, foxes, and minks; we rode together after the cattle; visited the solitary spacious pine woods to get lightwood for the fires. We also, from earliest times, hunted and fished a good deal together, though I cannot report that we supplied the plantation table with commendable regularity. Our failure to do so was not due to any lack of fish and game, but rather to our discursive natures; for no sooner were we well started on a hunt, or well settled by some cypress-brown, bass-haunted lagoon to fish, than some new interest of the wildwood or of the wild water would divert us. Thus I remember that we spent a whole half-day trying to see how many deadly cottonmouth moccasins we could catch with our fishing tackle. We did well, but when we presented our catch to Martha, in a somewhat darkened kitchen, her reaction was decidedly volatile and picturesque.

Young as I was, even in those first years of my association with Prince I recognized in him a decided superiority in certain matters. A plantation negro is as close to nature, I suppose, as any man in the world; and close in an intimate, authentic sense. He is still a child, folded on that ample bosom; he hears and obeys the voice of the ancient mother; he has with marvelous accuracy what we slangily but felicitously call the "low-down" on all the creatures of nature. The knowledge of them that came to me in some small degree after many years of patient observation and study, Prince appeared to have instinctively. His understanding of wild things was, and is, not scientific, but natural; I have always noticed that he speaks of an animal as if it were a human being; he fixes no gulf between the two neighboring kingdoms. His eyes in the woods used to surprise me; now they amaze me. My own eyesight has always been normally good, but it does not clairvoyantly apprehend as does his. As boys together, he was almost invariably the one to warn me when I was about to step on a snake: he could take me to the spot in the sunny wild field of broomsedge where a little fawn lay; he could see, on the topmost tiny spire of a towering yellow pine, that wisp of gray that betrayed the presence of a scared fox squirrel; it was he who took me to the den of a huge bull alligator on a lonely island. He had heard that Minotaur roar, had discounted all the ventriloquistic quality of that weird bellow, had located the singer accurately, and to the formidable monster he guided me, when he was not more than eleven years old. We caught the huge reptile, Prince and I, with a hook and line. We drew out Leviathan with a hook.

BECAUSE of our close and genuine comradeship, I used to go to Prince's cabin about as often as he came to my home; and as we were together every day and usually until nightfall, each one would go half way home with the other. The way led through the woods, and along the edges of the melancholy plantation burying

ELEANOR HALLOWELL ABBOTT'S

Enchanting love story in which the lives of two young people are strangely affected by

"Old Men Sitting *in the* Sun"

Illustrated by HANSON BOOTH

"Hanged if I don't like elements. Fighting 'em!" thought Raynard. "That's the job I'm off on tomorrow"

STANDING idly by the hotel piano, thrumming softly at the faded keys, young Hollingsby dropped down suddenly on the vacant stool before him, with a frank accentuation of interest, to investigate the unfamiliar song-score that seemed to beckon him so summarily from the battered rack.

"Old Men Sitting in the Sun" proved to be the name of the song. "An Ancient English Ballad" it further proclaimed itself.

Arguing somewhat jocosely that the song could not possibly be as old as the piano, but still frowning faintly with the unwonted concentration of his impulse, young Hollingsby turned the fluttering page, retrailed his facile finger tips across the dingy keys.

Tentatively as a swimmer testing the temperature of a pool, he dipped his right hand into the harmonies, flicked out a brisk note or two with his left, lapped up a dripping phrase on his humming lips, gave a sharp little gasp of surprise, cleared his throat, thrust his jaw sharply forward. "By Jove!" he quickened. "By—Jove!"

Then, flooding suddenly with a purely vocal passion, his lovely tenor voice, empty otherwise of anything but youth, plunged itself into an utter ecstasy of pain and song:

"Old Men sitting in the sun!
—Mother of Christ—shall I be one?
Old Dames mouthing at their tea!
—Son of Mary—have pity on me!
Was it for this the spark was fired?
Was it for this my flesh was sired?
Rosiest path of Love or Glory
Ending in this sorry story?
Sun and Moon and Star and Flower
Waxing only toward this hour?
All the bright red-blooded Past
Tamed to such pale veins at last?
—Old Men sitting in the sun!
—Mother of Christ—! Shall I be one?"

Yet, except for a single startled instant at the sheer unexpectedness and surprising volume of the vocal onslaught, the Very Old People playing Casino in the warm inglenook by the fire showed no untoward reaction whatsoever to the thoughtless effrontery. But to the borderline people scattered here and there through the mellow room—stout bankers in their early sixties, lean matrons in their late fifties—even to Vasco Raynard on what happened to be his fortieth birthday, the poignancy of the song became all in an instant so well-nigh unbearable that, when the young singer turned the fluttering page, supposedly to repeat his performance, Raynard crossed the intervening space as though with a single bound to clamp his hand down upon the younger man's shoulder.

"SING that again," whispered Raynard, "and I'll punch your head!"

With a frank gasp of astonishment young Hollingsby swung 'round on the stool and stared at him.

Softly but with indisputable significance Raynard repeated his assertion.

"Sing that again," he whispered, "and I'll punch your head twice! That song has no lure for me!"

In an instant young Hollingsby was on his feet. Two bright red spots of color had quickened suddenly in his cheeks.

"What business is it of yours what I sing?" he demanded not illogically. Before the faintly quizzical humor in the older man's eyes his own protest eased, all in an instant, to sheer bewilderment. "What possible harm—?" he stammered. His puzzled glance raking the room lighted suddenly on the Very Old People in the inglenook and lingered an instant. "Oh, I say—" he protested. "I didn't mean—didn't mean—"

"Oh pshaw! Don't mind them!" said Raynard. "They've already 'arrived' as it were, and probably don't half object to hearing the achievement celebrated either in song or story. But to some of the rest of us—? To me, for instance? Oh, hang it all, boy!" he said. "I'm forty years old today!"

"What?" protested young Hollingsby gallantly. "Oh, I say, that is tough!" he conceded with unmistakable sincerity.

In an instant the huddled group at the stove had resolved itself into the definite figures of three old men

"Most certainly I beg your pardon, sir!"

"Call me 'sir' again," grinned Raynard, "and I'll take a sock at you anyway."

"Oh, I say—" babbled young Hollingsby. Grinningly he turned toward the door, toward the window, hailed a passing acquaintance. "Seen anything of Miss Collier lately?" he questioned hopefully.

Without apology Raynard intercepted both question and answer.

"Oh, Miss Collier?" he said. "Why, if you really want to know, she's sitting in my roadster just outside the door waiting for me to drive her down the Crag-Castle road to see the moon on the bay. Any objections?"

"Why, no, of course not," admitted young Hollingsby.

"Then I bid you a very good evening," said Raynard and, turning sharply on his heel, he picked up the disputed song score, jammed it quite ruthlessly into his pocket, and crossing briskly to the open door through a sudden hitch of piazza chairs, a rising hum of human voices, ran down the steps, jumped into his mouse-gray roadster, and nodding only the most cursory greeting to the shadowed girl waiting him there, reached for the throttle.

With infinitely less stir and murmur than had marked his own passing, the purring motor woke to life in his hands. For a single instant only, master and mechanism seemed to hesitate between one opening vista and another. Then, like a mangle winding a spangled dress into its yawning maw, the little car gathered night, stars, space, speed, the crash of winds, to its eager greed.

With the strange aloofness of a speaker whose frowning eyes are still staring straight ahead of him while all his voice is tossing backward, Raynard cast a single stark comment across his own dark shoulder toward the pale blur of his companion's shoulder.

"Better put on your white bunny coat," he suggested. "We shall pick up some chilliness at this rate."

"Wh-what?" questioned the girl. In the wild rush and whish of breezes across both speech and hearing, her lips were of necessity almost on his ear as she questioned.

AS THOUGH wincing a little from even the casualness of the contact, Raynard slackened his speed and, swerving like the dip of a swallow's wing into the flickering radius of an arc light, stopped the car altogether for the ostensible purpose of lighting a cigarette. Almost severely across the spurt of his match, his eyes met the eyes of his companion.

"I said you'd better put on your coat," he repeated. "I said it might be cold." Expeditiously as he spoke he lifted the exotic wrap and watched her slender body go slithering silkily into its snow-white fastnesses. "You certainly have the loveliest clothes I ever saw in my life!" he admitted. Across the plushy somberness of his glance a little twinkle of light shot suddenly. "All bare-shouldered like that—" he said—"and with the gauzy scarf, did anyone ever tell you that you look like the picture of a girl on a green honey jar? I never thought of it before until this minute. But you do! Upon my soul you do!"

"Like a what?" laughed the girl. "On a what?"

"Speaking of honey," said Raynard just a bit abruptly. "Did you hear all those piazza-tongues buzzing as we left the hotel together?"

"'Piazza-tongues buzzing?'" questioned the girl. "Why, what in the world about?"

"About you, of course!" he said. "And sometimes I suppose about you and young Hollingsby—or one of your other admirers," he added with vague significance. "But mostly tonight I'll wager they were buzzing about you and me!"

"About you and me?" protested the girl. For some unexplainable reason the

Digitized by Google
Original from
UNIVERSITY OF IOWA

idea seemed to amuse her immensely. In a gesture faintly indicative even of delight she thrust her feet out straight before her through a shimmer of silk, a flurry of fine leather, and tweaked a tardy but altogether deprecatory ruffle across her gleaming knees. "Not really?"

"Very really," corroborated Raynard. "Just exactly as they've been buzzing about us for the last three weeks! Every day! Every hour! Ever since that morning in the laundry yard when I helped you wring out your bathing suit. Ever since that afternoon on the tennis court when you came out with a thread and needle to mend my shirt."

"O-h," said the girl. Her chin lifted.

"Just what seems to be the matter with us?" she asked.

"Matter enough!" snapped the man. "They just think we're courting!"

"'Courting'?" cried the girl. She clapped her hands. "Oh, how perfectly delicious!" she attested. "How unutterably delicious!"

RATHER reluctantly Raynard eased to her humor.

"They seem to have got the funniest idea," he grinned, "that one of us is an adventurer—and one of us a guileless victim. That one of us, that is, is very rich and one of us is very poor. But which of us is which they simply can't decide. Whether you, that is, are a clever but unscrupulous manicurist who has heaped a year's salary on her back to bait my fishy eye. Or whether I am a shrewd haberdasher's clerk, for instance, masked in my employer's marked-down ties to win the favor of that haughty princess, yourself!"

Once again the girl at his side in a sudden, characteristically childish gesture, thrust out her feet straight before her, reached impetuously to tweak the veiling ruffle across her silken knees.

"Oh, how—lovely!" she chuckled.

"Yes—you are!" said Raynard.

Once again, cupping his hands across the spurt of a fresh match, his sudden slanted glance caught hers. A certain shrewd sort of mockery was in the glance, a hint of defiance even, a threat of challenge.

"You know which one of us is the rich one—and which the poor one, I suppose?" he questioned.

"Yes," admitted the girl.

Raynard tossed back his head and laughed.

"Well, don't tell anybody!" he enjoined her. "Let's keep it always for just our secret!" The faintest possible flush of color brightened suddenly in his cheeks. "But, gad!" he said, "I wish that both of us were rich! Or else that both of us were poor!"

The girl's eyes narrowed a little.

"I wish that you—were sane!" she confided a trifle coolly.

"Never saner!" swore Raynard. Once again the slanted glance flashed. He started to laugh, but his crisp, terse voice went suddenly just a bit husky. "Honeyflower Girl?" he stammered. "Honeyflower Girl?"

"Mercy!" protested his companion. "Are you trying to make love to me?"

Raynard gave a little start.

"Great zounds, no!" he said.

The girl laughed.

"Good!" she said. "Then I won't have to ask you to take me home! We can still have our ride, I mean? The Crag-Castle ride?"

"Take you home?" protested Raynard. "Why, we haven't even started yet!"

The girl's eyes narrowed, a faint frown puckered across her brow.

"All those foolish people back there on the piazza—?" she scolded. "I hate them—I abominate them! But, all the same—" Most unexpectedly she threw back her pretty head and laughed. "But all the same," she confessed, "I simply adore being gossiped about! It always makes one feel so frivolous and young!"

"Young?" groaned Raynard. Impetuously he reached to his pocket, and drawing out the crumpled song, smoothed it painstakingly on his knee. "Well, this is just about as 'young' as I feel today!" he admitted. Accusingly he pointed to the tattered script. "Look!" he said. "Look! It's the most terrible song! Your young friend Hollingsby sang it just now—and I all but slew him!"

"SLEW him?" questioned the girl; "he has a wonderful voice." With frank curiosity she bent her face to the faded page, traced out the words with a delicate, prodding finger. "Old Men Sitting in the Sun?" she questioned. "Old Men Sitting in the Sun?" Blue and untroubled, her lifting eyes sought his. "Oh pshaw! That's nothing!" she said.

"Oh, isn't it though?" snapped Raynard. "I'm forty years old today!"

"Are you—really?" murmured the girl. The untroubled eyes filled suddenly with a vague concern. Her groping hand just barely touched his sleeve. "Oh, my dear," she said. "Is that what's the matter?" Like a little girl she laughed out suddenly. "Oh—pshaw! That's nothing either!"

"Oh, isn't it?" said Raynard. With a gesture almost savage he snatched up the song from his knee and tore it in two.

"Well, it's this much at least!" he said. "No one else is going to sing that song

For miles, in the rush of breezes, neither man nor girl spoke

Digitized by Google Original from UNIVERSITY OF IOWA

again in my presence!"

Rather strangely, with the tearing of the script, all the fret and resentment seemed to fade from his face.

"Little Miss Collier," he demanded quite abruptly. "It's the oddest thing, but even in the three weeks I've known you I've never heard anyone call you by your first name! What in the world is your first name?"

"Oh, rather a funny one," admitted the girl. "Dorisseta!"

"Funny enough," agreed Raynard, "but not half as funny as Vasco," he laughed. Quite bluntly appraising, he turned suddenly to estimate her small bobbed head, the brief bobbed skirts, the slender, exquisitely shod little feet, the plastic yet distinctly womanly hands. "And—and how old are you?" he questioned.

Raynard grabbed up the green honey-jar and the letter and scrambled up the ladder and tucked 'em away together

EXCEPT for swallowing twice before she answered the girl showed no astonishment at the question.

"Twenty-eight," she said.

"Thank heaven!" said Raynard. "I should have guessed eighteen!" And, gathering her precipitately into his arms, he implanted a most emphatic if not particularly emotional kiss upon her cheek.

Frankly startled, but by no means frightened or unduly affronted, the girl disengaged herself from his embrace and turned and stared at him.

"Now whatever in the world made you do—that?"

Raynard, all in that instant, was infinitely more disconcerted than herself.

"Hanged if I know!" he admitted. "Just a feeling, a rather imperative sort of feeling suddenly that I couldn't settle down to drive or talk or anything until I had done it!"

"Well, please don't feel that way again," she advised succinctly.

"No, I won't," agreed Raynard quite meekly.

With a half-mocking sort of reproachfulness she trailed her hand a bit restively along the door of the car.

"It's a lovely ride—of course," she murmured significantly. "But we don't seem to be getting anywhere." Still half mockingly, she gestured toward the glowering, monotonous buildings that surrounded them. "Now, on the Crag-Castle road," she suggested, "there is at least an unobstructed moon and—"

"I'm not going the Crag-Castle road tonight!" said Raynard with a quite precipitous decisiveness.

"Mercy—how high-handed we are—all of a sudden," she said.

"High-handed enough, if you choose to call it that," admitted Raynard. "But very low-hearted." With his hands still idling on the quiescent wheel he turned and raked her eyes with a shrewd, slow sort of speculation. "I tell you I've had a bit of a shock tonight," he confessed. "That confounded song! The sense of time slipping! I never felt it before! I tell you, I don't like it! I've worked pretty hard, played pretty hard sometimes, knocked round a bit all over the world, had more than one pretty narrow squeak. But—"

ABRUPTLY he broke off and stared at his companion again.

"I'm leaving in the morning!" he said. "Leaving for good, I mean!"

"What?" cried the girl. "What?" As frankly as another fellow might have done, she made no effort to conceal either her surprise or her dismay. "Why—why, how funny! Isn't it rather sudden?"

"Very sudden," admitted Raynard. A faint smile struck across his gravity. "It's part of my panic, I guess," he acknowledged. "The panic of 'Being Forty'! It's high time I was back on my job. When a fellow gets to be forty, his job is pretty much the only place where he ought to be! Not dancing! Not fooling!" His smile deepened a little. "Not dancing, not fooling, with even the prettiest girl in the world!" he added with unmistakable significance. "But back on his job!—Speeding up his work!—'Ere cometh the Night'—and all that sort of thing."

"You alarm me!" mocked the girl.

Their eyes met, held each other for an instant and shifted again.

THE purring motor woke to life once more. The little car lurched and steadied again, waiting stock-still for its ultimate release.

"If you don't mind," said Raynard, "I have a fancy to drive inland tonight! That Crag-Castle road—? It's all right, of course! Moonlight and the waters and bobbing boats and silly lovers sitting round on rocks everywhere! But somehow tonight all I want to do is to drive! Not talk! Not flirt! Just drive and drive! Miles and miles! Hours and hours!"

"I have to be in Detroit on the eleventh of the month," drawled the girl. "At ten o'clock sharp. I wouldn't want to be late!"

He tossed her a laugh, and a glance that did not altogether match the laugh.

"So it's just a question," he confided tersely. "Are you going to drive with me? Or are you not?"

"I am!" said the girl.

"Good!" said Raynard. In a second they were off.

Like band music passing, roar and the pound of the surf faded gradually off into nothingness. A loose-planked bridge clattered transiently into consciousness. For a moment only, a sluggish brown marsh picked up the sea's salty tune with a brief chuckle of tides. Faster than pages stripping from a book one vista followed another.

For miles, in the rush of breezes, the whirr of the engine, the seething vibration of speed and roadway, neither man nor girl spoke.

Then the road turned sharply and fled into the hills.

"It's funny about people," confessed the man's voice at last.

"Wh-what?" lifted the girl's voice. "I can't exactly hear you."

"Sit closer!" suggested the man's voice.

"I can't!" said the girl. But she did.

"You've been awfully nice to me!" testified the man.

"You think so?" (*Cont'd on page 74*)

Three weeks before the session was to open, the main building at Blackburn College was burned. "School will open on time," Dr. Hudson telegraphed students and friends, and borrowing old Pullman cars made them serve as buildings

Dr. William Mestrezat Hudson, president of Blackburn College, entering his office, which, in the days of its roving youth, was the washroom in a Pullman. These cars served as dormitories, classrooms, library, and offices

A College Where You Take Your Pick and Shovel

Every student at Blackburn must work his way through

By NEIL M. CLARK

SEVERAL envelopes were handed to the doctor, and he opened the telegram first. His face became grave.

"University Hall," the message said, "burned last night. Nobody injured. Property complete loss."

For one minute, he was staggered. It was the twenty-third of August, and in another three weeks two hundred and fifty students would be streaming back to classes which represented for many the last and only chance of an education; and the main building—only three buildings altogether comprised Blackburn College—was a smoking ruin! Offices, library, classrooms, the boys' dormitory—all, presumably, had been swept away.

Doctor Hudson—the president—was hundreds of miles from home, in a little mountain city back of nowhere in Kentucky. What could he do? Obviously, not much. Yet in ten minutes he had a dozen messages singing over the wires to as many friends. Each said, in substance: "In spite of fire, Blackburn College will open on September 15th. Please make this known as widely as you can, and do all in your power to help."

And the college did open. When the students streamed back on September 15th they found the president established in a six-foot-six office that had been the women's washroom in a parlor car. The dean's office was a similar room in another car. Other offices were scattered through three cars that had been spotted on a hastily constructed spur track. The library and reading-room were housed in two day coaches, with tables and chairs replacing the seats; the books were a few volumes saved from the burning or given by friends in response to hurried appeals. Part of the classes were conducted in still another day coach, others in frame buildings loaned by the local board of education and hastily moved to the campus; and full-grown young men and women students squeezed themselves into seats intended for fourth- and fifth-graders.

Probably no other college ever started a new year under conditions so strange. On his way home from Kentucky Doctor Hudson had sketched these emergency plans, and in the three short weeks at his disposal had gone to railroad friends and elsewhere, commandeering old cars and buildings for the use of his students.

Digitized by Google Original from UNIVERSITY OF IOWA

This incident reveals the type of man Dr. William Mestrezat Hudson is. The harder he hits trouble, the higher he bounces. In fifteen crowded years he has resuscitated a broken-backed old college and done one of the most interesting and useful educational jobs on record.

Blackburn College, located at Carlinville, in the coal and corn belt of Illinois, before Hudson's advent as its president seemed doomed to pass out of existence as other small colleges have passed, because of superior attractions of great universities. It had only a few students—thirty-five—the year before he took hold. Its entire plant and assets were worth less than two hundred thousand dollars. More money could not be raised. Various presidents had tried.

Blackburn today, revivified by this man with a dream and the whiplash of energy, is one of the leading self-help colleges of the country. Outside of the teachers, there is not a paid employee on its staff. In some respects it differs from any other college in the world. Its students number approximately two hundred and fifty each year (about all that such a college can accommodate), and its popularity is demonstrated by the fact that a thousand or so applicants are refused every year, because they fail to measure up to the requirements. The assets of the college are now nearly a million and a half dollars.

HOW this came to pass is a remarkable story of resourcefulness, persistence, and courage. These qualities are exemplified first in the president, but to an astonishing degree in the students; for one and all at Blackburn are tackling the task of getting an education with little or no money, some at ages far past the usual school and college age. What happened after the disastrous fire of 1927, when University Hall burnt to the ground, typifies the spirit of the place.

Boy students, directed by another boy student, daily attacked the great pile of débris left from the burned building, sorted good bricks from bad, cleared away tangled ironwork, radiators, pipes. A little later these same boys set to work with shovels, wheelbarrows, axes, pickaxes, and teams, digging a sewer and excavating for a handsome new fireproof dormitory. No money was available for this building, aside from an inadequate insurance carried on the old structure. But Doctor Hudson trusted that, as he needed it, he could get the money; and meanwhile the students could do much of the actual labor. Had you visited the campus on a certain November day, as I did, you would have seen two dozen freshmen and sophomores in overalls, up to their eyes in dirt.

"Hyah, Rube!" one cried, "look where you're going with that wheelbarrow!"

"Come on with that sand!" shouted another. "Rush some bags of cement!"

FUN! They were having the time of their lives, *not* on the football field, but at the day laborer's task of making cement and pouring it for concrete floors in the new building. At Blackburn, everybody works; and a few who have demonstrated qualities of leadership are the student-chosen bosses.

Doctor Hudson, the guide and head, is not aloof, cloistered, academic, but a very human little man, with a large head, figuratively and literally, a warm heart, a ready, friendly smile. His hair and mustache are touched gray, for he is fifty-five. His movements are quick, his speech decisive, humorous. He is athletic: only one Blackburn boy can beat him regularly at tennis. Mrs. Hudson ("Mother" Hudson to the students) shares equally the love, admiration, and leadership of the students.

What the doctor has done at Blackburn harks back to his own efforts at education getting. He was born on a farm in southwestern Pennsylvania in 1872. When he was barely nine, his father was killed in an accident. His mother, left with four children and scarcely any means, moved to Waynesburg, the county seat. Here, after finishing at the public schools, the lad attended a small denominational college, helping to earn his expenses by carrying papers, firing furnaces, cutting wood, working on farms.

Waynesburg College could not fit him for the ministry, the profession he wished to follow. To go away to a big university was beyond his or his mother's means. It seemed the project would have to be given up, or delayed until he could work and earn; but just then his mother's brother, Judge Mestrezat, for many years a member of the Pennsylvania Supreme Court, came forward. The judge had lost his own family, was well-to-do, liked his nephew; and paid for the course at Princeton.

"His assistance," said Doctor Hudson, "was one of the great influences of my life. Deeply grateful, I resolved, if the opportunity ever offered, to help educate other young people of slender means." His work at Blackburn, therefore, is in the nature of discharging an obligation.

Following college, Hudson became first a country preacher. At Carmichaels, Pennsylvania, he filled three pulpits every Sunday.

"I felt," he says, "that I was doing work I was called to do; yet as time wore on I became less sure that it was my real vocation. I felt the people I ought to reach were the very ones I did not reach—these never came to church! Those who came regularly did not particularly need my preaching."

IN 1907, Waynesburg College needed a president, and Hudson took the position, and held it for the next four and a half years.

"I tried," he told me, "to introduce the self-help idea, in which I was already very much interested, but at Waynesburg apparently the conditions were not right."

In 1911, Doctor Hudson's health gave way. Resigning the presidency he went back to the farm where he was born. Here he did the roughest, hardest manual labor for a year and a half, and regained his health.

"It's curious, isn't it," he said with a smile, "how things work out? On the farm at forty, I used to review what I had done up to that time. I had made no great success of anything. When, I wondered, should a man write himself off a failure? Well, in the light of subsequent events, and thinking over the experiences of friends, I have come to feel that most of us need a lot of 'turning' before we are 'cooked through.'

"My wife says everything I did before (*Continued on page 86*)

A romance with an inner meaning for Everyman and Everywoman

The Winged Man

By
KATHARINE NEWLIN BURT

"OH, LADY, lady, lady," murmured Jake Armitage, looking down from the corners of his tilted and brilliant eyes at the tall young woman who bespoke him, "I am right certain you don't surely want to marry me, and . . . and . . . I am not what you would call a marrying man."

"Why are you not, Jake?"

"There's gambling," he answered; "there's drinking, fighting; there's wandering about; there's being alone; there's women."

He spread out his arms to show her what manner of vagabond he was.

"To me," she said, "you look very much like other marrying men."

He included then in his self-accusing gesture, his world. At this too she looked observingly. There was so much of it to see at the moment—for they had ridden up from her friend's ranch to the shoulder of a mountain and stood above an immense platter of piled and jumbled ranges, blue-black with firs and streaked with the brightness of rivers unexplored and lakes unchristened—that her inspection lasted several minutes.

"Well," she sighed thereafter, "I find no excuse out there for your not being a marrying man, Jake. At least, I find none for your not marrying me, since you say you love me well enough."

"Since I say—?" Then he looked, not out of the corners of his eyes but with a blue-blazing directness into her eyes, which were the color of wet slate. Mirth and a slight sardonicism informed her quaint eyebrows and her pleasant mouth corners. She had a suspenseful, stage-curtain way with her eyelashes. When her lids interrupted the long mysterious story of her eyes, a watcher waited, not quite knowing what would happen next.

Jake said, "I ain't rightly a man at all, Miss Selda, ma'am. I am a sort of a . . . swallow."

"Swallows," she answered, in the quick Eastern cultivated tone that clipped into his like shears into an untamed hedge, "like other creatures, Jake, are in the habit of building nests."

"Yes, ma'am; but, like other critters, they have a habit of leaving them and of building new ones with new mates the follering spring."

"Did it ever occur to you, Jake, that perhaps, if they had the memories of men, these 'critters' might return to last year's nest and last year's mate, and renew a more chronological happiness?"

Unhappily, searchingly, his eyes traveled across her. "But what woman will wait to welcome a . . . winged man . . . when he pleases to come back, Miss Selda?"

"There's only one difference between you and the others." ("What others?" he interrupted fiercely, at which she laughed without otherwise allowing her speech to be diverted.) "Unlike the others, you are honest and you know yourself. You won't stoop to bait a trap for me with the flattery of lies. Winged man," again she laughed, this time at his poetry, for she was not, she thought, a poet herself, "you are the man I want!"

He looked down, gray and grim of countenance.

"James, now," he said between his teeth, "he will love you better, Selda."

IN QUICK and unavoidable bitterness, she agreed: "Oh, I believe he loves me better now. Your brother is no swallow, Jake. He's a wren, a swan, whatever emblem of marital fidelity you choose. But, unluckily, it seems, for everyone concerned, my dear, I happen to be loving . . . you."

He swept out his hard arm sideways, not turning his eyes from all the hills, and caught her up and held her close to his iron side, where his heart struck powerfully.

"Surely it will be a queer marriage, Selda, of you and me. You're forgetting everything you was born and raised for. You'll be wanting your Eastern friends, your folks. . . ."

"I have none."

"Your city ways, those other men who, you say, ain't honest enough to hurt you like I do. You'll be wanting the crowd, music, books . . . women-folks. Winters, when your friend Mrs. Shaw goes East with her Boston man. . . ."

"I'll be wanting nothing," she said. "I know myself."

Digitized by Google

UNIVERSITY OF IOWA

ILLUSTRATED BY ALBIN HENNING

"But what woman will wait to welcome a winged man when he pleases to come back, Miss Selda?"

He laughed and kissed her. His lips were not made of iron, but of some substance of a warm strength foreign to her own.

So Selda Marsh, twenty-seven years old, sophisticated, traveled, and with money in her own right, was captured by a Wyoming maverick, a stray, who, visiting a more static brother, had happened in one summer morning to the ranch-house of Griselda's friend and summer hostess, Mrs. Shaw. And Selda married him forthwith, not waiting to go back to her East, for fear, to be exact, of losing him.

Then, in her own new name, she took up a homestead in the Wyoming country, stocked it, irrigated it and sowed it, while Jake, happy and loud-whistling, grubbed her sage, and set up her fence poles, cut her wood, carried in her water, shot game and caught fish for her table, and behaved as any domesticated rancher might. And when the long winter came, he "holed" in contentedly beside her, and did all the icy winter chores light-heartedly and deftly, while he loved her with a cool and fiery tenderness which made her think of January stars.

But, even while she thought of January stars, spring drifted in with its gray-azure skies, its music and its languorous high wind, so that Selda found herself dreamful, absent-minded, lethargic, restless; while upon Jake came pallor and silent moods,

Digitized by Google
Original from UNIVERSITY OF IOWA

until one day, after a week of anguished, hesitant looks at her and away, the furtive looks of a criminal intention, he disappeared. He just rode off at daybreak on his buckskin, a pack animal in tow, and he did not even kiss her for good-by.

Except her husband's brother, Selda had, at this time of the year, no neighbors, so that much unnecessary suffering was spared her. Besides, as she resolutely reminded herself, she had been warned.

James, when he rode up and learned the truth, cursed fluently.

THIS man looked laughably unlike the wren or swan she had compared him to—a broad, slow, easily-smiling fellow, with a pair of somberly gentle eyes. But neither smiling nor gentleness were, for the moment, visible.

"Curse him for a heartless, carcass-hunting coyote," said Jake's brother, James.

Selda put her hand upon him.

"Just look at me a minute, Jamie."

He obeyed, not very willingly.

"Do I look heartbroken?"

She looked as cool as steel, straight and lithe in her riding-dress as she had just come back from the fields.

"You wouldn't let me see it, if you was."

She laughed. "I knew what I was doing when I made Jake marry me."

"*Made him?* He'd have crawled across the mountains on his naked shins to get you. Jake's a poker-man, he bluffed. . . ."

"No, Jamie. He wanted to spare me . . . this. I knew—though of course I hoped marriage might make a difference—that this might happen." She closed her slate-colored, her cloud-colored eyes an instant, and moved her lips: "He will come back."

"If I had my will, he'd never," James muttered and the muscles of his big arms twitched as he held them from enfolding Jake's Griselda. "Would you take him back?"

"Why not?"

"Well, a matter of pride. . . ."

"It wasn't for pride," she said with sardonicism rather than mirth in her eyebrows and mouth corners, "it wasn't for pride I married him, James Armitage!"

She looked away and away, across Jake's tumbled world, softened by spring so that its horizons melted into its skies, and slowly her eyelids came down across her eyes. When she opened them they were changed eyes. "And now," she said, "while we're waiting, give me some advice about this new alfalfa field Jake wants me to put in."

A ranch in summer is not a place of idleness. Griselda did not sit on a cushion and sew a fine seam. She was abroad from dawn to dark, and kept her "boys" informed with the creative spirit that was her own present help. She looked, perhaps, a trifle hard, as the constant riding and planning and controlling leaned and tightened her body and her mind, and the weather blackened her smooth face.

At night, alone, after Ma Wade, her cook, and Jonas Fry, her foreman, and James Armitage, her constant adviser and visitor, had left the evening session on the cabin porch, Selda would stand sometimes for half an hour, her arm slung about one of the rough posts, her head back, looking across the shining darkness, breathing deeply, gathering into her patient eyes the light of stars. Before they became spoky or blurred, she would hurry into her house, which she had made beautiful, and there, defiant of bodily weariness, supported by cups of strong coffee, she would read or play her violin until, when she got at last to bed, sleep would clap its hands instantly down upon her wits.

It was not a pleasant journey. There

In such a life there was no time dedicated to brooding or to self-pity. She was not unhappy therefore. Life was too active, too filled with amusing and exciting incidents, too creative and important, too human, to be sad. And the beauty of love for an absent lover, of fidelity and dreams, informed the body and the mind of her. To very few women has marriage brought a greater gift than her strange marriage brought to Selda.

But this, of course, James could hardly have been expected to understand.

ON AN Indian summer day, Jake Armitage came back. He rode up the long gradual open slope from the forest to the foothills against which Selda's house was built, and as he rode he looked excitedly about him, taking note of all the changes, calling aloud his greetings to the "boys" at work, and when, close to the home bars, he saw Selda at her threshold, white of face, he flung himself down and ran and leaped up the steps to take her in his arms.

After his embrace, she looked up, blind and dazed. Beside him, held against that iron side with its strong engine, she groped her way into the house and closed its door. She did not want her world—and this was her first concession to it—her world that had never seen her unhappy, to see her now so very, very glad.

But such gladness as Selda and Jake now enjoyed could not, for any pride, be hidden or even masked. It transfigured both of them. There is no honey in any summer's moon more golden than was the sweetness of their joy. Griselda actually felt no impulse toward reproach. She had accustomed herself during barren months to living in a present, so that now she had lost the habit of intruding sorrow upon joy.

She never questioned Jake. Before marriage she had set

was nothing "winged" about it

herself a course which, while she was alone, she reviewed and marked out again before her. She would not allow a shadow to fall across their Indian summer happiness. The swallow, the winged man, had returned of his own free will, of his own wild will, to his nest and to his mate, and it was her will that he should taste there a familiar happiness and be purely glad of his return.

After the snow came, when they were walled in together from all the world, she enjoyed, even, the relish of his outside adventures. Jake had gambled, had worked with "hosses," had seen a heap of new country, had staked a claim to some possible, or impossible, mineral wealth, off yonder in Oregon; had "swung over and dropped down" into the Salmon River country, where a man entered by a boat which at the end of the journey he destroyed because no boat could "make it back again" by the ladder of swift water.

What more intimate adventures he might have got himself into and out of again, she did not allow herself to inquire, not even to imagine. His talk of a poet betrayed no hint of any such adventures at all—but Jake was a poker player, Selda reminded herself, and he had a poker face.

WINTER was rest and revelry, was love and sleep and laughter. Now, they played together roughly like two boys; now, he worshiped her with closed eyes, kneeling with his arms about her knees, his bronze cheek against one of her hands while the other moved across his hair. They went out for long, gliding, silent trips on skis into the black and silver winter woods. At night they braved the crystal, unbelievable cold to see the white moon ride along snow peaks in a purple sky. There was enough of ecstasy in all this for ten lives. Selda's face softened into its old likeness of girlhood and beloved loveliness. Fairer she looked and young.

James had not waited to see his transformation. A little after Jake's return he left the valley. Hardly able to believe in Selda's joy, hardly able to keep silent his scorn of her weakness, after a scorched, tormented week he rode up in the dark past their lighted windows, to their door, carrying an explosive ready in his brain. What he saw, flashed for an instant into his eyes through parted curtains, blanched him. He did not get so far as the door. He did not go in. Their happiness had been branded in upon his conviction. He took his dead engine of destruction away into the lonely night. And presently he went out over the Pass to find summer again in California. His good-by to Griselda was terse and was prophetic:

"When the Jake-bucket's empty, Selda, you can wind up—James!"

And he made a gesture of letting fly a whirling handle and a sound of rattling, hollow descent, inside his throat.

Selda did not smile. There was something fearful in his pantomime and in the eyes that looked at her above it. Jake heard and saw the farewell and, for an instant, his poker face forgot itself, betraying him in the aspect of a quarry that has heard the far baying of bloodthirsty, terribly patient hounds. Thereafter, Selda and he had settled down to their ecstatic loneliness.

THE snow ran suddenly off that spring, surprising their eyes, after the monotonous winter dazzle with the various beauty of the ground, which opened into little flat golden flowers under the wet and crusty edge of drifts. On a day of still, high warmth, the call of homing geese in the air, Griselda went with Jake to a little height above their river. There, sitting beside him on that exciting various earth, not looking at him but at their winter-and-summer patchwork land, she spoke with measured gravity:

"When are you going out, Jake?"

His hand closed on the loose pebbles he had been fingering.

"Going . . . out . . . ?"

"You'll be wanting to visit your Oregon claim." Mirth and sardonicism were in her eyes—more detached than ever before from the tenderness of her feeling for him.

That poker face of the young Westerner began to tighten and to close up as he squinted down at her. "Wa-al," he drawled, "if I ain't of no partic'lar use to you here at present . . ."

"To tell the truth, as I was about to say, I am so used now to running things myself that I find you too pleasantly distracting, Jake, for a busy season. You would absorb too much of my attention. And it does seem a waste of time and energy to go into the A B C's of ranch matters with you when Jonas and I have everything worked out. James will be coming back very soon."

"Will he?"

"Yes. I heard from him. I sent Darkie down with his horses today."

There was a creaking sound of snow-fields melting. A bright-winged May-fly came up mysteriously from the snow patch at Selda's feet, lay for an instant in the dazzle, drying out its wings, and then flew up giddily into the sunlight.

"Well, ma'am, I reckon you've got it right. I had ought to look into that claim."

"It was about this time, or a little later, wasn't it, Jake, that you went out last year?"

"A little later," said he.

"I remember the wind, a queer (*Continued on page 80*)

Getting Along with People *that's* FLETCHER'S *Job*

By FREDERICK L. COLLINS

AS THE lanky young man on the speckled horse passed the old Cumberland depot in Chambersburg, Pennsylvania, the head of Ed Stowe, the telegraph operator, emerged from an upper window.

"Hello, Ed!" shouted the lanky young man.

"Hello, yourself!" shouted Ed. Then, as if he had remembered why he opened the window: "Henry, your old colonel's President of the United States."

McKinley had been assassinated.

The lanky young man—he is now fifty-four and our Ambassador to Italy—kept on riding. He still had a horse to put up for the night. And Henry Fletcher, even in those early days, never tackled tomorrow's job until he had finished today's.

"I suppose," he told me the other day, "that Ed thought I'd be appointed Vice President. I rather thought so myself! But nothing like that happened, so I decided to go up to Washington and see the Colonel.

"When I arrived at the White House, I found a very businesslike stranger guarding the President's door. It was George Cortelyou. He asked me if I had anything special to see Mr. Roosevelt about, and I told him that I simply belonged to the old regiment, and was calling to pay my respects. He allowed that he was sorry, but that the President was busy and couldn't see me. I said that was all right, left my card, and went out on the lawn to think it over.

"I knew it wouldn't do to offend Cortelyou. Yet I did want to see the President. Just then, I caught sight of an old friend of mine, Billy Loeb, who was only an assistant secretary on the White House staff but who had been with Roosevelt longer than Cortelyou had. I couldn't ask Loeb to do what his superior officer had refused to do, but I could—just casual-like—get in his way. So I walked fast.

"'Where you going?' Billy asked me.

"'Home to Chambersburg,' I said.

"'Did you see the Colonel?'

"'No. He's busy.'

"'Busy, my eye!' exclaimed Loeb. 'Come with me.'

"And he led the way up-stairs through the living-rooms of the White House to the second floor—and there sat 'my old colonel,' smiling and grinning at me just exactly as he used to do in Santiago.

"'Well,' he said, throwing his arms around my shoulders, 'what do *you* want?'

"Roosevelt was laughing when he asked that question; but I figured that the laugh might be covering up quite a bit of justifiable annoyance. Maybe I wasn't the only Rough Rider who had suddenly felt the urge to go into public life. And as it turned out, I wasn't. Anyhow, the time didn't seem auspicious for declaring my intentions of serving my country. Besides, Loeb was along, and I never was strong for doing business on the tea-for-three basis. So I laughed too, and said I didn't want anything.

"'Impossible!' shouted the Colonel, with obvious relief. 'You're the only one of the lot. All the others are either in office or in jail.'

"I was satisfied with my visit. I knew I could have got a job right then and there. But I knew that I would stand better with T. R. in the end if I went away without asking any favors. So I went back to Chambersburg, bought a self-teaching Spanish dictionary, and began preparing myself for a diplomatic career.

"About a year later I read in the paper that the first American Legation was to be established in Havana. This was my chance. I knew Cuba. I knew Spanish. And I think I have already shown that I knew the Colonel. The rest was easy. I went up to Washington again, told him of my ambitions and my studies, and started on my second trip to Cuba with Theodore Roosevelt as my boss."

THESE two trips to Washington illustrate several of the basic principles on which Henry P. Fletcher has built his world-wide reputation for knowing how to "get along with people."

Many people probably wondered last year why Mr. Coolidge was bringing a man all the way from Rome to go with Mr. Hughes to the Pan-American Conference at Havana. But a few days later, when they read in their papers that the conference had been saved from the wreck of the Columbian aviation problem by "conversations" during the night hours with "our Mr. Fletcher," they doubtless realized what five Presidents of the United States had already found out: that the erstwhile court stenographer of Chambersburg, Pennsylvania, still possessed that special ability that won him his first diplomatic post.

Exercising that ability is what Fletcher has been doing these thirty years. It's his job. And the principles on which he works are so simple and clean-cut and understandable that we can all apply them to our daily life.

"I didn't start out," he told me, "with any conscious ideas of how to get along with people. I don't think anybody does that. But I suppose I must have had some. And I certainly learned others by experience. Right now, I think, I can boil down into six basic principles what I have managed to (*Continued on page 164*)

Ten Fletcherisms Worth Chewing

1. "Don't write, don't telegraph; go."
2. "I may not have much personality, but it's better than a postage stamp."
3. "You can't get along with the other fellow unless you give the other fellow a chance to get along with you."
4. "I know where my hat is all the time, and I am not afraid to put it on."
5. "When it comes to business, I never hunt in pairs."
6. "I have a huge respect for the other fellow."
7. "Getting along with one person often involves getting along with a good many."
8. "We wait a year for Christmas or a new straw hat. Why shouldn't we wait a year for the right time to perform an important act?"
9. "I seldom do what the other fellow wants, but I can often do what *I* want *his way*."
10. "The man you are dealing with is always more important than the deal you are trying to make with him."

Honorable Henry P. Fletcher

MR. FLETCHER, now American Ambassador to Italy, is one of the most colorful figures in diplomatic circles. He served with Colonel Roosevelt as one of the famous Rough Riders in Cuba and, later, he saw service in the Philippine Islands. He has held government posts in Cuba, China, Portugal, Chile, Mexico, Belgium, Luxemburg, and last year he was called temporarily from Rome to serve as a member of the Pan American Conference in Havana. Mr. Fletcher was born in Greencastle, Pennsylvania, fifty-four years ago. Before he began his diplomatic work, he was a court reporter.

Sir George Hubert Wilkins

You would never know from his recent deeds nor from these pictures that Sir Hubert Wilkins grew up in the tropics. He is a native of Australia, but his residence is anywhere adventure may be encountered. Years ago he was a "stunt photographer," next he went with Stefansson to the Arctic, and after that he won renown as a member of the Australian Expeditionary Force in the World War. But his latest feat, flying from Point Barrow to Spitzbergen, was the greatest accomplishment of his daring career.

Over *the* Top *of the* World

The story of Sir Hubert Wilkins

As told by

Vilhjalmur Stefansson

An intrepid Arctic explorer

NEVER, since Balboa stood on a peak in Darien and saw for the first time the broad Pacific, has so significant a new vision of the world been spread before human eyes in one day as when Wilkins flew in twenty-two hours from America to Europe by way of the Arctic."

Thus spoke Colonel Amery, Colonial Minister of Great Britian, when the British Government and the British scientific world were welcoming the Australian Captain Sir Hubert Wilkins and his American comrade, Lieutenant Ben Eielson, to London. Captain Roald Amundsen, himself a famous Arctic flyer, called Wilkins's feat the greatest single flight in the history of aviation. Wilkins could not have made that remarkable flight except for remarkable qualities of mind and body. Fourteen years ago, I saw those qualities developing and hardening in a stern school. This was while Wilkins and I were traveling together by dog team over the frozen seas and the uninhabited lands of the Arctic. This was my third but his first polar expedition.

This new conqueror of the Far North was born thirty-nine years ago on the southern edge of the tropics, where the scorching midsummer winds sweep down from the north, bringing temperatures above 115° in the shade. But there was clean blood and strong fiber in the Wilkins family, and young George Hubert developed to manhood unsoftened by the much-feared sub-tropic climate.

Wilkins was recommended to me in 1913 as the best moving-picture photographer in the field. At this time, I was keen to get a crack camera man for the new Arctic expedition I was organizing for the Canadian Government. It is hard to realize now, but there were no movie companies of any account in the United States then. There were only two great companies abroad, Gaumont and Pathé. Wilkins was the star photographer of the Gaumont Company.

Perhaps it is lucky for me that I had to choose Wilkins from his record instead of by his looks. Certainly it takes a better judge of character than I am to see at a glance in a man of his quiet, unassuming manner one destined to be nominated at the end of the Great War by Sir John Monash, the commander in chief of the Australian forces in Europe, as the bravest and most useful man in all his armies.

When I picked Wilkins, sight unseen, for my polar expedition, he was again in the tropics, prosaically photographing the cocoa industry of the West Indies. Tame work, that, but few things have been tame about the rest of his career.

WILKINS never courts danger, but he never goes far out of his way to avoid it. Soon after he graduated from the Adelaide School of Mines in South Australia and had become a motion-picture camera man in order that he might see the world, he achieved a reputation as a specialist in "stunt photography." He was dropping in parachutes from balloons, and scrambling around with his camera on the wings of airplanes—common things to do now, but strange in those days, and more dangerous.

Then came war in the Balkans and the hunger of the public for real battle photographs. Before this time, we had had a great many alleged movies of fighting, but they had usually been obtained in Mexico by hiring a few hundred idle revolutionists and getting them to stage a sham battle.

Honest photography in the battle line is more dangerous than the fighting itself. Soldiers not only seek cover by instinct but are commanded to do so. A photographer grinding his camera has to stand out in the open. However, Wilkins had discounted danger when he took the job. When the time came to get the pictures, he just went out where the light was good and the fighting at close range, and set up his camera. And he brought back to his employers the first genuine movies of desperate fighting that were ever shown in the theatres of the world!

It was on this sort of record that I made a contract on behalf of the Canadian Government with the Gaumont Company for their best photographer to be the first professional movie camera man to be carried by an Arctic expedition.

A few months later, in the spring of 1913, when Wilkins reported to me at the Canadian Navy Yard at Esquimalt, British Columbia, he struck me simply as a quiet and unassuming young man. We noticed him little on the voyage north till we got among the ice and he began to scramble up the rigging, photographing the crew, the ship, and the ice floes as they were being split and pushed aside by the prow of the "Karluk."

A MONTH after we entered the ice the "Karluk" was beset, a prisoner in the moving Arctic pack. The ice was free to drift before the wind but the ship was fast and could move only with it. The winds were from seaward, however, and our ice, with the ship fast in it, was jammed into the mouth of a wide bay. Captain Bob Bartlett, my sailing master, and I agreed that she was probably there to stay for the winter.

To the south of the "Karluk's" frozen berth, the lowland of Alaska could be seen from the masthead. On that land was game, as I knew from having lived there by hunting, on a previous expedition. Bartlett thought one of us ought to go ashore with a party to get fresh meat, for there was danger of scurvy among our crew otherwise. It seemed a logical thing that the captain should stay with his ship, so the commander must do the hunting.

Six of us started for shore on September 20, 1913, two Eskimos and three white men besides myself—Wilkins, Burt McConnell, my

(*Continued on page 103*)

A sudden off-shore gale carried Stefansson and the main party off with the ice, leaving Wilkins and the rest stranded on the shore floe

"Look at the window," cried Lawton. . . .

SCATTERGOOD

The King of Half Acre is deposed at

By
CLARENCE BUDINGTON KELLAND

Illustrated by
PAUL MEYLAN

A YOUNG man trudged wearily up the mountain road carrying with a minimum of pleasure a small hand bag. In this bag were all his earthly possessions —few enough, it is true, but burdensome after ten miles of foot travel. No one would have taken the pedestrian to be more than twenty years old, though, as a matter of fact, he was far, far older than that. He was twenty-one.

As he sagged wearily down under a beech tree, he heard approaching the "clop-clop" of a horse's hooves, and presently there came into view a dusty, ramshackle buggy drawn by an overfed and pampered horse of uncertain age. In the seat was an old man, coatless, in a battered straw hat of wide brim. He occupied more than his share of the seat, and one leg dangled outside. The young man noticed that it was innocent both of shoe and stocking.

The horse came to a stop, and the fat occupant of the buggy looked down and cleared his throat.

"Goin' some'eres," he asked, "or jest a-travelin'?"

"I haven't picked out a destination," said the young man.

"Um. Hain't got the look of a tramp."

"It takes time," said the young man.

Smoke rolled upward; flames leaped and crackled

and the Square Peg

last. Another story of the Six Big Men

"I just entered the profession last night. How far is the next town? And can one eat there for nothing?"

"The next town," said the old man, "is nigh onto seven mile, and food costs money, or sweat off'n the brow. Would you druther walk, or ride?"

"My plate is full of walking."

"Then clamber in," said the old man. "I kin edge over a mite."

The young man got in; the old man clucked to his horse, and they ambled down the dusty road. Presently the driver spoke: "Name of Baines," he said. "Scattergood Baines. You got one about ye anywheres?"

"Stewart," said the young man. "Lawton Stewart."

"Good name," said Scattergood. "Don't seem like it fits a tramp."

"I'm thinking of changing it."

"Dunno's I would. Dunno's I would. Names hain't like undershirts—to be changed every Sattidy night."

"I THINK," said the young man, "my name would be glad to have me change it."

"Um. Hain't a fugitive, be ye?"

"No," said Stewart, "you couldn't call me that."

"You hain't got a crim'nal look," said Scattergood, "but you can't never tell just by the looks of a frog how fur it kin jump."

"I'm not criminal," said Stewart. "I'm just no good."

"What form does your no-goodness take?" Scattergood asked with interest.

"Well, among other things, I can't hold a job. I'm always being fired. I'm unreliable, by common consent. And I seem to be glad of it."

"Uh-huh. What kind of jobs?"

"All kinds. I've been kicked out of a bank and a real-estate office and a brokerage place, and a wholesale house, and a publisher's—just to name a few."

Digitized by Google
Original from UNIVERSITY OF IOWA

"Why?"

"Unreliable. I forget things, and do wrong what I remember, and sometimes I just don't go to work at all. I get up in the morning and can't compel myself to go down to some office and sit all day."

"To be sure. In Boston?"

"Yes."

"Don't know a feller there by the name of Maclyn Stewart, do you?"

"Yes," said the boy.

"Know him perty well?"

"He was my father until recently."

"How does a man git over bein' a father?"

"Mine resigned," said Lawton.

"And kind of cast ye off?"

"Without a shilling," said Lawton.

"Him and me's done business together," said Scattergood. "Didn't seem like he was more'n ordinary cantankerous."

"Well," said Lawton contemplatively, "I guess he put up with a lot before he exploded."

"And now what d'ye aim to do?"

"I'm not aiming, Mr. Baines; I'm just moving."

"Um. Folks that don't aim is 'most as sure to hit suthin' as folks that do—mostly it's the bottom," said Scattergood. "Hain't a toper, be ye?"

"No."

"Got any special vices?"

"I'm just generally useless. I'm no good."

"Kind of a sad state of affairs," said Scattergood. "Take even a wuthless dog and he's good fur suthin'—he kin entertain fleas. Did ye mention bein' hungry?"

"My stomach," said Lawton, "is in a receptive mood."

"Stummicks git that way. W-al, you 'n' me'll stop to the hotel and git fed up. . . . Ever try a hardware store?"

"No."

"Hain't familiar with pickin' up cook stoves in one place and settin' 'em down in another?"

"No," said Lawton.

"Know a ten-penny nail by sight?"

"I don't know anything useful, it seems."

"I calc'late you're in a perty bad way," said Scattergood. "One of them hopeless cases."

"That," said Lawton, "is the general opinion."

PRESENTLY they came in sight of Coldriver and drove down into the gracious valley which encloses the little village. It was noon and, after turning his equipage over to the livery stable, Scattergood conducted his companion to the hotel, where both enjoyed a hearty meal. At the end of it the old hardware merchant pushed back his chair and armed himself with a toothpick.

"When a feller," he said, "gits his stummick full he hain't apt to feel so kind of futile as he gen'ally does. How about you?"

"I might lift a stove to pay for this meal," said Lawton; "but I probably would put it down in the wrong place."

They got up from the table and walked out to the broad piazza of the hotel, where they sat down in big wooden rockers. Scattergood loved to place himself at some vantage spot from which he could watch the life of his village as it passed before him, and now he fell silent as his twinkling eyes roved up and down the street, taking in every movement, guessing at the errand of every individual.

He saw a large man in a black felt hat come toward him across the bridge. A small, barefoot, unkempt boy accompanied the newcomer. Scattergood frowned a very little, for this was a visitor from Hell's Half Acre, that community of outcasts which lay a few miles from Coldriver, and which had required no little of Scattergood's attention of late. In fact, the man was one of the Haddy brothers, who ruled that deplorable commonwealth.

As the couple reached the walk which led up to the hotel, the man turned in sudden anger and cuffed the child, cuffed him savagely, so that the boy was sent headlong to the ground. Then he drew back his heavy boot, and kicked.

SCATTERGOOD sucked in his breath; but before he could hoist his bulky frame from the chair young Lawton Stewart was up and down the steps. He ran across the grass to the boy's side, where Haddy stood over him cursing and, placing his hand against the big man's chest, he shoved violently. Haddy, taken by surprise, staggered back upon his heels and all but fell.

Lawton gave him no further attention, but bent and lifted the boy to his feet and, standing with his arm about the frightened, sobbing child, faced the man.

"That," he said, "will be a copious plenty!"

"Tend to your own affairs," said Haddy. "I calc'late I kin manage my own kid!"

"Not like that," said Lawton.

"Who says so?"

"I do!"

Scattergood was coming down the steps now, and his eyes were apprehensive. He knew the Haddys, knew how ruthless, how dangerous they were. And Lawton seemed so slender and young beside the bulk of the great bearded man.

"Leave go that kid!" snarled Haddy.

"Will you leave him alone?"

"I calc'late to give him the beatin' of his life," said Haddy with a grin; "and you're a-goin' to stand by and see me do it!"

With that he snatched at the little fellow. But his hand never touched the lad's shoulder. Lawton took a half step backward and, punching straight from the shoulder, sent his fist driving in among Haddy's whiskers. It was neat, well-timed, efficient. Haddy went back on his heels in real earnest; but he was not the man to be felled by any single blow.

He emitted a bellow of rage, and charged Lawton. Scattergood looked to see the young man beaten down and trampled, for it was a quaint habit of the Haddys to give the boots to the adversary who might find himself on the ground. And to be danced upon with calked boots is no light afternoon's amusement. But Lawton was not beaten down at the first charge. Indeed, the charge failed, for some reason, to reach him. He was not there, but to one side, from which position his fist found Haddy's chin again. And as the man stopped and grunted, a second fist crashed into a spot just below his ribs.

A crowd commenced to gather, an apprehensive crowd. Voices advised the young man to cut and run. But nobody interfered. Even Scattergood hesitated, but not for the same reason.

Haddy charged again, kicking for the knee, but Lawton had become a shadow, slashing, chopping, hooking with talented fists. The big man could not come to close quarters, could not deliver one of those swinging, sledge-hammer blows which would have ended the fight in an instant. Scattergood watched, and his brows lifted, for he saw that Lawton was smiling.

Then Haddy got in a blow—not flush and clean—but its force lifted Lawton from his feet and sent him sprawling. He got to his feet reeling, staggering. It seemed as if that one smash had been enough. Haddy bellowed, and rushed again upon his tottering adversary, sure now of his man, careless of any guard.

The spectators still disagree as to what exactly occurred. Certainly, Lawton ceased to waver. At some indistinguishable moment, his legs set, his stance firm, through the midst of Haddy's swirling arms he struck, straight and true. Haddy staggered. Again, with both right and left, the young man came in. The blows sounded sharp, distinct. Haddy's mouth opened; his arms ceased to revolve.

Then Lawton stepped in, coolly measured his distance, and with every ounce of his weight and strength drove two more blows to Haddy's jaw, just at the angle where it meets the ear. Haddy's knees buckled, refused to sustain his weight, and he slumped to the walk. Lawton turned away. His eyes met Scattergood's.

"I'm sorry, Mr. Baines," he said. "I'm always getting into some mess. . . . Well, I'll be going along."

"Um. . . . Street-fightin' hain't just polite, is it?"

"No, sir."

"Didn't fit in with the idea of what bank clerks and sichlike ought to do. Kind of added to your no-goodness, eh?"

"Distinctly," said Lawton.

"They tried to keep you writing in books and wearin' a white collar?"

"Yes, sir."

"W-al, the' hain't many white collars owned here, and we hain't so dog-gone polite allus. I guess you 'n' me better git on to the store."

"But what about this kid?"

"I'll 'tend to him," said Scattergood. Then, to Deputy Pilkins, "You better lug Haddy to the calaboose while he hain't so belligerent as he was. Then take and feed the boy."

LAWTON and Scattergood walked the few steps to the hardware store and entered its unlocked door.

"Set," said Scattergood, pointing to the counter. "Want a job?"

"What's the use?" asked Lawton, rubbing his skinned knuckles. "I couldn't hold it."

"There wouldn't be no white collars, nor yit ledgers to write into. It 'ud be kind of outdoors."

"Outdoors! I might get past as a common laborer. I never tried that."

"I aim," said Scattergood, "to make ye a kind of a uncommon laborer."

"Well," said Lawton dubiously, "I'll give it a try."

Digitized by Google Original from UNIVERSITY OF IOWA

"You ought to, seems as though," said Scattergood.

"LAWTON," said Scattergood, some days later, "I jest come to another conclusion."

"About what, Mr. Baines?"

"Changin' names. The's times when it comes in handy; and this here is one of 'em. Commencin' now, your name hain't Lawton Stewart no more; it's Pazzy Jones."

"You might at least," said Lawton, "give me a prettier one."

"I want it shouldn't be perty," said Scattergood. "Now, how be you comin'? Fred Norton got you together a gang of men?"

"Yes, sir."

"When you calc'late on startin'?"

"We're going to build a camp and storehouse tomorrow."

"Um. . . . Sha'n't be here. Goin' to Boston. Kind of hate to leave you facin' things alone."

"It's queer," said Lawton, "but this is the first time I ever looked forward to getting to work. Of course it won't last, and you'll be firing me in a week or so. But somehow it's different."

"You'll find it so when them Haddys clamber down onto your collar," Scattergood said dryly. "W-al, when I git back I'll be int'rested to learn how you make out. G'-by, Lawton."

"G'-by, Mr. Baines."

Scattergood got aboard his train, which ran the eighteen miles necessary to reach the main line, and spent most of that short journey in conversation with Pliny Pickett, once stage driver, now conductor. He transferred at the junction and continued on to Boston, where he made his way to the banking office of Mr. Maclyn Stewart.

"How be ye, Maclyn?" said Scattergood. He never used family names, no matter with whom he conversed.

"Very well, Mr. Baines. What's in the wind."

"Calc'late to start cuttin' the Homer Tract."

"Ah. . . . But you thought it unwise—"

"Them Haddys, eh? W-al, I kind of got it figured now's the time. Been a-waitin' for a man to do the dirty work. Once we git our narrer-gauge loggin' road built through Hell's Half Acre, and it'll be done."

"It's a ticklish job, and someone's apt to get hurt."

"They be," said Scattergood. "But I got a feller."

"A man you can trust to put it through?"

"Seems as though."

"A lumberman?"

"No, jest a man. He don't know nothin' about nothin'; but I'm bankin' on him jest the same. The's others kin lay rails in the woods. That hain't no job. But forcin' rails through the middle of Half Acre is suthin' else agin."

"It is. And what's his name?"

"Last I heard," said Scattergood, "it was Pazzy Jones."

"Doesn't sound like much."

"Mebbe not. Now, Maclyn, you 'n' me owns that tract together. I got a proposition—but I dunno's I'll make it yit."

Mr. Stewart smiled, knowing Scattergood. "If you won't, I'll have to wait," he said.

"Jest one thing I want to p'int out. If this Pazzy gits our road through he's deservin' of suthin' at our hands."

"He is. If he makes a success of this thing, he's a man we must tie to us. We need men like that."

"Um," said Scattergood. "W-al, that's that. G'-by, Maclyn."

WHILE this conversation was taking place, Lawton Stewart was disembarking a gang of men and certain materials from Scattergood's logging road some three miles from Half Acre. There were a dozen men, and much material. The first task was to throw up a bunkhouse and cook shanty, and a large shed for storage. It would astonish your city builder to see how rapidly this was accomplished and how efficiently.

It was midafternoon when the work was interrupted. Six very large men came trooping upon the scene and stood scowling. Labor ceased, and the laborers began to edge together uneasily, for they had lived long in the neighborhood of the Haddys, and were not without their apprehensions of those lawless men. Lawton stepped across to the little group, and spoke.

"Can I do anything for you," he asked.

"What you doin' here?" demanded Pete Haddy, the King of Half Acre.

"We are (*Continued on page 172*)

Before Scattergood could hoist his bulky frame from the chair young Lawton was up and down the steps

You Look 'em Over—*and*—You Obey Your Choice

What else can you do when there are thirty thousand laws to be abided by—or broken?

By WILLIAM S. DUTTON

HAVE you ever written a check for less than one dollar? Or bet on an election? Or said "Good morning" to the motorman of a trolley car? Or "made eyes" at a pretty girl on the street? Or failed to enter your winnings at poker on your income tax return, without making any deductions for your losses? Or helped to raffle off a layer cake at the church fair, or sold "chances" on a ton of coal for the benefit of the volunteer fire company?

If so, you are a lawbreaker. You may be fined as little as $5 or as much as $10,000. You may be sent to jail for a term of five years. You are a scofflaw, a fugitive from justice wanted by local, state, or federal police. It is your duty to request the nearest police station to "send the wagon." But wait. Maybe they had better send a fleet of trucks!

"How many law violators are at large in this country?" I asked Silas H. Strawn, of Chicago, who is president of the American Bar Association and one of the nation's leading lawyers. He has served as the American delegate on important international commissions, and has been engaged in the practice of law for thirty-nine years.

"I do not believe there is a person alive in America who hasn't violated some law," said Mr. Strawn, "and most of us violate a dozen laws a day. The baby who howls in the night and thus disturbs the sleep of neighbors is a lawbreaker, strictly speaking; and so are the baby's parents, because they are maintaining a nuisance. We are lawbreakers from birth to our dying day, and the fact that we may be ignorant of the laws we break is not a legal excuse.

"Nobody knows how many laws we have. The best estimates are only guesses, and I've seen guesses as high as ten million. It is not unlikely that even more than ten million laws and ordinances are theoretically in effect on our statute books, and we are adding to the number at a rate of 200,000 new laws and ordinances a year. We have a Congress, 48 state legislatures, approximately 16,000 incorporated cities, towns and villages, and about 3,000 counties in the lawmaking business, with more than 100,000 lawmakers duly elected to their pay rolls. Lawmaking has become one of the leading American industries, with a constantly increasing output. A single one of our state legislatures enacts more laws in one year, on the average, than the British Parliament enacts in ten years!"

Safety First, Last, and Forever!

"In one of our states," says Mr. Dutton, "there is a statute that no locomotive engineer has yet been able to obey. It provides as follows: 'When two trains approach each other at a crossing they shall both come to a full stop and neither shall start until the other is gone!' (The exclamation point is mine—and the engineer's.)"

Of course, all these laws Mr. Strawn mentions do not pertain to us individually. We are affected only by those laws which are in force in the county, town, and state wherein we live and do business. Furthermore, many laws are "private acts" that have no public application. Keeping this in mind, let us try to figure out how many laws we are personally expected to observe.

A YEAR or two ago, a patient investigator tried to find the answer to this question. To avoid the charge of exaggeration he did not consider the county laws at all, but confined himself to estimating the number of city, state, and federal laws a policeman was expected to know and enforce in a typical American town. The number he finally arrived at was 30,000 laws! Of this, 10,500 were federal laws.

What are these laws? What is their purpose?

They regulate, or rather were devised to regulate, every conceivable phase of human activity and conduct. The Bible covered the field in ten laws, and stopped. Justinian felt that 2,000 laws were sufficient to govern the Roman Empire. But our own lawmakers have refused to take any chances with such a flimsy legal structure. They have covered everything from the length of bed sheets in hotels to the hours of a housewife's use of the vacuum cleaner.

BUT don't be too hard on the lawmakers; they are doing the best they can, perhaps, with the rigid legislative system under which we live. Our method provides no solution for even the minorest thing, except the passage of a new law. The effort of the law is to cover every case that might conceivably arise! And there, again, you must blame the system as well as the lawmakers.

There are the common or garden variety of laws against theft, murder, and mayhem. There are laws against gossip and peddling peanuts without a license. In some towns your gate must open inward; in others, outward. The size of screws used by electricians has been specified by law in various building codes. What you eat, drink, see, hear, read, say, and sometimes think is regulated by a snarl of laws that no one living man has yet mastered. There are good laws, needless laws, fool laws, and freak laws, all of which have been enacted at a cost from $100 to $600 each.

Automobile laws probably are the most commonly violated. As a close second come the Sunday laws. However, if one considers the personal-conduct laws as a group, they are broken more than all others put together. Nobody even tries to enforce a fraction of the laws. Our courts and police simply choose the laws they *think* are in need of enforcement, and let it go at that.

You depart from home in the morning on the way to your work. We will assume that your medicine closet contains no prohibited drugs and your cellar no illegal brews; that your attic harbors no fire hazard; that you've made no change in the electric wiring not duly approved by an inspector; that your sidewalk is in repair and clear; that your garbage can is up to legal specifications and covered; that your children have been vaccinated and you haven't beaten your wife. Presumably, too, you are decently clothed, as

Digitized by Google
Original from
UNIVERSITY OF IOWA

the law decrees, and carry no prohibited articles in your pockets, such as lethal weapons and skeleton keys.

But as you open your gate, hung according to law, your dog slips out between your legs. He is unmuzzled, without leash, and without license; worse, he barks joyfully, to the distress of the neighbors. In most cities, as owner of the dog, you are violating three laws. If you direct any remark at the dog that might be construed as an oath, you may be violating four, especially if women or children are present.

A piece of cigar comes loose in your mouth and you spit it out onto the sidewalk—a fifth violation of law. You toss the cigar butt into the gutter, thus littering the street, which is a sixth violation of law. Stepping into your automobile, you note that one headlight is askew and mud obscures the rear license plate; but you've no time to bother with such details—and your violations of the law now number eight. Off you go at twenty-five miles an hour, in violation of the law. A pedestrian blunders into the way and you angrily threaten him with your clenched fist—a violation of the law against "threatening to fight," and also a violation of the pedestrian's rights. So far, between the gate and the end of the first block, you've broken ten laws, which gives you the benefit of the doubt on the oath.

A friend in his car draws alongside you in your car. He bets a box of cigars that he'll arrive first at the office, and you bet that he won't. You win, but in so doing you have broken the law against racing and the anti-gambling laws.

YOU park your car, contrary to law—six inches beyond the curb being the legal limit, and parking in that particular block being limited to one hour. But for years you've been giving the policeman a "present" now and then, which is bribery; what is more, you are engaged in a conspiracy with the policeman to frustrate justice, and you've become guilty of a criminal offense.

With your friend, you traverse the sidewalk to your office, see a charming young lady and covertly flirt with her, despite the law against flirting on the street. You carry a lighted cigar into the elevator, contrary to law, and while ascending you whisper to your friend a new bit of scandal about an acquaintance, which is defamation of another's character and may be criminal libel. In turn, he interests you in a scheme to beat the income-tax collector, which plunges you into another conspiracy, this time to defraud the Government. Since meeting your friend you have broken ten laws more, which gives you a total of twenty law infractions with which to start the day.

All of these laws which you have broken are well known to everybody. For the most part they are good laws, so regarded by a majority of the people. Then what chance have you, or anybody, to go through the balance of the day without fracturing at least one more of the estimated 29,980 laws which apply to the individual?

It is not only illegal to *make* a check for less than one dollar, but it is an offense to "issue, circulate, or pay out" such a dangerous instrument. Section 178 of the United States (*Continued on page 131*)

If You Ask Me:

When a Cyclone Seems to be Standing Still It's Time to Cut and Run

AN OLD native of the cyclone belt once said to me: "If a cyclone seems to be standing still it is time for you to cut and run—it means that the twister is headed straight for you."

Although my old friend didn't know it, he expressed a shrewd analogy of life in that observation of his.

If *life* seems to be standing still; if you are interested in the same people and the same things that you were interested in one, two or three years ago, and if they *look* to you exactly as they did at that time, it means that *you* are standing still. You are standing in the danger zone. And standing still in the danger zone with the "twister" of life ready to overwhelm you at any minute is just plain asking for trouble. You will not be overwhelmed by a tornado, but you will be mired in the bog of Human Inertia. The only way to live life is to live it on the move.

The tendency of the average run of folks is to stand still after they have reached maturity. Marriage and the birth of their first-born are to each of them life's last great adventures. After that, in the treadmill of living, the mind gets set in a narrow rut.

So, if the world shapes up to you as it did a while back, you can be pretty sure that you are standing still.

On the other hand, if people who seemed great a year ago now seem ordinary or commonplace, it is because you have *caught up*. So it is with books and music and many other things that are useful as standards of measurement. And if you have *caught up* you must have been going ahead—and the chances are that you will continue to go ahead.

A visit to the scenes of one's childhood is an astonishing experience. The creek that once seemed a river is now an insignificant brook; the hills are no longer imposing heights, but small elevations without lure or romance; the buildings have shrunk, the very streets have withered.

And if among those who remain in the old home town you find a few who filled you with awe as a boy, these also have lost stature and now are "old Grandpop Harvey" or "old Maria Higgingsbottom."

Everything seems changed, and yet practically nothing has changed except yourself. You have *grown*.

Now take a look back at your intellectual progress within recent years. A great idea to which you did homage a little while ago seems trivial today—a fragment of elementary thought for beginners.

But it isn't a trivial idea; it is in all ways as great as it was when it was first revealed to you. The change is in *you*. That idea was a seed that produced greater ones on which you fed, and the feeding made you grow.

Your beliefs and standards aren't what they were five years ago—not if you have escaped the tragedy of tragedies—stagnation. They are several sizes larger and are every day expanding to fit your normal growth.

The zest of life, the spice and the kick of it, are in the competition it affords. And the most interesting competition a man can have is with his passing self. So unless your life is richer and your outlook wider than they were a year ago, competition is over for you and the "twister" of life is going to flatten you into insignificance and mediocrity.

"Crow, he smart bird," said Rip. "Pappy, he 'lows he got a soul. When folks die, crow grab his soul an' fly 'way with it . . ."

Judgment Crow

HUGH FULLERTON *tells a story of two boys and the weird adventure that befell them*

Illustrated by
VICTOR C. ANDERSON

RIP and I were hunting crows. I was twelve then and Rip was two years older than I. It was the spring after I had scarlet fever, and even until today the country people fix the time as "the year the Judgment Crow caught the murderer."

It was the first time I had been permitted to go out with the gun that had been given me as a Christmas present, and which had remained close by my bed during the long weeks of convalescence. It was late May. The leaves on many of the trees and bushes were opened full, the dogwood was white, and the Judas trees flamed against the white of haw in the thickets, where the trillium bloomed, pink and white over the wet earth.

Rip, my chum, was a negro boy. He had owned a gun for three years and was a good shot; but my new gun was better than his, and I had promised to let him shoot it.

There was a bounty offered for the heads of crows in our county in those days, and Rip and I, in planning our expeditions, assured each other we could kill enough crows to buy all our ammunition, and maybe have money left to purchase other things, possibly even a gun like my new breech-loader, for Rip.

"Crow, he smart bird," Rip remarked as we trudged toward the country. "Crow smartest bird dey is. Jay bird smart, too; but jay bird, he a plumb fool some ways. Crow always smart. Pappy say crow, he got a soul. When folks die crow grab his soul an' fly 'way with it.

"Crows know heap more dan some folks do. Dey hold court an' try each other, like white folks do. Got a jedge an' everything. Jay bird, he holler an' laugh like a fool nigger. All time squallin' an' laughin'; but when crow he caw he mean somepin. Both of dem watch niggers, an' white folks too. Jay bird, he squawk an' laugh. He doan' mind what folks do, but crow, he like de parson. If you doan' do right, he gwine scold!"

Rip lectured me thus on the ways of birds, beasts, and fishes whenever we roamed the woods or fields together, mixing the weird folk-lore of the negroes with inventions of his own imagination.

On this day we decided to hunt crows on the old Brount place, over behind the Fair Grounds, a mile from the town. The big field on the hillside was clay, washed and gullied, uncultivated and unfertilized for many years, matted with trailing dewberry vines and patches of coarse grass between clumps of blackberry bushes. A rivulet, which emptied into Moberley's Creek a mile farther down the valley, flowed along the bottom of the hill behind the Fair Grounds. The clay road, which ascended steeply to the cluster of cabins on the crest of Pea Ridge, crossed the rivulet on a small bridge.

A few hundred yards below the culvert-like bridge, in a bend of the brook, was a thicket of wild goose plums. The bushlike trees stood close together, their thorny branches making difficult the passage through the heavy growths of berry vines and bushes of the underbrush. Paths by which the cattle on the hillside descended to the brook for water wound through the thicket.

This heavy copse of wild growths was a favorite meeting place of the crows. We hoped, by stooping low and keeping hidden behind the clay banks of the brook, to approach near to the thicket unseen and to shoot into the flocks that congregated there, cawing noisily, squalling as they moved restlessly about in the trees. On that day, however, an unusual silence pervaded the thicket.

"Powerful quiet in dar today," said Rip, as he crept along down the bed of the stream. "Ain't hear no crows cawin'. Reckon maybe dey ain't holdin' court today."

WE SKIRMISHED onward until we reached the fringe of the bushes and peered up into the plum trees, which were commencing to feather with white blossoms.

"Moughty funny 'bout dat," muttered Rip. "Ain't only one crow. Dat ole Judgment Crow, he sittin' guardin' de place. All de rest done gone."

I peered over the bank. One lone crow, hopping sedately from treetop to treetop, alone was visible. As he moved about he cawed at long intervals, a low caw, just one note at a time, a pause of perhaps half a minute and another caw.

We knew the crow. He was old; very old, and dusty black instead of shiny like the younger ones. There were white spots on his wings, and holes through them. One wing was ragged where the shot of some hunter had torn it. We had seen that crow many times during the preceding autumn, always detached from the main flock.

"Sumpin' worry dat ole crow," said Rip. "He de lookout. Smartest ole crow dere is. He watchin' somepin'. He worried, an' his mind is all puzzlement."

"Let's take a shot at him," I suggested.

"Doan' be shootin' dat crow," Rip said. "Dat de Judgment Crow! He done put de cunj' on you, come you shoot at him. Ain't no use, nohow. Cain't kill dat crow 'ceptin' with a silver bullet. Dat crow watchin' somepin'. He send dem others away an' he stay an' watch."

WE CLIMBED the bank and entered the thicket, following the windings of one of the paths by which the cattle came to water. The ancient crow cawed indignantly a few times, as if angry at being disturbed, and flapped slowly away toward the fringe of woodland far down at the lower end of the field.

Rip was leading the way. Occasionally we had to hold back a thorny branch in order to follow the path, and I had dropped behind to avoid the danger of being struck by the backlash of a released branch. My companion had passed around the turn in the trail when he stopped suddenly. An instant later, his gun trailing, his big eyes rolling, his black face powdery with fear, he crashed back toward me, brushing me aside, and then stopped.

"Whoo-ooo!" he exclaimed, emitting his breath forcibly. "Daid man! Daid man in dar! 'Most tripped over him."

"Aw," I protested shakily, "you're dreaming. There ain't any dead man."

"Reckon ain't? You better come look."

"I ain't afraid to look," I boasted, although I was.

I moved forward cautiously, ready to turn and run, and peered around the turning of the trail. The huddled figure of a man lay at the side of the path. The back was toward me, a gaping hole showed in the coat—and from the hole a dark trail led to the dead leaves on the ground, across the leaves to the path, where a hoof track was half filled with dark red fluid, and something heavy had been dragged in the mud.

I stopped in a paralysis of terror and stared at the body. The sound of Rip running aroused me to realization that I was alone; alone in the middle of the thicket

Digitized by Google
Original from
UNIVERSITY OF IOWA

with a dead man. I turned and raced after Rip, calling to him to wait, careless of the thorny branches that scratched and tore at my hands and face. I emerged from the thicket only a short distance behind Rip, who had leaped across the branch and was running toward the road.

Rip, glancing backward in terror, slowed his gait when he saw me and, panting from fright and exertion, I caught up with him.

"Whoo-o-o!" he said. "I heard you, an' thought dat daid man was chasin' me!"

"I—I—saw it—him," I said, panting heavily. We kept glancing backward as we hurried to the road, climbed the fence, and seated ourselves on the bridge, feet hanging over the edge, to recover breath.

"Dat what dat ole crow watchin'," said Rip. "Ole crow, he know. He waitin' an' waitin' to cotch de man what kill dat man."

"Did you see—it—him? Who was he, Rip?"

"Me see? I doan' see nothin' but daid man. I ain't look close at no daid man. Mought be Mist' Sam Brount; but I ain't stoppin' to see for suah."

"It did look like Mr. Brount's coat," I quavered. "I hope it ain't him; he was the nicest farmer there was. He always let us hunt. I betcha someone murdered him."

"Suah, someone done murder him," said Rip. "I betcha Mist' Sam Brount, he drivin' he's cows outen de thicket, an' someone shot him. Cows go through dat path today."

The sound of someone moving stealthily came

"WHAT do you suppose anyone shot him for?"

"How I know *who* done shot him?" asked Rip, irritated. "How I know whaffor, lessen I know *who?*"

"Do you suppose the murderer was hiding in there when we went in?"

"Whoo-o-o, boy! You done get de uneasiest notions," exclaimed Rip, startled by the idea. "Maybe he hidin'. Maybe come dat man see us an' fear we done cotch him! Bang! Bang! Daid nigger! Daid white boy!"

Rip's imagination was working, and I squirmed at the thought.

"Maybe we'd better go tell someone," I suggested uneasily.

"Hyah come dat ole Judgment Crow again," said Rip, pointing.

The old crow with the tattered wing, cawing in a different tone—five sharp caws in succession—was flapping its way toward the thicket. A minute later half a dozen other crows, cawing rapidly, as if excited, emerged from the woods and followed the leader. The flock settled in the thorny thicket, with much flapping and moving about and excited cawing. From far down the valley crows began to appear as dots against the sky. Others came over the tops of the row of barns at the rear of the Fair Grounds, and yet others from the trees far up on top of the ridge.

Within a few minutes crows appeared on the horizon from all directions, flying straight and fast, cawing constantly, and all converging on the plum thicket. A hundred or more of the big black birds were moving among the trees, cawing and flapping their wings, and the noise increased steadily as new additions to the flock arrived.

"What I done tell you?" demanded Rip.. "Dat ole crow, he de judge. He call all dem other crows to come to court; jest like Mist' John Williams leanin' out the courthouse winder.

"Dat ole crow, he smart. He call 'em together. An' tell 'em what he done find in de bresh. He say: 'All you lazy crows, fly roun' an' find dat murderer man.' He de boss."

"Do you think they'll ever find out who did it?" I asked.

"Suah, dey find out," said Rip, scornful of my question. "Dat ole crow gwine tell. Ole crow, he call all de other crows, an' he says: 'Boys! Daid man down dere. Someone done kill him. You all fly 'roun' an' find out who done it.' Maybe some crow see him an' tell ole crow. Maybe not. All de crows scatter an' look for dat murderer. Come maybe dey can't find him. Den de ole crow, he call de jay birds, an' say: 'Jay birds, quit you-all foolishment. Someone done kill a man. Find out who done it.'

"Ole crow, he wise. He know jay bird nosey bird, all time watchin' folks' business an' yellin' like he gwine tell. Dey tell ole crow. Suah, dey cotch dat murderer man."

"But how will the old crow tell the sheriff?" I inquired.

RIP'S eyes rolled and his face grew serious while he mulled over the problem and let his imagination run riot.

"Dat easy," he said scornfully. "Ole crow, he keep follerin' murderer man 'roun', cawin' at him, till Mist' John Williams, he notice. Den Mist' John done arrest dat man."

There was a slight sound as of movement under the bridge. Rip, leaning over until his face was below the level of the boards, peered under them. He straightened suddenly, his eyes big with alarm.

"Whoo-o-o!" he said in low tones. "Man under de bridge!"

UNIVERSITY OF IOWA

from the other side of the hazel bushes

My legs jerked upward spasmodically and, rolling onto my stomach, I looked over the edge of the bridge, peering into that semi-darkness under it. A villainous face, distorted with fear or rage, was staring toward me, the bulk of the big body outlined against the sunlight at the opposite end of the structure. He was in his undershirt. His shirt was hanging from a beam. A gun, its butt on a rock in the stream, was leaning against the stones of the abutment. The man was half crouched over, and in the act of reaching out a hand for the gun when I saw him.

RIP and I rolled to our feet and, tiptoeing softly in the dust for a dozen yards, broke into full flight, panic adding to our pace as we raced up the hill, threw our guns over the high fence and clambered over it, dropping down into the safety of the Fair Grounds.

"Whoo-o!" puffed Rip, with eyes bulging, "dat de murderer man."

"Washing the blood off himself," I panted in terror.

"You was scairt," sneered Rip.

"So was you."

"I wasn't 'zactly scairt. I was kind o' 'sprised. I was feared he'd grab me by de laigs. De murderer man listenin' to us," Rip went on. "He know we done find de daid man. Wisht I'd pointed my gun at him and cotched him."

"Why didn't you?" I sneered, suspecting his words covered fear.

"I—I didn't think of it—jest den," he apologized.

"Let's go tell someone," I suggested.

"Let's go tell Mist' Rufe," Rip amended.

Mr. Rufe was the superintendent of the Fair Grounds, and owned the fastest race horses in the country. He was preparing to exercise a horse driven to a light dog cart, when we found him at the barns far across the grounds.

"Hello, boys," he said. "Been hunting?"

"Mist' Rufe," said Rip, eyes bulging and face shining with excitement, "us done find a daid man."

"Dead man?" he asked in surprise.

"Yes," I said. "Someone shot him. He is in the plum thicket back of the grounds."

"Jump in the cart, boys," he said quickly. "We'll go notify the sheriff and the coroner."

THE ride into town was something over which we boasted for weeks. No other boy in town had been permitted to ride with Mr. Rufe behind a real race horse. Rip and I clung to the dog cart as we sped uptown, envious youngsters gazing at us in admiring disbelief. Twenty minutes later we were in the sheriff's office and a short time afterward we were riding out High Street, our importance much enhanced, in a procession consisting of the buggies of the sheriff, the coroner and Doctor Ben.

We led the way to the thicket, hanging back a little while the men went forward. Deep in the thorny tangle they found the body of Sam Brount.

"Someone hid here," said the coroner, pointing to thick undergrowth. "Sam came to drive the cows out of the thicket and the man shot him."

Rip and I were heroes in the eyes of the other boys during the ensuing days and swelled with our importance. The brutal murder of the kindly farmer who supplied milk to many of the families aroused the indignation of the community. We told our stories to the coroner's jury, described the finding of the body and of catching sight of the man who had washed his shirt in the branch under the bridge, saying nothing of our flight from the scene. The sand under the bridge, and the clay in the thicket path were examined for tracks; but the cattle had waded and walked over the old tracks and no marks were found that would aid the officials. The coroner's jury found that Samuel Brount came to his death by gunshot wounds at the hands of a person, or persons, unknown.

Brount was not known to have any enemies. He was a kindly, friendly man, a good neighbor and citizen. His widow said he had left home after breakfast, telling her some cows had strayed, and she did not hear of him again until noon, when word that he had been killed reached her. Neither Rip nor I could furnish any description of the man we had seen crouching under the bridge. Neither recognized him, as we had nothing more than a vague glimpse of him, and the light under the bridge was not good.

"I was certain he was a large man, that the shirt hanging on the timber to dry was a light blue, and that he was hatless. Rip testified that his eyes looked as big as saucers and that he had a short beard.

No one had seen a man approaching or leaving the place, and it was certain that he had avoided the road and taken to the shelter of the brush after leaving the bridge.

In spite of the fact that Rip assured me half a dozen times the old Judgment Crow was certain to expose the murderer, the chances of his capture seemed remote. The community settled back into its regular order of life and, after a few days, Rip and I resumed our hunting expeditions although, without mentioning the reason, we avoided the big field back of the Fair Grounds, and especially the plum thicket. Sunset Pass BY ZANE GREY

A strange and thrilling drama of frontier days

Illustrated by W. H. D. Koerner

Part VI

LONG after the Prestons had stalked away Rock lay behind the log, thinking over the peril he had been in and the revelation that had accompanied it. Late, he stole like an Indian to his cabin, made his bed inside, and, barring the door, lay down just as he was.

In the morning he watched from his window until Ash left, then went out to breakfast. Thiry did not appear. Preston came out while Rock was eating, and said:

"Rock, I've a job fer you thet'll take you away some time. The boys are gettin' a pack outfit ready. They know where to go. I want five hundred head of two-year-old steers in the flat down there by Slagle's ranch. By August."

"You're the boss, Preston. But are you sure you won't need me more right here?"

Preston bent toward Rock and lowered his voice: "It ain't what I'd like or need. I had no idee last night thet I'd send you off this mornin'. But it popped into my head."

"Ahuh! Who popped it?"

"Thiry. She asked me to. Ash is wuss than ever before. An' fer once Thiry seemed to be thinkin' of somebody else but him."

"How is she feelin', Preston?" asked Rock anxiously.

"Wal, she perked up when I told her I'd send you."

"Suits me fine. Don't mind tellin' you, Boss, that Ash is almost gettin' on my nerves."

"Haw! Haw! Almost gettin', hey? Wal, if you ain't made out of stone I'll eat my hat. My nerves *are* shot to pieces."

Rock got up and stepped over the bench, without looking at Preston.

"Small wonder, Boss. Reckon you'd do well to hawg-tie Ash, an' hang 'round the Pass for a month."

THIS speech had been the outcome of impressions Rock had received from Preston's manner and words. He spoke it curtly, with never a glance, then he walked away toward his cabin. It did not suit Rock just then to leave the Pass without a hint to Preston.

Rock repaired to his cabin and rolled his bed and packed the things he would need.

He wavered between two strong desires: Either to see Thiry before he left or write to her. The better course would be to write, because he could put on paper what there would be no chance to speak. No sooner did he decide than he realized it was an opportunity not to be lost. Therefore, with lead pencil and paper, he sat down to his little table and began, with hand that he could not keep steady and heart which accelerated a beat for every word:

THIRY DARLING: Your dad has ordered me away for several weeks, maybe more. I am glad to go, though not to see your sweet face for so long will be terrible. But I shall work like a beaver, and content myself with thinking of you by day and dreaming of you by night—with praying for your happiness and welfare.

I want you to know this, so that while I'm gone you may remember me often. My conscience flays me still for what I brought upon you at the dance. But I don't ask forgiveness for that so much as for what happened on Winter's porch. Still, if I had no more to sustain me, Thiry, through what seems to be the hardest trial of my life, that kiss you gave me would be enough. I know you meant only unheeding gratitude. But, nevertheless, you kissed me, and I can never be a rational being again.

Dunne made several weak attempts to call off the inspection, but Rock rigorously held him and his men to a count of every steer that passed the gateway

Don't worry, Thiry dear, about Ash, or me, or whatever it is that is wrong. You can't help it. And it will not turn out so bad as you think. Nothing ever does. I believe that if you were to fall into some really dreadful trouble I could save you. Now, what do you think of that for a fellow's faith in himself? Of course, by trouble, I mean something concerning Ash. I must not deceive you, dearest, your brother is the kind of range man that comes to a bad end. You must face this with courage. You must realize that he might involve your father, you, and all of your people in something through which you could suffer.

It is no use to try to change Ash. You waste your strength. The more you do for him the less he will appreciate. I think you can only pray and hope for the best. You will have a good long rest from my disturbing presence, during which time you must think earnestly and fight for that endurance women of the West must have.

My mother and sister tried the pioneer life for a while. It was too much for them. But you are of stronger stuff. Remember that Allie and Lucy must find their spirit in you.

I shall think of you every sunset, and see you come out to watch the Pass.

Ever, TRUEMAN.

Returning to the Preston cabin, Rock looked for Alice to deliver his note to Thiry, but as she was not there he ventured of his own accord. Slipping it under the door of Thiry's cabin, he beat a rather precipitate retreat. Nevertheless, he heard the door open, and, turning, saw Thiry pick up the missive, and then stand to look at him. Rock waved his hand. Would she return his salute?

SHE did not, to his dismay. Still, he turned again and again to look over his shoulder, as he hurried away. Finally, she waved, then quickly shut the door. Rock's dismay was transformed to delight. She had his letter and she had waved good-by. He could not have asked or hoped for more. That would serve him well during his sojourn in the woods.

In half an hour he sat astride Egypt, bound down the Pass. This trip would be a welcome respite, and, from every angle, favorable for him. Two hours later he was climbing the benches into the black timber, and late that afternoon he halted with the boys in a wild and sylvan spot, to make a permanent camp.

"Boys, your dad has stuck us with a job he thinks we can't do," observed Rock, at the camp fire. "Five hundred of two-year-olds by August."

"Can't be did," replied Tom, throwing up his hands.

"By thunder! What's eatin' Dad these days?" exclaimed Harry.

"Let's fool him once," added Al, with spirit. "There's 'nother dance in town along early in August. An' if you-all want a hunch—there's Somebody who says I gotta be on hand."

"That's the talk, Al," said Rock. "If

we can find a canyon or draw somewhere close, we'll drive what we round up each day, and fence them in."

"Good big draw over here. Water an' grass. Once been fenced in; but the poles are down. Reckon we could fix it up pronto."

Before they went to bed, Rock had imbued the brothers with something of his own will to do or die. Next morning they were up in the dark, had the horses in at dawn, breakfast before sunrise, and were on the drive when the first tinges of rose colored the rims of the Pass.

One night Al got in late, weary and sullen. Rock knew something untoward had happened, but he waited until the lad had eaten and rested.

"What did you run up on today, cowboy?" queried Rock, at length.

"I was up under the Notch," replied Al, "an' first thing, I seen a couple of riders high up, watchin' me. Reckon they never lost sight of me all day."

"Dog-gone!" ejaculated Rock.

The twins were silent, which fact did not argue for a favorable reception of this news.

THREE days later, miles east of the Notch, Rock's alert eye caught sight of riders above him on a slope, keeping behind the trees, and no doubt spying upon him with a glass. Though boiling with rage, he went right on driving, as if he were none the wiser.

Then, a couple of days before the full five hundred head had been herded into the canyon-corral, the thing Rock expected came to pass. Early in the morning, at breakfast hour, a group of riders, five in number, rode down upon the camp.

"Boys, reckon I don't like this," said Rock gruffly. "But you take it natural-like, and I'll do the talkin'."

As the riders entered camp, Rock rose from his seat beside the camp fire to greet the visitors. They were seasoned range-riders, a hard-looking quintet, not one of whom Rock had ever seen. They probably belonged to the Wyoming outfit which had come from the North with Hesbitt. It took no second glance for Rock to decide they did not know him by sight or reputation.

"Howdy. Just in time for grub," he said heartily.

"Much obliged, but we had ourn," replied the leader, a bronzed, rugged cowman, with bright bold eyes that roved everywhere. "Gage Preston outfit?"

"Part of it," replied Rock, not so cordially.

"Round-up or drivin' a herd?" went on the interlocutor.

"We're drivin' five hundred head of two-year-olds down the Pass. Reckon another day or so will make the full count," rejoined Rock.

"Big job for so few punchers. Where you got the herd bunched?"

"We fenced a canyon across the creek," returned Rock, pointing eastward.

"Don't know the lay of the land," went on the leader. "Haven't rid long on this range."

"Shore, you didn't have to tell me that," replied Rock bluntly. "You're from Wyomin', and ridin' for Hesbitt."

"How'd you know thet?"

"Reckon nobody else would brace *me* this way."

"You? Which one of the Prestons might you be? I've seen Ash Preston out on the range, an' you're shore not him."

"I might be any one of the other six Prestons," rejoined Rock, with dry sarcasm. "Hadn't you better hand over your callin' card before asking me to introduce myself?"

"I'm Jim Dunne, foreman for Hesbitt," replied the rider.

"All right. How do, Mr. Dunne. A blind cowboy could see your call isn't friendly. Now, what do you want?"

"Wal, we've come over to have a look at your herd," answered Dunne.

"Ahuh!" Rock strode half way across the camp space to confront Dunne. "Just to see if by accident we didn't round up a couple of Half Moon steers? Dunne, you bet your life you're goin' to look over our herd. Then I'll call you, plumb straight!"

One of Dunne's men whispered to him, with visible effect.

"Say, are you this fellar Rock?" he asked suddenly.

"Yes, I'm Rock. Reckon that doesn't mean anythin' to you. But maybe it will later."

"Wal, I can't see as there's any reason to be riled," returned Dunne, shifting in his saddle, evidently now wanting to conciliate Rock.

"That's because you don't know this range," said Rock curtly, and then turned to the Preston brothers: "Boys, we'll drive the steers out of the canyon for inspection. We'll head them down into the Pass. Then we'll pack and go on in."

Rock relentlessly held the Half Moon outfit on both sides of the corral gate while the cowboys drove the steers out in single file, and in twos and threes. It was Rock's task to head them down toward the Pass, which was easy after the leaders got started.

DUNNE made several weak attempts to call off the inspection, but Rock rigorously held him and his men to a count of every steer that passed the gateway. It was a long, tedious job.

"Dunne, between you-all you've seen every head of stock we've driven," said Rock, when he had dismounted to face the men. "You didn't see one Half Moon brand, did you?"

"Can't say I did."

"And you, punchers? Neither did you?"

"No, Rock, we didn't," replied the one who had whispered to Dunne. "An' if we'd had our way this deal wouldn't hev come off."

"All right. Dunne, go for your gun!" commanded Rock.

"What!" ejaculated Dunne hoarsely, his face turning yellow.

"Can't you hear? Any man who thinks me a rustler has got to back it with his gun."

"Rock, I—I—we— Throwin' guns wasn't in my orders."

"Dunne, you don't fit on this range," replied Rock, in bitter scorn. "Keep out of my way hereafter." Then he turned to the other riders! "Reckon you're not willin' parties to this raw deal Dunne gave me. Any self-respectin' cowboy, if he calls another a rustler, knows it's true, and is ready to fight. Tell Hesbitt exactly what happened here. If you don't, I'll hold it against you. Tell him rotten gossip on the range isn't proof of an outfit's guilt."

"All right, Rock, we'll shore give Hesbitt the straight of this," replied a rider.

The four mounted men rode away, and Dunne made haste to get astride and follow.

Three days later, early in the afternoon, Rock and his cowboys left the herd of steers in the meadow land below Slagle's ranch, and rode on home, a weary and silent four, scattered wide along the lane.

THE labor of the past few weeks had been so strenuous and the application to it so zealous that Rock scarcely realized the lapse of time. What had happened at Sunset Pass during the interim? He hoped but little. What pleasure he might have had in driving the herd down to the Pass, ahead of schedule, had been spoiled by the advent of the Half Moon outfit and the necessity of revealing it to Preston.

Rock asked the brothers to keep their mouths shut; but strict observance of their promise was not likely. Indeed, by the time he had shaved and changed his clothes there came rapid footfalls, followed by a thump on his cabin door.

Rock slid back the bar, whereupon Preston stamped in, with Ash close behind him.

"Howdy, Boss," said Rock cheerfully, and nodded to Ash.

"Al busted in with a wild story," broke out Preston; "said Hesbitt's outfit spied on you while you was drivin'. Then they rode into your camp. Five of them. Fellar named Dunne in charge. He was mean as a skunk, an' said he'd look your herd over. But when you called him, an' he found out who you was he tried to hedge. Al says you made him inspect every steer you had—an' after thet dared him to throw a gun. Al was terrible excited. Darn fool blurted thet all out in front of the folks. Rock, was he just loco, or is he exaggeratin' a little run-in you had with one of Hesbitt's outfits?"

"Boss, Al told the truth, and put it mild at that," replied Rock, and turned to tie his scarf before the mirror. In the glass he saw Preston's eyes roll and fix with terrible accusation upon his son.

"Sit down, both of you," went on Rock, and presently faced them again. Ash was coolly rolling a cigarette, his face a mask. Preston had been drinking of late, but appeared sober, and now, though grim and angry, met Rock's glance steadily.

"Wal, thet's short an' sweet," he said. "Now, Rock, suppose you tell us everythin' thet come off."

Thus adjured, Rock began a minute narrative of the situation from the day Al caught the two riders spying upon him from the slope.

"Rock," said Preston finally, "suppose Dunne couldn't have been bluffed? What then?"

"I'd have bored him," answered Rock. "And I told Dunne to keep out of my way. If I meet him—"

"Wal, Rock," interposed Ash, in a voice that made Rock's flesh creep, "I'll see to it. I'll meet him first."

"Cowboy, I never expected you'd stand up fer me thet way," burst out Preston, genuinely moved. "'Course, I never knew you. It means more'n I can

Digitized by Google Original from UNIVERSITY OF IOWA

tell you, havin' my youngsters be with you then. I just can't thank you."

"Don't try," returned Rock, turning it off with an easy laugh.

Preston paced the room, gazing down at the bare rough-hewn floor.

"Reckon this hyar deal wouldn't be particular bad for me, if it wasn't fer our butcherin' bizness," he remarked, as if thoughtfully to himself. Rock, however, divined that was a calculating speech.

"You hit it, Gage. There's the rub. My hunch is you must quit the butcherin'," said Rock deliberately, his eye on Ash.

"I will, by thunder!" replied the rancher, wheeling instinctively to face his son.

Ash rose out of the cloud of smoke. At that moment, for Trueman Rock, nothing in the world could have been so desirable as to smash that face. Ash took no notice of his father's decision. He flipped his cigarette butt almost at Rock.

"I'm butcherin' tomorrow, Mr. Rock," he asserted.

"Butcher and be darned," retorted Rock, absolutely mimicking the other's tone.

"You're gettin' too thick out here," said Ash, backing to the door, which he opened. "I told you once to clear out. This's the second time. There won't be no third!"

Ash backed out the door, his wonderful blue eyes like fire under ice, then he stalked off the porch toward his cabin.

"Gage, that bull-headed son of yours will be the ruin of you," said Rock, turning to the rancher.

"Lord, don't I know it?" groaned Preston from under his huge hands.

ROCK remained away from the supper table, though the second bell rang. He found in his pack enough to satisfy him. He did not feel hunger. It was a trying hour, as he watched from his window.

Presently Rock saw Preston, accompanied by Thiry, come out of his cabin, and cross over to enter Ash's. A light flashed from the window. Rock's first thought was to creep under that window and listen. But for the risk to Thiry, he would have done so; however, he decided to go down through the grove and come up between Ash's cabin and Thiry's, and wait for her.

It was quite dark when he slipped out. He stole among the trees, and, making a half circle, he came up to the bench under Thiry's pine, and sat down there to wait, thrilling with anticipation of soon seeing her white form emerge from the blackness.

But an hour passed. She did not come. Another went by! The light burned in Ash's window, and now and then a dark form cast a shadow. The conference was still going on. Rock knew surely that Thiry had not left Ash's cabin; he had watched for that, all the time he had circled it.

The night threatened to be stormy. The stillness gave place to a moaning of the wind, and thunder rumbled nearer. Drops of rain pattered on Rock's bare head. The lightning flared brighter, showing the black mountains, and the Pass leading to them.

All the lights except that one in Ash's cabin were now out. The hours passed, strangely full for Rock. The longer he waited, the less impatience he felt. He had been drawn into the whirlpool of this Preston catastrophe, and he would stick it out, come what might. How the wind moaned overhead! It was like a knell. And the weird flashes of lightning along the battlements of the horizon fitted the melancholy sound.

IT MUST have been long after midnight when Rock heard a door close. He waited, straining eyes and ears, beginning to wonder if he had been mistaken about not missing Thiry. He reassured himself. Another door closed, and that, he was sure, had come from Preston's cabin.

Then out of the blackness a slender vague shape glided, like a specter. The darkness was deceptive. Rock let her get right upon him, so close he could have touched her, and his heart suddenly contracted violently.

"Thiry! Thiry!" he whispered, unable to make his voice clear or steady. He heard her gasp. Like a statue she stood. He had a poignant instant of remorse for succumbing to his selfish longing to see her. This would alienate her further.

"Thiry! Don't be frightened. I waited. . . . It's Trueman," he whispered.

"You!" she cried, and seemed to loom on him out of the shadows. Her arms swept wide and that extraordinary action paralyzed Rock. The next instant they closed 'round his neck.

Rock stood stiff and immovable as the pine tree by his side; but his mind, his heart, received the fact of that embrace with tumultuous violence. Scarcely had Thiry clasped him when she uttered a cry and released the convulsive hold, her hands unlocking, and sliding down from each shoulder as if bereft of strength.

"Oh . . . I'm . . . beside myself!" she whispered.

Taking her hand, Rock led her to a seat on the bench under the pine, where she sank almost in collapse, her head bowed. Rock resisted his natural impulses—crushed down the exultation of the moment. *(Continued on page 135)*

"I told you once to clear out," said Ash. "This's the second time. There won't be no third!"

© CAPT. C. W. R. KNIGHT

He Trained a Wild Eagle to Eat Out of His Hand

IT WAS one fine morning in the early spring of 1915. The World War was almost a year old. In the Ypres salient, the front-line trenches of the English ran through an abandoned farm fringed by a few acres of wood. The German front lines were only a hundred yards away.

In the British trenches, two young men sat with their backs against a lot of sand bags and talked about home. They were sick of the dirt and carnage of war, and they were bored by inactivity.

Just at that moment, a clear trill came from the strip of wood lying between them and the enemy. The tall young man cocked an ear skyward. "By Jove," he exclaimed; "it's a golden oriole!"

They listened a moment longer.

Then the tall one said: "I say, let's go out and get a picture of it. Probably there's a nest and some young ones too."

But the other young man very sensibly refused to run the risk of being made into a sieve by German guns. Whereupon, the tall one strapped his camera to his back and, climbing cautiously over the top, wriggled away.

In spite of the smart rat-tat-tat of a machine gun that raked the wood every few minutes he made his objective in safety. Shinning up to the top of a tree that grew next to the one in which the oriole nested, he made some fine pictures of the bird and her family and took them back in triumph to his comrades in the trenches.

The young soldier who performed this gallant and perhaps somewhat foolhardy feat was Captain C. W. R. Knight. This was not the first time he had risked his life to make a picture of a bird. Nor the last time.

Today, Captain Knight is famous as a lecturer, nature writer, and photographer of wild life. He has just concluded a series of highly successful lecture engagements in the United States. I heard him at the Museum of Natural History in New York, where he showed his remarkable film of the private life of a family of golden eagles. This magnificent motion picture, revealing in dramatic detail the intimate home life of the king of birds, has been hailed by ornithologists and camera men everywhere as one of the outstanding photographic achievements of the decade.

Not only has Captain Knight filmed the family life of the most powerful and unapproachable of birds, but he has also tamed a golden eagle and trained it to hunt from his wrist, as falcons were trained to do in the Middle Ages. So far as is known, no other living man has ever trained a golden eagle.

"For years," he told me, "it had been my great ambition to obtain a comprehensive film of the life of the golden eagle. But not until the spring of 1926 did the realization of this dream seem even remotely possible. "At this time, I received from a stalker in the north of Scotland a letter containing the happy news that he had spotted a golden eagle's eyrie. I decided to try my luck at once. Much to my delight, my friend, C. I. Blackburne, offered to go with me.

"Loaded down with cameras, a battery of lenses, two complete 'hides,' thousands of feet of film, coils of wire and rope, and the insides of an old alarm clock to accustom the birds to the whirr of the motion picture camera in operation, we set out one day in quest of the golden eagle.

"At last, we found the eyrie. In it were two eaglets surrounded by food—the intact bodies of six grouse, three or four rabbits, and the remains of several hares. Built on a ledge of an outcrop of rock some sixty feet high, the nest could be looked at easily enough from above. But to obtain a satisfactory camera view from a suitable elevation was apparently impossible. Finally, we managed to build a 'hide' about nine feet above the nest, and only fourteen feet from its center.

"At such precariously close quarters, and with the camera resting on a rock, I watched the mighty golden eagle return to her nest. The spread of her great wings was well over seven feet. She could pick up a lamb in her powerful talons. Of course, if she had discovered us and had taken it into her head to do so, she could have made things very uncomfortable.

"The thing that impressed me most was the extreme gentleness of this gigantic bird in feeding her voracious young. It was in striking contrast to the rough, hurried methods of small birds like the chaffinch, or the tiny golden-crested wren, say. Even after the eaglets have learned to fly and fend for themselves a bit, the mother still searches them out with gifts of food.

"The eagle which I tamed was sent me from Scotland by a friendly gamekeeper who had decided that eagles were account-

(At the top) Captain C. W. R. Knight, whose extraordinary occupation is taming and training eagles; and in the lower picture, Grampian, the wild golden eagle that Captain Knight first tamed, then liberated

UNIVERSITY OF IOWA

ing for too many grouse. People always say, 'Didn't it take a great deal of patience to tame a wild thing like an eagle?' And I always answer, 'No.' It took a great deal of time; but every minute of it was rare sport to me.

"The steps in the training were simple and natural: My eagle weighed about thirty pounds. He was a very powerful bird when he came to me and, of course, a very dangerous one.

"First, I kept him in a dark room, so that he might not be confused and frightened by too many new objects at once. I even fed him in the dark. In a few days, he would feed out of my hand while I gently stroked him with a feather.

"Eventually, I promoted him to feeding in candle light, and thence, by easy stages, to daylight. By this time he associated me with food and friendliness. He had absolutely no fear of me. I now carried him about a good deal to accustom him to people, things, and noises. In this way, he soon lost all nervousness.

"The next step was to teach him to hunt. At first, I would set him on a gate or some similar elevation, unhood him, and, with a bit of meat, coax him to fly to my wrist. Later, I would allow him to fly the length of a long piece of rope attached to the jesses, or strips of leather about his legs. He was always rewarded by food when he flew back to me. Finally, I got my pupil to the point where I could safely let him fly free of the rope and be sure that he would come back to me in a short while.

"In the end, Grampian was liberated on one of the Duke of Sutherland's deer forests, where golden eagles are strictly preserved."

Captain Knight was born in Kent, England. As a schoolboy in his native Kent, he was exceedingly lonely and unhappy because he could make no headway at cricket and the other team games that his schoolmates played. His holidays were spent in taking long walks, during which he made friends with the birds and wild creatures. Although he was poor at cricket, he was expert at climbing trees. He learned the habits of the birds, and he learned to make their calls, so that they would come at his whistle.

In those days, young Knight was always fooling around with his camera. Soon he became skilled in catching pictures of bird and animal life in action. He sent some of these snapshots to a nature magazine in London, and received an order to write a short article about the birds he had photographed. Then came the war.

After the war, he took up his nature writing and photography where he had left off. Two years ago he got a chance to film the golden eagle, as I have already told you, and his film was a sensation in London, where it ran for fifteen weeks at one of the biggest theatres.

MILDRED HARRINGTON

Mrs. W. B. Bierce, of Detroit, discovered that her facility in making dainty knots and bows out of ribbon would enable her to help girls who needed help. Now this is Mrs. Bierce's life work

Her Ribbon Novelties Saved 300 Girls

ON a desk in the home of Mrs. W. B. Bierce in Detroit, Michigan, there lies a neat, sober, businesslike scrapbook, bound in black. Within its pages are almost three hundred letters full of passionate gratitude for succor in the emergencies of everyday affairs. Each letter carries a woman's signature, and most of them are signed by women whose years entitle them to be called "girls." Here and there between the letters are photographs. I paused at one, that of a fat, healthy, rollicking schoolgirl. There was a single line written beneath:

"This is the life you saved."

Eugenia Bierce, the owner of this remarkable scrapbook, is a comfortable, well-poised woman with a wholesome air and an unobtrusive personality. When she opened the book for me, she said in a well-measured voice, without a trace of emotion:

"This is my life work, to date."

As I read, I marveled. For here were the stories of crises in the lives of three hundred girls who had been plunged into the depths of want, and sorrow, and suffering, and who had been brought back to peace and comfort and well-being. I marveled still more when my hostess set before me an array of ribbon bows and ribbon roses, such as are worn upon baby's dresses or on dainty lingerie.

"It began during the World War, when I found that I could not roll good Red Cross bandages," she said, smiling. "One of my friends urged me to make a number of these things, which I had often constructed as gifts for friends, sell them, and give the money to the Red Cross, in lieu of bandages. I did as she suggested. The amount I was able to make surprised me. It totaled twelve hundred dollars that first year. Then the war ended, but need did not end.

"One day I noticed that the girl who was washing my hair looked worn and ill. I talked with her and found that I had happened upon a tragedy. She had married six months before; her husband had deserted her, and there was a baby coming. She had managed to get a job, but she would soon have to give it up. She had hardly any money and she was desperate. I mean that literally.

"I did not dare to go away from her. She wanted to commit suicide. So I took her with me and we stayed together until she finally promised to do nothing rash before I saw what I could do. I found her mother-in-law sympathetic: the girl had been afraid to go to her, and—well, I helped. Now the girl has a good position and the baby is a great girl. It was this girl who held me to making my roses and bows.

"I kept on devising design after design, and always some girl or woman needed the help they enabled me to give. I had my own charity fund, based upon my own income; but I needed far more. I stopped going out so much, and gave more time to work. For the past ten years I have averaged fourteen hundred dollars a year from making and selling such things as these.

"This sum of money goes farther, because every year some of the girls pay back all or a part of the help given. That is such a happy phase of the work. Every once in a while I get a letter like this:

"Dear Mrs. Bierce: I am all right now. Take this and help the next girl who comes to you."

Digitized by Google Original from UNIVERSITY OF IOWA

Mrs. Bierce's girls are scattered all over the country. Down in New Mexico at the Sunmount Sanitarium for the tubercular they have sold Mrs. Bierce's roses, and the resultant fund has been used to keep girls who could not otherwise afford to stay as long as they should. This came about because one girl from Detroit who was stopping there offered to sell, not for herself, but for the others who must go away too soon.

But the most unusual work is that of Mrs. Bierce herself. It is emergency work. Sometimes a disheartened girl needs nothing more "than to be taken to a nice club or hotel for lunch—some place she has never seen before." Sometimes she needs merely to "come to my home for a night or so." Often she needs material help.

"How do they find me? They tell each other. Sometimes the editor of the woman's page of a newspaper calls me up and tells me of a girl who has appealed to her. But mostly someone just tells me about them. I meet such wonderful girls, struggling against terrific odds.

"It is very easy to find girls who need me," Mrs. Bierce said, rather puzzled at my persistent inquiry. "If I miss seeing a girl in her usual place in a shop or restaurant or at an elevator, I ask about her. Often she is away sick, and I call on her. If help is not needed she is glad to see me. I always seem welcome."

I should think she would be. This personal loving kindness has almost been forgotten of late, and here is one woman who by herself has tided over three hundred human lives. To the money realized from her dainty things to meet material needs, she has added uncounted hours of tireless visiting, of climbing up and down stairs, of straightening up disordered rooms and comforting in her warm motherly arms girls discouraged and sick and sore at the buffeting of the world.

"I would like this to be printed," she said wistfully, "because there are so many idle women who could make these things as I do, and sell them. I can't take care of *all* the girls who need aid. Others might help.

In this compact office on wheels, C. R. (Jack) Bryant, of Portland, Oregon, conducts his unique accounting business. Here the books of many Pacific Coast business firms are audited by expert accountants

An Office on Wheels is His Place of Business

C. R. (JACK) BRYANT, of Portland, Oregon, is the inventor of the "Cunocar Accounting Service," a Pacific Northwest chain of automobile accounting-offices that park at the very doorways of business concerns to audit and keep their books.

This tall, well-poised, combination accounting expert and mechanical genius, who can talk fluently about his work, but not about himself, was born in the year 1891 in the heart of Chicago's business district.

"We moved about continually," Bryant says, "living in small towns as often as big cities, and I became more or less familiar with the problems of small business concerns, which, I observed, often hinged on the lack of proper bookkeeping systems.

"When faced with the necessity of earning a living, I took a special business college course, qualifying in stenography, accounting, and office management, after which I worked for five years as a court reporter. Next, I became a bank cashier, and then I entered the employ of the Burroughs Adding Machine Company, specializing in the installation of bookkeeping machines in banks."

About this time Bryant married, and started the development of his clearly visualized idea of an at-your-door-on-wheels accounting service, for which he found the time evenings and week-ends.

Bryant built his first Cunocar in the back of a garage which, unfortunately, was next to a hotel whose irate tenants raised strident objections to his nightly anvil chorus. Assembling the car necessitated the raiding of every second-hand store in the city, and he carried all his materials home on the street cars to save cartage. One time it was a door, then a window, next a heavy armload of lumber; and always after an energetic day of selling and installing bookkeeping machines.

Eventually—with many an emergency trip to the only midnight general store in the city for screws and bolts—the car was finished, and outfitted with a second-hand bookkeeping machine, a typewriter, and other office equipment. Then, tediously, Bryant lettered his registered trademark, Cunocar Accounting Service, applied for patents, and set out to look for business.

Bryant's first customer was secured without difficulty, he being the automobile man from whom he had purchased his second-hand chassis, and who had obligingly allowed three months' bookkeeping to accumulate, waiting for Bryant to finish his car.

"Landing the next several accounts was a much more difficult matter than I had anticipated," he relates. "Men had never heard of offices-on-wheels. They couldn't understand what I was talking about; but when I finally boiled my sales talk down to just this: 'Come outside. I want to show you something,' I was able to make slow but sure progress.

"It took two months of persistent solicitation to line up my first three accounts, every one of which had books all in a wretched mess; and it took weeks and weeks to straighten them out, work that I was compelled to do gratis, in order to get their good-will.

"The first month, by working days, nights, and Sundays, I earned sixty-five dollars. During this time I unscrambled the books of an ironworker who did 'picture bookkeeping,' and whose records were an almost undecipherable tangle of hieroglyphics, accompanied by crude ink drawings, instead of the names of gates, lamps, fences, grills, and other items. I was amply repaid, however, for my pains, for today this man is one of my best clients."

After six months, Bryant's car was paid for, and he was beginning to earn what might be called a living. Then he built another car, working nights as before.

Now came a real problem, one that made his previous efforts seem inconsequential—that of finding a man qualified to operate that second car.

"I tried three men, one after another," he says. "But at last came a man who qualified, and who became sufficiently interested to help build the third car."

Five cars were thus built, one after another, till the day came when Bryant was able to employ a mechanic.

Today, Bryant has his own modern building, which contains a garage, a car-building shop, a private filling station, wash racks, and every other requirement of a growing fleet of automobile offices. Right next to his office is a well-appointed "classroom," where "school" is held for the benefit of new operators.

Dr. Afranio de Amaral, at left, head of the Antivenin Institute of America, has perfected serums to cure bites of North and Central American snakes. In the picture he is seen extracting snake venom for use in the manufacture of an antitoxin

Fifty Cents a Pound for Venomous Snakes!

DR. AFRANIO de AMARAL, head of the Antivenin Institute of America, holds the distinction of being first in perfecting serums in quantities sufficient for commercial use, to cure the bites of venomous North and Central American snakes. Other physicians experimented, and found successful serums to combat the attacks of poison-filled fangs; but the saving serums, unfortunately, could not be obtained in time of need.

Now, through the zealous efforts of this brilliant young South American—he has earned the degrees of M. D., B. Sc., LL. B. and D. P. H.—the antivenins placed on the market some time ago are available throughout the snake-infested regions of North and Central America.

Former head of the Butantan Institute in his home state of São Paulo, Brazil, Doctor Amaral came to the United States in 1925 at the invitation of Harvard University to study the snake situation. He was made a lecturer in the School of Public Health and given facilities for investigating conditions throughout the country.

There was but one record available at that time, compiled sixteen years before by Doctor Willson of Chicago from medical literature previous to 1909. That showed a total of seven hundred and forty cases of poisonous snake bite in the United States for a long period of time. No mention was made at all of the Southern States, where the rattler, moccasin and copperhead are found.

In order to get first-hand knowledge Doctor Amaral took a motor trip through the snake areas, lying chiefly in the South, Southeast, Southwest and Middle West. He drove about the country seeking out victims, taking notes on sectional conditions, teaching farmers and laborers how to prevent snake bites.

"We discovered," the scientist told me, "that the number of cases of snake bite mounted higher than anyone had supposed. I have secured data which makes three thousand persons a year a conservative figure.

"Texas leads all other states in the number of victims. In that state alone over a million dollars' worth of cattle die every year from snake bites. Pennsylvania has the rattler, but its bite is not fatal to adults.

"The Texas rattler, found from the Mississippi to California, is the most dangerous reptile in the United States. The copperhead swarms through all the Southern States, except Florida. When it reaches the banks of the St. Mary's River it stops. The Florida rattler refuses to have diplomatic relations with his fellows across the Mississippi. Equally unsociable, the Texas diamondback, like the little piggy of nursery tales, stays strictly at home.

"Strangely enough, and quite contrary to general belief, the clearing of the jungle or wilds increases rather than prevents losses from snake bite. As the tall grasses disappear, the larger animals and birds of prey retreat; but the snakes stay to enjoy the blessings of civilization. They have more food and less competition. The more snakes eat, you know, the more they reproduce. So with more snakes and more people coming to the clearing, the toll of victims is naturally heavier.

"Snakes are most dangerous in May, when they get together for reproduction, and in October, when their young appear. In this latter month, too, the eggs of most non-venomous snakes, laid in September, are hatched. Snakes increase at the rate of from twelve to sixty a year."

To make the woods and waterways safe for humanity, to further knowledge on the subject of venomous animals in general, and to develop means of preventing deaths, the Antivenin Institute of America was founded, in June, 1926. It is part of and has the active support of the Mulford Biological Laboratories, distributors of the saving serums, as well as that of dis-

tinguished individuals and organizations.

The Institute maintains stations at San Diego and San Antonio. Stations were opened at St. Louis and New Orleans in December, 1927; another is maintained in connection with the Bronx Zoölogical Gardens, New York City.

"In three months," said Doctor Amaral in speaking of the first two stations, "venom from over four thousand rattlesnakes, as well as many copperheads and moccasins, was secured. One truly venomous New World snake gives enough venom to prepare antivenin for the cure of four or five persons. The snakes are captured with lassos or wire hooks. From thirty to fifty cents per pound is paid for live snakes. They are 'milked' twice a month."

This milking consists of, first, making them bite through a rubber sheet, and, second, squeezing their supralabial glands to help the evacuation of the whole poisonous secretion. The venom is then purified, dried, and sent to the central laboratory. There the immunization of thirty horses against both North and Central American snake venoms is progressing very satisfactorily. The venom is injected into the animals in small doses; these are gradually increased, and after a few months they are bled. The serum is prepared from the drawn blood.

Complete instructions on what to do when bitten are contained in pamphlets which accompany the vials of serum. Above all, victims are warned to avoid alcohol or any stimulant; by speeding up the circulation, these may help the distribution of the venom throughout the body.

Doctor Afranio de Amaral was born in the Para rubber section in northern Brazil of Brazilian-Scotch descent. When fifteen he received the degrees of B. Sc. and LL. B. from the University of Bahia. He studied two years at the Sorbonne, in France, returned to Brazil and entered medical school. He was awarded his M. D. degree when twenty-one.

He affiliated himself with the Butantan Institute, where studies in snake bite relief have been progressing for over twenty years. After another year abroad studying in Germany chiefly, he enrolled at Harvard University, and was graduated in 1925.

MARY THERESA COLLINS

He Didn't Leave the Woods Until He Got What He Went After

IN THE summer of 1871 a group of boys entered the woods in the vicinity of Big Moose, New York, in the Adirondack Mountains. Somebody had told them it was easy to earn one hundred dollars in the woods. But they hadn't been in very long before they found they needed more than traps to collect even a few dollars' worth of skins. And when the first snow fell they decided to leave. All but one a long lank youngster who hailed from the Mohawk Valley.

"Ain't you goin', Bill?"

"No!"

"But what you count on doin'?"

"I came here to get one hundred dollars, and I ain't goin' out till I get it!" he answered deliberately. And he stayed.

William Dart never has gone out, except for visits to Florida, where he now has a winter home, to New York and other places that draw his interest for the time being. But there is a story to the effect that when he went out of active business in the management of the camp he established—the first camp of its kind settled in that part of the Adirondacks—it was with a profit of forty-two thousand dollars.

When the shadows closed upon the retreating figures of his pals, young Bill Dart turned to the serious business of keeping himself alive. Winter came with its hardships. Still he had not earned his hundred dollars. He stayed on, stubbornly choosing to be found dead where he was rather than go out of the woods empty-handed.

Once he was ill, and another guide followed his line of traps to the lean-to he'd put up, to find him twisting in the knots of rheumatic fever. But gradually he was growing into an expert. In the winter he learned to make moccasins, tan skins, and do other things that brought in a little money.

PHOTOGRAPH BY F. A. HODGES, UTICA, N. Y.

When William Dart was a boy, he went into the woods to earn $100 trapping animals. He didn't get it—then. But he stayed till he got a lot more

The time came when he got a chance to do some guiding on his own, and reached the place where he could make three dollars a day, working fourteen hours a day.

In 1879 he built his first house near the lake now known as Dart's Lake. His first big speculation was the purchase of the six-hundred-acre property, including the lake, from the late Dr. W. Seward Webb, then president of the Adirondack Railway. The price ran into the thousands, and undoubtedly took all his courage, not to mention spare change, to negotiate.

In 1888, William Dart married. Comely, of good German stock, the bride traveled with her husband, via lake and trail, from her home in Laketown, New York, to his home in the woods. They went by stage to Moose River Tannery, by horseback to Old Forge, by boat through the First, Second, Third and Fourth lakes, to what is known as Becker's Camp, and then to Bub's Lake, over the carry (trail) to Moss Lake, to Dart's Lake. And when they made the return trip, accompanied by a man to help with their dunnage, the woman was as firm of step as before; but braver.

A few hours after they arrived at their destination, a daughter was born to the William Darts.

From about this time on, Dart's future began to take shape slowly but definitely. Increasing numbers of men from the cities, wanting to live the primitive life for a space, followed him into the woods. While they tramped and fished, Mrs. Dart cooked for them meals that were memorable. Campers of twenty years ago will tell you how, after the last of these meals each evening, they with the dogs gathered around a bonfire on the point by the lake, and made Bill tell them stories.

From the highway in to camp, he cleared the one-track dirt road. It lies today pretty much as he made it; a circuitous, winding canyon in the woods, with walls of firs and hemlocks rising sheer for many feet on either hand. At the right is a succession of fields, where he dynamited the trees out.

Gaunt, in his seventies, his eyes appear to be dim when he sits for hours in his chair before the fire. But these eyes sharpen when he regards you, and you know that he is pretty well able to tell what manner of person you are.

TOMATO SOUP

A sparkle in every spoonful!

SOUP

and why men like it

WHAT IS IT about soup that makes it an essential dish in the rightly selected menu? Why are men so eager to eat it? What makes it such a welcome dish to everybody in the family, children included?

Delicious flavor, to begin with. In the tonic liquid food, soup, the skilled cook has the opportunity to blend so many different ingredients and in such a fascinating variety of combinations that the sense of taste responds instantly and always. No other food appeals in the same way or offers such a varied and steady chance to the housewife to tempt and "interest" the family appetite.

The liquid invigorating soup acts promptly and with sure effect. Its savors and its flavors immediately set the digestive juices in freer motion. The result is a keener enjoyment of all the food on the table and greater benefit from it. Soup itself nourishes and it also aids you to digest your other food more completely.

HOME COMES the man of the family. He has had a hard day's work. He is tired and he needs refreshment, as well as solid food. You place before him a delicious, appetizing plate of soup. The very sight of it challenges his taste. Every spoonful is a bright, flavorful invitation and satisfaction. Within a few minutes, he is refreshed and a new sparkle is given to his meal.

And it's so easy! To each Campbell's Soup you simply add an equal quantity of water, bring to a boil and allow to simmer a few minutes. 21 Campbell's Soups to choose from, all listed on the label. Your grocer has, or will get for you, any soups you select. 12 cents a can.

In every town I win renown,
I'm Soup Chef for the nation.
I take my pride in spreading wide
The Campbell's reputation.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

THE CLEANSING OF THE TROPICS

For generations the scourge of tropical epidemics preyed upon America. By the hundreds, by the thousands, yellow fever struck down men, women and children. Without apparent reason it passed from city to city, from country to country. There seemed to be no escape, no remedy.

Then the discoveries of Koch, of Pasteur, of other great fighters of disease, brought a gleam of hope. These men had found the cause of tuberculosis, they had evolved the antitoxin for diphtheria. They had worked marvel after marvel. Perhaps they could also succeed in defeating yellow fever.

Science accepted the challenge. Less than thirty years ago a group of men under the leadership of Doctor Walter Reed set out for Cuba to undertake the task. After months of intricate research, after many daring experiments, at the cost of the lives of several of their number, they proved conclusively that yellow fever is spread by a mosquito.

Immediately there started a mighty war upon the gutters, the cisterns, the cesspools of the tropics. Gradually (though in truth, when the task is considered, it was with almost magical speed) yellow fever began to retreat. It passed from Havana for the first time in centuries! Gorgas conquered it in Panama! It vanished from such formerly dreaded spots as Vera Cruz and Guayaquil! Soon it was completely under control—the tropics had been cleansed!

It was American medical science that won this tremendous victory. In the West Indies, in the Philippines, too, in Africa, in China, America has also led in the saving of countless lives.

In the constant struggle being waged against infectious diseases, the House of Squibb has played an important part by providing preparations of unquestionable trustworthiness for the use of physicians everywhere.

For almost three-quarters of a century, now, Squibb Products have thus unfailingly served the medical profession and all users of medicinal products. They have earned world-wide recognition for their purity, uniformity and efficacy.

Whenever, in emergency or in following your physician's instructions, you need a medicinal product such as Cod-liver Oil, Epsom Salt, Milk of Magnesia, Boric Acid, Bicarbonate of Soda, Castor Oil, specify the one made by Squibb. For with that name is linked the "Priceless Ingredient," the honor and integrity of the maker. It symbolizes a promise of safety and satisfaction that has always been kept.

Edwin Markham's Three Glimpses of God

(*Continued from page 26*)

the Suisun Hills, between San Francisco and Sacramento, she bought a hundred and sixty acres of land and became a wheat grower and sheep raiser.

Later she sold her sheep and went in for cattle. At the age of twelve, the youngest Markham, a strong, vital, supple boy, plowed and harrowed and sowed wheat. At fifteen, he was doing a grown man's work, riding out of the corral early in the morning and into the hills to care for the cattle.

Astray in the Sacramento Valley, the cattle would cross into the tall river grass, which grew to a height of ten or twelve feet. There, they were practically lost, and when the young cowboy of the hills set out to find them, he might be gone for days.

Up to his fifteenth year, this young pioneer lad had but fifteen months of schooling, but he was a-thirst for learning. His boy comrades were enthusiastic followers of the adventures of the juvenile heroes of the day—Dead-eye Dick and Three-fingered Jack—but into Edwin's blanket roll would go Bullion's grammar and Ray's arithmetic.

IN THE autumn of his fifteenth year, there came to the bleak little schoolhouse that young Markham attended, a teacher named William H. Hill, a discerning, understanding man, a lover of poetry and romance.

During noon-recess one day, he fell into conversation with the boy from Lagoon Valley. Already, as the result of a quick-witted reply to some question or other, the teacher had Edwin singled out as the object of special attention. On this occasion the frontier lad told of his thoughts while caring for his mother's cattle. In his shy boyish way, he spoke of budding trees, and mating birds, and swollen streams, and the smell of the earth after rain.

The teacher listened in pleased surprise. "You have a real vein of poetry in you," he said; and, when the apt pupil showed blankness, Mr. Hill went on to explain that there were in the world great souls known as poets, and he named some of them—Tennyson, Moore, Bryant, Poe.

In that whole region, so far as could be discovered, there was not then a single book of poetry. So Mr. Hill, sitting on the bench in front of the schoolhouse, recited from memory for the benefit of his pupil long portions of the great poems he loved.

On first hearing words set to music in this way, a strange excitement came over the cowboy pupil. He asked for more—and more. Their lyric fire kindled young Markham's soul: It was as though the gates of Paradise had opened; and he had found his path to heaven.

"This new manner of expression, these thoughts congealed in music like the witchery of Jack Frost on window panes, had a most lasting effect!" said Edwin Markham. "It swept through me like a madness. Afire with the great need that had sprung up in me, I went to my mother and said, 'I must get copies of Tennyson, Bryant, and Tom Moore, and one of Webster's Unabridged Dictionary to help me understand those poets.'

"'Where did you think you would get them, boy?'" my mother parried, in her cautious, canny way.

"'You'll buy them for me!' I declared.

"But Mother couldn't see it that way.

"Behold me! A would-be student of the poets, in utter despair! Mr. Hill had written a number of poems down for me, and these I recited and read over and over again. But they didn't begin to satisfy my appetite. I was a-thirst for more beauty. Again I went to my mother.

"'I must have the books,' I said. 'Please lend me the horses and the plow, and I'll find a farmer who'll let me plow for money to buy them.'"

TO THIS his mother agreed. Young Markham found a farmer willing to pay a dollar an acre for the plowing of twenty acres of rough, stony land. In triumph, he returned home with a twenty-dollar gold piece, which he confided to his mother, who was presently to make her annual pilgrimage to San Francisco. Thus, after a wait of many weeks, he found, on her return, stowed away in the wagon, along with barrels of sugar and molasses and salted salmon, a bundle containing the poets and the miraculous Unabridged.

Much in these books he was too young to understand, but diligently he paged his Unabridged. The sense of all the simpler things, the music, the rhythm, the march of line and rhyme, took hold of him anew. Then one day, months later, while he was rummaging in an old cupboard, he came upon a book covered with dust, mold, and cobwebs. It had been left there two years before by his elder brother, Henry—a copy of Byron in heavy calf-skin!

"And now," cried the poet, "in reading Byron I had a new experience. I was tossed as upon a vast, mysterious sea; was swept away, lifted far beyond myself, voyaging upon his marvelous ocean of resounding words.

"With what avidity I read Childe Harold's Pilgrimage, Darkness, The Ocean, The Destruction of Sennacherib, When We Two Parted, The Eve of Waterloo. How many times I read The Dream, that poem which tells of Byron's impassioned but tragic affection for Mary Chaworth! It invoked in me visions of loveliness, and laid a strange enchantment upon all my romantic boyhood.

"Thus, out of Byron I sprang as a stream from its fountain source. Under his inspiration I began to write. My first poem, I remember, was called 'A Dream of Chaos.' It could hardly have amounted to much. No matter! I was now under full sail, writing continually, filling small notebooks with hundreds of poems and words and phrases that sang for my boyish ear."

Ambition sprang up in the young poet's heart. He wanted to go to Teachers' College at San José and possess himself of all the tools of learning and the keys to all the libraries and the culture of the world. How out of place seemed all fancies such as these, in his crude environment! His mother urged him to direct his thought to increasing their herds of cattle and becoming a prosperous farmer. But the lad craved other and finer things. That house divided against itself could not stand. Somewhere, he fancied, a job could be found that would furnish money for his schooling; and one day, his mother being absent, like a young Don Quixote astride his Rosinante (in this case a lively, rollicking buckskin broncho), with a blanket roll containing grub, his grammar, and his precious books of verse, he rode out in quest of schooling and honor—and renown!

The day was half way toward noon; the sun bright and clear. "Where now?" he asked himself, for he had not settled where to go. And the answer came without his waiting for it, one that was worthy of a bold knight-errant. "I'll ride in the direction I know least!" said he. So, turning his broncho toward the north and the far-off, blue, hazy summits of the Coast Range, he did that very thing.

Many adventures befell him. He was detained by constables; again, in the giant redwoods of the Coast Range, he was stopped by the notorious, hairy, bearded, bad bandit of the region, Black Bart, who was accompanied by his Three Merry Thieves. They let him pass, nor charged him revenue, for he had none—none but books! By night he slept on green boughs and a blanket; or, perchance, having forded swollen streams, the night found him dancing, naked, around a camp fire until his clothes dried out.

But on, on, to the north, until he was more than three hundred miles from home! Here he worked on a large cattle range for six months. What was his amazement one morning early in the seventh month, to see his mother drive up to the gate of the ranch-house in a buckboard. After the most energetic efforts, involving appeals to the Masons and to the Post Office, and finally through a letter to a sister which had inadvertently come into her hands, she had found out where he was.

"'Since you're so set on going to Teachers' College,' she said, 'I've made up my mind to help you all I can. But first I want you to come home, Edwin.'

"I WENT home with my mother," said Markham, "promising to remain until the college opened. One day, close beside a big rock on a path near our house, I was digging for soap root, a root which makes lather suitable for the family wash. Under this rock where the soap root ran, my shovel crashed upon what seemed to be metal. I pulled out a canvas bag. It was rotted and shredded. Presently, I turned up something that was clustered with dry earth. It shone like gold. I rubbed it on my breeches. It *was* gold! A twenty-dollar gold piece! Under that rock, someone, a miner presumably, had buried a bag of five-, ten-, and twenty-dollar gold pieces, more than nine hundred dollars in all!

"For me, this was the legendary pot of gold at the end of the rainbow. The find, as well as my mother's change of heart, made everything possible, helping me through school, so that in 1872 I had my diploma, and went forth to teach."

And now we can but scratch the surface

Digitized by Google
Original from UNIVERSITY OF IOWA

of events, rapidly passing over several decades in order to come to that period when, mature, ripening and wise, he was ready to catch and ponder and record in glorious phrases thoughts that came to him like gleams from the Infinite.

After leaving his first teacher's position in San Luis Obispo County, he carried his schooling farther and taught in many places. Ever faithful to the Muse, his first significant poem, "The Gulf of Night," appeared, in 1880, in a California magazine, after which he was a frequent contributor to the leading magazines of the East. At the age of thirty-four, in 1886, a teacher-poet still, he was serving as county superintendent of schools in Placerville, California.

"I had in my library," Markham said, "a copy of Fourier's 'A General Introduction to Social Science.' It was packed with what were then new social truths. A thousand times, in the little Lagoon Valley, hoeing and weeding the garden and orchard on my mother's farm, I had experienced the weariness and ache of the unbroken day's work. This book and these memories gave me a deep compassion for all who toil. It was in my mind to write an epic of labor, and from time to time, with the literarians I knew, I discussed this project.

"ONE evening a young friend came to my home in Placerville and laid on my desk a magazine which contained a reproduction of a world-famous painting, Millet's 'The Man With the Hoe.'

"'There's the man you've been talking about!' said he. 'Yes,' I deplored, 'this is the brutalized man at the bottom of the human ladder! He's the hero of my epic!'

"We talked about it at length; then my friend departed. I sat late that night brooding over the picture. I saw that Millet's figure is not the working man in his higher estate, but is of the toiler in the abyss, with none of the hopes and dreams that make us men.

"But there he stood, a startling figure, in all his rugged reality. In my large notebook, I wrote the four opening lines of the poem; substantially as they stand today:

"Bowed by the weight of centuries, he leans
Upon his hoe and gazes on the ground,
The emptiness of ages in his face,
And on his back the burden of the world . . .

"Then the cares of life swept in, thick and fast. I had much bread labor to perform. This and many other poems were left unfinished. Later, when visiting my mother's home in San José, I did write out in their first form other lines of the poem; but these were only whirls of star-dust, and not yet concentrated into a moving orb."

Up to this time Edwin Markham had not been given the whole vision, as it was eventually to come. Thirteen years passed; he was forty-seven, located in Oakland, head of the teachers' training school of the State University. In the course of the summer vacation, while turning the leaves of his old notebook, he came upon the original notes for the poem, and felt that this was the next subject for his pen. The following December he heard that the "Hoe" painting was on exhibition in San Francisco. He hastened to see it.

"I cannot describe the thrill that passed through me," he said, "when I saw what painting it was that had the central place, dominating the whole room. It was the original of 'The Man With the Hoe,' from the immortal hand of Millet, which had recently been purchased at a cost of sixty thousand dollars by Mrs. William Crocker and lent for this occasion!

"For an hour I sat enthralled in front of it, and when I left I was like one under a strange enchantment. It was as though this awe-inspiring shape, full of terror and mournful grandeur, had risen before me from Dante's dark abyss; yet, at the same moment, I was filled with exaltation, as though the heavens had opened and given me a message for mankind.

"Immediately on reaching home I wrote out the first stanza in its completed form. All the rest of the day I could but ponder upon this arrested life that had lost step with the divine music of the world. The following morning I awoke at daybreak with the idea of the second stanza ready to be molded into form. I sprang out of bed and wrote it down, interweaving some of my old material with the new lines that came flashing in:

Is this the Thing the Lord God made and gave
To have dominion over sea and land;
To trace the stars and search the heavens for power;
To feel the passion of Eternity?
Is this the Dream He dreamed who shaped the suns
And markt their ways upon the ancient deep?
Down all the caverns of Hell to their last gulf
There is no shape more terrible than this—
More tongued with censure of the world's blind greed—
More filled with signs and portents for the soul—
More packt with danger to the universe.

"As on the preceding day, I could write no more, but could only moon and croon over these lines, changing a word or revising a phrase and pondering vaguely what next might come. Strange as it may seem, each of the following stanzas seemed to be handed down in the same fashion, out of the white fire of the morning. They seemed like gifts more than creations. Where did they come from? Were they, in the deep of night, laid away in the mind by powers we know not of?

"On completing the fifth stanza, I knew that nothing more was to be said; that my poem was not to be the story of creative and exalted toil such as I had contemplated years before, but a word for the humiliated and wronged."

SHORTLY after the completion of the poem Edwin Markham attended a literary gathering in San Francisco. Each member of the circle was asked to contribute something to the evening. With a copy of the Hoe Man in his pocket Mr. Markham was prepared; and it was this gathering which first heard read aloud the complete poem, of which this is the fifth and final stanza:

O masters, lords and rulers in all lands,
How will the future reckon with this Man?
How answer his brute question in that hour
When whirlwinds of rebellion shake all shores?
How will it be with kingdoms and with kings—
With those who shaped him to the thing he is—
When this dumb Terror shall rise to judge the world,
After the silence of the centuries?

"At the conclusion of a reading of this sort," observed the poet, "either because the audience approves the sentiments or because they are glad it is over, there is usually some applause. In this case, there was nothing of the kind, but a prolonged, impressive silence. Then, abruptly, Bailey Millard, editor of the San Francisco "Examiner," crossed the room and asked to read the manuscript. Twice, he read it hastily, then handed it back with this remark: 'That poem will go down the centuries.'

"A few days later he purchased it for publication in his newspaper, advertising it for three weeks with lurid phrases, and finally printed it in large type in the center of the editorial page. Almost immediately it caught the imagination of the country.

"Thousands of editorials were printed, raising the question of who was responsible for the brutalized toiler in the abyss. One newspaper offered a prize for the best answer to it. Lecturers took it up.

"Hot upon these events, before I had time to realize what was happening, I received telegrams from seven publishers, proposing arrangements for bringing out a volume of my verse, including the Hoe Man. So I found myself humorously reciting:

"Seven cities contended for Homer dead
Through which the living Homer begged his bread."

NO MORE begging for bread! No more futile appeals to publishers to let the voices of his collected work be heard! "The Man With the Hoe and Other Poems" made a big success. Markham took leave of absence from his teacher's position, and came East. Presently, at the end of 1899, a new call came to him, for, as the poet remarked with a twinkle, 'God works in a mysterious way his wonders to perform.'

"Four grave and reverend seniors, from a rich, exclusive New York club, knocked at my door in Brooklyn, my first home in the crowded East," he explained. "I was told that their select company was about to give a Babylonian banquet at Delmonico's to celebrate the first Lincoln birthday anniversary in the twentieth century. The rail-splitter, whose early rations were slices of bacon and a hunk of corn bread, was now to be honored with a groaning table at twenty dollars a plate!

"Lincoln was one of those men with hearts of great compassion—eager to extend social justice. Such souls are in touch with the Higher Power, with the One who watches: At mention of Lincoln's name my heart leaped, singing. For no recompense, only for my love of this lofty soul, only for the joy of the doing, I promised the poem that the committee wanted. But not with certainty. 'Gentlemen,' I said, 'for Lincoln I have deep love and reverence. I will wait patiently upon the Muse. If she gives the poem to me, I will give it to you.' Then I plunged with a passion into the task, reviewing in my mind all that I knew about the Martyr President.

"There were three weeks before me in which to woo the Muse. On the evening of the third day, I sat down to write. Alas, I was too eager! Words did not come.

"During the following week I read a score of books on the life of the great President. The time was drawing near when I must rise in my place and read my ode. But no inspiration came.

"The following afternoon the four

To New Shavers —*and old:*

Make this 10-day test before you decide you've found the ultimate in a shaving cream that suits your face

GENTLEMEN:

When we decided to go into the making of a shaving cream we were told that men were fickle—that they changed shaving creams as easily as they changed their shoes.

But this we believe is wrong. For in the few years this new shaving cream has been sold, we find there is a peculiar loyalty to it. We find the younger generation is "going Palmolive" when it comes to shaving.

And we know for fact that 85% of those who take our 10-day test, remain wedded to it.

If you do not know Palmolive Shaving Cream, why not send the coupon now and give us a chance to win you? You'll thank us when you know the joy it brings. And the burden lies entirely with us to prove our claims.

We first asked 1000 men

We sought, first, the shortcomings of other shaving methods before we even started to create Palmolive Shaving Cream. 1000 men's views were asked, their answers analyzed.

Then our 65-year-old laboratory put its most skilful men on the problem to exceed these expectations. Time after time they failed in one way or another—129 times in all. Then we won.

These 5 exclusive new features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now make the trial, please

No doubt your present shaving preparation suits you, yet there may be a better way. We've tried to find one for you, and will thank you to give it a test. Just send the coupon now, before you forget.

PALMOLIVE RADIO HOUR—Broadcast every Friday night—from 10 to 11 p. m., eastern time; 9 to 10 p. m., central time—over station WEAF and 32 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc — especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Clip the coupon now.

members of the anxious committee called on me for news. I had nothing to show them; but I was still hopeful, courageous, full of faith.

"So I pondered, waited, yielded not an inch. Two days remained. As there is something witching and creative about the night hours, I determined to sit up that night. I watched the stars away; but the Muse did not descend.

"ANOTHER night I kept watch—the last night on the brink of the great banquet. At midnight, I found myself reading a poem of my own, "The Desire of the Nations," which appeared in my first book of verse. Here I prophesy the coming of the great social deliverer. I read the lines over and over again, until the heat of them had penetrated me as a subtle fire, dissolving the cold prose of the mind and letting in the music of the spheres."

Thus, at two o'clock in the morning, in that mysterious hour "when churchyards yawn" the Muse touched Edwin Markham with the fire of her genius, granting him another gleam from the Infinite—a second glimpse of God.

"At that moment," he exclaimed, "I saw in Lincoln the providential man sent into the world at a great crisis of his people, for a great service to the race. I saw that the Norn Mother, the Divine Mother, the Creative Mother of the universe, must descend into the earth from the Heaven of Heroes to mold this man—not to mold him out of the fragile porcelain from which she makes aristocrats and kings, but out of the tried clay of the common road, out of the clay from which she makes common people:

"When the Norn Mother saw the Whirlwind Hour
Greatening and darkening as it hurried on,
She left the Heaven of Heroes and came down
To make a man to meet the mortal need.
She took the tried clay of the common road—
Clay warm yet with the genial heat of Earth,
Dasht through it all a strain of prophecy,
Tempered the heat with thrill of human tears,
Then mixt a laughter with the serious stuff.
Into the shape she breathed a flame to light
That tender, tragic, ever-changing face;
And laid on him a sense of the Mystic Powers,
Moving—all husht—behind the mortal veil.
Here was a man to hold against the world,
A man to match the mountains and the sea.

"And I saw that this man must have in him the dear and fondly remembered qualities of the solid and homely earth, the labor-place and the resting-place of countless generations of men.

"The color of the ground was in him, the red of earth,
The smack and tang of elemental things:
The rectitude and patience of the cliff,
The good-will of the rain that loves all leaves
The friendly welcome of the wayside well,
The courage of the bird that dares the sea,
The gladness of the wind that shakes the corn,
The pity of the snow that hides all scars,
The secrecy of streams that make their way
Under the mountain to the rifted rock,
The tolerance and equity of light
That gives as freely to the shrinking flower
As to the great oak flaring in the wind—
To the grave's low hill as to the Matterhorn
That shoulders out the sky.
Sprung from the West,
He drank the valorous youth of a new world.
The strength of virgin forests braced his mind,
The hush of spacious prairies stilled his soul.
His words were oaks in acorns; and his thoughts
Were roots that firmly gript the granite truth.

"Thus, the poem leaped into its elemental form. I needed only to add a few details of the man's character and express his tragic ending. In three hours it was finished, recopied three times to revise and perfect, and in another hour it was typewritten and on its way to the copyright office."

With the tremendous success of "The Man With the Hoe and Other Poems," and of "Lincoln, the Man of the People," not only Edwin Markham's position in American literature but his financial future seemed assured. From editors and publishers everywhere came requests for poems, essays, and books more rapidly than they could be met. During the years 1900 to 1905, he made ten thousand a year with his pen, an extraordinary achievement in those days, particularly for a poet. Moreover, the sales of "The Man With the Hoe" continued to mount to a figure never before achieved by a book of verse—hundreds of thousand of copies. Eventually, this alone was to bring in sixty thousand dollars.

"I paid up my debts," Markham continued, "squared myself with the world. I bought a home in a pleasant neighborhood in Waters Avenue, Staten Island. With a care-free sense of exaltation, I was looking forward to years of creative writing—independence! But that was not to be. For I bethought myself of investing what fortune had put in my lap. Though my desire was for sound, safe investments, to free me from worldly cares, I was badly advised and guilty of some negligence myself.

"In my first venture I lost twenty-five thousand dollars. Through a promising land development plan in California I lost an additional fifteen thousand dollars. But before either of these ventures failed, I had already lent a large sum of money on valuable property which, as it turned out, did not actually belong to those who claimed to own it.

"So, in rapid succession, came blow after blow. Here I was, in 1912, at the age of sixty, not quite penniless but with my financial power utterly broken. Figuratively speaking, except for my home, I was flat on my back on the cobblestones.

"Gloom? Despair?" he responded to my questions. "To be sure, there were moments when I experienced something of the sort; hours when I felt crushed. But never was it long before I assembled my philosophy of life and met the phalanxes of gloom demons in counter attack."

"EXACTLY what did you do?" I asked. "First, I consulted with my friends. As one cannot every day produce a poem worth fifty dollars to a publisher, nor one worth five hundred, and as I needed a sure means of livelihood, I chose to go on the platform as lecturer and reader, talking about the art of poetry and reading from some of my own work. In my lectures I had in mind always one definite idea—that of helping others bear their burdens. Not that I wanted to belittle or befog the reality of human sorrow or the tragedy that all too often enters into our earthly struggle; but I was determined that no regrets of mine should tinge my conduct with bitterness.

"Soon, people who came to hear me on the platform were saying that I helped them. In the pleasure this gave me there was another incentive to forget what I had just passed through. To my surprise, in the midst of this success on the platform and the warmth of friendship shown me on every hand, the past was all but obliterated, shaken off as one shakes off the weight of a bad dream.

"What some might lack under similar reverses is a sense of human values. We are apt to place too much emphasis upon material success. Material success is important, to be sure, for it may open the way to great spiritual adventures; but the all-important thing is the high heart and generous activities, when otherwise one might despair.

"The philosophy that sustained me through this ordeal? It was very simple: For one thing, I saw that happiness does not depend upon the amount of property we own, but upon true friends and the opportunity to earn one's way by labor. Again, as I saw it then and as I have told myself many times since, we are in this world in preparation for another adventure in a wider and more useful sphere. I believe in the survival of the soul; that character is the ultimate outcome of mortal experience; that our present world is but a spiritual Kindergarten for the High School ahead; that death is only the next Frontier of the Great Mystery. Because of these beliefs, at moments when otherwise I might have given way to depression there surged up within me this rallying cry: 'Courage! Life is but the stuff to try the soul upon!'"

TRIUMPHANT under the caresses of fortune, Markham now bore himself triumphantly under the grim cross-strokes of fate, and went his way scattering glints of gravity and gayety throughout the nation, living the poetry that he had sung!

One day, in 1916, four years after these crushing events, he was sitting at his desk contemplating a long poem with many of its lines incomplete. There were many engagements ahead, and that poem, like many others, must remain in an uncompleted state for an indefinite period.

In an unwary moment, there stirred within him a trace of resentment over the disasters of the past. But the poet holds no enmities against any man. He knows that the man who hates hurts himself more than he does the other fellow. He is certain that there is no safety except in love. "Love will outwatch the stars," he has said—and so it happened that on this particular afternoon his resentment subsided; the philosophy of his life returned; and, in a flash, on a sheet of paper, he had inscribed two circles, a diagram of all that wisdom which the years had brought: a brief, inspiring allegory, subtle but clear, a terse summation of religious and human faith, all-embracing Love: four lines which have come to be one of the best known quatrains in the world. Here it is:

OUTWITTED

He drew a circle that shut me out—
Heretic, rebel, a thing of flout,
But Love and I had the wit to win:
We drew a circle that took him in!

One word more about the consequences of these financial reverses: For ten years they put a handicap upon Mr. Markham's literary output, lessening it to the extent of at least one volume a year. But it is

possible, as the poet said, to acquire the ability to write under all sorts of circumstances. This he did. Half of all his poems have been written while waiting for trolley cars, or at railway stations, or when riding on trains, or when waiting for luncheon in some restaurant or hotel.

And now, at seventy-six, in addition to practicing his art, he is still lecturing, traveling far and wide, in a single continuous journey visiting twenty or thirty communities. Also, in this later period he took upon himself three years of monumental toil to produce a record, in two volumes, of his sixty years of joyous roving among the poets—what has come to be regarded as the greatest anthology of its kind in the language, "The Book of Poetry," with thousands of explanatory notes and 3,243 pages of selections from the poets of all time. And this, with a vigor, determination, and youthfulness that would be praised in a man of forty!

Our last conversation took place in an alcove of his study. All unexpected, a delegation of students from Hunter College had come to pay him their respects. From an adjoining room we could hear their voices. Youth! Laughter! Life at its beginnings and its highest hopes!

"They are young, and you are old and wise," I said, "and yet young too, or they would not have come!"

"Young and still in harness!" was the response. "And I'll stay in harness till I die!"

"IF YOU could have your way, how would you like best to die?" I asked.

"On the fighting line!" was the quick response. "No pinochle, no solitaire, no lounging in antique hotel corridors for me! I have none of the decrepitudes, no aches and pains, none of the complaints of old age. I should like to end that way—and make a joyful exit from the platform which has been my home these later years. I should like to go just after reading the last stanza of 'Lincoln, the Man of the People'—

"So came the captain with the mighty heart;
And when the judgment thunders split the house,
Wrenching the rafters from their ancient rest,
He held the ridgepole up, and spikt again
The rafters of the Home. He held his place—
Held on through blame, and faltered not at praise—
Towering in calm rough-hewn sublimity.

So be it! Let his end be dramatic, and in a moment of great spiritual exaltation! He asks nothing better than to have the last four lines of this stanza as a preface for his passing over the next Frontier of the Great Mystery:

"And when he fell in whirlwind, he went down
As when a lordly cedar, green with boughs,
Goes down with a great shout upon the hills,
And leaves a lonesome place against the sky."

EDITOR'S NOTE: Mr. Markham's poems used in this article vary slightly from some previously printed versions. The poet himself authorized the lines as we produce them.

"Old Men Sitting in the Sun"

(*Continued from page 37*)

"Gallant, I mean, and generous!" persisted the man. "Showing me the best of everything, even from the first day I arrived! Horses, tennis courts, everything!"

"Oh, that's all right," said the girl.

"But I haven't been so awfully nice to you," confessed the man. "Not quite honest, that is. You took it so for granted, I mean, that I'd never been here before that I just let it pass. But I have been here before! Twenty years ago! Nineteen years to be perfectly accurate! The summer I was twenty-one it was! And all the views you've shown me and all the walks and everything— I've seen them with another girl!"

"Oh, that's all right too," pulsed the cool cheek that almost grazed his cheek. "I've seen them, of course, with lots of men, and shall undoubtedly see them again with just as many more."

"Thanks," said Raynard. The car picked up speed a little. Very faintly he joggled her shoulder to attract her very particular attention. "Gad! But you're sweet!" he said. "Sweet!" A trifling huskiness crept suddenly into his voice. "I shall never marry!" he said. "I'm not that kind! But I wish to heaven that I were! I wish to heaven that you wanted to marry me! And that I wanted to marry you! But I tell you—I tell you—" The unmistakable timbre of panic crept suddenly into his voice. "But I tell you I don't want to marry anyone—at all!" he said.

The girl at his side laughed out quite frankly. Breeze-blown, breeze-cool, her laugh flaunted like a banner streaming in the wind.

"SILLY!" she said. "Does anyone ever really want to marry? Actually choose, I mean, to walk deliberately and cold-bloodedly even into so sweet a trap? Not till the tom-toms begin to pound! The pulses, of course, I mean! The—"

"Huh! You're mixing your metaphors!" scoffed Raynard. "Tom-toms—and traps? What a lovely absurdity!"

Once again her soft laugh streamed like a banner across his ear.

"All metaphors," she insisted, "were meant to be mixed and well shaken—before taken!"

Raynard's frowning profile showed just a trace of astonishment.

"Truly you do astonish me every now and then," he admitted. The faintest possible chuckle slipped from his own lips. "Do you want to know what it was about you that really astonished me first?" he questioned. "It was your shoes! Some little brown shoes sticking out around the jog of the piazza! Legless, trunkless, headless little shoes, as far as I knew! But fairly teeming with personality! One of them had the tiniest little wisp of a four-leafed clover snagged in the toe! It looked cunning. I shall always remember it!"

"Do!" said the girl. "If you really insist on keeping my memory green what could be greener than a four-leafed clover?"

The man's cool cheek hollowed suddenly, as though he had bitten somewhat reflectively into it.

"No, but honestly," he persisted. "All joking aside, I wonder just how I shall best remember you?" The faintest possible sternness crept into his half-averted voice. "After all," he reproached her, "you've been pretty noncommittal. The only thing that I really know about you is that in August you dance enchantingly, play a very fair game of tennis, handle a boat mighty well, sit a horse rather gracefully, romp, flirt, read—all in August. But what is your real job in life? The job that yields you your pay! I mean!—Praise—Sympathy—Envy—! Hatred and malice for aught I know! Whatever it is that you rate as 'pay'? What do you do all the other eleven months of the year?"

"What do you do?" countered the girl.

Vasco Raynard swallowed once or twice before he answered.

"I'm a mining engineer," he said. "Hell of a job!" he admitted quite bluntly. "But hanged if I don't like it! The zest, the pep! The incessant fight with elements! Hanged if I don't like elements! Fighting 'em, I mean! That's the job I'm off on tomorrow. A big cobalt mine up in the Northwest! Some complication that won't yield! His jaw tightened suddenly. "By gad! It's got to yield!" he said.

The girl drew aside a little, gave a frank little gasp of astonishment.

"A—a 'mining engineer'?" she questioned. "Why—I would have guessed you were a teacher, perhaps, or a lawyer! Someone who lived rather smoothly with fine books, and stately furniture and polished floors, and polished compliments! Oh, very specially with polished compliments! But cobalt mines—?

THE car slowed a little. He twisted slightly in his seat, slouched sideways with a certain air of expectancy.

"Well—?" he prompted.

"Well—what?" parried the girl.

"What do you do all the other 'leven months of the year besides just 'riching around'?" he reiterated stubbornly.

The girl picked up the phrase as though she found it flavorous. "'Riching around'?" she questioned. "'Riching around'?" Her tilted face looked almost consciously provocative at the moment.

"Oh, pshaw!" cried Raynard impetuously. "I think you're quite the nicest girl I ever knew! Even in this bawdy age, I mean, when almost anything goes, you've kept such a perfectly amazing dignity and sweetness and decency! Even in your unconventionalities, I mean, even in your amazing independencies, no decent fellow could ever mistake you! You're as white as shining stars! Any decent fellow would see that you are as white as shining stars! But I do think you're just a bit careless! Even if you remember me only and always, as having told you you were just a bit careless, I'm going to tell you just the same!"

"'Careless'?" questioned the girl. She seemed really very much interested.

CHRYSLER PLYMOUTH

$675 AND UPWARDS

Plymouth 2-Door Sedan, $700

At Last! A New Car Whose Like— *In Style, Performance and Value*— You Have Never Seen Before

CHRYSLER PLYMOUTH

Coupe	$685
Roadster *(with rumble seat)*	675
2-Door Sedan	700
Touring	695
De Luxe Coupe *(with rumble seat)*	735
4-Door Sedan	735

All prices f. o. b. Detroit

Chrysler dealers are in a position to extend the convenience of time payments.

An enthusiastic public now acclaims the new Plymouth as the most astounding value in three decades of motor car manufacture.

No one but Walter P. Chrysler and his great engineering organization ever attempted such a car at such a price.

Plymouth is the amazing realization of the Chrysler vision of a low-priced car, embodying the beauty, the quality, the value of the finest cars.

Abundance of power from the new "Silver-Dome" high-compression engine which uses any gasoline.

Luxurious comfort over rough stretches that many $2000 and $3000 cars can well envy. Supreme safety of internal expanding hydraulic 4-wheel brakes, with moulded brake linings, efficient in any weather.

Full-sized bodies with ample seating capacity for adult passengers. Fine, deep upholstery. Swagger body lines in the new vogue created by Chrysler—new slender-profile radiator—new bowl-shaped lamps—new type "air-wing" fenders.

See for yourself that a car of the style and quality of the Plymouth, a car that does the things the Plymouth does, really can be produced at such low prices.

You will find the nearest Chrysler or Plymouth dealer eager to show you this great new car. Ride in the Plymouth, drive the Plymouth—the most astonishing performance, quality, style and value that the low-priced field has ever known.

"Anybody as conspicuously lovely as you," persisted Raynard. "And as conspicuously unaccounted for in a great walloping hotel like this—? No older woman with you apparently—? No brothers or sisters evidently—? No intimate woman friend even—?" His mouth drew all in an instant to a taut, thin line. "Even if you hate me," he said, "I'm going to tell you! It's the manager, of course, that I mean. His extravagant solicitations! Even you must admit that his attentions to you are conspicuous! Your lightest whim? Your wildest fancy? A curtain drawn here, a window thrown open there? Always the saddle horse you prefer—? The tennis court that proffers the most shade? That angry woman who was moved out of the tower suite because that was the suite that you usually have? The hours that he spends in that suite with you?

"Oh, I know it's rotten. I know it's absurd! All the silly talk—all the horrid speculation! If he was even a man of your own class—your own race, the gossip wouldn't be so hot, I think! Oh, pshaw!" he said. "No one believes a confounded word of it—of course—but they just like to wallow their disbeliefs in it!"

A fluff of the girl's hair crinkled across his cheek.

"You mean," she said quietly, "that somebody has suggested that possibly I might be the manager's—?"

"Don't even say it!" snapped Raynard.

For the infinitesimal fraction of a second her cheek touched his.

"But I am!" she said. "If you choose to use the word in its more legitimate sense! Because, you see, I happen to own the hotel! And this manager that you speak of is most definitely—and loyally in my employ."

"Wh-what?" gasped Raynard. "Wh-what?" In the sudden startled flex of his hands the car all but left the road. Dominantly he steadied it to its course again. "Wh-what?" he stammered. "You really mean that you own all this great walloping hotel?"

"And the one in Detroit too," murmured the girl. "The one in Detroit is twice as big, only, of course, it hasn't got the golf courses and all the other outside things."

A GUFFAW that was plainly near being hysterical burst from Raynard's lips.

"Oh, gad!" he said. "Your money? It's even worse than I thought!"

"Oh, what nonsense!" said the girl. "Money's got to work some of the time. It can't play all the time." She sighed a little. "All this hotel business," she deprecated, "it's been in my family for three generations." The sigh deepened. "My father died four years ago," she added just a bit hastily. "I didn't happen to have a brother, so he left it all to me. I suppose he thought he was doing me a favor. But, I—I—" The sigh crisped suddenly to a little laugh. "But I," she laughed, "would so much rather have had a monkey and a hand-organ! I could have had fun with a monkey and a hand-organ."

"Who's talking nonsense now?" said Raynard.

"I am!" admitted the girl. "All the same, it's rather a big job."

"What is?" questioned Raynard.

"Hotels," said the girl.

"Too big for a girl," said Raynard.

"Big enough," she admitted. "Oh, of course I've got managers!" She grimaced very faintly. "But who's going to manage the managers? And the stewards? Someone, of course, has got to steward the stewards. And the new golf greens? Shall they be here—or there? And the saddle horse that kicked the little boy? What's to be done about that? And the new fireproof construction for the ell? Is it or is it not really fireproof? And that suspicious-looking girder that the contractor is so cocky about? How far shall I push my suspicion against his contradiction? And what about this new insurance scheme? And what—?"

With a little chuckle that might have meant anything, she nestled down a tiny bit further into her white furs.

"OH, OF course it's more or less fun sometimes," she admitted in all honesty. "Dashing in and out so utterly incog, I mean, from one hotel to the other. Studying—studying—studying—all the time! What do people eat? What do people drink? Why do they sleep? Why do they wake? What gives them pleasure? What gives them pain? What makes them come again? What makes them never come again? . . . That new Persian rug on the library floor? Why has it practically doubled the use of the library? That funny old piano in the lobby? Why do the summer people absolutely insist upon its retention?"

"Does Hollingsby know?" quizzed Raynard quite abruptly.

"Know what?" said the girl.

"About your owning the hotel?"

"No, indeed. No one at all knows it except my manager—and you."

"Why in the world did you tell me?" demanded Raynard.

"I don't quite know," she admitted.

"Gad!" said Raynard. "Gad!"

Once again in an almost hysterical abandon his boyish guffaw rang out.

As though vaguely related to the impulse of the laughter, he turned the car sharply and rather wildly into a wood-road that almost tossed them from their seats with its unexpected roughness.

"Sorry!" he apologized. "But this short cut saves us about three miles on the highroad and a swamp besides."

"You seem to know your way," murmured the girl.

"I have always known my way, until tonight," said Raynard. Whatever the significance of the statement was, there was no doubt whatsoever that it had significance.

"It was the road I was referring to," murmured the girl.

"I remember every bump of it," said Raynard. "Every overhanging tree, every crackling twig!"

"But nineteen years?" laughed the girl. "Hardly the same bumps, the same trees and twigs?"

Raynard made no comment.

Like a motor-boat rocking suddenly from surf into a glassy sea, the little car slipped into the highway again, and picked up an asphalt channel, inky black, inky smooth, through twittering farm-house lights and ragged fields, into the spangled edges of a tiny hamlet, where, sweeping casually through a deserted street, past a single lighted doorway, Raynard stopped his car suddenly and, reversing his engine, backed slowly but surely to the yawning door again, where, vaguely illuminated in the sallow flare, loomed a sagging sign: "Post Office and General Emporium."

Vaguely questioning, the girl's eyes lifted to his.

"Great Scott!" muttered Raynard. "Was I ever here before?" Tentatively he rubbed his hand across his forehead, nodded toward the yawning doorway, turned with a faintly puckered brow to stare at his companion again. "Um—m-m," he said. "Well, I'll be darned!" He began to laugh suddenly. "Most assuredly I've been here before!" he affirmed. "And I can prove it!" His eyes fixed on hers, narrowed a little. "Let me see," he reflected. "There used to be the weirdest-looking green jar of honey—on the third shelf—back of the wooden pails—next to the younger tomato cans. It had a picture on it of a very—very lovely lady—with none too many flannels on—floating quite unperturbedly through a swarm of bees. I hadn't thought of her for years until tonight! The picture I told you about, you know—? You look just exactly like her—just exactly! The floaty look, I mean! It came over me all of a sudden just as we were leaving the hotel through all that buzzing!"

He stirred a little, reached tentatively toward the door.

"What do you wager she's there yet?" he challenged.

Through the yawning door loomed the shadowy outline of men's figures huddled round the small bleary eye of a sheet-iron stove. "Let's go in," suggested Raynard.

"I don't mind," said the girl.

Acquiescently she slipped out of her seat and followed him from the flavorous, fruit-scented darkness through the pale yellow square of doorway, into the musty, cracker-scented gloom of the stark, barn-like room lighted only by the stove's bleary eye and the two smoky lanterns dangling wanly from their respective nails. Like gilded dove-cotes from which the birds had long since flown, a tarnished tier of letter boxes yawned blankly toward the newcomers and the light.

"Good evening—everybody!" said Raynard.

In an instant the huddled group at the stove had resolved itself into the definite figures of three old men: a baldhead sitting curiously aloof; a doughty graybeard tossing waste paper on the flame; a hawk-nosed gaffer wound in a red muffler, lolling with sharp chin balanced on a gold-topped cane.

Inadvertently Raynard gave a gasp.

"MERCIFUL heavens!" he said. "Can' we escape it anywhere tonight?—'Old Men Sitting by the Fire'?"

"And, 'Wouldn't you think they would perspire?'" countered the girl quite blithely.

Reacting to the sheer literalness of the comment, Raynard turned, half a-grin, to greet the old graybeard who came forward to meet him.

"Good evening!" Raynard's grin widened a little. "Got a letter for me?" he questioned.

"Got a—what?" stammered the old graybeard.

Hot-weather proof from equatorial Africa that your automobile engine will do better with

Mobiloil Quality

Hot weather imposes a severe friction load on your automobile engine. This stress becomes even greater when you drive at high speeds over open country roads or crawl along with frequent starts and stops in congested city traffic.

Dramatic proof of Gargoyle Mobiloil's hot-weather superiority is found in facts like these:

Mobiloil lubricated the first cars to cross the Sahara Desert in 1923.

Mobiloil lubricated the first motorcycles to go over the same route in 1927.

Mobiloil lubricated the first cars to travel from Morocco to Cape Town in 1926.

Mobiloil lubricated Major Dagnaux's plane when he flew across Africa—from Paris to Madagascar—in 1927.

Your Mobiloil is the most popular oil in hot countries the world over.

To use heavier oil than that recommended for your car in the Mobiloil Chart is to invite extra carbon deposit and possibly serious mechanical troubles. You are always sure with

Fair retail price—
30¢ a quart
from bulk, except "B" and "BB" which are 35¢ a quart. (Prices higher in Southwest and Far West.)

"A letter!" said Raynard.

"Sh—sh," whispered the girl. "Don't tease the old fellow!"

"Tease nothing!" said Raynard quite tersely. Once again he repeated his question: "I said—did you have a letter for me?"

The old man rallied as best he could from the instant's confusion.

"What name?" he questioned.

"Vasco Raynard," said the younger man.

The old man shook his head.

"No," he said.

"What do you bet?" challenged Raynard.

The old man bridled faintly.

"I been here twenty-eight years," he boasted. "Store and post office both! 'Vasco?'—'Raynard?'—Whoever heard a name like that?"

"All the same—" insisted Raynard.

A light hand brushed his arm.

"I said not to tease the old chap," cautioned the girl.

Raynard laughed.

"Say anything you want to!" he conceded. "But if there's a letter here for me, I'm going to have it!"

IMPETUOUSLY he reached toward his pocket. The gesture might easily have been the gesture of a gunman, but shifted most reassuringly to a flutter of greenbacks instead.

The old postmaster's eyes brightened.

"Say, who are you, anyway?" he grinned. "One of these-ere motor bandits that one reads so much about? Or just a fresh young feller ridin' out with his girl?"

"Oh, mercy! We're not motor bandits!" protested the girl. As though to prove indeed the incontestable innocence of her own intent, she slipped suddenly out of her rabbitskin coat, and easing her filmy way somewhat cautiously through the crowding boxes and barrels, dropped down on the empty stool nearest the fire and held her ringed hands to the flickering fire. "Oh, mercy—not motor bandits!" she reiterated with some emphasis.

Raynard caught her eye and grinned.

"Thus you cheerfully consign me," he reproached her, "to the rôle of being 'just a fresh young feller riding out with his girl'?"

Airily she shrugged both grin and reproach from her consciousness.

With a resumption of peremptoriness, Raynard turned back to the old postmaster again, and pointed imperiously into the murky distance.

"Where's the old hound that used to lie—there?" he demanded. "And the great bunch of red bananas that used to swing there? And the pictures of the two escaped convicts? And—"

"Oh, lor!" said the old postmaster. "There hasn't been a hound-dog here for twenty years!"

"It was twenty years ago that I was here!" said Raynard. "And a girl had promised there would be a letter for me. And, believe me," roared Raynard suddenly, "when I asked for the letter that night, and was told there wasn't any, I started right in to clean up things!"

"Wh-at?" said the old postmaster. "Wh-at?"

"There were three of us," said Raynard, "driving home in a yellow buckboard from a dance."

The old postmaster came suddenly out of the shadows and confronted him.

"Good lor!" he said. "Was that you?"

"It was!" cried Raynard. Once again memory and laughter overwhelmed him. "Right in the midst of it," he confessed delightedly, "a man rushed in and tried to sit on my head!"

"It was me that tried to sit on your head," said the old postmaster.

"What?" protested Raynard. "You?"

Dramatically he pointed to a cluttered desk in the far corner. "I remember going—there!" he said. "And sweeping everything on the floor! Bills, letters, patent-medicine ads! It must have been piled up a foot high!"

"Two feet," admitted the old postmaster.

"The pen was split!" said Raynard. "The ink was mud! But even that couldn't stay my ultimatum! 'The next time I come here,' I swore, 'and ask for a letter—there's going to be one!'" Once again his shadowed face picked up the lantern-light with startling distinctness. "And, by Jove, I wrote it!" he said. "Right there on the spot."

"How—funny!" said the girl.

"Yes—wasn't it?" admitted Raynard. "Yet, even when I'd got it written, they wouldn't rent me a letter box! Didn't consider me a responsible person—apparently."

"Can you blame 'em?" said the girl.

"So, when everybody piled out helter-skelter," persisted Raynard, "to see what the horses were bucking about—and found the whiffle-tree kicked to pieces—I just grabbed up the green honey jar and the letter and scrambled up the ladder and tucked 'em away together, and—"

A strange little hush seemed to come over him suddenly. Frowningly concentrative, he began slowly to scan the crowded, towering shelves that surrounded him. Then, with a single sharp little gasp of satisfaction, he yanked out a rickety ladder from its shroud of cobwebs, and, bracing the ladder against the dingy tier of shelves, climbed up into the dusty shadows through a dangle of scarlet peppers—a glint of tin dippers—the tarry slap of coiled ropes—and began to rake his finger speculatively along the faded tiers of tin cans—looking himself, for all the world, like some erudite librarian searching his shelves for a lost Plato or Aristotle.

Dumb with bewilderment, but half a-grin, the old postmaster watched his progress.

But the old man with the red muffler, driven absolutely garrulous with curiosity, reached forward very surreptitiously and touched the girl on her shoulder.

"THAT feller up there on the ladder," he whispered. "Is he your husband?"

The impetuous denial on the girl's lips changed suddenly to the most inexplicable burst of confidence.

"No—not—yet," she confided.

The old man dropped his chin to his cane again, snuggled down a bit deeper into his red muffler. His head began to nod.

"That's right," he mumbled.

Droningly from the shadowy rafters overhead, Raynard's voice came floating down to them.

"Let—me—see? One—two—three—four—five—?" he sing-songed. "Two rows to the right, was it? Or two from the left. Just beyond a wooden keg with a broken stave—I remember. Just beyond." He gave a sudden little cry of triumph. Two tin cans bumped, a tearing paper snarled out its single faint note of resistance. Then Raynard himself, smutched with dust, bedraggled with cobwebs, came, half sliding, half tumbling down the ladder, with a very dingy green jar and a very dingy envelope in his hand.

"There!" he said. "What did I tell you?"

Proudly he held the green jar aloft, blew the dust from its gleaming sides, turned the faded but still flamboyant label to the light, gave another little sharp cry of satisfaction. Shrouded in cobwebs if not in clothes, the diaphanous lady still floated unscathed through the swarm of bees. Faithfully out of Time and Chance she lifted her lovely face to his.

"Upon my soul you do look like her!" cried Raynard. Snatching his knife from his pocket he began to slash the fraying wicker thongs that wound the jar. The crinkle of his nostrils was unmistakably expectant.

"Do you know—I had a fancy that night," he confided quite boyishly, "that the honey came direct from the Garden of Eden."

"You had a good many fancies that night," chuckled the old postmaster.

FOR reasons of his own, Raynard chose to ignore the implication. With a slightly twisting grin he bent to solve the knotted intricacies of the last strand that bound the green jar's cap—swung 'round with a sudden air of resentment to accuse the bald-headed man's persistent ind'fference.

"What? Aren't you interested in anything?" he demanded.

"Oh, shucks! Don't mind him," said the postmaster. "He's been stone deaf these dozen years!"

"Oh, dear—what a pity!" protested the girl's quick sympathy.

The old postmaster looked vaguely surprised.

"Not at all," he contradicted. "He never liked anything he did hear! So what difference does it make?"

Half a-grin Raynard glanced at the girl and beckoned her to him.

"If you really want to know what the Garden of Eden smelt like—?" he challenged.

Swishingly the knife blade flashed through the last binding thong. Out of crunching sealing wax a stubborn cork lifted. With clutching hands and crinkling nostrils, two faces bent almost cheek to cheek to prove the treasure, and winced back with startled eyes to stare at each other.

The jar was empty! All the gay song of the summer—the scent of flower—the drone of bee—sun, moon, the stars themselves—changed to a crust of sugared dust.

"Well, I'll be darned!" said Raynard He looked really quite shocked, started to laugh; but the laugh proved rather unsuccessful. "Well, I'll be darned!" he repeated quite fatuously.

Out of the instant's speechlessness, the girl's face rallied to a single comment.

"Oh, dear—oh, dear," she said. "Now I shall never know what the Garden of Eden smelt like!"

Beware of Spiders

BACK of a partition where passers-by cannot see him, the loan shark spins his web—and waits. In his show-windows he displays generous-sounding proposals. He says, "We will trust you when nobody else will—*if* you have a job." He sends smoothly-worded circulars and letters marked "Personal," telling how he has been able to assist "your friends", and how he will gladly do as much for you—and no outsider will be the wiser.

Sometimes he boldly tells his story on posters and handbills—"Money for salaried men. No mortgages—no indorsement—no collateral—no questions asked. We let you have money at the time you apply for it." He pledges strict secrecy and low rates of interest. He describes himself as "the wage-earner's only friend in time of need"—spider-webs to catch the unwary.

Perhaps you have never known a desperate need for an immediate loan. But the loan shark knows that the world is full of unfortunate men and women who will promise to pay almost any price in the future for a little cash in hand *now*.

Driven by extravagance or unexpected misfortune, the needy one, when caught, pays a truly terrible price.

The loan shark knows that many of his victims will be unable to pay on the appointed date. He, therefore, extends the time but increases the amount of the loan. Month by month it grows till it crushes. The loan shark's favorite lash on the unhappy victim is "Pay—pay more—or I will expose you. Pay or I will make you lose your job." Sadly enough, sometimes his threat is carried out and the job is lost.

Imagine a frightened employee paying $2.00 a week "interest" on a $10.00 loan for three years—156 weeks—and still "owing" the original $10.00 although he had paid $312.00. The man who paid this lived in the capital of a great State.

A man who made $60 a month borrowed $75 from a loan shark. For a period of three years, he paid each month $21.85 interest—more than one-third of his wages—without reducing the principal debt.

Fortunate is the man who has honest employment which pays him a better wage than he needs for actual necessities. Out of his surplus, week by week, he can make himself safe. The man past middle age who has never saved a cent can hope perhaps for but little more than continuing health and steady employment, but younger men and women can and should plan complete financial independence for themselves in their later years of life.

If you must borrow, make sure the lender is licensed and supervised by the State.

A booklet prepared by the Metropolitan will be of assistance in showing how to save, and thereby avoid the loan shark's web. It will be sent free and without

© 1928 M. L. I. CO.

obligation on your part. Address Booklet Department, Metropolitan Life Insurance Company, Number One Madison Avenue, New York City and ask for Booklet No. 98 A.

Haley Fiske, *President*.

Many millions of dollars are loaned annually by loan sharks. These millions in loans cost borrowers as much more in interest, together with untold mental distress.

Prosecution, though helpful, is not a permanent remedy for the loan shark evil. People still need money and will make any promise for the future in return for present relief. Legitimate remedial and business institutions are therefore necessary. Most States permit the chartering of limited-dividend, semi-philanthropic remedial loan societies.

The Uniform Small Loan Law drafted by the Russell Sage Foundation is in use in twenty-three States and has done much to better commercial money lending conditions in those States.

This Foundation has also assisted in the development of credit unions which are mutual loan and thrift associations. The credit union collects the savings of its membership and reloans these savings to finance the individual needs of the same group.

The Department of Remedial Loans offers its assistance in organizing credit unions and remedial loan associations or in advising loan shark victims. Address, Russell Sage Foundation, 130 East 22nd Street, New York, N. Y.

Still grinning faintly, but with a curious impulse toward sobriety stealing over him, Raynard picked up the fallen envelope at his feet, and slapped it tentatively against his knee. "Well, here'll be something, anyway!" he promised.

"Do you remember what you wrote?" questioned the girl.

"Well, no—not exactly," admitted Raynard. "But something reasonably wise I'll wager. Kids are pretty shrewd."

He opened the letter.

Bending to read it he straightened up again with a half-smothered expletive and handed the page to the girl.

A single sentence scrawled across the page.

"*Don't be a fool all the days of your life!*"

it said. Just that. Nothing more.

"*Don't be a fool all the days of your life!*"

Rousing vaguely from his dreams, the old gaffer with the red muffler opened his blinking eyes to stare palely for an instant from one startled young face to the other.

"That's right," he assured them. "That's right."

RAYNARD caught the girl's glance, tried to hold it, shrugged his shoulders with an air of futility.

"By Jove!" he said. "And I thought I'd written a tome!"

"Well—didn't you?" said the girl. Her tone was curiously incisive.

"What?" cried Raynard.

Apprehensively he glanced around him. Oblivious alike to shout or whisper the bald-headed man still sat feeding waste paper into the avid flame. Deep in his dreams again, the old gaffer wheezed to the glint of his gold-headed cane. Safely ensconced behind his tarnished letter boxes even the doughty postmaster had faded into a mere thud-thud-thud of canceling stamps.

Raynard took a single step toward the girl, fixed his eyes on her eyes; his glance was a little bit stern.

"What are you driving at?" he said.

The girl laughed.

"Not 'driving' at anything apparently," she conceded. "Maybe, indeed, just 'riding for a fall'!" Quizzically she picked up the scrawled page again, flicked her finger against it.

"Well—" she said, "are you going to take it?"

"Take what?" snapped Raynard.

"The advice!" laughed the girl.

Raynard grimaced.

"It's a fair-sized dose!" he admitted.

"You mixed it yourself," said the girl. Her mocking eyes, grown suddenly grave, narrowed to his. "Tomorrow you are going away," she said. "And tomorrow is rather near. But 'Away' is very far off! How shall I ever know," she questioned. "How shall I ever know whether you take the advice—or not?"

"I will come back sometime and tell you!" said Raynard. The cool, intentioned lightness of his tone deepened suddenly to impassioned bitterness. "When I have made good!" he said. "When I have at least made—better! I will come back! I will—"

The girl's face lit to laughter again.

"And I shall be gone!" she said. "Like the honey! All the promise of the spring—all the fulfillment of the summer—gone—like the honey!"

Raynard's face went suddenly white.

"What are you driving at?" he demanded sternly.

"At your foolish pride!" cried the girl. "Oh, haven't I eyes? Can't I see? Haven't I a heart? Doesn't it answer your heart?"

Raynard gasped! "But—but you don't mean—"

"Yes," nodded the girl soberly.

"But—you are so—rich," said Raynard. Even his voice sounded white. "And I—am so poor."

"Oh, you foolish!" cried the girl. "You laggard! You waster! Can't you see that if we loved each other we'd both be rich? Incalculably—rich?"

"What?" cried Raynard. He took another step forward and stopped suddenly. "What?" he cried. "You don't really mean that you care? As much as that!"

"I care—most awfully!" said the girl. With an almost terrifying simplicity and honesty she repeated the statement: "I care—most awfully."

THE man's face was a study. He put his hands on her shoulders, tried very resolutely to grin, but his eyes belied him.

"Oh, all right—" he stammered. "Earlier this evening, when you asked me if I was making love to you, I said 'No.'"

"I remember," murmured the girl.

"Well, I am making love to you—now!" said Raynard.

"It's about time!" said the girl. Half tears, half laughter, her provocative face lifted to his.

Raynard bent his head to hers.

The old man with the red muffler roused sluggishly from his sleep and stared at them.

Raynard's impetuous resentment of the interruption turned suddenly to a grin.

"I was just about to kiss this young lady," he explained stentoriously. "Kiss her—*good*—I mean!"

The old man with the red muffler smiled. Even toothlessly it was rather a sweet smile.

"That's right," he said. "That's right!"

Swinging suddenly around to challenge an unexplained stir behind him, Raynard saw the old postmaster slipping back with a certain shy air of expectancy to his place by the fire, sensed the bald-headed man lifting a curiously bland smile to the light. All three old faces in that instant took on a curious, furnished look—like old rooms that, even only primitively equipped, had yet seen the whole drama of life enacted in them.

The fire quickened. The whole dusk took up the glow, and all of a sudden there was no sense any more of shadow or of firelight, but just of sunlight, a whole world kindled then and there to the love-light in a girl's eyes.

Raynard looked around and gasped.

"'Old Men Sitting in the Sun—'?" he said. "'Mother of Christ—*May* I be one?'"

The Winged Man

(*Continued from page 43*)

warm wind, had been blowing for days."

"There hasn't been so much of that blowin' this spring," Jake murmured absently. "Seems like the geese fly awful straight this year. There's an awful still air. You can see the wind fingerin' the clouds way up aloft, but it don't get down to us. Listen to how the river talks, Selda. Seems like it had a lot that wanted sayin'. Rivers, now, and trees and the wind a blowin', they go on a-talkin', listeners or no, they tell all there is in their minds to tell, while we screw out a sentence or two maybe now and again; but we don't tell nothin' . . . we don't tell *anything* we know."

"You're right. We don't tell anything we know."

She rose and they walked down the steep wet trail together. And the river talked.

Next morning he rode out . . . but this time he had made her a wordless passionate farewell . . . and at the farthest ranch bars he met his returning brother, James.

"Ah," said James after his "Hullo," "the empty bucket a-passin' of the full one."

"What," Jake demanded, sitting slack in his saddle with his eyes fastened from under forward-bent brows, on James's broad smooth face, "do you mean by your buckets, Jamie?"

"Well, sir, you've emptied yourself, haven't you? Now you're a-goin' back to fill yourself up with . . . livin', fightin', playin' . . . all the rest of it." He turned unexpectedly crimson and fierce, pointing his big right arm toward the ranch-house, visible through twinkling young aspen leaves above them. "What do you think or care what sufferin' she goes through, holdin' up her head and smilin', so us boys won't guess how her pride's hurt!"

Jake's face deepened in its color as though it had passed into a brown shade.

"You think this"—he made a gesture toward the pack horse he was leading—"you think this . . . hurts her pride?"

"A woman whose man says to the world, 'I'm gettin' weary of you, ma'am; I got to quit you for a spell till my taste fer you comes back upon me,' don't you figger that such a woman has stood for a blow in the face of her pride, Jake?"

Jake tightened his lips and turned his horse by the pressure of a knee. But James, spurring close, prevented his impulsive return.

"Where you goin'?"

"Back to ask Selda."

"God Almighty—there's a plenty of fools in this here world! Now that you've done your hurtin' of her, Jake, better get out and let her ease herself by forgettin' you for a spell."

This Jake considered, still as a statue in the flecked light.

SHE LEARNED *this Secret in Childhood Days*

While she was a tiny tot, Miss Marjorie Willis found the dentifrice that **cleanses** *her teeth into sparkling radiance*

Her radiant, lovely smile! It's a charm that men admire . . . that flash of beautiful, gleaming teeth

NO wonder her admirers watch for it—the sudden smile that lights her face like magic. In it there's warmth and understanding, and much more besides. There's evidence that her teeth have had closest attention. That their gleam and sparkle are the result of daily *cleanliness.*

Uncompromising care of her teeth is a life-long habit with Miss Marjorie Willis. Since she was first able to hold a brush she has cleansed them twice a day with Colgate's. Never in all these years has she let herself grow careless in this toilet detail.

Others, too, know the way

In this country, and in foreign countries the world over, you will find thousands and thousands of men and women like Miss Marjorie Willis. Because they began using Colgate's ten, fifteen, even twenty years ago, their teeth are exceptionally sound and beautiful today.

There is nothing mysterious about these enviable results. The men and women fortunate enough to secure them did nothing that you cannot easily and quickly do yourself. They visited their dentists for periodic inspections. And they used Colgate's. With Colgate's, cleaning is not a side issue, or an added feature . . . it is the main thing.

Naturally, no dentifrice that you have ever used will clean your teeth more thoroughly. And, mark you, this supremely efficient cleansing is the basis of beautiful and long-lived teeth.

At your druggist's

So, for lovely teeth . . . for teeth that make your smile the asset that it should be . . . ask your druggist today for Colgate's Ribbon Dental Cream. Or, if you prefer, return the coupon and let us send you a sample to try.

Colgate & Co., Dept. 201 I, 595 Fifth Ave., N. Y. **FREE**
Please send me a Free sample of Ribbon Dental Cream.

"I was not a-goin' out for long," he said seriously; "I aimed to look into some Oregon property."

"If I was you," James continued evenly, "if I was you, and I wanted to heal Selda's pride, I'd write a letter from out in Oregon. I'd write a real humble kind of letter, to ask her if she was willin' to take you back. Seems to me like it'd be decent to give her a chanct to say 'No,' supposin' she had learned to feel like sayin' it."

To this advice, too, Jake listened carefully, and carefully he looked at James. "Yes, sir," he said; then equably, "I reckon you are right. I'll do that, Jamie. Thank you for suggestin' it. Good-by."

He put out his lean dark hand and Jamie's broad paw swallowed it. They parted, Jake whistling in the key of some tropical songster of the jungle, Jamie muttering to his saddle horn, staring back as he rode on to Selda.

IN AUGUST Jake's letter came. One of the boys brought it across a dazzling grain field to Selda where she sat on a high fence rail with James lounging beneath and beside her. James flushed as he saw the writing on the envelope.

Before she looked at the paper herself, Selda said something to the bearer, who laughed appreciatively. Her own look of laughter faded slowly from her face as she looked down. A letter from Jake. She opened it. James's hard breathing at her side did not distract her attention. She had forgotten that he was there.

DEAR WIFE: I have a notion maybe you don't want me back. 'Twas you sent me away this year and I've been telling myself, Likely she was meaning for you to stop away, being tired of marriage with a winged man. So I am writing this to give you your chanct to tell me the truth of what you feel. I am hoping that it will be just that—the truth. If you do not send me an answer to this address to tell me, "Come home, Jake, I am still wanting you," then I will know that you are tired of me, and I will stay away so that you can get your freedom from me. But I will never say nor think a word but love and understanding of you, Selda. Your true lover, JAKE.

Selda looked up. There had never been a day so gracious, so golden, and so still. She breathed deeply, gathered a harvest of thrilled victory. And that evening, with no black coffee to keep her wits awake, she wrote to Jake his answer:

I want you now and always, Jake; but only of your free, winged will. Your wife,
GRISELDA.

And she sent this out, as it happened, by the hand of James.

He had a bargain to make, he said, out over the Pass, a business summons, he told her, from a man who aimed to exchange stock with him. James thought he'd give up horse raising and go in more for other cattle. The matter might take a week. It might take longer. He'd be going direct to Foster, the nearest town, and he could save Selda's letter a whole twenty-four hours' delay in its journey toward Oregon. Selda let him draw the envelope from her fingers and, looking down at his, saw something in their expression, heavy, patient, eager, that smote her nerves.

She looked up at him with a new and seeing look.

"James, you have been a good brother to me. I've never thanked you. I count you my best friend."

He said a hoarse syllable, incomprehensible, and added, a moment later, as though to interpret it, "I ain't no brother of yours, Selda. I am Jake's brother," which left Selda as uncertain as before of what he had meant to tell her. He pocketed her letter, turned from her and left her house with heavy, resolute steps, the steps of an intention.

The letter in his pocket mounted the horse, the letter in his pocket rode slowly down the lane between two waving fields of grain, the letter in his pocket went from her following observation into the darkness of pines . . . on its long way to Jake, on its interminable slow way to Jake. She could not bear to think of the jogging day, of the night in a dark post box, of some deliberate whistling mailman, of the waiting for the train, of the train's progress. It made her heart labor and her eyes turn dim.

And then she knew that she was happier than any summer bird, and she flew out to find her own pony and to ride . . . and ride . . . and to ride singing. . . .

Every day she rode out now, alone and singing, to celebrate her woman's victory over a winged man. And so every day, a day passed, and so with seven days, a week passed, then a fortnight, then three quarters of a month, and then a whole long month with all its days. No word from Jake and no return of James.

SHE still rode, but she did not sing. Evenings, strong coffee kept her at her violin or at her books again. Then, one night, rather late, the violin was jarred by a step upon her porch. Heartsick with suspense, she laid down her instrument and moved a few steps toward her door. It opened. She stood looking with stretched eyes at—James.

He had the physical aspect of a heavy and dazed animal, and all about the room, rather than at her, he looked as an animal would look.

"Where . . . is . . . he?" asked James.

"Not here. No answer."

"No answer at all?"

"You mailed my letter?"

"Yes, ma'am, on my way out, as I told you I would do."

He sat down near the door like a peasant visitor. "I reckon he ain't minded to come back so quick, after all. He's struck it, likely. I heard—"

"You heard?"

"That he was lucky in that Oregon claim of hisn. Now, if he's struck it rich, he's got the world and its women to play with, and he will be slower comin' back. He's celebratin'. Gambler's gold. All his life, Jake's been hopin', seekin', stakin' out, diggin', and assayin'. Gold . . . coal . . . oil. This time I reckon he's struck it."

Selda sat quickly down. James was not looking at her.

Presently she asked him if he wanted food or drink. He took a cup of her black coffee, told her good night, and walked out on his boot toes as though from a chapel or a sick-room. Selda lay all night, full-dressed, across her bed. She held her muscles tight at irregular intervals, as though a lash fell. Those lashes were her memories of Jake. Why had God made her able to love like this? Surely such women were a primitive survival; the world no longer had a use for such fond and firm intensities. Passion should be a gambler's game, married affection a cool-hearted and casual friendliness, a reasonable partnership, too hard for wounds.

Love was not meant to burn and writhe and suffer, clinging to flame, like this deep, blind, unreasoning love of hers, which could not be dug up by a brain nor smothered by a will. Men had no need of a Griselda. She must love herself, her labor, and her land.

The next day she was about, hard, pale, collected, with a hundred clear commands. James came up and they held one of their old councils, Jonas and James and she, as to which steers should be sold that autumn, as to whether it would be wiser to winter here or to drive out into Idaho.

JAMES spoke collectedly with his best ranch wisdom, but he watched Griselda. He was frightened, perhaps, by a new opaque grayness of her eyes. Wet slate and clouds, of course, they had always been, but there had used to be across them, behind them, a flash of sunlit wings. Today they were old eyes, they were eyes—dead.

They scared him. Day after day, now, he watched them in her thinning face.

Before snow came, Jonas Fry rode down to have a private consultation with Jake's brother. It took place in Jamie's kitchen, before the stove of which Jonas gradually thawed out the icicles from his mournful, long mustache.

"She gits weaker every day, Jamie. She's a-gettin' now so's she can't rightly swing up into her saddle without I give her arm a hoist. She's gettin' so her voice is whisperin', sort of broken-like. She ain't no heavier than this here tumbleweed what blows about down Texas way. She's white. Her eyes look big. Her hand trembles. She don't eat. I reckon that violin of hern has made music for her till sun-up night after night. Last night, she smashed it with her foot, where it laid when I come in early this mornin', stamped into splinters on the floor. Soon she won't be able to stand up from her bed. Man," the iceberg-blue eyes of the speaker thawed into quick and painful moisture, "that girl is slowly dyin'."

James asked hoarsely, "What'd you hev me do?"

Jonas Fry said nothing. The two men stayed in that kitchen, the one heavily sitting, the other heavily standing, wordless, for an hour. Then Fry got to his horse and rode back through a whirl of snow.

FOR three days James stayed away from his brother's deserted home. On the fourth he came into it reluctantly. In the living-room Ma Wade sat sighing and alone.

"Oh, James Armitage," she said, "we got to get a doc for Selda afore we're all snowed in. She's runnin' a temperature. She hasn't got the strength to stand."

James went in to see Selda for himself.

Brightness had come back to her eyes, wild wings seemed to be flashing across them, and her face was deeply flushed. She looked at James with a vague and puzzled look.

Sport Sedan

Every previous conception of Luxurious Fast Travel outdone by the new

AIRMAN LIMITED

INTERIORS of *built-to-order* elegance—body lines of *distinctive* smartness—riding comfort of *all-day* restfulness—motor performance of *the fastest road car ever built!*

In each of the four essentials of complete motor car enjoyment, the Airman Limited sets an advanced pace all its own—ahead of anything ever achieved in automobile building. In the words of a new owner, "For the first time I know what a motor car can really *be* and *do*."

In the recent coast-to-coast, round-trip run, a standard Franklin Sedan, driven by Cannon Ball Baker, lowered the record by 10½ hours—averaging 42.5 miles per hour for nearly 158 hours—many hours faster than the most famous Limited trains. Without question the Airman Limited institutes the absolute standard of road transportation—riding, roadholding, safety, sustained speed and luxury.

Only a drive can convince you that 300 or 400 miles in a day in this car means luxury—fast transportation that does not fatigue—riding ease no other car can offer.

Franklin ownership is a constant source of enjoyment. The Airman Limited is the soundest motor car investment you can make. Our nearest representative will be glad to place a car at your disposal today. Term payments are offered.

"He won't come back at all," she said.

James answered, "Hush, you! Get well. I'm here," and put his hand upon both of hers, which were knitted as though with physical effort.

"But you know he won't come back, James. You told me . . . he can buy the world . . ."

James crouched down beside her and seemed to pray. It was a Black Mass of Oaths to which he said an Amen backward. He then put both his arms about her.

"Look you at me."

"Yes, James."

"I am the man to love you, to stay with you, to take care of you, and to make you happy."

She drew back so that she could better look at him, and she shook her head.

"You haven't any . . . wings," she said, and her neck snapped like a flower stalk, so that her head dropped to his shoulder, where she wept and wept and wept.

James told Ma Wade he was going out to fetch her a doctor.

"I'll fetch him here if I hev to rope him, hog-tie him, and drag him in through a blizzard after I've kicked him to pulp." Ma Wade opened her eyes amazedly at this ferocity. "He ain't likely to act up any," she said mildly. "Doc Sampson, well, sir, he's a quiet, obedient, harmless sort of man, Jamie, like a long drink of warmish milk."

TO HER patient, her mistress and her little girl, Ma Wade said, "He's gone out to get you a doc, dearie, so's you will get real well and strong again."

"I'm not sick," Selda answered. "I'll be up and about before your 'doc' can get here." And, to prove this, disobedient to Ma, she did drag herself up two evenings later and dress herself and waver into her living-room, where she lay on a lounge and tried to pretend that she was quite her old self, holding a book with great difficulty up before her eyes. Those eyes grew gradually dim. The book fell. It was the sound of crunching steps, of a heavy bundle dragged, of a falling weight against her door, and presently a thunder of knocking, that at last lifted her lids, lifted her body from its repose and drew her across the room to the suddenly mute and inexpressive timber of her door.

"Who is out there?" she asked.

No answer.

"James?"

She hesitated and drew in her door.

A great bundle stumbled in and fell down across the floor at her feet.

She closed out the icy air and the white moon. Jake, her husband, her winged man, bound and gagged. From a pale, bruised face his eyes glittered up at her. They danced. They sang. Their look was to her an incarnate, a maddening mystery. She began to free him, first to speech and then to motion. She knelt beside him, and he edged himself so that he lay within her arms.

Wrapped in his gag, a crumpled red silk handkerchief, was the envelope that contained her own unanswered letter to Jake. To his shirt was tied a label, scrawled roughly over with a message:

A good-by gift from James. I've clipt his wings for you.

Strength seemed to be flowing into her from Jake's hard body in her arms. As he grew warmer, came back more and more to life, she could feel the strong big beating in his iron side.

"Well, ma'am," said Jake comfortably, though his wounded lips fumbled with the sounds, "I'll sure hev to stop with you for a spell now, winged man or no."

"Why didn't you come before?"

She was weeping; her tears fell down like a child's, freely. Her heart grew bigger and bigger with incredulous, with incomprehensible reassurance.

"I was waitin'," said Jake. He kept those intolerably delighted eyes upon her face.

"What—what were you waiting for?"

"For a letter from you, like I told you."

"A letter from me? Jake, Jake, my letter is here. It was wrapped in this. ." She groped on the floor, not willing to move her eyes from the look in his that reassured her so, and, having found the crumpled paper, she spread it out for him. He lifted his head painfully and read it.

"James," he drawled, dropping back against her, "James must hev forgot to mail it . . . until he found my mouth convenient for postin' purposes. Queer feller, James. I reckon the journey we both made tonight was hurtin' him even more than it was hurtin' me. He kind of done me a kindness in his own way, and made up fer not mailin' me my letter. Yes, ma'am, he's a queer feller, James." He drew in an enormous breath and straightened against the wall, trying to reverse their positions so that he could hold her in his arms. She helped him to arrange this.

"James," he went on, when this matter had been adjusted, "met me on my way in yesterday. I was meanin' not to disturb you any, thinking, as I did from not gettin' word, that you wasn't ready fer me to come home yet—but meanin' just to get, unbeknownst to you, a glimpse-like. I got fearful you might be ill, be lonesome. That was always the worst of stoppin' away from you. I kep' a worryin'."

"Of . . . stopping . . . away . . . Jake?"

"WELL, yes, ma'am. But let me tell you what happened between James and me. James, he met me. I saw right off that he was awful fierce and vengeful-like, but I was not prepared. He just plumb fell upon me like a full-growed wolf-pack. Hadn't I wanted so awful bad to be took back and laid down spite of myself, Selda, at your feet, likely I'd 'a' put up a better fight. But there was somethin' inside of me, way down, that kep' a-fightin' fer James. Anyways, he got the best of me, and he roped me and gagged me and slung me on my hoss, and . . . we rode off.

"Well, ma'am, it was not a pleasant journey. There was nothin' winged about it. And when we come to your door—I'd been unconscious a good part of the way, pain maybe, cold maybe, maybe just the blood not runnin' normal—but, when we come to your door and he unslung me and let me drop, I come to just as he drug me acrost the porch here and set me up agin your panels. I heard him knock. Says he, 'Tell her I did mean to cure her of her fancy fer a wanderin' coyote; but if it means killin' instead of curin', she'd better have her coyote back. Tell her to tie you up.'

"Selda," he cried suddenly, in a changed quick voice and, as though his strength had come fully back, he held her closer, "I'm sorry. I didn't never *want* to go away."

"Not . . . want . . . to . . . go?"

"Why, no. 'Twas the look that a spring wind'd bring back into your eyes. . . ."

"Into *my* eyes?"

"Yes. That old look that made me scared to marry you. I knowed right well there was only the one thing that made you love me. I hadn't nothin' else, no wealth—though I'm richer now—no learnin', nothin' at all but the one thing that made me different: your belief that I would be a restless, come-and-go lover, nothin' steadfast, nothin' wearyin' and stale, not like the others you could never see your way to loving. They promised to be faithful, so you was like a wild thing a lookin' cageward. They promised you unchangin' love, so you felt like a chain was laid about yer neck. But me—and I sure had nothin' else to offer—why, I promised you spells of freedom and of loneliness, of bein' mistress of your own life.

"AND so . . . and so—though it ached like rheumatism in a freezed bone—when spring come and the wind begun its blowin' and I seed that absent, hungry, lazy look come to your face, I knowed I'd hev to go. 'Twas my part of the bargain. This time, Selda, 'twas you that sent me packin'. Oh, you thought—I reckon you still think that 'twas fer me you done it. And when you thought I would come back no more, you fell sick. And that sickness come upon you because way down in your heart you knowed 'twas your own fault I went away. And you did need me back again. You will always need me back again. Me, who hungers for you always like for water and for daily bread. But I know the secret of you, Griselda. Bend you down; I'll whisper it to you."

Selda obeyed. Mirth and sardonicism were routing astonishment from her brows and her mouth corners.

"'Tis you that are a winged woman, Selda, and to hold you I must be leaving you sometimes. I must still pretend to you that I, too, have them terrible, great, restless wings."

Selda has never contradicted him. She has accepted the triumphant wisdom of her man. But, being a woman, she has forgone her own triumph, and has never whispered to him the secret of himself. She has never whispered:

"Those wings you saw in my eyes when the spring wind was blowing, those wings that scared you so . . . they were only a reflection of your own. Those wings you see upon my shoulders, dear Jake, you have fastened them there yourself; and, because I am willing to wear them for you, you will perhaps be able to walk beside me, patient and steadfast, on your two human feet . . . until the winged end."

But only the laughing, weeping gods know the whole truth: that both the man and the woman, walking together, carry wings.

This National key town map Free to Anyone interested in cutting Costs

An Advertisement for Bell Long Distance Telephone Service

To LOWER distribution costs, business is turning to the key town method of buying and selling by telephone. By this plan each representative can "travel" farther, reach more people, buy and sell more—and cut expenses.

The national key town map, showing key towns and their calling areas, is now ready. This and regional maps may be obtained at any Bell Telephone business office. They are free.

Key town plans work like this. The sales or purchasing representative goes to the key towns in person. From each he makes his contacts by telephone with customers and prospects in that area. Expensive visits in person are made less often; yet by telephone more frequent and up-to-the-minute relations are maintained.

Related telephone services supplement the key town plan. Classified business telephone directories furnish lists of prospects, sequence calling lists save hours of time, the Bell System credit plan makes it possible to have bills for calls sent to home offices—avoiding the carrying of cash and helping in keeping records of contacts. Thus, Long Distance can be custom-made to fit your selling or buying problems—to increase business, yet lower costs. A call to your Bell Telephone business office will bring a copy of the national key town map to you. . . . . *Number, please?*

GONE ..*all* Razor Pull *and* Discomfort

When Beards are Softened Small-Bubble Way

Millions wanted these new shaving results

A faster, smoother shave . . . that's what this offers you. A quick, easy way to get your whiskers off. Without razor-pull, sting or smart. There's a difference in this shaving cream, men, that you can prove by test. See coupon below.

Here's a shave with a smile . . . just try this new small-bubble lather—you'll see the difference.

GOOD news is printed here, for every man who shaves himself. It's the story of a scientific shaving discovery . . . a startling new principle in beard-softening.

The results will surprise you . . . shaving has been made delightfully comfortable. You get a quick, smooth shave . . . every time.

These are results which a test will clearly prove. Clip the coupon if you seek an improvement in shaving methods.

ORDINARY LATHER

Photomicrograph of lather of an ordinary shaving cream surrounding single hair. Large dark spots are air—white areas are water. Note how the large bubbles hold air instead of water against the beard.

COLGATE LATHER

Photomicrograph prepared under identical conditions shows fine, closely knit texture of Colgate's Rapid-Shave Cream lather. Note how the small bubbles hold water instead of air close against the beard.

Small Bubbles the reason

No other shaving cream is like Colgate's . . . a shaving cream based on the now proven principle that water, and not soap, is the real beard-softener.

This small-bubble lather is designed to absorb more water.

That's the principle. Now here's what it does for you:

1. The soap in the lather breaks up the oil film that covers each hair . . . floats it quickly away.

2. Then billions of tiny, moisture-laden bubbles seep down through your beard, crowd around each whisker . . . soak it soft with water. Instantly your beard gets moist and pliable . . . limp and lifeless . . . scientifically softened right at the base.

Thus your whiskers come off clean and smooth. You've never had a shave like this before.

COLGATE & COMPANY
Dept. 501 I, 595 Fifth Ave., N.Y.

A College Where You Take Your Pick and Shovel

(*Continued from page 39*)

forty was preparation for the work I was to undertake later. I am inclined to agree. Many men flower late."

With health regained, Doctor Hudson began looking for a suitable position. There was an opening at Berea College, in Kentucky.

"Big things," he smiled, "sometimes hinge on little ones. I had done too much farming to have one decent suit of clothes left. While I was waiting for a new outfit, word came that the Berea place had been filled. Of course, I was terribly disappointed."

"Then through the same friend who suggested Berea came word that Blackburn needed a president."

Blackburn, he found, had a lot of history—and little else! "In some way," Doctor Hudson said, "the job looked hopeless; certain features, however, pleased me. Part of the college property was a farm with soil far richer than our Pennsylvania land; this appealed to that part of me that is a 'dirt farmer.' Then I have a liking for business, and the finances of the college sorely needed a business hand. There was a valuable old charter, too, exempting college property from taxation, thus removing one great expense burden. Best of all, the trustees said I could try the self-help plan, and they offered me a free hand."

Hudson accepted the position in 1912. Before the opening of school the next year, twenty-five thousand dollars was spent in improvements. Eighty students enrolled. This was rather encouraging. The self-help plan proved such a huge success that one year later the campus was swamped. That has been the normal condition ever since. It was not magic: simply *a man with an idea, driving it through.*

"THE theory of self-help in college," said Doctor Hudson, "is simple. Several types of students have to depend on it. A few with a natural gift for making money can go to any university, work their way, have a fine time socially, and come out richer than they went in. Such chaps are always found in college, but they are not at all common.

"Others can *help* to pay their way by a limited amount of work. With assistance from home or friends, they get along splendidly.

"Still others have neither the money-making knack, nor friends with cash. For them, life in a big, expensive college with students from families of all degrees of wealth may be difficult and spiritually embittering. The self-help college is a solution here.

"Costs are kept low by strict economy" (at Blackburn, the average cost of meals per person is thirteen cents!), "and also by having students do all the work, except teaching, ordinarily done by paid help: janitoring, firing boilers, making beds, laundering, cooking and serving meals, raking leaves—all these tasks are per-

Fun stops when Corn pain starts!

It's a handicap to your looks and your health besides

Put one on —the pain is gone!

THAT persistent torment from corns, tells on your nerves, spoils your pleasure and makes you feel miserable all over.

But don't despair. You have simply gone about getting relief the wrong way. You've been trying to get rid of your corns *without removing the cause*—and it can't be done permanently that way.

Remove the cause and your corns will heal *by themselves.* You will need no other aid.

It remained for Wm. M. Scholl, M.D., noted orthopedic authority and inventor of 40 famous Foot Appliances and Remedies, to find the way to do this with safety and surety.

Instead of a powerful medication to destroy them, Dr. Scholl perfected a thin, protective, soothing, healing pad that *removes the cause,* called Dr. Scholl's Zino-pad.

These pads remove the friction and pressure of the shoe and *heal by the natural process of absorption.*

Your relief is instantaneous. In *one minute* you will be as forgetful of corns as if you never had one.

If applied at the first sign of irritation caused by tight shoes, Dr. Scholl's Zino-pads will *positively prevent corns.*

Many old-time treatments—harsh liquids and caustic plasters—are wrong in principle, because they *ignore* the cause—often make the toes sore from acid burn.

Zino-pads won't harm the most delicate skin. Physicians use and recommend them in their practice. Dr. Scholl's Zino-pads are also made in special sizes for Callouses and Bunions.

Buy a box today. At all drug, shoe and department stores—35c.

On receipt of coupon below we will mail you free sample and booklet, "The Feet and Their Care." The Scholl Mfg. Co., Inc., 21 No. Wabash Ave., Chicago; 62 W. 14th St., New York City; 112 Adelaide St. E. Toronto.

Makes New Shoes Fit with Old Shoe Comfort

If new shoes make your feet sore and tender, you can avoid that ordeal by applying Dr. Scholl's Zino-pads wherever they give you discomfort. You get instant relief, because all friction and pressure of the shoes is removed. Any soreness, tenderness or irritation is healed overnight, and corns, callouses, bunions or blisters positively prevented.

For Corns and Tender Toes
Dr. Scholl's Zino-pads for Corns instantly relieve corn pain by removing the cause—friction and pressure of the shoes. Thin, protective, healing.

For Callouses and Burning Soles
Dr. Scholl's Zino-pads for Callouses immediately relieve pain and remove the friction and pressure of the shoe. Also instantly effective in relieving burning soles.

For Bunions
Dr. Scholl's Zino-pads for Bunions stop pain at once, protect the swollen joint from rubbing and pressing of the shoe. Safe, soothing, healing.

Dr Scholl's Zino-pads

For Corns, Callouses, Bunions, Tender Spots

FREE SAMPLES AND BOOKLET

THE SCHOLL MFG. CO., CHICAGO, ILL.

Please send me sample of Dr. Scholl's Zino-pads for Corns ☐ Callouses ☐ Bunions ☐ (indicate size wanted) and a copy of Dr. Wm. M. Scholl's booklet, "The Feet and Their Care."

The lather makes the shave

MEN changed their shaving habits after Mennen developed the *dermutized* shave. And Mennen Shaving Cream daily grows more popular with men everywhere.

Mennen-lathered is well-shaved. Unless your beard is completely softened, the razor either hurdles over the hairs, or hooks part way into the beard, yanking and dragging painfully at the roots. Mennen avoids all that. For Mennen lather has that special beard-softening process of *dermutation,* developed in the Mennen laboratory and available only in Mennen Shaving Cream. Dermutation starts the instant you touch the moistened brush and cream to the face. Its gentle action completely softens the beard. No finger rubbing necessary.

It levels the minute mounds at the base of each hair, smoothing the way so that the razor slips clean and smooth through the thoroughly softened hairs at the skin surface. No nicking or scraping of these little peaks—no rawness or smarting. No caustic to burn. And *dermutation* is complete in any water, hot or cold, hard or soft. Five soothing emollients in Mennen lather soothe and soften the skin, leaving it soft, fresh, clean and smooth. And how long a Mennen shave seems to last!

●

Also Made Mentholized

Like a cooling shower on the face is a dash of menthol in your lather. To those who relish its reviving freshness we have good news. You can now get Mennen Shaving Cream with or without menthol. Thus you may enjoy this added feature in Mennen, the shaving cream that softens your beard by the Mennen *dermutation* process, giving you the world's finest, coolest shave. To get Mennen mentholized, ask your dealer for the tube with the red ball. He has it, or can get it for you. Either tube—50c.

Top off with Mennen Talcum for Men

It's growing—this habit of toning down after-shave glitter with a splash of Mennen Talcum for Men. Neutral tinted not to show. Soothing and comfortable. 25c per tin—in stick form 50c.

formed by students. Each Blackburn student is *required* to do at least two and a half hours' daily work.

"So, students very largely solve their own financial problems at the same time they are studying; and in the summer vacations they usually earn enough to pay part of the winter's expenses. Two hundred dollars is the actual cost of the student for tuition, board, and lodging for one year. Things are arranged here, however, so that not all the students pay even the full two hundred.

"Self-help at Blackburn has been carried one step further: we have student management as well. This, in my opinion, has a high educational value. Certainly it helps to counteract the occasional criticism that college men are not trained practically, that they lack experience in actual work, that they shy at taking responsibility."

Few phases of the big job Doctor Hudson has done show his energy and tenacity better than his fight to get money for Blackburn's endowment.

"Nearly every college president," he went on, "has to be something of a salesman. In the past fifteen years I raised more than a million dollars for Blackburn, and have had many curious experiences and learned some interesting things. One fact of a personal nature is that the difference between doing things on a big or little scale depends a good deal on the doer's own ideas. *Think* small, and accomplishment will be small—and *vice versa.*"

IN THE fifteen years of his presidency, Dr. Hudson has built up a wonderful list of friends for Blackburn: men and women who have faith in him, in the aims of the college, in his ability to get a large educational return for every dollar spent. His method in winning these friendships is simply personal acquaintance—and persistence.

"Time after time I have been disappointed," he said, "when some man of great wealth handed me a check for one or two hundred dollars, though he could as easily give ten or a hundred times the sum. Yet some such men have developed eventually into the largest givers. One man whose gifts total a hundred and fifty thousand dollars started with a modest check for two hundred and fifty. It takes time for a man to become convinced he is giving to a useful enterprise."

It was during the war that the idea of student management was added to that of self-help at Blackburn. First-rate employees were scarce then, and an incompetent woman was in charge of the college kitchen. Some students said:

"*We* could do that work."

"There is nothing I should like better—if you could," Doctor Hudson replied.

He agreed they might have a trial, and they made good far beyond his expectations, and have been doing the work well ever since.

Since student management worked so well in the kitchen, it was tried elsewhere. Today *all* student work is managed by students. Recently even discipline was put into their hands. There are two work managers, a boy and a girl, and each has an assistant trained as a possible successor. Each division of the work is under a department manager. There is a boss

More than ocean waves are *needed... to rid him of that half-clean look*

A DASH through the surf, a swim to the raft—even then, she notices, his face still wears that sallow, half-clean look!

For more than ocean waves are needed to make his face really *clean.* Pore-dirt hides in every face.

All day long—on the street, even indoors—the air teems with millions of tiny specks of sooty gray. These specks sneak right *into* the pores—get jammed tight *under* the surface of the skin.

Once under, pore-dirt is there "for keeps" . . . *unless you massage it free.*

That is why Pompeian Massage Cream was made. That is what this cream so clearly *proves* to be true!

Every inch of air, says the U. S. Weather Bureau, is alive with millions of tiny specks of soot. Motor puffs, chimney smoke, dusty streets — no one escapes!

Goes in pink—rolls out GRAY

Below, in the circle, is a photograph taken under the lens of a powerful microscope, showing a section of any ordinary man's skin *after* Pompeian Massage Cream has gone to work!

See the dark marks? They're dried pellets of cream laden with pore-dirt now rolled free! *Now* the skin is *clean*—gloriously clean.

Try it on your own skin! After a hard day's work let this bracing cream bring to your face the freshness of a chap who's just had a few hours' nap. There's nothing like a pick-me-up Pompeian massage to make your friends say, "My, but you sure look well, old man!"

Step out tonight with a face really clean—Pompeian clean! So fresh and ruddy that she will say, "My, but you sure look well tonight! You never looked better in all your life!"

Thousands of men benefit by our FREE offer

Pompeian is 60 cents at any toilet goods counter. You're welcome to test it *free.* Thousands of men have been convinced this way. Please take advantage of the coupon. Mail it . . . *now!*

POMPEIAN MASSAGE CREAM

Dept. 900-I

The Pompeian Company,
595 Fifth Ave., New York.
In Canada: 72 St. Ambroise St., Montreal.
Gentlemen: Please send me a free trial tube of Pompeian Massage Cream . . . enough for two cleansing, invigorating facial massages.

fireman, a farm boss, a boss breakfast cook, a boss dinner cook, laundry boss, and so on. There are a few, but only a few, jobs that occasionally require expert outsiders; in erecting the two new college buildings, for instance, on which the boys have done all the unskilled labor, an experienced contractor was necessary. Making cement also required an expert.

Doctor Hudson's friendliness to student management is in part another outgrowth of his contacts with business.

"In my hunt for funds for the college," he related, "a fact that soon impressed me was that most of the big business men seemed to have little to do. That is, they could take two or three hours for lunch, go where they pleased, when they pleased, and yet their affairs went along smoothly. Or so it seemed.

"One day I spoke about this to my friend the late Senator McKinley, our most generous trustee. As a boy, Mr. McKinley was one of the poorest of the poor, but his various public utility enterprises made him worth many millions.

"'Why is it,' I asked, 'that with all your interests, you never seem busy?'

"'I hire men smarter than myself,' he replied, 'and let them run my affairs.'

"That was only part truth, of course, a snap summing-up; but it suggested a new train of thought.

"Another time Senator McKinley was preparing for a trip to Alaska. I knew his companies were engaged in negotiations for a capital transaction involving dozens of millions.

"'Surely,' I said to him, 'you'll not go until this deal is settled.'

"'Yes,' he replied. 'Why do you suppose I have Lawyer So-and-so? He knows more about the details of this affair than I do. If he can't look out for my interests while I'm away, I'd be in a bad fix even if I were at home!'

"THE policy revealed by such incidents was contrary to my practice in much smaller affairs.

"I resolved to change my methods, and did. I refrained from criticizing so much—from insisting on having things done in just a certain way. The results have surprised me. Now, I can be gone for weeks during term time, and student affairs run as smoothly as when I am at home: *more* smoothly, I sometimes think!

"So, business men taught me what I now consider the most fundamental law of organization: *Have helpers you can trust—and trust them.* At Blackburn, the management of the curriculum is entirely given over to the dean and faculty. The dean, once a Rhodes scholar at Oxford, is a man of high educational attainments and experience. The members of the faculty, in turn, are specialists, each possessing a master's degree from some large university. Neither the dean nor I interfere in their departments.

"This produces excellent results. Educationally, Blackburn's rating is A-1; students from our sophomore classes enter the junior classes of large universities. Four of our young men, for example, have entered the junior class at Princeton with excellent ratings, and the last one to go made the highest scholastic average in his senior class. Our girls who have gone to Smith, Wellesley, and Vassar have made exceptionally fine records there.

"I had lost every ounce of cheerfulness I ever possessed!"

Los Angeles, Calif.

"Two years ago an attack of influenza left me so weak that I had to give up all my favorite outdoor sports. I lost weight steadily — became nervous, 'touchy'. Everything I ate seemed to disagree with me.

"Medicines proving useless, my parents suggested a change of climate. But a month's rest left me no better than before.

"One day a friend of mine suggested 'Fleischmann's Yeast.' It seemed useless, but I started in, eating a cake three times a day. The results were wonderful —and prompt. In a month I had taken enormous strides toward recovery. I can't praise Fleischmann's Yeast too highly."

JESSIE E. GRENNAN

MISS JESSIE E. GRENNAN, *Los Angeles*

THE use of drugs and strong cathartics is like a vicious circle. The oftener you take them the sooner you need to resort to them again.

Fleischmann's Yeast acts differently. Fresh yeast is not a medicine but a *food* —like any garden vegetable. Yeast tones up sluggish intestines, clears out depressing poisons. Evacuation gradually becomes regular, *complete*. Your whole system responds—digestion, appetite, complexion. Even your disposition reflects your new internal health!

Buy 2 or 3 days' supply at a time from your grocer and keep in any cool, dry place. Write for booklet on Yeast in the diet—free. Health Research Dept. J-56, The Fleischmann Company, 701 Washington St., New York.

(Above) *"My work calls for steady nerves," says Mr. Wilson. He writes:*

Waltham, Mass.

"RECENTLY I formed my own window cleaning business. I work on the job all day, and in the evening attend to the details of management—taking on helpers and getting new business.

"I am also keen on dancing. But pimples and blackheads embarrassed me and I felt below par from stomach trouble.

"My doctor advised Fleischmann's Yeast. It drove all the poison out of my system and completely cleared my skin. I come home with plenty of pep left over for dancing. What's more, the girls seem glad to dance with me."

R. ROYCE WILSON

MR. L. C. SNOW

(LEFT)

Salt Lake City, Utah

"OVER A thousand young people every year report to me as president of the Missionary Home for a brief training course. By all odds the most common ailment among them is constipation—showing itself in skin troubles and general inefficiency.

"Fleischmann's Yeast as a corrective food had long interested me. Repeated attacks of indigestion finally spurred me to try it—3 cakes a day.

"After several months I was enjoying all my taboo dishes. My indigestion had vanished. For the correction of constipation, indigestion and bad skin I now make it a practice to advise the regular eating of Fleischmann's Yeast."

LEROI C. SNOW

Joyous, vibrant health—

this new, simple way!

Eat three cakes of Fleischmann's Yeast regularly every day, one cake before each meal or between meals: just plain, or in water or any other way you like. For stubborn constipation physicians recommend drinking one cake in hot water—not scalding—before each meal and before going to bed.

"Young man", *he said, warningly*

"tell your teeth to get busy!"

The young man's semi-annual visit to his dentist had seemed to be passing off pleasantly. In the dentist's conscientious hands, tiny mirror and needle-pointed explorer had done their best to locate cavities—and cavities there were none! The young man hopped blithely from the chair.

"Not so fast!" said the dentist, pushing him back. "I want to show you something."

He handed his patient a hand mirror. "Your teeth are all right—but look at your gums! They ought to be firm and healthfully pink. But they're growing soft—losing their tone. Nothing serious yet—but you can't afford to neglect it. Tell your teeth to get busy!"

"What do you mean?" demanded the young man.

"Chew!" *said the dentist.*

Chew! It is the battle cry of the modern dentist. Well he knows that nothing so effectively protects the health and beauty of teeth and gums as this exercise that Nature planned.

Grape-Nuts is highly praised by dentists because it is one of the few modern foods that encourage thorough chewing. These golden kernels have such a unique and tempting crispness—such a delicious nut-like, malt-sugar-tinged flavor—that you will *enjoy* chewing them! And Grape-Nuts also helps to build and maintain sound tooth structure. Made from wheat and malted barley, it is a food of great nutritive value.

Grape-Nuts supplies phosphorus for teeth and bones; proteins for muscle and body-building; iron for the blood; dextrins, maltose and other carbohydrates for heat and energy; and the essential vitamin-B, a builder of appetite. Eaten with milk or cream, Grape-Nuts is an admirably balanced ration—particularly easy to digest.

Try Grape-Nuts! Your grocer sells it. Accept this offer:

Free! *Two servings of Grape-Nuts and a booklet on teeth.*

"The lesson in leadership which I learned from business men, I have tried to pass on to students also. Blackburn College, of course, is not a business organization, nor are students even in a self-help college employees. Yet this policy, with students, yields the finest results, and has a high educational value as well. Students who win the coveted college responsibilities rely upon the qualities that win promotion in business or any other occupation of after life."

"Don't the students make a lot of mistakes?" I asked.

"Of course they do," Doctor Hudson replied, "though," he added, "not so many as you might think. Once in a long while a girl spoils a meal. But not often. They dread too much the disgrace with the other students, who have to *eat* their mistakes!

"One boy blew up a boiler. He started to drain it with fire up, went off to a class, forgot it. When he returned, the boiler was red hot. He turned cold water on it (the worst thing he could have done!) and it cracked beyond repair.

"That mistake cost the college the price of a new boiler. It was the most expensive single mistake any student has made. But it is better to pay for a new boiler than to let young men and women go out into the world without knowing the feel of acting on their own judgment and taking responsibility."

THE students of Blackburn are no different from the students of other colleges—except, perhaps, a little happier, more aware that life is good and the race to the strong, and certainly more like members of a big family. And how could they help feeling that way, meeting three times daily at meals, as they do, boys scattered at table among girls, and grace being spoken by a fellow student? They work together, study together, play together. Three or four times a year, or oftener if necessary, they have "work days," when classes are dismissed, and everybody spends the whole day cleaning up accumulated tasks. One day each fall the boys fill the silo while the girls make apple butter, and a grand occasion it is. There is no stigma to labor; they glory in it. That many are starting life with little of this world's goods is beside the point. They are standing on their own feet, and feel confident of being able to do the same later.

How little of this world's goods some of the students possess was revealed by a few stories Doctor Hudson told me. A social was to be held. Harriet Hudson, the president's daughter, asked one of the girls if she were going.

"No," smiling; "can't afford it."

The price per person was ten cents!

Harriet told her father. He quietly inquired into the girl's finances.

"I've had a two-cent stamp for the last five weeks," she said, laughing gayly, "and that's all."

"Here," said Doctor Hudson, "is a one-dollar bill. Pay it back when you can."

A dollar, when your fortune for weeks has been a two-cent stamp, is wealth!

A girl spoke to Mother Hudson after Sunday-school.

"I suppose it seems odd," she said seriously, "that I didn't put anything in the collection box. This is the second

Makes every cleaning minute show

greater results

POSITIVE AGITATION

THERE is a new exact measure of cleanliness for floor coverings—*the amount of dirt removed from rugs for every minute of cleaning.*

Here is the real test of any cleaning method. And in this test the Hoover has repeatedly proved its ability to remove more *dirt per minute.*

"Positive Agitation" gives the Hoover this greater *dirt-per-minute* capacity. This sensational cleaning principle beats out the deepest-buried dirt from your rugs. To this deep-beating are added sweeping which removes the lint, and suction which gathers up the dirt from the surface of the rug. Only in cleaners made by The Hoover Company are these three essentials of *thorough* cleaning combined.

We shall be glad to demonstrate in your home the Hoover's ability to remove the most *dirt per minute.* Phone your local Hoover Dealer.

Cash prices: Model 700 Hoover, **$75.** *Model 543,* **$59.50.** *Dusting tools, $12.50. Model 972, $135.00. Dusting tools, $15.00. Floor Polisher, $7.50. Easy payments if desired. Only $6.25 down. Hoover dealers will make you an allowance on your old machine.*

Little adventurers!

New, better ways to guide them

"Today many parents are appealing to children's love of games and of achievement to *lead* them—instead of *pushing* them in the old way," says Dr. Douglas A. Thom, author of the famous, authoritative book, "Every-day Problems of the Every-day Child."

There are wonderful new ways, now, to handle these joyous, turbulent youngsters of ours—ways that make life simpler for parents—happier for children.

For example, the mother's problem in establishing sound breakfast habits. Nothing is more important. Tests made in the schools of many cities have proved that the child who has a *hot, cooked* cereal for breakfast does much better than one who has not. In 70,000 schools this slogan hangs on the walls:

"*Every boy and girl needs a* hot *cereal breakfast*"

Now most mothers know this. In fact, so important does it seem to them that they often urge their children to eat a hot cereal, such as Cream of Wheat, "because it is good for you."

When the hot cereal is presented in this way, the child is quite likely to respond "I don't like Cream of Wheat"—"I don't like oatmeal"—or whatever the cereal is. What he

really means is "I don't like to do things that are good for me!"

Here is where the new psychology of child training can help you in establishing the important hot cereal breakfast habit. A remarkable plan has been devised. It works so wonderfully with children that they *want* to do the very thing you want them to.

Recommended for years by child specialists

For 32 years specialists have considered Cream of Wheat an ideal *hot, cooked* cereal. Here are their reasons:

1. It gives in abundance the food elements, rich in mental and physical energy, which growing children need. It is all real food.
2. Cream of Wheat is exceptionally easy and quick to digest because it contains none of the harsh, indigestible parts of the grain.
3. Its creamy goodness is easily varied by adding raisins, dates or prunes.

Safeguard your children by giving them a hot bowl of Cream of Wheat every morning.

FREE—*mothers say this plan works wonders*

A club—called the H. C. B.—that children work out for themselves. A plan that arouses children's interest in a *hot, cooked* cereal breakfast and makes them want to eat it regularly.

Badges and a secret for members, gold stars and colored wall charts. All materials free, sent direct to your children, with a sample box of Cream of Wheat. Children cannot resist it! Eating Cream of Wheat becomes a fascinating game, then an enjoyable habit. Mail the coupon now—watch the club idea work.

CREAM OF WHEAT COMPANY DEPT. P-15
MINNEAPOLIS MINNESOTA

Gentlemen: Please send my child the free material for the H. C. B. Club, as described above.

Sunday I haven't. I've got some money—a quarter—that my aunt gave me for Christmas; but I've been saving it. She told me a person always ought to have *something* behind them!"

A girl's shoes, Doctor Hudson saw, were worn through at the sole. He warned her she would get sick; she replied that she had no money to have them fixed. He handed her a ten-dollar bill, telling her to buy herself a new pair, as well as have the old pair repaired.

The next morning in his mail a ten-dollar bill fluttered out of a letter. "When I was a girl," wrote the sender, "I remember feeling hurt and humiliated because I had no nice shoes. I am sending this ten-dollar bill, and wish you would see if there isn't a girl at Blackburn who needs shoes."

A coincidence, of course. "But," says Doctor Hudson, "such things happen too often for me to think they are *wholly* coincidence. I believe that when a man proves his willingness to help himself to his limit, then *he will be helped* when the need arises."

But the fact that many students at Blackburn are poor, pinchingly poor, is, to repeat, only an incident. The big thing is that these young men and women are taking their lives in their two hands and making of them something worth while.

I MET a woman student when I was out there: thirty and some years old she is. In her family she was the daughter who stayed at home and helped the younger brother and sister through school. They established themselves in good positions.

"Now, if ever," she thought, her burden lifted, "is *my* time to get an education."

She had only a little money. Looking around for a school that would take one of her age and slender means, she found Blackburn.

In the kitchen I saw her stirring up pastry for her two hundred and fifty hungry fellow students: that was her daily stint. She is equipping herself with a broader outlook on life, and at the same time is preparing practically, no doubt, for a responsible position, perhaps as superintendent of a hospital kitchen, possibly as manager of a cafeteria.

There is, to go on, "Bill"—yellow-haired, slender, high-foreheaded, bespectacled, friendly Bill! He has charge of all the buying. Bill's story is romance. Born in Germany twenty-six years ago, he used to revel in a grandfather's tales of the United States.

"Always since a boy," he says, in precise, accented English, "I wanted to go to America. Then came the war. Just before my class was called into service, they signed the Armistice.

"After school, I clerked in a dry-goods store and saved some money to go to America. The United States was then not friendly to admitting a German, so I went to the Argentine. I stayed there fourteen months."

"Doing what?" I asked.

"Oh," smiling, "many things: digging ditches, sweeping stores, janitor work in the stock yards, anything! After a year I could be admitted to the United States, so I came first to Des Moines, where I had relatives, then to Chicago. One day I was walking down the street, and heard music in a church and thought I would go in. I

FRIGIDAIRE

THE CHOICE OF THE MAJORITY

Powered to freeze ice quickly . . . always

ICE CUBES tinkling in beaded glasses. You want them and need them the year around. And that's *one* reason you're thinking of buying an electric refrigerator.

When you put water into the Frigidaire trays to be frozen you're never disappointed. No matter how hot the weather, it freezes quickly . . . solidly . . . all the way through.

It takes surplus power to give *safe, dependable* refrigeration, and to freeze ice cubes quickly and surely . . . always. This surplus power is built into every Frigidaire, and the powerful Frigidaire mechanism is completely concealed, completely out of sight . . . there's nothing to mar Frigidaire's practical beauty.

This wide margin of reserve power does not add to the cost of operation. This master automatic refrigerator actually pays for itself in ice and food savings. This economy of operation is the direct result of Frigidaire and General Motors mechanical experience. Such unique features as the Frigidaire fan and the V-belt drive, carefully tested over long periods, have proven their value in providing efficient, low-cost operation.

Let Frigidaire pay for itself as you pay for it

If you care to buy Frigidaire on a deferred payment plan, as most people do, the first payment can be so small and General Motors terms so liberal, that Frigidaire will actually pay for itself as you pay for it. Not only in summer and winter ice savings, but in the prevention of food spoilage and the chance to buy food in larger quantities. You need Frigidaire in your home today to protect your family's health, to provide ice cubes and frozen delicacies. Telephone your Frigidaire dealer today.

And remember, Frigidaire pays for itself as you pay for it. So why put it off any longer? Frigidaire Corporation, Subsidiary of General Motors Corporation, Dayton, Ohio.

Mirror

Helps Millions

choose right Pro-phy-lac-tic

1 *Tufted Pro-phy-lac-tic.* Most dental arches are full-formed and require this type of brush. Best quality bristles. Handle curve correctly balances brushing end.

2 *Oval Pro-phy-lac-tic.* Scientifically designed for the small, more sharply oval dental arch. Sloping bristle surface makes this an ideal brush for small mouths.

3 *Masso Pro-phy-lac-tic.* Gives beneficial massage action to either large or small dental arch that calls for special care. Try it if your gums are tender.

Healthier teeth and gums yours if you use brush designed for your dental arch

SIMPLE as ABC's now to win strong, sturdy teeth—firm, healthy gums.

Ten seconds . . . your mirror . . . and you know what type of dental arch (teeth and gums) you have—what brush suits it best. If your mirror reveals a full-formed face, your dental arch, too, is full-formed, of average size. The right brush for you is the Tufted Pro-phy-lac-tic.

A smaller facial contour indicates a small, more sharply oval arch. Then the Oval Pro-phy-lac-tic is the brush to use.

But . . . you may have either a large or small dental arch and require still a different type of brush—the Masso Pro-phy-lac-tic. This brush is for teeth and gums that need special care. Dual action—it massages as it cleans.

All three new Pro-phy-lac-tics have high-grade bristles, super-polished colored handles. All are guaranteed.

Trial well worth while

Make the mirror test. Then use the Pro-phy-lac-tic that is best for you. Your smile will soon sparkle with a new health of teeth and gums you never dreamed would be yours.

became acquainted with the pastor, and decided I would like to enter the ministry. The pastor told me about Blackburn, so that is why I am here."

Last summer Bill drove a taxi in Chicago, and came back with a modest pocketful of cash.

There is another boy, a rare type at Blackburn: his parents are well-to-do farmers. They thought so highly of the college that they besought the president to admit him.

"But," Doctor Hudson objected, "you can afford to send your boy elsewhere. Don't you realize that every student costs Blackburn two hundred dollars and more, over and above the tuition he pays and the work he does? We must take only those who cannot go elsewhere."

"We will gladly pay *all* it costs," they said.

"I thought," Doctor Hudson told me, "that it was worth an experiment. I let him come."

There is another farm boy: neither he nor his father had any money for his education. He walked sixteen miles leading two milch cows, which he offered in lieu of tuition. They were accepted.

But enough of cases! Truly, there is a rich spirit in this college of the coal and corn belt. Burdens sat heavily on Doctor Hudson after the fire of 1927. Noting the lines in his face and the tiredness in his eyes, three boys came to Mother Hudson.

"Isn't there," they begged, "something we can do to share his load?"

Tears sprang to her eyes. Theirs is the spirit of Blackburn.

If worldly goods are scarce, it makes little difference; not one of these students but know that possessions, after all, are no final or significant measure of the worth of a man. They have grasped the subtler truth that in labor and in seeking are to be found happiness, satisfaction, true wealth. If they learned not one thing else at Blackburn, they would owe a great debt of gratitude to the little "Prexy" who has made *that* learning possible.

Judgment Crow

(*Continued from page 57*)

The closest approach to the thicket we made was the fringe of woods half a mile below it, a narrow strip of timberland extending from the crest of the ridge down to the branch, through which another brook flowed down to unite its waters with those of the larger stream.

About two weeks after our adventure Rip and I were creeping along up the little creek formed by the union of the two brooks. Hidden from sight by the high bank on that side of the creek, we were trying to reach this strip of woodland, where large numbers of crows were gathered in the trees, from which they sallied forth occasionally to seek the corn fresh planted in the big field between the woods and the road.

We were in the edge of the woods, and were moving stealthily up through them when a shot was fired somewhere farther up the hill. A moment afterward, the old crow with the tattered wing flapped its way out over the field, cawing and scolding angrily as it made its way toward the

The Truth About Dull Film on Teeth

As viewed by the foremost dental authority of the day

Now leading opinion lays to film many serious tooth and gum disorders, as well as dull, "off-color" teeth. Remove it by this special film-removing dentifrice dentists urge.

Sparkling teeth hold charm that others note and marvel at—for still many do not know how great a change Pepsodent can work.

WHAT robs teeth of ivory brightness? What makes them more discolored one time than another?

And why, when looking their worst, do teeth decay more rapidly, why do gums grow sore and sensitive?

These questions dentists answer in three words—"film on teeth." What film is, how it acts, are told below.

To combat it successfully where ordinary brushing methods fail, a *special film-removing* dentifrice is used, called Pepsodent.

Look for FILM this way

Run your tongue across the teeth. If you feel a slippery, slimy coating, that is film. An ever-forming, ever-present evil in your mouth.

It clings tightly to teeth and defies all ordinary ways of brushing. It gets into crevices and stays. It absorbs stains from food and smoking and turns teeth dull and gray.

Germs by the millions breed in film, and germs with tartar—a prolonged film deposit—are the chief cause of pyorrhea.

Film invites the acids of decay.

And you may remember that before this special film-removing method the prevalence of dental troubles was alarmingly on the increase.

Now film removed new way

Film cannot resist brushing the way it did before. Pepsodent acts to curdle film. Then to remove it in safety to enamel.

This recent scientific way is the greatest step made in a half-century's study of tooth-cleansing methods. Its results are seen on every hand.

Fights decay—firms gums

Other new-day agents in Pepsodent increase the alkalinity of saliva. They neutralize food starch from fermenting and forming acids of decay.

Still other properties firm the gums.

Dentists know the secret of dazzling white smiles. "Keep dull film off your teeth," they say. That's why the use of Pepsodent, the special film-removing dentifrice, is so widespread today.

Thus, Pepsodent answers fully the requirements of the dental profession of today. That's why it is accepted among dentists of 58 nations.

Give Pepsodent 10 days

If teeth are dull, "off color," that is film. If you are prone to tooth and gum disorders, that may be film also. Remove this film and see teeth whiten.

Between your dentist, and Pepsodent used twice a day, you obtain the ultimate in tooth and gum care as modern dental science knows it.

Get a large tube at your druggist's. Or write to nearest address below for a generous supply to try.

The Pepsodent Co., 1104 S. Wabash Ave., Chicago, Ill., U. S. A.; 191 George St., *Toronto* 2, Ont., Can.; 42 Southwark Bridge Rd., *London*, S. E. 1, Eng.; (Australia), Ltd., 72 Wentworth Ave., *Sydney*, N. S. W.

The World's Biggest Sales Convention *meets in the Living-Room*

EVERY week of the year, dozens of towns, from Atlantic City to Los Angeles, entertain sales conventions. A hundred, five hundred, five thousand men gather together to learn better ways of selling.

Yet, if all those meetings were rolled into one, its total influence on American buying habits would be as nothing compared to *another convention* that meets daily in the country's twenty million homes.

▼

That convention is the family council which gathers at the dinner table or in the living-room. There the hopes, the desires, the needs of every member of the family are presented, discussed, and settled. And there rests the ultimate fate of every product that is sold to the family.

Obviously the more advocates a product has round the family circle the sooner that product is purchased.

▼

That is why leading advertisers now want to know *how many members of the family* read each publication. Therefore, numerous investigations have recently been made of the reading habits of the American family. And in every survey, of which we have record, one magazine, *The American,* was overwhelmingly first in its combined reading by all the family. No wonder such notable advertisers as The Cream of Wheat Company, The Quaker Oats Company, Colgate and Company, The Hoover Company, and The Cunard Line have, for 1928, increased their schedules in The American Magazine or are using it for the first time.

May we present you with facts to prove that The American Magazine, at one advertising cost, reaches the whole family circle in 2,200,000 homes?

▼

IN ROCHESTER—
"First with all the family"

In Rochester, N. Y., and Detroit, Mich., a thousand families were asked this question, "If your family could take only one magazine and the question were put to a *vote* of *all members* of the family, what magazine would be voted the most indispensable to your family?"

The result of that investigation showed that 61.2% of the families voted The American Magazine the *most indispensable.* All other magazines combined totaled only 38.8%. That is only one investigation among dozens which prove The American Magazine is "First with all the family."

shelter of the heavier woods across the valley. I raised my gun, aiming at the bird as it passed overhead not far from us.

"Hyah!" yelled Rip sharply. "Don't be a-shootin' dat Judgment Crow! Dat crow gwine find out who killed Mist' Sam Brount."

"Aw, I couldn't have hit him anyhow. I was just funning," I apologized.

"You let dat crow 'lone," he warned sullenly. "Someone up in de wood tryin' to kill dat crow. Ain't no use. Cain't kill dat crow till he pass judgment on de murderer man."

Three or four days later almost the same thing happened: The old crow, that time, was sitting alone, perched high on an oak tree. Dozens of other crows were in the woods, and we were slipping along behind the bushes to get within shooting distance when someone in the underbrush fired a shot. The old crow, squawking angrily, fluttered an instant as if some of the shot had struck it, wheeled, and flew rapidly away. Rip and I ran forward, to get shots at the other birds, which had been disturbed and were flapping out of the woods, when we saw someone, bending low and dodging behind bushes, running away.

"Dat's funny," Rip muttered. "All time, shootin' at de ole crow. Ole crow is too smart. He perch high an' he fly fast. No one cain't kill dat crow. He got a charm."

A DAY or two later there came a white day in my life. Doctor Ben asked me to go with him in his buggy and hold the horse while he was making calls in the country. His bright bay horse was a thoroughbred, and to be permitted to drive it and to hold it while the doctor was making calls was esteemed a great privilege among us boys.

Doctor Ben was a man past middle age. He had brought us through mumps, measles, whooping cough, and scarlet fever; had picked bird shot out of our bodies; cut fish hooks from our fingers, lanced our stone-bruised heels, and patched our broken arms and collar bones. He knew boys and he understood them. A fellow could talk with him and tell him his thoughts and ideas, and not be afraid of being laughed at.

On that day his calls were in the country to the north of town, the part of the country I knew best of all. We were driving out the Samantha Pike when a flock of crows arose from the field at the east of the road and flew over toward the woods. Leading them by fifty yards or more, flying alone and cawing as if giving orders, was the old crow with the tattered wing.

"There is the old Judgment Crow," I exclaimed, pointing at it with the buggy whip.

"Judgment Crow?" repeated Doctor Ben, as if not understanding.

"Yes, sir. At least, that's what Rip says," I explained. "Rip says that old crow is the judge and the boss of them all. When they hold court he acts as judge, and sentences them to be punished."

"What case is he sitting in now?" asked Doctor Ben, with his eyes bright.

"Rip says he is looking for the man who murdered Mr. Brount."

It is easy to tell Doctor Ben about things. I told him how the old crow had been in the thicket that day we found Mr. Brount's body, how he came back leading

the others, and what Rip had told me about the old crow telling the jay birds to act as detectives, and how jay birds sneak around and watch what everyone is doing.

Doctor Ben nodded understandingly. He never laughed at boys the way some older people do, and he always understood.

"When did Rip tell you all that?" he inquired.

"Oh, he tells me lots of funny things about birds and beasts, especially about rabbits," I explained. "He told me about the crows that day after we found Mr. Sam's body."

"Was it while you were sitting on the bridge?"

"Yes."

"Do you think the man who was hiding under the bridge heard him?"

"Oh, yes, he must have listened while we were talking. He kept quiet for a long time and didn't move."

"And you say you have heard someone shooting at the old crow several times since?"

"Yes. We heard him once, and the other time someone shot at him we saw a man going away through the woods."

"Uh-huh."

Doctor Ben was thinking. He didn't say anything until I slowed down the horse at the covered bridge over Clear Creek and, after walking it through the bridge, started it to trotting again.

"Bub," he said, "what are you going to do tomorrow?"

"Rip and I were going out to try to shoot some crows."

"How would you like to take a drive—if I'd go hunting with you?"

"Oh, dandy!" I exclaimed.

"All right. You get Rip and bring him up to my office before ten o'clock. Both of you bring your guns."

WE STOPPED at several farmhouses where people were sick. It seemed to me Doctor Ben did not talk as much as he usually did. We were coming up the hill into town before he mentioned the crow again.

"Bub," he said, "I wouldn't be surprised if Rip was right. That old crow may catch the murderer yet."

"Do you think so?" I asked, pleased with his interest. "I thought it was only one of Rip's pappy's negro stories."

"There is a heap of truth in some of those negro stories," said Doctor Ben.

When I reached his office the next morning, bringing Rip with me, both of us carrying guns, I was surprised to find a crowd waiting. The sheriff was there, and two of his deputies, and the town marshal and policeman, and Doctor Ben. And there were three buggies hitched downstairs waiting.

"Do you know where you can find that old crow this morning?" asked Doctor Ben.

"The Judgment Crow?" I inquired, surprised that he remembered. "Yes, sir; he is either down in Rockhold's thicket, or in the woods back of the cemetery, or up in Haynes's woodlot, or in the plum thicket—"

"Dat ole crow'll be hangin' about de Haynes's woods," Rip predicted. "He watchin' somepin' up dar."

"Sure you know it when you see it?" asked the sheriff doubtfully.

"Oh yes, we know him," I said. "He has holes in his wing, and one of them is ragged."

"Come on then," said Doctor Ben. "We'll all go hunting."

I was puzzled to know why they all wanted to go crow hunting, but Rip and I swelled with importance at being chosen to guide the party. We drove into the field near where the branch crosses the big pike and tied the horses to trees in the grove at the foot of the steep hill.

"Now, boys," said Doctor Ben, "you go just like you do when you're by yourselves. We'll follow you."

Rip and I led the way around the hill to the branch, jumped down to the edge of the water, and moved along, screened under the bank. The men, each of them with a gun, except Doctor Ben, followed, bending over to keep their heads below the level of the bank.

BEFORE we had proceeded a quarter of a mile a shadow passed over the creek and the cry of "Caw, caw" came from the sky.

"Dar he is now," said Rip excitedly. "You all duck low. Dat crow 'spect somepin'. Maybe he spyin' on us."

The men smiled, but peered upward toward the ancient bird flapping lazily along over the field toward the fringe of woodland.

"He'll light in the woods and look around," I said. "If he don't see anything scary he'll call the others."

"Keep down low and hurry," the sheriff ordered quickly.

We dodged along rapidly until we reached the underbrush where the fringe of woodland ended at the mouth of the smaller branch.

"Separate here," the sheriff ordered. "Doc, you and Tom creep up along the edge of the woods. Rip, you take the marshal and go up the little branch. You others go on to the other side of the woods and get up into the field where you can watch the thicket. Bub and I will go up through the center of the woods."

"You-all goin' shoot de Judgment Crow?" demanded Rip, his eyes large with protest and his voice indignant.

"No. Going to help him," said the sheriff. "All of you go carefully, and don't make any noise you can avoid."

The little party separated. The sheriff allowed me to lead the way into the woodland, saying I knew every tree. We moved from clump to clump of underbrush, always carefully screened. I was keeping an eye on the old crow, which had alighted on a dead limb high up in a great oak tree. Occasionally, through the branches of trees, I could catch a glimpse of it as it moved back and forth along the limb, peering downward, then out across the fields, and cawing in single notes, as if reassuring its fellows there was no danger. Other crows were flying toward the woodland.

We reached a pawpaw patch near the center of the woods and not far from the tree on which the old crow was perched. The sheriff touched me lightly on the arm, and we crouched down lower, waiting. Beyond the pawpaw trees a thick clump of hazel bush screened us from sight.

"Lots of crows coming," I whispered.

"Sh-h—" said the sheriff. "Keep quiet."

"Someone is coming," I whispered a minute later. "They'll scare the crows away."

His big hand reached out and pressed my shoulder, pushing me lower. He had knelt and was parting the bushes quietly with his hands and peering through them. I quit trying to see the old crow, and followed the example of the sheriff. The sound of someone moving stealthily came from the other side of the hazel bushes. An instant later I saw a man, bending over as he moved cautiously along, his face turned upward, the gun in his hands held ready for quick action. I started and trembled. It was the same face I had seen in the semi-darkness under the bridge. He was glaring upward toward the old crow, his face transfigured with fear and hatred. His clothing rasped against the bushes on the opposite side of the clump behind which we crouched.

Suddenly a wild "Caw-caw" of alarm came from the crow on the oak tree. It spread its wings to fly. A snarl of rage came from the man. Straightening, he threw up his gun and fired both barrels. The crow, riddled, turned over and over, wings fluttering feebly as it fell toward the ground.

The man shook his gun in a savage ecstasy. "I got you!" he muttered. "Now you'll quit your cawing at me and trying to tell everybody I killed Sam Brount. . . ."

"That'll do, Swain. . . . Drop that gun!"

The sheriff spoke sharply. He was standing, covering Swain with his gun. The man turned toward us. He stood gaping, as slowly comprehension dawned.

"That damned crow!" he said, hurling his gun to the ground. "The nigger said it would get me. . . ."

Doctor Ben, the deputies, and the marshal, led by Rip, came running.

"Got him, eh? I thought so," said Doctor Ben.

The handcuffs were on the man's wrists. He seemed scarcely to understand what had happened.

"What did you do it for, Swain?" asked the doctor quietly.

"Sam caught me stealing harness," the man said sullenly. "He was going to have me arrested."

SUDDENLY his manner changed. "The damned crow!" he raved. "It kept following me, cawing at me. Every time I moved it cawed. It sent the jay birds to watch me. The nigger said it would; but I didn't believe him. But they came every morning. They got around the house and yelled at me at daybreak. Every time I shot one, more of them came. They knew I did it. I thought if I could kill that damned crow, they'd quit—"

He broke down and shook as with palsy. The sheriff and marshal were leading him away.

"Pore ole Judgment Crow," said Rip, who had recovered the body of the ancient bird and was gently stroking its feathers. "You sure got *him*—even if he done kill you."

"Bring it along, Rip," said the doctor kindly. "We'll have it stuffed."

So, even until today, the old Judgment Crow sits on a perch in the sheriff's office looking down upon evildoers, as if watching them.

So effective! So *good to eat!*

That's why it is the most popular BRAN CEREAL *in the world*

Bulk for regularity and a delicious flavor to tempt you into healthful habits! That's why millions find Post's Bran Flakes with other parts of wheat the best ally against constipation. Try it now and see how delicious it is. Eat it once a day for two weeks and see how much better you feel. Then eat it regularly for health. No preparation necessary. Serve right from the package with milk or cream, with berries or fruits. Great for muffins and bran bread.

Ordinary cases of constipation, brought about by too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

POST'S BRAN MUFFINS

- ¾ cup sifted Swans Down Cake Flour
- 1½ teaspoons baking powder
- ⅕ teaspoon salt
- 1⅕ cups Post's Bran Flakes
- 2 eggs, well beaten
- 3 tablespoons sugar
- ⅗ cup milk
- 2 tablespoons butter or other shortening, melted

Sift flour once, add baking powder and salt and sift three times. Add Post's Bran Flakes. Combine eggs and sugar. Add flour mixture alternately with milk, beating well after each addition. Add butter and beat well. Pour batter into greased muffin pans, filling each about two-thirds full. Bake in hot oven (425°F.) 25 minutes. Makes 9 to 12 muffins.

Over the Top of the World

(*Continued from page 47*)

secretary, and Diamond Jenness of New Zealand, now chief anthropologist of the Canadian Government.

It was on the way ashore that I discovered an outstanding quality in Wilkins —a willingness to take orders. And whether he thought the orders silly or whether he considered them wise, he carried them out with equal thoroughness.

THERE is nothing more difficult in polar exploration than to teach a young man how to take care of his clothing. The first rule about sleeping at night—and the only way you can be permanently comfortable —is to use a sleeping bag of one thickness only and to strip completely naked before going to bed. All our southern instincts and training are against this. We are used to wearing pajamas or other night clothing. We know that several thicknesses are warmer than one, because of the air layers between. Generally speaking, this is true, but in the Arctic that very thing is a drawback, for hoar frost will condense between the layers and make your bag wet, eventually filling it with ice.

Wilkins was from the tropics and had more superstition and misinformation in his head about cold and the terrors of it than did perhaps any other member of our party. *Yet he obeyed orders even when no superior was watching.* In this way he learned the first lesson of comfortable Arctic travel; that is, you must forget practically all your preconceived theories and beliefs about cold weather.

The qualities that marked out Wilkins for an outstanding figure and really set him upon his career of polar exploration came into view only several months later. At that time, we were on the north coast of Alaska with three of the five ships that composed our expedition. The time had come to call for volunteers to travel by sledge north over the unexplored floating ice of the deep ocean. We were going in search of lands which, according to theory, were supposed to lie far to the northward. The distance was so great that there was no chance of being able to haul along enough provisions for the journey. We would, therefore, have to live by hunting.

But the Eskimos of northern Alaska all said that there was no game under or on the ice of the polar sea when you got more than ten miles from land. This same view was held by all the explorers and all the scientists. But I had come to the opinion that the Arctic Sea is as crowded with fishes, shrimps, and varied animal life beneath the ice as the other oceans are where there is no ice.

When I called for volunteers for a journey north over the ice to live by hunting for a year, only six men came forward. One of them was Wilkins. The other five, I think, were more or less of the opinion that my views were right, or had a good chance of being right. Wilkins thought I was wrong. He had been fully convinced by the Eskimos and by the arguments of the scientific staff of our expedition that there would be in the ocean no animal life sufficient for us to live upon by hunting.

But Wilkins was not to go very far with us on that journey north over the floating ice. We were traveling by sledge over the ice pack, when a gale came up which separated our party. It left Wilkins and some others on the land floe, but carried six of us fifty miles to seaward, floating on a cake of ice. It was not possible for them to find us, or for us to return.

After our first disappointment, we realized that the separation from Wilkins might turn out to our advantage. We were intending to make a journey of about seven hundred miles, first north and then northeast, east, southeast, and south. Our goal was the northwest corner of Banks Island, a large uninhabited island whose interior had never been explored, though it had been discovered nearly a century before. I wanted two of our three ships to try to meet us there in about six months. So I sent three of our six men ashore with orders to Wilkins that he was to take command of one of these ships and bring her to northwestern Banks Island. Similar orders were sent to cover the other ship.

It turned out to be our salvation that I had sent orders direct to Wilkins. For when we three who had gone out in search of land failed to return to Alaska, the belief grew up (in spite of the fact that we had said we would not return) that we had died of hunger or exposure somewhere on the floating ice many hundreds of miles to the north. Hence our men in Alaska reasoned that there was no point in sending a ship to Banks Island to meet us.

It was Wilkins who stood out against this theorizing. He took the position that orders had to be obeyed, even if the commander who issued them were dead. He found us in uninhabited Banks Island, living there by hunting as we had lived also while traveling the seven hundred miles over the sea ice to get there. Our last supplies from home had given out fifty-six days before we got to Banks Island and nearly half a year before Wilkins reached us there.

THREE years Wilkins served on our five-year expedition. He helped us discover the islands now called Brock, Borden, Meighen, and Lougheed. We named after him as Wilkins Sound the great bay that cuts into one side of Borden Island. Then he asked my permission in 1916 to leave. His father was nearly a hundred years old and he wanted to see him before he died.

We had received news of the Great War about a year after it started, but our letters had said it would last only a few months. When Wilkins got south, his father had died but the war had not been won. He enlisted in the Australian forces and was rapidly promoted. Eventually, he became captain and was placed in command of all the photographic work of the Australians on the Western Front, with several airplanes under his command.

Flying was no new thing to Wilkins. He had learned it from Grahame-White in 1912, and while with us in the Arctic had constantly studied natural landing fields, both on the lakes and prairies of the islands, and on the floating ice floes of the ocean. He was planning airplane expeditions even then. Indeed, he was always explaining to the rest of us how the Arctic seemed to him one of the best flying districts in the world, with air conditions usually favorable, storms infrequent and not so violent as farther south, and the polar seas the only ocean upon which nature had provided landing places so you could come down in an emergency and take off again after making repairs.

The war over, Wilkins stayed in the flying game. The London "Daily Mail" offered a $50,000 prize for the first successful flight from England to Australia, and he entered the race with a Kangaroo plane. Everything went well as he crossed Europe, but his fuel tank sprang a leak over the island of Crete and he was forced down on rocky ground, smashing the plane. In 1921 he joined Shackleton as chief of his scientific staff for the Antarctic voyage on which Shackleton lost his life.

When he came back from the Shackleton voyage, he put in two years conducting a scientific exploration for the British Museum in the wildest parts of tropical Australia.

THEN came 1926, and Wilkins was offered backing to fly across the Arctic, from Alaska to Europe. He planned several preliminary exploring flights radiating from Point Barrow to the northwest, north, and northeast, to discover whether there was any land in that part of the ocean. Then he would fly from Point Barrow to Spitsbergen.

One more of the striking Wilkins traits appeared when he announced his flying plans for 1926. The safest, easiest, and almost the shortest road from Barrow to Spitsbergen lies right across the North Pole. But he announced he would go out of his way to avoid the Pole, for two reasons: First, he wanted to emphasize the fact that the North Pole is not really in the center of the Arctic, as the public supposes, but four hundred miles away from the center. And, second, he wanted to emphasize also his conviction that Peary had visited the North Pole in 1909, had spent two days there, taking a sounding and making other scientific observations, and that it was therefore absurd to suppose that anyone could, by merely flying over the place, discover anything of value which Peary had overlooked.

But in 1926 Wilkins went through an unbelievable series of calamities and troubles. The able young newspaper correspondent, Palmer Hutchinson, who had been assigned to cover the story of the flights, walked into the propeller when the first machine was tuning up for a trial flight at Fairbanks, Alaska, and was instantly killed. Apart from the tragedy itself, the propeller that killed him was broken, and when they put on a supposedly duplicate propeller, it turned out not to be a duplicate at all but one which did not give adequate power.

There were two airplanes in this expedition and Wilkins had selected two of the best pilots that forethought and experience

This ONE Critical Mistake

costs motorists millions every year

"THAT'S YOUR OWN FAULT," says the repair man. "If you don't keep tires properly inflated, you can't expect them to last very long."

JUST LOOK AT THIS! Both tires have been run 4,000 miles. One is ruined, the other almost as good as new. This advertisement tells why.

It ruins their tires in a few short months . . . causes premature tread wear, fabric ruptures, rim cuts and other costly injuries

IMPROPER inflation, the most destructive abuse to which tires are exposed, can be avoided easily if these simple precautions are taken.

First, ask your dealer the exact pressure your tires should carry. Then test them regularly . . . once a week at least. For this purpose use the Schrader Gauge.

This gauge is built on simple, scientific principles. It is accurate, durable. Easy to read. Easy to use.

Second, make sure each valve stem is covered by an *improved* Schrader No. 880 Valve Cap . . . air-tight up to 250 pounds.

In case of a damaged valve inside, this unique cap will prevent the escape of air at mouth of valve until the valve inside can be replaced.

And third, change your valve insides once a year. See that you have the *genuine* Schrader . . . standard wherever pneumatic tires are used.

Schrader products are sold by more than 100,000 dealers throughout the world.

Write for our booklet, "The Air You Ride On." A. Schrader's Son, Inc., Brooklyn, N. Y. Makers of Pneumatic Valves Since 1844. (Tire Valves . . . Tire Gauges.)

1 *The Schrader Gauge is accurate . . . and it is built to stand the gaff. Wise motorists use theirs once a week . . . to make sure their tires are kept at proper pressures.*

2 *This Schrader No. 880 Valve Cap is air-tight up to 250 pounds. Box of five 25c*

3 *Change your valve insides once a year. Make sure you have the genuine Schrader. Box of five . .25c*

could provide. Yet one after the other these two pilots took the two machines out for trial spins and each made the same mistake—they misjudged the landing, and both crashed, wrecking their machines.

In spite of these and other troubles, much important pioneer flying was done by Wilkins in 1926. Testimony had just been given before Congress that no enemy, such as Russia or Japan, could ever fly airplanes across Alaska because of the unfavorable atmospheric and landing conditions. Previous explorers, too, had reported the Endicott Mountains, which run east and west across northern Alaska, to be about five thousand feet high. But now Wilkins, with his pilots, Major Thomas Lanphier and Lieutenant Ben Eielson, began to taxi back and forth through the Arctic skies between Fairbanks and Point Barrow, a five-hundred-mile distance, more than four hundred of it across Arctic prairie and across the Endicott Mountains. The latter turned out to be twice as high as the previous explorers had thought. Thus, in carrying supplies from railhead to his flying base, Wilkins accomplished the first great triumph of Arctic flying, presaging the time when the airplane will be the most powerful single agency for opening up the Arctic.

The tragedy of young Hutchinson and the two crashes at Fairbanks had been unbelievable, each separately and particularly all three in combination. Now, with the supplies at last accumulated at Point Barrow, something equally strange began to happen. The mechanics were unable to tune up the engines so that they would develop anything like the expected power, and it was not possible to get them to lift the required load into the air.

The Wilkins expedition of 1926 was at Barrow many weeks before either Byrd or Amundsen reached Spitsbergen, yet both of them were able to take off ahead of him. Few things could be more heartbreaking than to be there at an ideal base in ample time and to see week after week of the best winter weather going by without a chance to fly. Then came spring, to be followed by summer, both too foggy for successful exploratory flying. It all nearly broke Wilkins's heart and it would have broken the spirit of almost anyone but him.

WE NOW come to the thrilling story of the year 1927. It seems to me that the marvelous popular success that Wilkins and Eielson made in 1928, just a little while ago, is useful, or at least interesting, chiefly in pointing out the remarkable things they did a year before when nobody was watching.

The Arctic is dangerous because it is a new country with strange conditions that temperate zone and tropic people fear. Place one of them untrained in the Arctic, and it is as if you were to cast a landsman adrift in mid-Atlantic.

Even for the trained and experienced, the Arctic is difficult because it is an uninhabited region where no one can come to your assistance. Let the flying conditions be ever so favorable, you are always in the greatest danger nevertheless. Something may go wrong with the engine and you are forced to come down to either an island or an ice floe that is hundreds or perhaps thousands of miles from the nearest human beings.

In flying a pioneer country, nothing can

INVEST 2¢

... you may save $200!

Write us *now* for your copy of *this free book*

THE fund of facts in "How to Judge a Used Car" may easily save you $200 or more in buying a used car! Boiled down into ten minutes' interesting reading are the safeguards experienced *automobile dealers* apply when *buying* used cars for resale. Every paragraph is the summary of years of experience—every page is full of time-saving, money-making pointers.

Pictures and text in this helpful used car manual give startling information never before made public. They show *you* what code prices mean, why dealers turn the speedometer back to zero, how to fix the value of a used car offered by a friend, how to avoid "orphans"—and other important points the average buyer might overlook.

Send the coupon *now* for your copy. Learn how to get more for your motoring money. Invest 2c in a postage stamp—you may save $200!

Pledge to the Public on Used Car Sales

1 Every used car is conspicuously marked with its price in plain figures, and that price, just as the price of our new cars, is rigidly maintained.

2 All Studebaker automobiles which are sold as CERTIFIED CARS have been properly reconditioned, and carry a 30-day guarantee for replacement of defective parts and free service on adjustments.

3 Every purchaser of a used car may drive it for five days, and then, if not satisfied for any reason, turn it back and apply the money paid as a credit on the purchase of any other car in stock—new or used. (It is assumed that the car has not been damaged in the meantime.)

Replace your Crosley Radio in approved Showers Cabinet and *save money!*

Only through Showers Brothers Co., America's largest furniture builders, are these astonishing values possible. Their great factories produce at a speed and efficiency no one has ever approached.

The finest veneers have been selected—master wood carvers drafted . . . rare decorative woods employed . . . all to create a beauty and design at prices that cannot be equalled.

Note how delicately these charming pieces appear. Yet examine them and realize their sturdy construction.

Your home can hold no better furniture!

Take advantage of the 5 day free offer. See for yourself how well this radio console will appear in your home—how wonderful the radio performs and how much pleasure this little investment can bring.

Other Showers cabinets equally as good values in larger sizes are shown by Crosley Radio dealers.

Model C-4
Matched walnut veneer with over-laid curly maple and genuine wood carving decorations. Solid brass door pulls. Dynacone built in, $70.

Model C-2
The popular "chest" model. Door falls to form arm rest for tuning. Beautiful matched walnut veneers and genuine wood carvings. Dynacone built in, $70.

Model C-1
Exquisitely proportioned cabinet of loveliest matched walnut veneers. Rare zebra wood and genuine wood carving add rich decorative effects.
Dynacone built in, $84.

38 inch walnut veneer
CONSOLE RADIO
with Dynamic Speaker CROSLEY DYNACONE built in and new Crosley 6 tube AC Electric GEMBOX installed ready to attach to your antenna. Nothing but tubes to buy. **$115**

Cabinet with Dynacone built in (without radio), **$50.**

The most beautiful grained veneers have been selected to form exquisite matched patterns and genuine wood carvings add a decorative note of real distinction. Note the beautifully turned legs and graceful proportions, and the artistically designed spreader which not only adds a greater measure of beauty, but a sturdiness of construction not found in "cheap" radio cabinets.

avail you in case of engine trouble, not even supreme coolness and the highest skill, unless you can find level places to land on. Several explorers, including most of those who had either flown or planned flying the Arctic, were of the opinion that there were few landing places on the moving pack where the Arctic ice floats around in cakes that vary in size from a house lot to a large farm. One of the most famous of all these explorers, Captain Roald Amundsen, had said that on the entire polar sea, from one side of it to the other, there was "not one safe landing place, not even one," for an airplane mounted on skis.

But Wilkins replied that, in his judgment, based upon his experience in the Arctic, there would be on the average at least one reasonably safe landing every five miles of floating pack ice.

These flat places, however, even if they existed, would be really safe only if you landed on them in perfect weather with perfect skill. One safe spot every five miles does not mean that you could come down anywhere you liked or anywhere you happened to be.

ON MARCH 29th, 1927, the world would have held its breath with thrilled suspense, had it known that Wilkins and Eielson were taking off from Point Barrow for a fourteen-hundred-mile round-trip flight to the northwest, twelve hundred miles of it over ocean never before seen by human eyes. But the world did not know, for Wilkins had no press agents.

It was a clear morning when the Stinson plane took off for its flights into the unknown. The temperature was about thirty degrees below zero, ideal flying weather. But that good weather might not last, for there are no weather bureaus near enough to Point Barrow to give reliable forecasts such as, in a measure, protect the Atlantic and Pacific flyers.

With Eielson at the controls and Wilkins navigating, the single-engined plane flew high and straight—high in case there might be land to see on either side and so that, in event of engine trouble, the flyers would be able to make a longer glide downward in search for a landing place. For six hours the weather was perfect as the plane carried them farther and farther over the uncharted landless sea.

Then came the sudden test of whether there are safe landing places on the Arctic pack. The engine started kicking. With their scientific reputations as well as their lives at stake, the flyers came down in a long, slow glide for the first landing ever made or ever attempted with skiis or wheels on the Arctic pack. In the few moments that were all he had, Wilkins selected a place he thought Eielson could make, and Eielson did make it. The plane came to rest smoothly and safely five hundred and fifty miles from the nearest land, and four hundred miles farther out in that ocean than human beings had ever penetrated before!

For a study of men under stress, even more significant than the perfect landing with its vindication of Eielson's skill and Wilkins's judgment was the sort of thing they did after landing. A storm came up, blowing from the land and therefore against them as they would return. Yet they made no feverish haste to tinker the engine and get into the air. While Eielson

Replace your old radio!

Seven and a half million sets now obsolete

1928 Features

Few radios AT ANY PRICE combine ALL these features which are essential to today's reception.

AMPLIFICATION
Neutrodyne 10×10×10=1,000
Other systems 5×5×5=125

Crosley Radios tune efficiently

Crosley Neutrodyne circuit is sharp, sensitive and selective. Distant stations are easily found. Local stations tune without squealing.

Crosley Radios are shielded

Each element shielded from each other provides maximum selectivity and *is featured* in the most expensive sets.

Crosley Radios are very selective

In crowded districts where many local stations fill the air you find means of listening to ONE at a time.

Crosley Radios have great volume

Volume may be increased to tremendous proportions without distortion.

Crosley Radios can be softened to a whisper

A positive volume control enables operator to cut any program down to faint and scarcely audible reception.

Crosley Radios fit any kind of furniture

Outside cases are easily removable and chassis are quickly fitted into any type or shape console cabinet.

Crosley Radios have illuminated dials

Your set has served you well *but* you will *not be satisfied* with *its strained stringy tones when* you hear a *new full toned power speaker* Crosley *set*

$25 New Dynamic DYNACONE *Amazing Speaker*

6 tube GEMBOX AC ELECTRIC $65

FIVE DAYS FREE TRIAL IN YOUR OWN HOME

Crosley originated the idea of a national policy of home demonstration. Home is the place to buy a radio set. Compare a Crosley radio set with any other that you are contemplating buying and you will choose the Crosley. If you have electric current in your home, your set should be a modern, AC electric receiver. A converted battery set is out of date. If you pay more than $65.00 for a radio set, it should have two 171 output tubes, push-pull instead of one, eight tubes instead of seven. To be up-to-date, your new radio set should be designed to take and supply the current for a power or dynamic type of speaker. Crosley sets are so designed. Other sets designed for power speaker use are much more costly. You should demand the tone quality and the performance resulting from high power output coupled with dynamic speaker. Your set should be completely shielded and incorporate the highly sensitive, genuine, neutrodyne circuit. It should have a modern illuminated dial. An examination of Crosley radio sets will show you many other modern exclusive features.

$25.00 NEW DYNAMIC DYNACONE AMAZING SPEAKER!

The Dynacone is a new revolutionary speaker at a price less than many good magnetic speakers. The first minute you hear this new reproducer, it will thrill you to a new conception of what radio broadcast reception should be. Crosley manufacturing speed and straight line methods permit the extremely low price.

WHY PAY MORE THAN CROSLEY PRICES?

We urge you to listen to a Crosley radio set, try it, put it to any test you can think of. No sets that approximate Crosley prices can compare in performance. Why pay a high price for a set that can compare favorably with Crosley?

SIX TUBE GEMBOX AC ELECTRIC, $65.00

Self-contained AC electric receiver. It utilizes two radio, detector, two audio and a rectifier tube—171 power output tube. Designed for use with the new Crosley Dynamic power speaker. Operates from 110 volts 60 cycle AC house lighting current. Crosley prices do not include tubes.

1928's greatest radio

8 tube SHOWBOX $80

Genuine Neutrodyne, 3 stages radio amplification, detector, 3 stages audio (last two being 171 push-pull power tubes) and 280 rectifier tube.

8 tube JEWELBOX $95

Genuine Neutrodyne 3 stages radio amplification—227 detector tube, 3 stages audio frequency, and 280 rectifier. Shielded coils, modern illuminated dial and highly selective.

6 tube BANDBOX $55

An improved model of the 1927 receiver that led the world to better radio. Genuine Neutrodyne—every modern fitting and refinement including illuminated dial. The set you can safely buy where AC current is not available—selective, sensitive.

5 tube BANDBOX Jr. $35

Operates entirely from dry cells and is especially designed where no electric current is available for AC radio or recharging storage batteries.

Improved MUSICONE $15

The outstanding Magnetic type speaker available, still maintaining its leadership, today, as from its inception in 1925.

CROSLEY

The Crosley Radio Corporation
Powel Crosley, Jr., *Pres.*
Cincinnati, Ohio.
Montana, Wyoming, Colorado, New Mexico and West, prices slightly higher.

NEW YORK *debutantes say they don't like men who are bald or have dandruff. Don't give women a chance to talk this way about you*

"Even if they aren't old and neglected, *they look it,*"

say New York debutantes of men who are BALD or have DANDRUFF

"OF COURSE we don't like men so well who are bald or have dandruff, who does?" popular New York debutantes recently told us.

Don't let the women you know feel and talk this way about you!

Dandruff *can* be destroyed—by the right method. And this regular 3 minutes a day treatment will keep your hair vigorous, young-looking, thick.

But remember, it must be followed *faithfully*, 3 minutes a day every day.

EVERY MORNING, moisten hair and scalp generously with Pinaud's Eau de Quinine. Then, with fingers pressed down firmly, *move scalp vigorously in every direction, working tonic thoroughly into every inch* of scalp. Move scalp, not fingers. Brush your hair while moist. It will stay just the way you want it.

Dashing Pinaud's Eau de Quinine over the scalp kills dandruff. *Working it into the scalp deeply* every day, gives hair-health, keeps the hair growing and thick.

Begin this Pinaud treatment now. Buy a bottle of Pinaud's Eau de Quinine at any drug or department store today.

FREE: generous sample bottle of the famous Pinaud's Eau de Quinine. Write today to Pinaud, Incorporated, Dept. A-2, 220 East 21st Street, New York.

IF HE ONLY *hadn't waited, how very different this photograph would be! But he did wait—and just a slight hair-thinning became a sizable bald spot. And the V's at his temples grew into peaks. Such a pity when 3 minutes every day would have saved his hair!*

Look for Pinaud's signature on every bottle

PINAUD'S *Eau de Quinine*

Copr., 1928, by Pinaud, Inc.

KEEPS THE HAIR HEALTHY: THE SCALP CLEAN

worked quietly at the machinery, Wilkins prepared to sound the depth of the ocean, so that their forced landing would have its scientific compensation. The ocean proved to be 17,000 feet deep, more than three miles, by far the greatest depth ever discovered in the Arctic Sea.

After two hours of repair work the engine was not running perfectly, but the offshore wind was increasing and delay had begun to look dangerous. They tried taking off, succeeding at the fifth attempt. The wind was so strong by then, however, and the clouds so thick, that there was nothing for it but to give up the rest of the planned flight and steer homeward.

The plane had been in the air only ten minutes and had not yet made the desired altitude when the engine failed them again. Once more it was a question of life and death. Indeed, the situation was more serious this time, for there had been sunshine when first they landed, so that the snags of ice threw black shadows that could be seen clearly from above. Now, with the sky overcast, there were no shadows and it was most difficult to tell whether the ice below was level or rough. But Wilkins had profited by his three years afoot driving dog teams over the Arctic pack, and by his two years of Arctic flying. Again he directed Eielson to what he thought was a safe spot; again Eielson was able to keep the machine up till they got to the place selected, and for the second time made a perfect landing.

This time both worked at the machinery. It did not take long to make the necessary repairs, but already the snow had been falling. It fell soft and thick while they worked. By the time they had finished, it was so deep that even with the engine now working perfectly they got into the air only at the second try.

THE two landings and what amounted to seven take-offs had used up so much gasolene and so much time that it was hopeless to try to reach land before nightfall and doubtful if their fuel would take them there.

At nine P. M. it was dark with a combination of storm and night. They did not know how far from shore they were, though it must be far. The ice they were flying over, but could not see, they knew was rough, for even Wilkins himself, the most optimistic of polar flyers, had estimated only one safe landing place every five miles. To come down on any spot but one of these meant tangled machinery and mangled bodies that would soon be blanketed from sight by the drifting snow.

"We had climbed to five hundred feet," says Wilkins in his report to the scientific sponsors of his expedition, the American Geographical Society of New York. "Visibility ahead was nothing. My watch was before me. At 9:02 the engine cut out suddenly, as if the switch had been snapped. There was no sputter because of starved carburetor, but a sudden silence, except for the hum of the wind in the wires.

"Eielson snapped the switch right and left; there was no response from the engine. We could feel the sag of the falling plane. With great coolness and skill Eielson steadied the machine, righting her to an even keel and an easy glide. His eyes were glued to the turn and bank indicator. My hands were ready to guide and keep the compass course.

Home *from a happy week-end!*

Pleasant to find a well-stocked refrigerator with everything in perfect condition

AFTER a happy week-end—have a happy home-coming! Find a generous supply of food waiting for you. Milk, fruit, meat, salad —your General Electric Refrigerator will keep them all perfectly chilled—healthfully fresh.

Your every-day planning of menus becomes so much simpler, too. Delicious and unusual desserts will be as easy to prepare as old, familiar standbys. Salads are crisper, fruits more luscious in flavor, when they are thoroughly chilled.

Quietly, economically, this "years ahead" refrigerator brings you new comfort. Its operation is so completely automatic that you never even have to oil the machinery. It is all enclosed in an air-tight steel casing — mounted on top, away from floor dirt. And the constant circulation of warm air through the coils actually prevents dust from settling.

Important, too, from the standpoint of cleanliness, is the fact that this refrigerator is up-on-legs. It's so easy to mop the floor under it. In fact, every element that makes for the housewife's comfort has been carefully incorporated in these truly *modern* refrigerators. For detailed specifications of the various models, just drop us a card for Booklet A-9.

Pipe Smoker Finds Right Tobacco For "Breaking in" a Pipe

Ohio man now enjoys wife's gift of two years ago for the first time

There are many veteran pipe-smokers who have never discovered Edgeworth. These hardy souls are prone to advise new smokers that a pipe must be old before it can be sweet. True, an old pipe is sweet. But how can a man breaking in a new pipe achieve this sweetness? Let Mr. Shera's letter tell you:

Columbus, Ohio
March 10, 1927

Larus & Bro. Co.
Richmond, Va.
Gentlemen:

Two years ago my wife gave me an expensive pipe. I smoked it a great deal for two or three weeks, put it aside, then began smoking it again. This time it was very strong. Veterans told me that it had been smoked too hard for a new pipe and should be put away.

The pipe was laid away again. A short time ago I got it out and smoked one of the common brands of tobacco in it. The results were disappointing. I told the druggist of my experience with it. He asked if I had tried Edgeworth. I told him I never had. I followed his suggestion, and I am honest when I say that it has restored the sweetness to the pipe, and has made me wonder: Was it the pipe or the brand of tobacco that caused me to lay it away for the long period of time?

As a novice, I prefer Edgeworth; and I am going to stick to it, as I feel satisfied that there is none better on the market.

Sincerely yours,
Philip C. Shera

Evidently, smokers can't resist the impulse to write their praises of Edgeworth.

To those who have never tried Edgeworth, we make this offer:

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

[*On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 254.1 meters. Frequency 1180 kilocycles*]

"Near the ground the air was rough. The plane swerved and pitched, but Eielson, still calm and cool, corrected with controls each unsteady move. In a moment we were in the snowdrift. We could not see beyond the windows of the plane. I felt Ben brace himself against the empty gas tank; I leaned with my back against the partition wall of the cabin and waited; the left wing and the skis struck simultaneously. We bounced and alighted as smoothly as if on the best prepared landing field. I gripped Eielson's shoulder and slipped through the door of the machine to the ice. Wind and driving snow filled my eyes. Dimly about us I saw pressure ridges as high as the machine. We had, undoubtedly, struck one as we came down. Along the extreme edge of the lower wing, the fabric was torn.

"The intense strain of the last two hours of flying over the Arctic Ocean through the blizzard after sunset had left us weak and tired.

"Ben looked at me and I looked at him. Then we began to laugh nervously and could not stop for about five minutes.

"Then Ben stretched out in a sleeping bag on top of the empty gas tank and I huddled in a corner of the cabin. We went to sleep."

WHEN they woke next morning sextant and chronometer observations, such as navigators make at sea, told them they were eighty-three miles northwest of Point Barrow and therefore eighty-three miles away from the nearest land. They were on a rapidly moving ice island floating before the wind.

Bad weather lasted five days. During that time Wilkins and Eielson bunked comfortably enough in the cabin of their machine while they tore out parts of it and built a sledge to haul their meager outfit to land. When the weather settled, an observation proved that they had drifted about one hundred and sixty-seven miles in five days and were now about one hundred miles northeast of Point Barrow.

So that was their task—to make land a hundred miles away, dragging their sledge and building snowhouse camps at night. Wilkins is one of undoubtedly less than a dozen white men in the world who knows how to build a snowhouse Eskimo fashion. I suppose Ben Eielson learned the trick from him before they reached shore, for it took them thirteen days and they had to build a snowhouse every night. In these they slept with comparative comfort.

On the eighteenth day after their forced landing Wilkins and Eielson made shore at a fur trader's station near Beechy Point. While they rested, a fast dog team was sent dashing with a message the hundred miles to Barrow. They did it in record time and Alger Graham, the second pilot of the Wilkins expedition, came down with his airplane, picked them up and took them to their base. But the weather was thick already with the fogs of spring and it was too late for successful exploratory flying till another year.

This year, Wilkins and Eielson went to Barrow, flying there once more five hundred miles across the Arctic mountains from Fairbanks, the railway terminus of central Alaska. On April 15th they took the air for the flight to Spitsbergen which Wilkins had planned to make two years before.

FLYING from Barrow to Spitsbergen by way of the North Pole is not only one hundred and twenty-seven miles shorter than the road Wilkins chose; it is safer and easier as well. For the navigation is fundamentally easier if you first travel straight north to the Pole and then straight south. In that case you change flying direction only once—at the North Pole. By the course Wilkins took it was necessary to change the direction of flight every hour or every two hours, which made the navigation far more difficult. Besides this, he also deliberately accepted other difficulties that are too technical for a simple explanation. He did this for the reasons he had given two years before. He made that diagonal crossing successfully and proved this vast stretch to be only landless ocean.

As Wilkins outlined it, the danger of his flight was least while he was in the heart of the Arctic and in the center of the unexplored. He carried rifles and ammunition and stated in his program that, if he were forced down at the farthest point from land, it might take him and Eielson two years to walk out to some Eskimo or white settlement, but that he felt no doubt of his ability to do this with reasonable safety and comfort, relying on seals for food, fuel, light, and clothing, living in snow houses in winter, heated and lighted with seal's fat, and living in tents of sealskin in summer. Had he been forced down near Greenland, the walk to the Eskimo settlements would have required only a few weeks or months. Had he been forced down between Greenland and Spitsbergen, death would have been almost certain, for the landing would have had to be made either in water, with immediate drowning, or on a cake of ice rapidly drifting south and giving only a respite of a few days before it melted in the warm waters of the Gulf Stream.

But, with a little good luck to cancel the bad of former years, with his own superb navigation and Eielson's perfect piloting, Wilkins brought his single-engined Lockheed-Vega plane to a safe landing in difficult Spitsbergen at the end of a voyage through unexplored skies that has brought him a shower of gold medals and every other token of the favor of the scientific world. For men of science of every land agree with the British Minister for the Colonies, who said that "never since Balboa stood on a peak in Darien, and saw for the first time the broad Pacific, has so significant a new vision of the world been spread before human eyes in one day as when Wilkins flew in twenty-two hours from America to Europe by way of the Arctic."

HARRY EMERSON FOSDICK, one of the best-known preachers in this country, writes a powerful piece for us next month on the always interesting subject, "What is happening to the American family?" "The revolt against old-fashioned family life," he says, "is not only inevitable, it is desirable." But what are we revolting to? Trial Marriage? That is the question Doctor Fosdick discusses.

Do You Make these Mistakes in ENGLISH?

Sherwin Cody's remarkable invention has enabled more than 50,000 people to correct their mistakes in English. Only 15 minutes a day required to improve your speech and writing

SHERWIN CODY

MANY persons say "Did you hear from him today?" They should say, "Have you heard from him today?" Some spell calendar "calender" or "calander." Still others say "between you and I" instead of "between you and me." It is astonishing how often "who" is used for "whom," and how frequently the simplest words are mispronounced. Few know whether to spell certain words with one or two "c's" or "m's" or "r's," or with "ie" or "ei." Most persons use only common words—colorless, flat, ordinary. Their speech and their letters are lifeless, monotonous, humdrum.

Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. A striking command of English enables you to present your ideas clearly, forcefully, convincingly. If your language is incorrect it hurts you more than you will ever know, for people are too polite to tell you about your mistakes.

Wonderful New Invention

For many years Mr. Cody studied the problem of creating instinctive habits of using good English. After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes which have been hurting you. Mr. Cody's students have secured more improvement in five weeks than previously had been obtained by other pupils in two years!

Learn by Habit—Not by Rules

Under old methods rules are memorized, but correct habits are not formed. Finally the rules themselves are forgotten. The new Sherwin Cody method provides for the formation of correct habits by calling to your attention constantly only the *mistakes you yourself make*—and then showing you the right way, without asking you to memorize any rules.

One of the wonderful things about Mr. Cody's course is the speed with which these habit-forming practice drills can be carried out. You can write the answers to fifty questions in 15 minutes and correct your work in 5 minutes more. The drudgery and work of copying have been ended by Mr. Cody! You concentrate always on your own mistakes until it becomes "second nature" to speak and write correctly.

FREE BOOK ON ENGLISH

A command of polished and effective English denotes education and culture. It wins friends and makes a favorable impression upon those with whom you come in contact. In business as well as in social life correct English gives you added advantages and better opportunities, while poor English handicaps you more than you now realize. And now, in only 15 minutes a day—in your own home—you can actually see yourself improve by using the 100% self-correcting method.

A new book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if you can not instantly command the exact words with which to express your ideas, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 99 Searle Building, Rochester, N. Y.

The Importance of Being Yourself

(*Continued from page 13*)

commenting on the fact that though he possesses the arbitrary power of a majority stockholder he never exercises it.

"We appreciate the dignity and self-respect which result from affiliation with a leader so democratic in his ideas of internal management, and so liberal in his public outlook," they said.

It was a very genuine tribute from men who have fought their way up from reporters' jobs by the habit of saying what they think.

On October 22d, 1895, which was the day Bob was born, Roy Howard stood on an Indianapolis street corner selling newspapers. It would have taken a brave man to place a bet on his future that day. From his father, who died young, he inherited only about a hundred pounds of flesh and bone, and a tendency to tuberculosis. There was no money, and only a high-school education; but there was something inside the boy which made up for all the handicaps.

The Howards were fighting Irishmen. The grandfather, engaged in a dispute over a line fence, lost the argument by reason of two inches of cold steel. As far back as the records run, the race has been short on brawn but long on spirit. People who watched the diminutive newsboy noticed that his small legs covered a lot of territory. While his chest looked thin, his voice was as strong as the whistle on Mark Twain's famous steamboat. And the bigger boys treated him with the respect which a slow-moving St. Bernard renders an aggressive fox terrier.

FROM the selling of newspapers it was an easy step to the making of them. The kid became a copy boy and then a sporting editor, while still in his teens. It was a good job, and most youngsters would have been well satisfied; but after a couple of years Howard had different ideas. He did not want to be a sporting editor; he wanted to be a newspaper man—a big newspaper man. Accordingly, he went to St. Louis to work on the "Post-Dispatch," because it was owned by Joseph Pulitzer, who owned the New York "World." If he made good in St. Louis, it ought to be possible to get to New York.

He was assistant telegraph editor in the days of the Russo-Japanese War and, when the telegraph editor resigned to go to Chicago, Howard had the temerity to ask for the job. The powers-that-be looked at his size, considered his years, and told him to be a good boy, and maybe he might some day grow up.

"Good-by," said Howard. "I'm going to Cincinnati. Ray Long has offered me a job on the Cincinnati 'Post.'"

"You mean to say you are going to work for that Scripps-McRae outfit!" they exclaimed incredulously. "Those people don't even know the *why* of a newspaper."

"Maybe not," said Howard. "But that's where I'm going."

They thought it was the end of what might have been a good newspaper man.

Colonel Milton McRae, who at that time was the partner of E. W. Scripps, visited the Cincinnati "Post" during Howard's incumbency as managing editor, and carried away a vivid recollection of the experience. He says in his memoirs:

"At the top of the stairs, a little railing had been built around the editorial sanctum to enclose the editor and his staff. There was a trick lock on the gate leading to the enclosure. I didn't know about the trick lock. I ran up the stairs and fumbled at the lock in vain. The thing wouldn't open. Inside the enclosure, at a desk piled high with copy, sat a dapper little chap about half my size, a youngster of twenty-one he seemed to be. He was apparently trying to write a headline for a story for which the make-up man was calling.

"After asking politely a few questions as to how to open the trick lock I became peeved and gently inquired what the railing had been built for. The boy at the desk looked up and snapped out, 'To keep the children from falling downstairs.' . . . 'Then I don't think it was built any too soon,' I snapped back.

"AFTER the 'Post' had gone to press an old employee asked the young editor if he knew who the 'big guy' was. He said 'No.' They told him. Roy Howard, for he was the 'boy,' declares that he was nervous for the rest of the afternoon. I don't believe from that statement that he meant to infer he was afraid, for in nineteen years' association with Howard I never knew him to be afraid of anything."

So it was that Roy Howard met one of his bosses. His meeting with E. W. Scripps was at the ranch in California and came some years later. The old man loved the out-of-doors and liked to wear high boots, into which he tucked his trousers. The boots were made to order and cost him plenty; but the costume gave the impression of a rough-and-ready dresser, and the organization generally assumed that he disliked good clothes. Accordingly, when one of the men was summoned out to the ranch he entered the old man's presence attired in a well-worn outfit.

Roy Howard likes good clothes, and is not at all averse to having them conspicuous. When his first invitation to the ranch arrived he was warned by the older men; but he proceeded promptly to dismiss the warning. He arrived in clothes which were not only fashionable but could be heard several blocks. The giant boss in high boots looked down at this immaculate live-wire about whom he had heard so many stories, and cracked a rude joke. Quick as a flash Howard shot back at him. In a minute they were in the midst of the first of several hundred battles; the big man trying to terrify the little one, or make him lose his temper, or trap him into some fool remark; and Howard side-stepping, shifting his guard, and giving back as good as he got.

Scripps loved a verbal battle. He took great pleasure in advancing an argument which he himself knew was fallacious, in order to test the intelligence and independence of his subordinates. In Howard he found a personality that would not be submerged, a mind which made its own

FOOTBALL BATTLES could be fought in DUNLOP CITY

THE Yale Bowl is huge enough to hold 75,000 football fans. It covers more than 12 acres. Dunlop's productive properties—if combined into one place—would form a "Dunlop City" of over 100,000 acres.... vast enough to hold 8330 Yale Bowls.

There are two reasons why you should be interested in the fact that Dunlop has grown so great:

1. It never could have come about if Dunlop had not made consistently *better* tires.
2. Such magnitude gives Dunlop certain tire-making advantages that no one else can match.

With Dunlop-owned rubber plantations—with 40 years' actual tire-building experience—with $195,000,000 in resources—with 45,000 craftsmen and engineers—Dunlop *should* be able to build consistently better tires.

On top of these mammoth assets, Dunlop has earned a reputation for painstaking genius in the details of tire-making. Take cotton, for example: Dunlop pays extra premiums to get the very pick of long staple cotton from upper Egypt. This cotton is woven into cord fabric for Dunlop Tires in Dunlop's own 32,000-spindle mill at Utica, N. Y.

The fabric is as vital to your tire as metal is to your motor. Your tire's backbone should be made of cotton that has strength *plus* another vital virtue. Your tires must flex in and out every time your wheel turns. Therefore, to be extraordinary, a tire must have cotton with extreme "stretch," as well as strength. Dunlop cotton has both these qualities... that's one big reason why Dunlop tires are so long-lived.

More and better cotton—more and better rubber—they are partial causes of Dunlop's supremacy. The splendid service rendered by Dunlop dealers has also been a factor.

But after all, here is the most decisive evidence that you will profit from Dunlops:

More than 26 million Dunlops are now running.

decisions. The two men became real friends at once.

There were six Scripps-McRae newspapers in Ohio, and Howard, who really should have been quite satisfied with his progress in Cincinnati, conceived the idea that the six ought to have a special correspondent in New York. Money was not plentiful in the outfit in those days; all of the papers were in the cellar-and-second-hand-printing-press period of their existence; but he managed to argue and annoy the editors into sending him East at a salary of fifty dollars a week. For a couple of years it was his business to write a daily letter from New York, interview the important people who registered at the hotels, and personally to cover fires, new plays, murders, divorces, and whatever else went on in the great city.

The Publishers Press, a poor excuse for a news service, was also owned by Scripps-McRae. It was presumed to see that the papers received the events of the world over a telegraph wire; but it had no money, no staff to speak of, and hardly anything in the way of equipment. Scripps sent a man to New York to build it up according to the Scripps policy and without expense. Looking around, the new boss discovered Howard, and immediately eyed him covetously.

"I'll tell you what I'll do," he said; "I'll make you managing editor of the Publishers Press, and you can carry on your correspondence for the Ohio dailies on the side. You turn over your fifty dollars a week to me, and I will pay you a salary of thirty-five dollars."

The nerve of the proposal appealed to the young correspondent.

Howard looked around at the two battered desks, and the lone telegraph instrument which *were* the Publishers Press. It was not an alluring set-up, but in his mind's eye he saw visions.

"You're on," he said. "When do I start?"

"This morning," the boss answered. And Howard took off his coat.

That was the beginning of what was later to grow into the United Press.

SUBSEQUENTLY, Howard was sent to San Francisco to start the service on the Coast, and later back to New York as president. He was twenty-eight when he took the top job, one of the youngest chief executives in the United States. What he did for the organization, how he changed it from a struggling little news service to a world-wide enterprise, with correspondents in every country, thousands of miles of leased wires, and more than eleven hundred newspaper clients—all this is now a matter of history.

Most big things are of slow growth. Howard was never content to grow slowly. In those days he seemed to be everywhere at once: In South America, persuading the newspaper publishers there to take their news from the United States instead of from Europe; in England and Germany and France; on every front of the World War, and in every chancellery where there was news.

It was said that nobody could see Lloyd George; the Prime Minister of Great Britain was too busy. But Howard saw him, and came away with the famous "knock-out" interview. Access to German headquarters was forbidden. But Howard got through, and almost caused a riot by asking General Mackensen if it were true that he was Scotch. When passage from Holland to England was impossible because all available berths on the boats were filled with Belgian refugees, he made the trip as a stowaway, arriving very hungry and very unkempt, but undaunted and on time. And the United Press responded to the tireless energy of its president, and grew.

THE time came, five years ago, when E. W. Scripps realized that he could not live forever, and that some provision must be made for carrying on his newspapers. Bob had been working ahead in the editorial end and was ready for editorial control. But who would take the business management? Scripps sent for Howard.

"The United Press is organized," he said. "You can turn it over to Bill Hawkins and Karl Bickel, who are perfectly capable of carrying on. I want you to go in with Bob and manage the newspapers."

To his surprise Howard was not responsive.

"I want to stay with the United Press," he said.

"It's a much bigger chance; much more money."

Still Howard side-stepped.

"I have a reason," he said.

"What reason?"

"It would hurt your feelings. I can't tell you."

E. W. demanded to be told the truth.

For a long while they sparred, and finally Howard blurted it out!

"I don't like your papers," he said. "And I don't believe in them."

It was a body blow. Anything else would have been forgivable. But not to believe in the papers; not to be loyal to the brain children into which the old man had poured his life!

"So you, too, have become conservative, have you?" he demanded. "You get a little prosperous and you abandon the faith."

Slowly, painfully, feeling that every word was a sword thrust, Howard freed his mind. He said that the papers had been founded to fight the battles of the under-dog; that they had made a magnificent fight, a winning fight. He said that they should always be fighting papers; but that they had failed to recognize that times had changed. Many of the issues for which they had struggled were established. Instead of battling, they were merely grumbling.

For hours they argued back and forth—two strong men, so curiously different in size and habit and mental processes. In the end they both won. Howard agreed to leave the United Press and go over to the newspapers. E. W. agreed that Bob and Roy should have a free hand to reshape the editorial policy. It was perhaps the biggest thing that E. W. Scripps ever did. Plenty of builders have seen their creations crumble because they themselves were too proud or too stubborn to change. He was broad enough to realize that each new generation must and will be served according to its own needs.

The conference ended with a final fling from the old man.

"I'll give you small salaries," he said, "and a big slice of the earnings. Whatever you make you've got to make out of the

NEW CHAMPION SPARK PLUGS

once a year

Save Gas and Oil

To install new Champion Spark Plugs every 10,000 miles, or at least once a year, actually costs you nothing, as they quickly save their price in gas and oil.

Spark plugs deteriorate in service, no matter how well made they are. After 10,000 miles the spark is weakened. Combustion is only partially complete. Unburned gas is wasted through the exhaust. Power is lost. Engine performance is seriously impaired.

Although dependable Champion Spark Plugs give better service for a longer time than any other spark plug, even Champions should be changed if they have been in service for 10,000 miles or more.

A new set of Champions assures complete burning of the gas. Engine efficiency is restored. Power, speed and all-around performance are improved to an amazing degree.

The saving in gas and oil, and the freedom from repair expense, are so immediately obvious that the regular change of spark plugs at least once a year becomes economically sound and eminently practical.

Outstanding Champion Improvements

Always pioneering and anticipating engineering demands, Champion Spark Plugs have been greatly developed and improved to meet the demands of the modern high-speed, high-compression engine.

The insulator is of *sillimanite*, a rare mineral far superior to ordinary insulating material and is exclusively Champion's because Champion controls the only commercial supply.

This insulator has been further developed to withstand temperatures far higher than is reached in any engine.

This makes certain that the insulator has the strength to stand up under the tremendously increased stress of the modern engine and provides complete insulation, insuring efficient sparking under all driving conditions.

Better engine operation is further assured by the new, all-copper gasket-seal of Champion's two-piece construction, which remains absolutely gas-tight against the increased compression of today's engines.

Champion has been further improved by marked development of the special analysis electrodes which assure a fixed spark gap under all driving conditions and are practically immune to pitting and corroding.

All of these improvements keep Champion far in advance as the better spark plug and assure its continued selection by two-thirds of the motorists the world over.

There is a correctly designed, dependable Champion Spark Plug for every engine. Champion X for Model T Ford, 60 cents. Champion for all other cars and trucks and tractors, 75 cents. (Canadian prices, 80 and 90 cents.)

4 O'clock

THERE'S no surer relief from that rather stodgy 4-o'clock-in-the-afternoon feeling than a glass of Welch's Grape Juice.

And the best of it is, you know it is so good for you.

Because it gives you much more than the temporary refreshment.

Welch's is a real food as well as a delicious drink. It is pure fruit juice and you can count on it for important health values—energy value, mineral salts, and vitamins.

Try it at 4 o'clock this afternoon. And be sure you get Welch's. No other can compare with it. The flavor is so pure and rich that you can serve it straight, blended or diluted.

For children after school—a glass of Welch's straight, or half Welch's and half water.

For business men at the soda fountain—a Welchade, long and cool, made like orangeade of the fruit juice and syrup and water.

For the woman at home or shopping—Welch's with cracked ice or carbonated water. Recipes for Welch Punch and other drinks are on every bottle.

Free—Book of Fruit Drinks—Send a postcard for free illustrated recipe book to the Welch Grape Juice Co., A-86, Westfield, New York. In Canada—St. Catharines, Ontario.

WELCH'S

Once you've tasted Welch's no other grape juice will do

At the fountain ask for straight Welch's or Welchade

properties. And you've got to put your earnings back into more stock. I've gone on the principle that the business ought to double every ten years. I've averaged better than that. At one period I doubled it in six years. I don't expect you boys to do as well as I've done. You haven't got as much brains."

So Bob and Roy went in together—youth taking over the reins from the hands that had held them so long. The name was changed from Scripps-McRae to Scripps-Howard; and they doubled the business in three years.

The chain of papers now extended from New York to San Francisco, including the New York "Telegram," the Cleveland "Press," the Pittsburgh "Press," the Denver "News," and twenty-three others—the largest group of newspapers under one ownership in the United States.

Howard is forty-five years old, and Bob Scripps is thirty-three.

SCRIPPS and Howard would never forgive me if I set them forth as anything more than two likable, human, hard-working fellows in the newspaper business—two good reporters. They don't seem to have changed from the men they were when they started work, and certainly they are no different in the eyes of their friends.

In Washington a few months ago somebody introduced Roy Howard to a big crowd at a dinner.

Said the speaker: "A tree never dies as long as the fresh sap keeps coming up to the top. An institution never grows old so long as fresh blood rises to the high places."

Howard answered: "I take it from the toast-master's remarks that he regards me as the fresh sap."

I have traveled with both men, played with them, battled with them when I thought they were wrong, and there is small chance that I shall sacrifice their friendship by trying to set them up here on any pedestal. They wouldn't stay up if I tried it. They would laugh hard and shake themselves off. Nevertheless, success is never entirely a matter of chance. There are always some characteristics in a man who gets to the top which have significance for other people. One of these is a wholesome dissatisfaction with the past.

Bill Hawkins, one of Roy's partners, once said: "I have never seen a piece of paper laid on Roy's desk that met with his complete approval. No matter what it is: a letter, an editorial, a contract: he reaches instinctively for his lead pencil; he always has an idea that there ought to be some way to make the thing better."

That kind of nature does not make a man a restful business associate. Perhaps Roy is too hard to satisfy, too attentive to little things. When I have seen him packing his trunk in a hotel, insisting that every article shall be put into its proper spot with his own hands and refusing to hurry in spite of my pleas and imprecations, I have sometimes thought that he would make life easier for himself and his associates if he could delegate more detail. But I am not sure.

We said at the beginning that there is no hard and fast rule for executive success; and in nothing, perhaps, do executives differ more than in this matter of detail. There are presidents who sit behind cleared desks and refuse to be concerned with anything but the very broadest questions of policy. And there are other presidents—and perhaps they are in the majority—who know more about every department than the department managers, and who will hold up the whole show while they carefully correct a tiny flaw.

Of course attention to detail will never get you anywhere unless you do the larger things too. Both Scripps and Howard are workers.

"I keep moving," Roy says. "Did you ever watch a short stop in a major league team? Short stops are usually little fellows, and maybe that's why I like them. Anyway, I notice this: A short stop may be only an average player; maybe he's even a little below the average; but if he keeps moving and accepts plenty of chances, he'll wind up the year with a good fielding record. He'll make plenty of errors, but his percentage will be all right. I'm a short stop."

His curiosity about life is insatiable. We were riding in an automobile in Havana when an airplane sailed over us.

"Did you ever fly in an airplane upside down?" he asked.

I said "No," and he explained that once at an army field he had bribed a flyer to take him up and go through the whole bag of tricks.

That night we were watching the gamblers at the Casino. There was one game that was new to both of us.

"How does it work?" I asked him. "What are the rules?"

"I'm going to find out," he answered, and began laying dollar bills on different parts of the board. After half an hour he had contributed quite a neat little sum; but he had found out.

Most men go through life half blinded by lack of curiosity and half paralyzed by fear. Bob and Roy see everything, and will try anything. Mistakes? They make plenty; but no men in the world acknowledge mistakes more quickly or with less embarrassment. I have seen them engaged in an argument that looked to an outsider as if it would wreck the firm. And in the end, one or the other would say: "I was wrong," or, "I guess I pulled a boner that time," and that would be the last of it. Either would be equally quick to make the same acknowledgment to the newest cub reporter.

THUS, liking each other, fighting each other, but standing shoulder to shoulder against the world—or as nearly shoulder to shoulder as is possible for six-feet-two and five-feet-six—they have worked out their successful partnership. In hardly a single attribute are they alike. Bob hates publicity; Roy thrives on it. Bob dresses in a way to aid him to escape attention; Roy's clothes are a New York institution. Bob moves slowly, and when he has made up his mind he seldom changes it; Roy can talk himself in and out of several conclusions in five minutes; but he has an instinctive habit of hitting the right one at the end. What a misfit Bob would be if, watching Roy's success, he had tried to be a rapid-fire executive. How foolish Roy would look sitting behind a desk and giving an imitation of a man engaged in thought. Each has succeeded by being himself.

ATWATER KENT RADIO

MODEL 40
Far more powerful and sensitive than the famous Model 37, radio's best seller. Satin-finished in brown and gold or bronze and gold. Uses six A.C. tubes and one rectifying tube. For 110-120 volt, 50-60 cycle alternating current.

$77
(without tubes)

Must good electric radio be expensive?

Emphatically—NO!

Owners of the new 1929 Atwater Kent electric sets will tell you they often hear their guests say:

"Why, that is the finest radio I ever heard! And you have no trouble at all? You must have paid a great deal for it. Wha-a-a-at? And to think we paid . . . ." Sometimes the sum mentioned is a very large one.

But really, there is nothing surprising in the price of Atwater Kent electric sets. When the public buys so many that factories covering 16¾ acres can be devoted solely to radio—when the ever-increasing demand enables the manufacturer to equip these factories with every conceivable means of bettering his product—the price *can* be kept down.

This always happens when a thing is so good that a great many people want it. It is precisely what has happened here.

So you have, in the self-contained Atwater Kent electric set for 1929 everything radio can give you—and nothing it *shouldn't* give you. You have the wonderful convenience and fraction-of-a-cent-an-hour economy of battery-less operation. You have clear tone, selectivity, volume, range. You have the thrilling certainty of the FULL-VISION Dial. You have compactness. You have smartness of appearance. You have reliability—freedom from annoyance and expense.

You have long evenings of companionship, summoned at will from here, there, everywhere.

And you have money in your purse that you might have spent unnecessarily.

MODEL 42. Many refinements in cabinet design. Uses six A. C. tubes and one rectifying tube, with automatic line voltage control. Without tubes, $86.

ATWATER KENT MFG. COMPANY
A. Atwater Kent, President
4702 Wissahickon Avenue Philadelphia, Pa.

"I Used to Be a Highbrow but Look at Me Now"

(*Continued from page 15*)

long illness I was unutterably bored. I was in no particular pain, just weak and irritable and nervous and depressed, too weak, in fact, to sit up. At first I couldn't sleep; and I couldn't eat, for my nervous condition had attacked my stomach. My brain at times seemed over-active, and the long hours, day after day, dragged with leaden feet. I felt that I needed something to distract and occupy my mind, not realizing that I was in bed because my mind had been too much occupied in the past, and that my cardinal need was mental rest.

One afternoon, a few months after my collapse, I told the nurse to hand me Taine's "Philosophie de l'Art," a book which I always keep at hand wherever I am. She looked vague, even vaguer than usual, and then for the first time I noticed that all my books and papers had been surreptitiously removed from the room, in order that (as I learned later) there would be no literary associations round me—nothing to remind me of my erstwhile labors and start my mind off on tiring trains of thought.

When the doctor came later that day for his usual twilight visit—which was intended, I now know, to cheer me up and tide me over the melancholy crepuscular period—I berated him for his chicanery, and demanded mental pabulum. He refused to let me read, kindly but firmly. I went into an argument and lost another pound or two. No success. I couldn't read—and that was that. But I was just contrary and disgusted enough not to let the matter drop. For a month I made the doctor's life miserable by demanding books.

THE doctor grew desperate; and at last, in the hope of saving me from brain exhaustion, he capitulated, with reservations. In another month (he marked the calendar) I could, if I desired, read a little light fiction. No serious works, however, no art books, no philosophy, no essays, no classics—nothing but light fiction; something that would not produce too much cerebration or stir up any desire to write myself.

I detested light fiction, and I told him so. He replied that he was glad of it. I suggested various compromises. All were vetoed. The prospect of regaling myself with silly fictional adventures and sillier love-stories filled me with gloom and animosity. I suspect to this day that the doctor had no idea that I would read such books as he prescribed.

For three weeks I planned a counter-offensive. I devised endless ways and means of outwitting him. But it was of no use. One night he brought a copy of "Black Beauty," and handed it to me with a grin. I hurled the book across the room and would not speak to him for days. Then a thought struck me. In my youth I had read Sherlock Holmes and been interested in the deductive processes of the Baker-Street sleuth. On the doctor's next visit I asked, with masterly indifference:

"May I amuse myself with anything as low and frivolous as a detective story?"

He pondered a moment, and, thinking I was being ironical, gave his consent.

Thus I began reading detective-mystery fiction. For two years I did little else. I devoured it. I wallowed in it. Moreover, I seemed to thrive on it. It apparently kept my mind off of my former studies, and gave my brain a kind of mild relaxation. Anyway, I was permitted to continue my literary sleuthing without let or hindrance.

After a few months' reading it suddenly dawned on me that the detective novel had its own peculiar technique and its own unique appeal, and that it operated according to its own individual rules—in short, that it constituted a *genre* of literary entertainment quite distinct from all other classes of fiction.

And then I recalled the fact that detective stories meet the recreational needs of all classes of humanity, from the college professor, the scholar, the statesman, the diplomat, and the scientist, all the way down to the most primitive and untutored reader.

WITHOUT a word to the doctor I set to work to discover the reason for the almost universal appeal of detective fiction: to trace its evolution, to analyze its technique, to define its laws, and, in general, to study it as I would any other individual art form. I coördinated and systematized my reading. I began with the works of Poe and Gaboriau, and gradually came down, in chronological order, to the present day. I had my book dealers in Berlin, Paris, and London make a search for all the great detective stories of the past seventy-five years; and my New York book dealer was kept working overtime digging up American detective stories for me. When I began to sit up I had a library of nearly two thousand volumes, covering the entire field of American and European detective literature.

For over two years I had read these books incessantly, always with an analytic eye and mind, and had made notes on the fly leaves when the nurse's back had been turned. It was my secret intention to do a short critical book on the subject as soon as I was well.

I think it is safe to say that I have read more detective novels, and have made a closer and more careful study of them from the technical, literary, and evolutional standpoint, than any other man living; which, after all, is no credit to me, for I was effectively barred from doing anything else! No literary man in his right mind and under ordinary conditions is going to take three years from his life to study detective fiction. So my distinction in this respect is analogous to the distinction of the cow with five legs. Neither the cow nor I could help ourselves.

In the late summer of 1925 I was allowed to get up and take a lungful or so of fresh air every day. I was weak and haggard, and needed support in order to move about. But my nerves were quiet; my sleep was fairly good; I could eat a little solid food and enjoy it; and my brain seemed to function more or less normally. I was itching to get back to work. My mind was filled with ideas; and I had a longing to complete my "Modern Literature" and return to my book on philology, which was then in the note-book stage.

"Ah!" I exclaimed rapturously to myself. "A few more weeks, and then the deadly delectable grind again!"

But I was far from happy. My books had never brought me a sufficient income to live on; and all my literary life I had been compelled to eke out my royalties with magazine articles, stories, editorial work, translations, teaching, etc.—the sort of things that tear an author's heart out of him and keep his nose to the grindstone day and night. The war had cut into my earnings deeply; my ebbing strength during 1921 and 1922 had curtailed my output; and the kind of books I wrote had little sale during the aftermath of the great world struggle. My collapse in 1923 had practically cut off all my income, and when, two and a half years later, I began to struggle back to life, with little more than skin, bones, and viscera as my physical capital, my skies were black with discouragement. I naturally wanted to resume work at the earliest possible moment.

However, when I poured out my sorrows and plans to the man whose affection and loyalty and professional care had brought me through my illness, I was plunged into even deeper gloom by being told I was positively to do no serious writing or study for at least another year.

I then commenced scheming again. And several weeks later, as I was reading a new detective novel that had gone through numerous editions, despite its obvious faults, an idea came to me.

"Why," I asked myself, "if other writers, with far less experience or training than I have had, can achieve success at this kind of fiction, can't I? I've studied the detective novel, and I understand its rules and technique. I know its needs, and have learned its pitfalls."

The idea took hold of me, and I began to think out a plot which, while being off the beaten track, would contain the elements that I had found to be psychologically sound and in accord with the literary principles of this particular type of story. I also began to shape a central character, or protagonist, who would not only be distinctive but would apply a new and modern method of deduction to his criminal problems. I put the matter up to my doctor, and got his permission to write the book—after January 1st, 1926.

THIS was in September. During the next four months I outlined a series of detective novels. I built up my sleuth, "Philo Vance," and worked out the plots for three books. I then made a thirty-thousand-word synopsis of each story; and after the first of the year I fared forth to find a publisher. I felt a bit giddy, physically and mentally; but I had faith in my undertaking and I was full of enthusiasm. The prospect of any kind of creative literary work after three years of enforced idleness set my blood a-tingling.

"No son, not a *real winter* since '93"

Snow and ice may be tearing in from the North. Your nose, ears, and fingers may be nipped. The bottom may be dropping out of the thermometer. But Grandpa still contends that the world is getting warmer. No winter in recent memory can quite equal, he is certain, the severity of that cold spell back in '93.

In all modesty, the United States Radiator Corporation is responsible for Grandfather's warm conviction. There he is, sitting in a room cheerfully heated by Capitol radiators; the Capitol boiler in the basement delivering ample warmth without extra care or attention despite the sudden and extraordinary cold.

Not only have there been tremendous improvements in heating equipment since his youth, but now a big new idea—*Capitol guaranteed heating*—insures new comfort, economy, and ease of operation. For it guarantees★ in writing the exact number of radiators that every Capitol boiler will satisfactorily heat.

Capitol guaranteed heating thus assures you that your boiler will not be larger and costlier than your needs. It dismisses all doubt that your boiler will be too small to supply uniform heat during sudden cold snaps. It gives written security that your Capitol boiler, for steam or hot water, on any standard fuels, will economically supply plentiful warmth.

Ask your contractor about the kindly and honorable service *Capitol guaranteed heating* will give you. And write for a very useful and informing book, *A Modern House Warming:* illustrated, and free.

★GUARANTEED HEATING

Your contractor receives a written guarantee on the heating capacity of every Capitol Boiler. No other heating equipment assures you satisfaction so definitely

Among prominent persons and institutions served by the Davey Tree Surgeons are the following:

VICE-PRES. CHAS. G. DAWES
HALEY FISKE
CITY OF DAYTON
ROGER BABSON
ACADEMY OF HOLY NAMES
FRENCH LICK HOTEL
MISSISSIPPI POWER & LIGHT COMPANY
CONNECTICUT STATE CAPITOL
ROCKEFELLER INSTITUTE
ATWATER KENT MANUFACTURING CO.

JOHN DAVEY
1846-1923
Father of Tree Surgery
Reg. U. S. Pat. Office

Surprisingly low in cost

73% of Davey clients paid less than $100 each

In 1927 Davey Tree Surgeons served 17,417 clients, from Boston to Kansas City and from Canada to the Gulf. The volume of business last year was $2,400,000.

And yet for this expert, reliable tree service—

9726 clients paid less than $50.00 each
2944 paid from $50.00 to $100.00 each
2372 paid from $100.00 to $200.00 each
1687 paid from $200.00 to $500.00 each
And only 688 paid over $500.00 each

Davey Tree Surgeons are easily available. They live and work in your vicinity. There are 900 of them now—all carefully selected, thoroughly trained, properly disciplined and supervised, and held to a high standard of service—scattered over the eastern half of this country and Canada.

The business of The Davey Tree Expert Company has trebled since 1923, as follows:

Volume in 1923.....$ 800,000
Volume in 1924.....$1,200,000
Volume in 1925.....$1,600,000
Volume in 1926.....$2,000,000
Volume in 1927.....$2,400,000

This steady and substantial growth does not prove everything, but it does indicate a high measure of value and satisfaction. How else could this personal service business be maintained and made to grow? More than half the business each year comes from former clients.

Every hour of every day 900 Davey Tree Surgeons are working on probation. Every client reserves the right to stop the work at his discretion. They must give satisfaction or they would have no employment. They will please you also. Wire or write nearest office.

AN editorial reprinted from the Davey Bulletin, a semi-monthly magazine published for the employees of The Davey Tree Expert Company, Inc., Kent, Ohio, a national organization now numbering more than a thousand persons

The Price of Success

By Martin L. Davey

EVERY normal man wants to succeed. He wants it not alone for the financial benefits involved, but also for the personal satisfaction that goes with it. It is this enlightened self-interest that is the great moving force in the world of practical affairs.

All too many men desire success eagerly enough in their minds, but are not willing to pay the price for it. They want this great blessing to settle down upon them like the gentle dew from heaven, without any effort on their own part, and without preparing themselves to carry it naturally and gracefully.

It has seemed to me, as I have watched the progress of many hundreds of men, that the secret of success is not a very strange or mysterious thing, for it flows in a natural way from certain definite causes.

Assuming that a man has normal intelligence and health, I should say the outstanding requirements for success are personal integrity and reliability, organized and sustained energy, painstaking care, and definite purpose and determination. These are the old-fashioned qualities which always have been, and always will be, the basic elements of success.

I have placed personal integrity and reliability first, because nothing else matters very much if a man lacks character and is not personally reliable. His word must be good. He must be honorable in his relations with all other men. In our business, this includes not only the company, but especially the clients whom we serve. If we give daily proof of individual and collective character in the service we render the public, there is nothing that can impede our progress as an organization and as individuals. When you stop to think that the Davey Tree Expert Company has trebled its business since 1923, it is a positive indication of something fundamentally sound and good in the service and in the men who render it.

MARTIN L. DAVEY
President and General Manager
The Davey Tree Expert Co., Inc.

The next in order is organized and sustained energy. This is conspicuously important for several reasons. I am coming more and more to the conclusion that physical energy is absolutely necessary to success, because the required effort cannot and will not be made without it. But this energy must be organized and directed. A man must avoid wasting his time and scattering his fire. He must proceed according to some well-defined plan, and this means the direction of his physical energy by the mastery of his mind. Obviously this energy must be sustained also. No hit and miss effort is of much value. The man who works his head off one day and lays way down in his effort the next is merely fooling himself. Steady effort, day after day, applied in a definite direction and for a given purpose cannot fail to produce results.

PAINSTAKING care is certainly a thing of primary importance. I doubt if any great success can be achieved unless a man has the ability to take pains. This means carefulness and thoroughness, not only in the work a man does but in the way he does it. I have thought many times that one of the greatest things America needs in our generation is the desire to do things right and to avoid the slip-shod, indifferent and careless way of performing the duties of life. There is material for a thousand sermons in the profound slogan that John Davey gave our organization, "Do it right or not at all." This philosophy is of elemental and supreme importance. Incidentally it is an evidence of character.

IT IS certainly necessary that a man have a definite purpose in life and a fixed determination if he ever hopes to succeed. Without a definite purpose he goes on aimlessly and blindly. He has no goal and nothing to strive for. He is like a ship without a rudder or compass, drifting with the winds and the tides of time. And he must have determination. Without it there is no dependable motive power. The will to win is so essential in the battle of life that it is impossible to determine the limit of its importance. You will find in every man who succeeds a steady determination, an unconquerable spirit.

In addition to all these other things, a man must have poise and balance and frankness and sincerity and the ability to cast aside all conceit. Success is hard to stand, much harder than adversity. Just the minute that any man achieves any measure of success and lets it go to his head, he loses his sense of proportion and his mind is out of balance. Conceit destroys the success which created it. What a wonderful thing it is to see a man succeed, either moderately or in a large way, and remain his own natural self, continuing to strive in the same way toward the same goal, with the same old-fashioned qualities! The world loves to see a man succeed and rejoices in his achievements, if success does not spoil him.

There is an old saying, "What you are speaks so loud I cannot hear what you say." There is much solemn wisdom in this proverb. Be what you ought to be, do what you ought to do, do it with earnestness and determination—this is the price of success.

Gentlemen: Please send, FREE and postpaid, Book, Samples, Trial Offer, New Low Prices and Tape Measure. This obligates me in no way.

NAME.....

Street (R.F.D.).....

City.....*State*.....

I went straight to Maxwell E. Perkins, of Charles Scribner's Sons, the quietest, most sympathetic and lovable man in the book-publishing business, a man of culture and insight, of uncanny judgment and surpassing fairness. Perkins and I had been classmates at Harvard in the old days; and though we had drifted apart during the years of manhood I had never forgotten him. Something told me that he was the person who would best understand my project, and sympathize with the things I hoped for from it.

Nor was I mistaken.

"The books are just what we want," he told me immediately. "And I believe you can do them. We'll take all three. How much advance royalty do you want, and when can we have the first book?"

"I want an advance of three thousand dollars," I said; "and I'll deliver the first book on July 1st."

The next morning I received the check and the contract.

Thus was Philo Vance borne into the world on his first vehicle, "The Benson Murder Case."

And thus did the pseudonym of S. S. Van Dine come into being.

I decided to hide my true identity behind a pen-name for several reasons. Primarily I did not want my new novels to be associated in any way with my other books. I wished to keep my two reputations entirely distinct. Through long years of hard labor and diligent study I had come to be known as a critic of art and literature. Two of my books dealt with painting (one was used as a text book in schools and colleges); another dealt with the science of esthetics; another with modern philosophy; another with French literature; two others with modern cultural influences in England and America; another with the psychology of the artistic temperament; and another with pre-war Europe. They had all more or less found a place in contemporary letters; and my name for years had stood for certain definite philosophic, literary, and esthetic ideals. I saw no advantage—and even feared a certain disadvantage—in wrenching my own name from its cultural moorings and setting it adrift upon the seas of popular fiction.

ANOTHER reason I had for entering secretly upon my life of crime was that in America the writing of detective novels is not yet considered a wholly respectable occupation. We Americans are very serious, and we look askance upon any form of pure literary diversion. Frivolity we deem the hall mark of a superficial nature; and the author who indulges in it is pretty sure to be relegated to the category of the insincere, or, at least, of the not-to-be-taken-seriously.

In England, on the other hand, a little leg-shaking in the Nietzschean sense on the part of serious authors is regarded as something rather to be desired, with the result that many of the leading British authors have turned to detective-story-writing as an avocation, without impairing their standing in the community; for instance, The Reverend Ronald A. Knox, G. K. Chesteron, A. E. W. Mason, Hilaire Belloc, Israel Zangwill, John Buchan, A. A. Milne, Eden Phillpotts, and even Dickens. But, being an American, I rather feared ostracism if I boldly switched from esthetics and philologic research to fictional sleuthing, and so I hid behind an old family name and the Steam-Ship initials.

MY FIRST venture under the Van Dine banner was an immediate success. (I am here speaking in sordid commercial terms.) The critics were good enough to receive it with praise; and the public were sufficiently indulgent to buy it. The entire first edition of "The Benson Murder Case" was sold out in a week, and the following month saw two other large editions vanish from the bookstalls. In six months it had outsold all its competitors in the field; and it is now in its eighth edition.

After the manuscript of "The Benson Murder Case" had been turned in to my publishers, I took a two-months rest at the beach, filled up on salt air, put on twenty pounds, and then began "The 'Canary' Murder Case"—the second of the Philo Vance series. It ran serially in "Scribner's Magazine," and appeared in book form in July, 1927, nine months after the "Benson." This new book broke all publishing records for detective fiction. It immediately got into the lists of six-best-sellers, and stayed there for months. It even became a best-seller in England. It has been translated into Swedish, Norwegian, Danish, French, German, Polish, and Croatian; it was run as a serial in the leading Jugo-Slavian papers; and it is now being made into a Paramount motion-picture "special," with William Powell in the rôle of Philo Vance.

After another two-months rest I set to work on "The Greene Murder Case," the third in the series. This also ran serially in "Scribner's Magazine," and was put on the market in book form last April, ten months after the "Canary's" début. This book sold even better than either the "Benson" or the "Canary." It entered the best-seller lists the first week of its existence, and during the month of April was the best-selling book in the United States. In May it held third place throughout the country; and as I write these lines—four months after its publication—it is still among the leading six. In England, too, it is a best seller, as was the "Canary." (Incidentally, both "The Benson Murder Case" and "The Greene Murder Case" have been bought by Famous-Players-Paramount for feature films, to follow the "Canary," with the same stars in the leading rôles.)

Last spring I finished "The Bishop Murder Case," which is to begin serially in this magazine next month, and run through six numbers. It is the fourth of the "Philo Vance" novels, and presents that debonair young sleuth with the toughest problem of his detectival career. Originally I had planned to call the book "The Mother Goose Murder Case;" but the canny psychologists of THE AMERICAN MAGAZINE's circulation department informed me that it would be taken for a juvenile story; and, remembering that "The Hound of the Baskervilles" was still regarded in certain quarters as a dog story, I changed the title to "The Bishop Murder Case," an alternative name I had had in mind from the first. This new title, in fact, is more appropriate than "Mother Goose"; but I somehow had a fondness for the old gray lady in the peaked bonnet—an affectionate hang-over, no doubt,

Your reading problem solved—

(A page from the new Daily Reading Guide)

CHARLES WILLIAM ELIOT, LL.D.

Forty years President of Harvard University, Editor of the famous 5-Foot Shelf of Books (The Harvard Classics)

"Your arrangement of passages for daily reading from the Harvard Classics has resulted in a very enticing bill of fare. I doubt whether any other device would reveal as well the extraordinary variety of material in the collection."
WILLIAM ALLAN NEILSON—President of Smith College.

"It is the Reading Guide, which in my judgment makes the ownership of a set of The Harvard Classics the greatest single source of enjoyment, as well as the chiefest source of self-benefit, that anyone can possess."
GRANT OVERTON—Distinguished Author and Critic.

"'Fifteen Minutes a Day' is indeed a valuable adjunct to The Harvard Classics and I constantly consult it with profit and delight. Here is a college education within the reach of everyone—knowledge stripped of its dull components and presented with attractive succinctness."
H. C. WITWER—Prominent Fiction Writer.

"As I ran through that inimitable reading guide, 'Fifteen Minutes a Day' I pictured three types of women who would find it invaluable—the woman of leisure with her multiplicity of social obligations; the woman of business whose mind must be keen to meet both professional and social competitions; and the club woman who must study constantly or fall behind her co-workers."
ANNA STEESE RICHARDSON—Author of "Standard Etiquette."

WHAT are the few great books really worth reading? How shall a busy man or woman find them? This problem has been wonderfully solved for you by Dr. Eliot from his lifetime of reading, study and teaching. He has made it possible for you, by reading little, still to be well read.

His influence on America cannot be calculated, but that it was prodigious must be admitted when one considers the thousands of men who passed under his eye and hand in the 40 years he was president of Harvard. But that he reached far beyond the Cambridge walls may be seen in thousands of home libraries throughout the land. Many denied any other guidance have gained a speaking acquaintance with the world's classics through Dr. Eliot's Five-Foot Shelf.

And you need only turn to the Daily Reading Guide to find reading selections from the Five-Foot Shelf appropriately assigned for every day in the year. Each can be read in about 15 minutes with leisurely enjoyment. The Reading Guide carries a step further the expert selection and guidance of Dr. Eliot.

The Five-Foot Shelf of Books free you from the limitations of your age, of your country, of your personal experience; they give you access to all ages, to all countries, to all experience. They take you out of the rut of life in the town you live in and make you a citizen of the world. They offer you the companionship of the most interesting and influential men and women who have ever lived; they make it possible for you to travel without leaving home, and to have vacations without taking time from your work. They offer you—if you will only accept it—friends, travel, the knowledge of life; they offer you education, the means of making your life what you want it to be.

DR. ELIOT'S FIVE-FOOT SHELF *of* BOOKS

(*The Harvard Classics*)

Pleasure, self-satisfaction, entertainment and at the same time the delight of mental growth—these are the ideas behind The Harvard Classics. In all the world there is no other such grouping of the few imperishable writings which picture the whole progress of civilization. Send for the free booklet which gives Dr. Eliot's own plan of reading and tells how he has put into the Five-Foot Shelf "the essentials of a liberal education."

Since 1875, P. F. Collier and Son Company has published good books, and furthers the cause of good reading by offering you the plan which enables you to pay for the books while you are enjoying them.

Since 1875 COLLIER Good Books

from my nursery days—and so I instinctively chose the longer name. All authors have these purely sentimental prejudices.

The success of the Philo Vance stories thus far has surpassed my wildest dreams; and the fame of S. S. Van Dine has spread as I never dared hope it would. After the appearance of "The 'Canary' Murder Case" long articles about me began appearing in the newspapers and magazines. I was beset with interviewers. I received numberless requests for autographs. A club in Shanghai asked for my picture with which to adorn its walls. The Law School of the University of Virginia used one of the novels as the basis for its annual "trial." I was kept busy writing articles for high-school and college publications, for it seemed the youth of the country had affectionately adopted me.

I received scores of invitations to lecture in different cities. A Presidential nominee declared that I was his favorite detective-story writer. An Oxford don wrote me an eight-page letter of congratulation and protest. The "Atlantic Monthly" twice included my stories in its exclusive "Bookshelf." My endorsement was solicited for a popular brand of cigarette. I received letters from lawyers, college professors, art collectors, ambassadors, eminent scientists, judges, and government officials of European countries. A university reading course devoted an entire bulletin to an analysis of the "Greene."

I was twice invited to speak over the radio. The Book-of-the-Month Club placed the "Canary" on its recommended list, and made the "Greene" its first recommended alternate. An ice-cream sundae was named after my hapless Canary. (As sundaes go it wasn't bad.) The most conservative literary journals of England devoted columns of serious analysis to my books; and "Punch" gave me the stamp of immortality, as Mark Twain would have said, by glorifying me in verse.

I received lucrative offers from leading newspapers to "cover" current murder trials. And in various other ways I was made aware that my efforts at literary entertainment had achieved far more than I had set out to accomplish. I had a curious feeling of humility and gratitude about the whole matter. I experienced a sense of human contact and intimacy with mankind which had never been mine during the writing of my other works.

THERE is something both of romance and irony in the amount of money these three detective novels have earned. Within a year of the time I completed the manuscript of "The Benson Murder Case" I was free from financial worries and in a position to tack in any direction my fancy dictated. The income from "The 'Canary' Murder Case" was nearly double that of the "Benson;" and "The Greene Murder Case" has already outstripped the other two combined.

What a topsy-turvy situation! Here was I, a well-known writer, who had spent fifteen years of my life building up a cultural reputation for myself in American letters—the author of nine serious books, into which I had put the fruits of all my research and study and labor; and up to the age of thirty-seven I had barely succeeded in keeping my ledger balanced.

Then I was shunted, by a crazy twist of fate, to detective fiction; and each one of my Philo Vance stories has made more money than all my nine serious books put together. My literary earnings for any six months during the past two and a half years have been more than were my entire literary earnings for the previous fifteen years.

I suppose all this is an eloquent commentary on something or other, or a biting criticism of this or that state of affairs in American life. But, frankly, I don't know just what it is. Unlike the youthful Gargantua, who "alwayes looked a given horse in the mouth," I have made no effort to inspect the gift that came tumbling down Olympus and landed in my lap. I see no reason whatever why the public should have bought my scholastic tomes on esthetics and philosophy and eighteenth-century literature if it wasn't interested in them.

My adoption of the name of Van Dine was wholly for the purpose of anonymity. Neither I nor my publishers attempted to make any capital out of it. To the contrary, we kept mum on the subject, and never once even suggested that S. S. Van Dine was not a real person. Indeed, it was my earnest wish to be accepted merely as a new writer of detective stories.

BUT Harry Hansen—that brilliant critic of the New York "World"—spoiled all my plans. One morning he printed an article frankly expressing the belief that the author of "The Benson Murder Case" and "The 'Canary' Murder Case" was not a novice, but an experienced writer in a nomenclatural disguise. He thereupon made a guess as to my identity, bolstering it up with a column of inductive clues. That started the snowball rolling. Other guesses were made throughout the country; and to date I have been accused of being each of the following:

William Lyons Phelps, John Galsworthy, Dr. Joseph Collins, Edmund Lester Pearson, Arthur Train, George Jean Nathan, Pola Negri, Edward Hale Bierstadt, Vance Thompson, Carl Van Doren, Willard Huntington Wright, Frank Crowninshield and Richard E. Enright in collaboration. William Hamilton Osborne, Robert H. Davis, Louis Joseph Vance, Robert Bridges, Ma Ferguson, H. L. Mencken, and Arthur Stringer.

The reasoning behind the guesses was often highly plausible, and some of the "proofs" advanced by my accusers almost convinced me that I was indeed someone else. Many a criminal has been convicted in our courts on circumstantial evidence far less conclusive than that adduced to prove that I was this or that well-known writer. Mr. Walter G. Bowerman, of Leonia, New Jersey, wrote to "Scribner's Magazine":

> One of the most interesting books is 'Live and Let Live,' by Vance Thompson. In curiosity to learn whether Vance is a man or woman, we looked up the name in "Who's Who in America." There we find that he was educated in Germany and that he has written a mystery of European intrigue. We already knew his power and versatility as a writer. The choice of name, Philo Vance, for hero in the current series of murder stories agrees also with his own first name—Philo being simply the Greek word for *love*."

The chief objection to this theory is that Mr. Thompson died in 1925.

The guess that I am Edmund Lester

Digitized by Google Original from UNIVERSITY OF IOWA

Pearson, (the author of those splendid criminological volumes, "Studies in Murder," "Murder at Smutty Nose," and "Five Murders") appears to be the most persistent; and the reasons given therefor are, I must admit, most ingenious. I have apologized personally to Mr. Pearson for the bother I've unwittingly caused him, and I hereby repeat my apologies.

Mr. Bruce Gould, the daily literary arbiter of the New York "Evening Post," wrote an article "proving conclusively" that I am Willard Huntington Wright. So complimentary was it, and so thoroughly do I respect Mr. Gould's judgment, that I simply haven't the heart to deny his clever and entertaining deductions. One of the most amusing points marshaled by him was the fact that Mr. Wright had taken him to lunch at Pierre's. "We submit," wrote Mr. Gould, "that no writer of cultural subjects, such as Mr. Wright is, could ever make enough money in America to lunch his friends at Pierre's. Therefore, we can only conclude that Mr. Wright has become very wealthy at the expense of his close friend, S. S. Van Dine."

VARIOUS bits of detective work have been done to discover my identity. One day a professor of a local university wrote me (S. S. V. D.) a letter which demanded an answer. Later, an acquaintance wrote me (my true self) a friendly note about nothing in particuar; but worded it so that courtesy made necessary a reply. A few days afterward I (my true self) received from this latter correspondent a bald accusation of being S. S. Van Dine. It seems the stationery on which I had written to him and to the professor was identical! I—the creator of the supersleuth, Philo Vance!—had used the same note paper, not suspecting that he and the professor were in cahoots. But, even so, the evidence was not sufficiently damning to make me reach in my waistcoat pocket for a capsule of cyanide of potassium, as do all literary culprits when confronted with proof of their guilt.

Two other acquaintances of mine, suspecting that I might be S. S. Van Dine, wrote to me—one to my true self, the other to the author of the Philo Vance stories. The signatures of my two answers were then submitted to a handwriting expert, and a copy of his report was triumphantly mailed to me. It cost me a lavish dinner to insure the silence of these base plotters. Recently a bright reporter, who had read too much, oh, far too much! Sherlock Holmes, conceived the brilliant idea of visiting my home (I live in an old remodeled dwelling of many apartments) and checking up on the names in the mail boxes. There he found my own card in one box, and in another box the card of S. S. Van Dine. He twitted me gloatingly with the discovery, and proceeded to levy the most outrageous blackmail—which I paid! (I have since removed Mr. Van Dine's card from the mail box.)

Miss Fanny Butcher, the charming and clever literary editor of the Chicago "Tribune," wrote to me (S. S. V. D.) last year for a short article. I complied; but by return mail she demanded a picture of myself with which to accompany the article. I smelled a mouse: experience had taught me wariness. It seemed ungracious to refuse the request, and yet I knew that if I sent my photograph she would recog-

Thick, tender steaks . . . fried oysters . . . fish cakes and cold meats and broiled chops. Pour Heinz Tomato Ketchup on any of these good things. Their fine flavors become even better with the help of this rich, thick ketchup. Such a pleasant tomato-y taste with hot little spice thrills in every drop.

It's the *flavor* that makes Heinz Tomato Ketchup so tempting.

Indeed, in order to catch the true flavor of tomatoes and bottle it up into ketchup, we found we had to begin at the beginning.

Develop our own seed. Raise our own tomato plants. Pick the tomatoes when they are just at their reddest and plumpest and juiciest. And bottle them while they are still garden fresh in Heinz kitchens located near the gardens.

Then, of course, adding just the right spices—the dash of Heinz mellowed vinegar—the salt—the pure granulated sugar for sweetening . . . Only by sending our buyers to special markets in the Far East could we get the choice quality of spices we use.

Care, *always,* in every detail that concerns flavor—even to using glass lined tubes to conduct the ketchup from the kettle to the bottle . . . For care is the real reason why the Heinz name has come so indisputably to mean Flavor.

OFF TO A GOOD START

MOTHER—"Bill's all ready to start school tomorrow morning, except for a nickel to buy some pencils."

DAD—"A pencil, you mean, mother—a Dixon's 'Ti-con-der-oga' just like this one. We've found down at the office that one 5¢ 'Ti-con-der-oga' is better than a whole handful of cheap pencils."

DIXON

"TI-CON-DER-OGA"

An extraordinary five cent pencil

Pencil Dept. 161-J JOSEPH DIXON CRUCIBLE CO. Jersey City, N. J.

Three for a quarter in Canada

© 1928

You'll find it convenient to buy Ti-con-der-ogas by the dozen — in this distinctive box.

nize it at once. So I met feminine wile with masculine deceit. I drew a caricature of myself in which I embodied all my features and characteristics—the pyriform cast of face, the hair parted on the right side, the somewhat bony forehead, the long straight nose, the prominent ears, the waxed moustache and the pointed Van Dyke, the habitual cigarette and the eyeglass. In its details it was truthfully and meticulously I; but, as an ensemble, it bore no resemblance to me. I sent her this picture. She was good sport enough to thank me and reproduce it, without a word of criticism.

THIS picture—the only one of S. S. Van Dine that has been given out—has been used pretty extensively; and it is reproduced herewith. As Miss Butcher remarked in her caption, I look more like

one of my murderers than an author. My poor mother, who has a certain maternal pride in the features with which she endowed me, wept copiously over the portrait. Before its publication she had a secret fear that my true name would never be revealed. Now she lives in fear that it will.

During the two years of my double life I have had many amusing and disturbing experiences, and have been caught in all manner of embarrassing situations. I have sat at dinners where my books were being discussed and have been called on for an opinion as to the logic of "Vance's" deductive methods, the plausibility of the books' situations, and even as to who was the actual author of the tales.

A score of book stores have endeavored to sell me my own stories, and have recommended them to me so highly that I have blushed. Feeling guilty and chagrined, I have actually bought numerous copies of them at the full market price! My own book dealer sent me both the "Benson" and the "Canary," telling me I "couldn't afford to miss them." The next time I saw him he asked me point-blank: "Wasn't I right about the Van Dine books?" I developed a coughing spell, and murmured a vague answer. He bemoaned my apparent lack of enthusiasm. "Why," he exclaimed, "I've sold more Philo Vance stories than all my other detective fiction combined!" "That's bully!" I replied. "Who is this Van Dine, by the way?" I asked casually.

Digitized by Google Original from UNIVERSITY OF IOWA

"They tell me," he confided, "that he's a well-known motion-picture actor." I fled from his presence in a state of suicidal despair.

A publisher, who issued one of my early books on painting, knowing I was acquainted with Mr. Perkins, of Scribner's, asked me as a special favor to try to find out—by hook or crook—who S. S. Van Dine was. He gave me his solemn word that, in case I was successful, he would not reveal to Mr. Van Dine the source of his information!

I don't remember what I answered, but I do know that the next day I received a complimentary set of books from this publisher. It was a damnable predicament to be in, and I searched my heart deeply for counsel. I couldn't return the gift without arousing his suspicions, and I couldn't truthfully tell him I was unable to find out what he wanted to know. The books are still in my library; but every time I look at them I have a twinge of conscience.

Another publisher, whom I had known for years, asked me one day at lunch if I had read the Van Dine books. I nodded indifferently. "Rotten, aren't they?" he asked. "Can't abide that fellow Vance. A nincompoop! Don't see why they've made such a hit. We've a dozen better detective novels on our list; but all of 'em together haven't sold as many copies as one of those damn Van Dine thrillers. Terrible business, publishing. Why don't *you* write a detective story—the way it ought to be done?" I tried to look scandalized at the suggestion, and must have succeeded, for he immediately changed the subject.

Less than a week later a friend of mine said one night: "I've just finished 'The Greene Murder Case,' and there were a few passages in it that reminded me of you. But I know you couldn't have written it. You would have made a much better job of it." I of course vigorously repudiated the compliment. But, alas for the faith of our friends! I had written the book, and had put forth the best that was in me. I had done my darnedest, and angels could do no more; yet my friend had loftier visions of my powers. My heart was touched; but I could not disabuse him. And, after all, there is inspiration in having those you care for think you are better than you are. It gives you more distant targets to aim at.

THERE has been much speculation and theorizing as to why all classes of readers universally enjoy arm-chair sleuthing. But the real reason is, I believe, that the appeal of a good detective novel is the same as that of an elaborate and interesting puzzle. It puts the mind to work and keeps it busy, for in any first-class detective story the reader takes fully as much a part in the solution of the problem as does the detective himself. I would go so far as to say that a detective novel does not fall under the head of fiction in the ordinary sense. It really belongs in the category of riddles; and I am convinced that its astounding popularity is directly due to the identical factors that give the cross-word puzzle its popularity.

Indeed, the cross-word puzzle and the detective novel have many things in common. In each there is a problem to be solved; and in each the solution depends

To be sure ...this catsup has "*personality*"

Wine of tomatoes gorgeously spiced!

CALL it "personality," "difference," what you will—there is *something* about the taste of Snider's Catsup which has made this sauce the prime favorite among folk who look for the unusual.

Of course this unique flavor is no accident. Back of it is an experience in catsup cooking two generations old—a recipe that can't be copied—a Snider method of "mulling" which so heats and spices the ingredients as to impart to this famous condiment the mellow quality all its own.

There's an individuality about Snider's that appeals to people of individuality.

Snider's

The *mulled* catsup

Close your eyes

and operate it

The simplest system on earth for all your business figuring

OVER the keys of the Sundstrand, fingers fly with amazing speed . . . adding, subtracting, multiplying. Figuring invoices, adding debits, and subtracting credits . . . balancing accounts. No need to keep your eyes on the keys. You can even close them when someone is calling the figures.

The Sundstrand has only ten numeral keys, and these are logically arranged for quick development of the touch system. Control is right under the finger tips of the one hand. In ten minutes the most inexperienced operator has memorized their location. No wide area to cover. No hesitation in the selection of the proper column. You press the keys just as you would write down the numbers. The figures of each item appear in the correct columns automatically. All this puts speed into business figuring that no other machine approximates.

What you can do with the Sundstrand is astonishing . . . positively uncanny. It not only adds, subtracts directly, and multiplies quicker than you ever believed it could be done, but it literally carries the most complicated transactions *in its head*. The Sundstrand Credit Balance Feature enables you to subtract credits in excess of debits and get the answer — directly.

The Sundstrand is priced as low as $100. Use the coupon for descriptive booklet describing the Sundstrand line.

on the reader's ability to analyze the various elements and to coördinate apparently unrelated clues. When the analysis is complete and the clues have been fitted in place, the detective novel, as well as the cross-word puzzle, becomes an interrelated unit. Consequently, the reader has a feeling of satisfaction, of difficulties overcome, of order having been produced from chaos. This is why, I think, the so-called highbrow reader, who would be positively humiliated if caught with an ordinary popular romance, reads detective novels, and even flaunts them brazenly in the faces of his acquaintances.

Good detective stories appeal directly to the intelligence: they are a source of mental stimulation. The finest minds in America today read them. And I'll say this: No reader of detective fiction is ever stupid. Without an active logical mind, capable of gripping a difficult problem, one would never turn to detective fiction for pleasure. As Carolyn Wells has said: "Show me an inveterate reader of mystery yarns, and I will show you a quick, intelligent brain."

A QUESTION that is often put to me is how long I intend to go on writing detective stories. When I first conceived Philo Vance I had no definite plans beyond the three books I had outlined: "The Benson Murder Case," "The 'Canary' Murder Case," and "The Greene Murder Case." However, during the interims between the work on these novels I did a great deal of criminological reading; and I made notes and sketched ideas for possible future Philo Vance stories, though I had no actual intention of continuing them. Then I was lured into a contract for "The Bishop Murder Case" by the Editor of THE AMERICAN MAGAZINE; and I also involved myself for two other books in the series—making six in all.

These six I shall go through with. But no more. An even half-dozen is a nice orderly number. And to write a detective novel according to the rules and ideals I have set for myself is no easy matter. It requires tremendous patience and hard work. The detective novel is the most rigid and exacting literary form I have ever undertaken. Each paragraph, each sentence—each word almost—must fit perfectly into the final pattern. There can be no loose ends. And the entire story must be planned in every minute detail and built up with painstaking care before the actual writing can begin. My original synopsis of a Philo Vance story is half the length of the finished book; and I work over it for months, rearranging, readjusting, refitting, and rebalancing every speech and episode and detail, before I settle down to the task of clothing it.

Then there is the important matter of ideas: the conception of the crime, the clues, the methods used for detecting, the devices for concealing (legitimately—there's the rub!) the culprit until the dénouement, the setting, and the interplay of character. The means and the material must be original: it is the simplest thing in the world to fall into a hackneyed technique, and to make use of clues and devices that have been employed before.

I doubt if any one writer has more than six good detective-novel ideas in his system. At any rate, I shall draw the line at that number; and I pray daily to the gods

Digitized by Google Original from UNIVERSITY OF IOWA

that have thus far guided my destiny that I shall not fall below the standard I have set for myself. This is why I have consistently refused to write more than one Philo Vance novel a year.

But, even were I convinced that I could go on writing detective novels indefinitely without falling below my standard, I nevertheless would desist. I have no yearning for much wealth. What I want most is an opportunity to go traveling in the realms of learning, and to write books of my adventures there. This opportunity is now mine; and when I bid farewell to "Vance" and "Markham" and "Heath" I shall return to my other more serious literary labors. The old lean years were good years—filled with ardor and high hopes and blazing ideals, and with the earnestness and the enthusiasm of youth. And I shall go back to them, and strive to recapture their magic. I shall again tread that long, weary path to personal fulfilment, which has no end but which leads ever upward to the stars; for only in an effort to achieve that which is beyond all human achievement does the restless spirit of man find solace. The bitterest of all disillusions are the realities we have managed to grasp.

S. S. Van Dine Sets Down Twenty Rules for Detective Stories

THE detective story is a kind of intellectual game. It is more—it is a sporting event. And for the writing of detective stories there are very definite laws—unwritten, perhaps, but none the less binding; and every respectable and self-respecting concocter of literary mysteries lives up to them. Herewith, then, is a sort of Credo, based partly on the practice of all the great writers of detective stories, and partly on the promptings of the honest author's inner conscience. To wit:

1. The reader must have equal opportunity with the detective for solving the mystery. All clues must be plainly stated and described.

2. No willful tricks or deceptions may be placed on the reader other than those played legitimately by the criminal on the detective himself.

3. There must be no love interest. The business in hand is to bring a criminal to the bar of justice, not to bring a lovelorn couple to the hymeneal altar.

4. The detective himself, or one of the official investigators, should never turn out to be the culprit. This is bald trickery, on a par with offering some one a bright penny for a five-dollar gold piece. It's false pretenses.

5. The culprit must be determined by logical deductions—not by accident or coincidence or unmotivated confession. To solve a criminal problem in this latter fashion is like sending the reader on a deliberate wild-goose chase, and then telling him, after he has failed, that you had the object of his search up your sleeve all the time. Such an author is no better than a practical joker.

6. The detective novel must have a detective in it; and a detective is not a detective unless he detects. His function is to gather clues that will eventually lead to the person who did the dirty work in the first chapter; and if the detective does not reach his conclusions through an analysis of those clues, he has no more solved his problem than the schoolboy who gets his answer out of the back of the arithmetic.

7. There simply must be a corpse in a detective novel, and the deader the corpse the better. No lesser crime than murder will suffice. Three hundred pages is far too much pother for a

1022 *consecutive* bull's-eyes!

HOLDER OF WORLD'S RIFLE RECORD TELLS HOW HE CONDITIONED HIMSELF FOR THE GREATEST TEST OF NERVES IN THE HISTORY OF SPORT

"AS a marksman, perfect coordination of nerves is of first importance to me. But hot drinks are also essential and caffein with my meals had been my only dissipation. However, it affected my nerves so that I dropped it from my diet, selecting Postum instead.

"I found Postum to be more than a substitute. I gained weight, slept better, ate better, and all signs of nervousness vanished. In less than thirty days I was in perfect condition.

"On June 24, 1921, I started a course of rifle fire that was the most exacting ever recorded. On that day I shot continuously for 9 hours and 10 minutes, making a run of 1022 consecutive bull's-eyes that established a new world's record—in fact, it almost doubled the old one. Even then I quit without missing. My last shot was as perfect as my first. The entire group could be covered with a quarter.

"I could never have stood the strain had I continued the use of caffein. By changing to Postum, I added to my nerves the strength and endurance caffein had been taking away. I have used Postum regularly ever since."

—ULRIC S. VANCE, JR., Hillsboro, Ohio
Member, U. S. Rifle Team, 1921
Member, Peter P. Carney's All-American Rifle Team

NO matter what your aim in life, calm, unruffled nerves are vitally important if you are to hit the target. You know that. But you may not have realized how slyly, insidiously, the use of harmful mealtime stimulants like caffein frequently can change steady nerves to shaky ones, and undermine your chances for success.

Try Mr. Vance's experiment! Eliminate caffein from your diet for thirty days—make Postum your mealtime drink instead. Then see how much better you feel!

Postum is made of roasted whole wheat and bran—no trace of any artificial stimulant in it. A drink that never frays your nerves, never affects sleep, or causes indigestion. And Postum has a flavor you'll enjoy—a rich, distinctive flavor millions prefer to that of any other mealtime drink!

© 1928, P. Co., Inc.

Postum is one of the Post Health Products, which include also Grape-Nuts, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

Your grocer has Postum. Or mail the coupon—we will send you one week's supply free, as a start on your 30-day test. Please indicate on the coupon whether you wish Instant Postum, made instantly in the cup, or Postum Cereal, prepared by boiling.

MAIL THE COUPON NOW!

ANY TOOTHBRUSH IS BETTER THAN NONE, *BUT . . .*

NEW in 4 ways that mean WHITER TEETH

FOUR vital benefits, for care of your teeth, are provided by this *new* DR. WEST'S toothbrush. You will *see* the results.

Its original correct design has never been improved upon—although often imitated. Now it's made *doubly* effective by:

1st) Costly bristles, unobtainable since the war, used in this new brush only. They cleanse and polish.

2nd) Super-accurate trimming and spacing of bristles, to give more thorough cleaning of crevices.

3rd) Rigid handles, unbreakable; easier to hold and use.

4th) Whiter, cleaner teeth for you—by these *combined* improvements.

All druggists have new DR. WEST'S: adult's size, 50c; youth's, 35c; child's, 25c; soft, medium, or hard. Each brush sterilized, sealed and guaranteed. Today get one for each member of your family. Then see how quickly teeth whiten.

THIS DIAGRAM SHOWS
How the new DR. WEST'S reaches and cleans all teeth—inside as well as outside, far back as well as in front. See how erect bristles penetrate crevices, sweeping them clean.

THE RIGHT WAY
to brush your teeth

This is the way dentists advise: Use your new DR. WEST'S twice daily. Brush always away from gums, toward cutting edges of teeth. Employ any good dentifrice; bristle tips cleanse and polish. Each 60 or 90 days get a new brush—making sure of full benefits.

Dr. West's *new* Tooth Brush

crime other than murder. After all, the reader's trouble and expenditure of energy must be rewarded.

8. The problem of the crime must be solved by strictly naturalistic means. Such methods for learning the truth as slate-writing, ouija-boards, mind-reading, spiritualistic séances, crystal-gazing, and the like, are taboo. A reader has a chance when matching his wits with a rationalistic detective, but if he must compete with the world of spirits and go chasing about the fourth dimension of metaphysics, he is defeated *ab initio*.

9. There must be but one detective—that is, but one protagonist of deduction—one *deus ex machina*. To bring the minds of three or four, or sometimes a gang of detectives to bear on a problem, is not only to disperse the interest and break the direct thread of logic, but to take an unfair advantage of the reader. If there is more than one detective the reader doesn't know who his co-deductor is. It's like making the reader run a race with a relay team.

10. The culprit must turn out to be a person who has played a more or less prominent part in the story—that is, a person with whom the reader is familiar and in whom he takes an interest.

11. Servants must not be chosen by the author as the culprit. This is begging a noble question. It is a too easy solution. The culprit must be a decidedly worth-while person—one that wouldn't ordinarily come under suspicion.

12. There must be but one culprit, no matter how many murders are committed. The culprit may, of course, have a minor helper or co-plotter; but the entire onus must rest on one pair of shoulders: the entire indignation of the reader must be permitted to concentrate on a single black nature.

13. Secret societies, camorras, mafias, *et al.*, have no place in a detective story. A fascinating and truly beautiful murder is irremediably spoiled by any such wholesale culpability. To be sure, the murderer in a detective novel should be given a sporting chance; but it is going too far to grant him a secret society to fall back on. No high-class, self-respecting murderer would want such odds.

14. The method of murder, and the means of detecting it, must be rational and scientific. That is to say, pseudo-science and purely imaginative and speculative devices are not to be tolerated in the *roman policier*. Once an author soars into the realm of fantasy, in the Jules Verne manner, he is outside the bounds of detective fiction, cavorting in the uncharted reaches of adventure.

15. The truth of the problem must at all times be apparent—provided the reader is shrewd enough to see it. By this I mean that if the reader, after learning the explanation for the crime, should reread the book, he would see that the solution had, in a sense, been staring him in the face—that all the clues really pointed to the culprit—and that, if he had been as clever as the detective, he could have solved the mystery himself without going on to the final chapter. That the clever reader does often thus solve the problem goes without saying.

16. A detective novel should contain no long descriptive passages, no literary dallying with side-issues, no subtly worked-out character analyses, no "atmospheric" preoccupations. Such matters have no vital place in a record of crime and deduction. They hold up the action, and introduce issues irrelevant to the main purpose, which is to state a problem, analyze it, and bring it to a successful conclusion. To be sure, there must be a sufficient descriptiveness and character delineation to give the novel verisimilitude.

17. A professional criminal must never be shouldered with the guilt of a crime in a detective story. Crimes by house-breakers and bandits are the province of the police departments—not of authors and brilliant amateur detectives. A really fascinating crime is one committed by a pillar of a church, or a spinster noted for her charities.

18. A crime in a detective story must never turn out to be an accident or a suicide. To end

Digitized by Google
Original from UNIVERSITY OF IOWA

an odyssey of sleuthing with such an anti-climax is to hoodwink the trusting and kind-hearted reader.

19. The motives for all crimes in detective stories should be personal. International plottings and war politics belong in a different category of fiction—in secret-service tales, for instance. But a murder story must be kept *gemuetlich*, so to speak. It must reflect the reader's everyday experiences, and give him a certain outlet for his own repressed desires and emotions.

20. And (to give my Credo an even score of items) I herewith list a few of the devices which no self-respecting detective-story writer will now avail himself of. They have been employed too often, and are familiar to all true lovers of literary crime. To use them is a confession of the author's ineptitude and lack of originality. (*a*) Determining the identity of the culprit by comparing the butt of a cigarette left at the scene of the crime with the brand smoked by a suspect. (*b*) The bogus spiritualistic séance to frighten the culprit into giving himself away. (*c*) Forged finger-prints. (*d*) The dummy-figure alibi. (*e*) The dog that does not bark and thereby reveals the fact that the intruder is familiar. (*f*) The final pinning of the crime on a twin, or a relative who looks exactly like the suspected, but innocent, person. (*g*) The hypodermic syringe and the knockout drops. (*h*) The commission of the murder in a locked room after the police have actually broken in. (*i*) The word-association test for guilt. (*j*) The cipher, or code letter, which is eventually unraveled by the sleuth.

You Look 'em Over—and You Obey Your Choice

(Continued from page 53)

Criminal Code, passed in 1909, makes these offenses punishable by a fine of not more than $500 or imprisonment for not more than six months, or both.

Talking to the motorman of a trolley car, or to the operator of any public conveyance, is forbidden by law in most states. It also is a law infraction to ride on the front platform of a trolley car, or on the platform of a railroad coach—a law which is buried in the crush during "rush" hours.

Lotteries, raffles, and "games of chance" are against the law in Pennsylvania and in other states. Every sale of a "chance" on, say, a sewing machine, a ton of coal, an automobile, or what have you is law-breaking—with churches and volunteer fire companies leading the list of offenders.

And there *is* a bed-sheet law, in fact a number of them, as well as an ordinance regulating the use of the vacuum cleaner!

Certain Southern lawmakers, hearkening to the woes of elongated traveling salesmen, were moved to regulate the length of hotel bed sheets by law; and so were the lawmakers of Idaho, who also put themselves on record in favor of clean towels. The Idaho law provides that all hotel sheets "must be at least eight feet in length" and that "each guest shall be furnished with at least two clean towels." What is more, "in all hotels where fifty cents or more a day is charged for lodging, the sheets and pillow cases shall be changed after the departure of each guest."

Then, of course, there are the laws against the wearing of bed sheets as disguises for parade or other public occasions—aimed at the Ku Klux Klan.

Will You Be Clerk or Manager Ten Years from Now?

SURELY, this could never happen to *me*," you say—"that I should be sitting at the same desk—be doing the same work, *for ten straight years!*"

But wait a minute—

Exactly the same thing is happening to thousands upon thousands of men throughout the country. It has probably happened to men right in the company you now are working for. *And—unless you deliberately fit yourself for a better job—there is a very good chance that it will happen to you!*

Unthinkable? That's what R. M. Whitney, of Rochester, N. Y., said to himself. Yet lack of training kept him slaving away at low wages for more than twenty years . . .

Trebled His Salary in Three Years

—For more than twenty years, till finally, at the age of 47, *and still receiving only thirty dollars a week*, R. M. Whitney resolved to be a bookkeeper no longer. He enrolled with LaSalle for training in Higher Accountancy, and completed the course. Almost immediately came the offer of a bigger job.

Less than three years later, the Davenport Machine Tool Company—*the very company he had worked for as a clerk*—invited him to come back. He returned as Auditor, at a salary-increase of better than 300 per cent.

Today, he is Treasurer of this great company; and in a letter to LaSalle, after commenting on the opportunities LaSalle affords to men in their forties or early fifties, he adds, "And for the *young* man, who is just getting a foothold in the business world, LaSalle Extension University training is the most profitable investment he could make."

Says Good-bye to Clerkship—Now Heads Successful Firm

We have told you about a man who *waited*—at a cost to himself of probably not less than $100,000. Now consider the experience of a younger man—G. Roy Eshelman, of Decatur, Illinois—

Eshelman was occupying a subordinate position in the purchasing department of a manufacturing concern—salary $16 a week. Visualizing the opportunities for skilled accountants, he enrolled with LaSalle for training in Higher Accountancy.

"Through this training," writes Mr. Eshelman, "I became interested in the Auditing Department and often remained after working hours watching the Auditor at his work. Observing my interest, he soon placed me in his department at a 50% increase in pay, and as I progressed with my LaSalle work, I was shortly rewarded with an additional 40% increase.

"My studies rapidly equipped me to strike out for myself, and at present I have an extensive practice as a Public Accountant, employing four accountants. It is sufficient to say that my present income is *many, many times greater than when I enrolled.*"

Send For These Two Books and Start Toward Real Success

Need you hear more before you investigate the opportunities in Accountancy? Shall we tell you about Hyde—or Gray—or McDuffie—all of them commanding incomes better than $10,000 a year *and all of them still in their thirties?*

Or will you face the problem of your future NOW—and send to LaSalle and get further facts and particulars?

Without cost or obligation, the coupon will bring you two books—one a 64-page book entitled, "Accountancy, the Profession that Pays;" the other, "Ten Years' Promotion in One."

How about those next ten years—will you wait, or will you START TODAY to realize the opportunities that lie ahead of you through sound and practical home-study business training?

Measure your grit and ambition by what you do with this coupon—NOW.
